THE MAN OF PROPERTY

TO MY WIFE:

I DEDICATE THE FORSYTE SAGA IN ITS ENTIRETY, BELIEVING IT TO BE OF ALL MY WORKS THE LEAST UNWORTHY OF ONE WITHOUT WHOSE ENCOURAGEMENT, SYMPATHY AND CRITICISM I COULD NEVER HAVE BECOME EVEN SUCH A WRITER AS I AM.

PREFACE:

"The Forsyte Saga" was the title originally destined for that part of it which is called "The Man of Property"; and to adopt it for the collected chronicles of the Forsyte family has indulged the Forsytean tenacity that is in all of us. The word Saga might be objected to on the ground that it connotes the heroic and that there is little heroism in these pages. But it is used with a suitable irony; and, after all, this long tale, though it may deal with folk in frock coats, furbelows, and a gilt-edged period, is not devoid of the essential heat of conflict. Discounting for the gigantic stature and blood-thirstiness of old days, as they have come down to us in fairy-tale and legend, the folk of the old Sagas were Forsytes, assuredly, in their possessive instincts, and as little proof against the inroads of beauty and passion as Swithin, Soames, or even Young Jolyon. And if heroic figures, in days that never were, seem to startle out from their surroundings in fashion unbecoming to a Forsyte of the Victorian era, we may be sure that tribal instinct was even then the prime force, and that "family" and the sense of home and property counted as they do to this day, for all the recent efforts to "talk them out."

So many people have written and claimed that their families were the originals of the Forsytes that one has been almost encouraged to believe in the typicality of an imagined species. Manners change and modes evolve, and "Timothy's on the Bayswater Road" becomes a nest of the unbelievable in all except essentials; we shall not look upon its like again, nor perhaps on such a one as James or Old Jolyon. And yet the figures of Insurance Societies and the utterances of Judges reassure us daily that our earthly paradise is still a rich preserve, where the wild raiders, Beauty and Passion, come stealing in, filching security from beneath our noses. As surely as a dog will bark at a brass band, so will the essential Soames in human nature ever rise up uneasily against the dissolution which hovers round the folds of ownership.

"Let the dead Past bury its dead" would be a better saying if the Past ever died. The persistence of the Past is one of those tragi-comic blessings which each new age denies, coming cocksure on to the stage to mouth its claim to a perfect novelty.

But no Age is so new as that! Human Nature, under its changing pretensions and clothes, is and ever will be very much of a Forsyte, and might, after all, be a much worse animal.

Looking back on the Victorian era, whose ripeness, decline, and 'fall-of' is in some sort pictured in "The Forsyte Saga," we see now that we have but jumped out of a frying-pan into a fire. It would be difficult to substantiate a claim that the case of England was better in 1913 than it was in 1886, when the Forsytes assembled at Old Jolyon's to celebrate the engagement of June to Philip Bosinney. And in 1920, when again the clan gathered to bless the marriage of Fleur with Michael Mont, the state of England is as surely too molten and bankrupt as in the eighties it was too congealed and low-percented. If these chronicles had been a really scientific study of transition one would have dwelt probably on such factors as the invention of bicycle, motor-car, and flying-machine; the arrival of a cheap Press; the decline of country life and increase of the towns; the birth of the Cinema. Men are, in fact, quite unable to control their own inventions; they at best develop adaptability to the new conditions those inventions create.

But this long tale is no scientific study of a period; it is rather an intimate incarnation of the disturbance that Beauty effects in the lives of men.

The figure of Irene, never, as the reader may possibly have observed, present, except through the senses of other characters, is a concretion of disturbing Beauty impinging on a possessive world.

One has noticed that readers, as they wade on through the salt waters of the Saga, are inclined more and more to pity Soames, and to think that in doing so they are in revolt against the mood of his creator. Far from it! He, too, pities Soames, the tragedy of whose life is the very simple, uncontrollable tragedy of being unlovable, without quite a thick enough skin to be thoroughly unconscious of the fact. Not even Fleur loves Soames as he feels he ought to be loved. But in pitying Soames, readers incline, perhaps, to animus against Irene: After all, they think, he wasn't a bad fellow, it wasn't his fault; she ought to have forgiven him, and so on!

And, taking sides, they lose perception of the simple truth, which underlies the whole story, that where sex attraction is utterly and definitely lacking in one partner to a union, no amount of pity, or reason, or duty, or what not, can overcome a repulsion implicit in Nature. Whether it ought to, or no, is beside the point; because in fact it never does. And where Irene seems hard and cruel, as in the Bois de Boulogne, or the Goupenor Gallery, she is but wisely realistic--knowing that the least concession is the inch which precedes the impossible, the repulsive ell.

A criticism one might pass on the last phase of the Saga is the complaint that Irene and Jolyon those rebels against property--claim spiritual property in their son Jon. But it would be hypercriticism, as the tale is told. No father and mother could have let the boy marry Fleur without knowledge of the facts; and the facts determine Jon, not the persuasion of his parents. Moreover, Jolyon's persuasion is not on his own account, but on Irene's, and Irene's persuasion becomes a reiterated: "Don't think of me, think of yourself!" That Jon, knowing the facts, can realise his mother's feelings, will hardly with justice be held proof that she is, after all, a Forsyte.

But though the impingement of Beauty and the claims of Freedom on a possessive world are the main prepossessions of the Forsyte Saga, it cannot be absolved from the charge of embalming the upper-middle class. As the old Egyptians placed around their mummies the necessaries of a future existence, so I have endeavoured to lay beside the, figures of Aunts Ann and Juley and Hester, of Timothy and Swithin, of Old Jolyon and James, and of their sons, that which shall guarantee them a little life here-after, a little balm in the hurried Gilead of a dissolving "Progress."

If the upper-middle class, with other classes, is destined to "move on" into amorphism, here, pickled in these pages, it lies under glass for strollers in the wide and ill-arranged museum of Letters. Here it rests, preserved in its own juice: The Sense of Property. 1922.

THE MAN OF PROPERTY

"..... You will answer The slaves are ours ....."

--Merchant of Venice.

TO EDWARD GARNETT

PART I

CHAPTER I

'AT HOME' AT OLD JOLYON'S

Those privileged to be present at a family festival of the Forsytes have seen that charming and instructive sight--an upper middle-class family in full plumage. But whosoever of these favoured persons has possessed the gift of psychological analysis (a talent without monetary value and properly ignored by the Forsytes), has witnessed a spectacle, not only delightful in itself, but illustrative of an obscure human problem. In plainer words, he has gleaned from a gathering of this family--no branch of which had a liking for the other, between no three members of whom existed anything worthy of the name of sympathy--evidence of that mysterious concrete tenacity which renders a family so formidable a unit of society, so clear a reproduction of society in miniature. He has been admitted to a vision of the dim roads of social progress, has understood something of patriarchal life, of the swarmings of savage hordes, of the rise and fall of nations. He is like one who, having watched a tree grow from its planting--a paragon of tenacity, insulation, and success, amidst the deaths of a hundred other plants less fibrous, sappy, and persistent--one day will see it flourishing with bland, full foliage, in an almost repugnant prosperity, at the summit of its efflorescence.

On June 15, eighteen eighty-six, about four of the afternoon, the observer who chanced to be present at the house of old Jolyon Forsyte in Stanhope Gate, might have seen the highest efflorescence of the Forsytes.

This was the occasion of an 'at home' to celebrate the engagement of Miss June Forsyte, old Jolyon's granddaughter, to Mr. Philip Bosinney. In the bravery of light gloves, buff waistcoats, feathers and frocks, the family were present, even Aunt Ann, who now but seldom left the corner of her brother Timothy's green drawing-room, where, under the aegis of a plume of dyed pampas grass in a light blue vase, she sat all day reading and knitting, surrounded by the effigies of three generations of Forsytes. Even Aunt Ann was there; her inflexible back, and the dignity of her calm old face personifying the rigid possessiveness of the family idea.

When a Forsyte was engaged, married, or born, the Forsytes were present; when a Forsyte died--but no Forsyte had as yet died; they did not die; death being contrary to their principles, they took precautions against it, the instinctive precautions of highly vitalized persons who resent encroachments on their property.

About the Forsytes mingling that day with the crowd of other guests, there was a more than ordinarily groomed look, an alert, inquisitive assurance, a brilliant respectability, as though they were attired in defiance of something. The habitual sniff on the face of Soames Forsyte had spread through their ranks; they were on their guard.

The subconscious offensiveness of their attitude has constituted old Jolyon's 'home' the psychological moment of the family history, made it the prelude of their drama.

The Forsytes were resentful of something, not individually, but as a family; this resentment expressed itself in an added perfection of raiment, an exuberance of family cordiality, an exaggeration of family importance, and--the sniff. Danger--so indispensable in bringing out the fundamental quality of any society, group, or individual--was what the Forsytes scented; the premonition of danger put a burnish on their armour. For the first time, as a family, they appeared to have an instinct of being in contact, with some strange and unsafe thing.

Over against the piano a man of bulk and stature was wearing two waistcoats on his wide chest, two waistcoats and a ruby pin, instead of the single satin waistcoat and diamond pin of more usual occasions, and his shaven, square, old face, the colour of pale leather, with pale eyes, had its most dignified look, above his satin stock. This was Swithin Forsyte. Close to the window, where he could get more than his fair share of fresh air, the other twin, James--the fat and the lean of it, old Jolyon called these brothers--like the bulky Swithin, over six feet in height, but very lean, as though destined from his birth to strike a balance and maintain an average, brooded over the scene with his permanent stoop; his grey eyes had an air of fixed absorption in some secret worry, broken at intervals by a rapid, shifting scrutiny of surrounding facts; his cheeks, thinned by two parallel folds, and a long, clean-shaven upper lip, were framed within Dundreary whiskers. In his hands he turned and turned a piece of china. Not far off, listening to a lady in brown, his only son Soames, pale and well-shaved, dark-haired, rather bald, had poked his chin up sideways, carrying his nose with that aforesaid appearance of 'sniff,' as though despising an egg which he knew he could not digest. Behind him his cousin, the tall George, son of the fifth Forsyte, Roger, had a Quilpish look on his fleshy face, pondering one of his sardonic jests. Something inherent to the occasion had affected them all.

Seated in a row close to one another were three ladies--Aunts Ann, Hester (the two Forsyte maids), and Juley (short for Julia), who not in first youth had so far forgotten herself as to marry Septimus Small, a man of poor constitution. She had survived him for many years. With her elder and younger sister she lived now in the house of Timothy, her sixth and youngest brother, on the Bayswater Road. Each of these ladies held fans in their hands, and each with some touch of colour, some emphatic feather or brooch, testified to the solemnity of the opportunity.

In the centre of the room, under the chandelier, as became a host, stood the head of the family, old Jolyon himself. Eighty years of age, with his fine, white hair, his dome-like forehead, his little, dark grey eyes, and an immense white moustache, which drooped and spread below the level of his strong jaw, he had a patriarchal look, and in spite of lean cheeks and hollows at his temples, seemed master of perennial youth. He held himself extremely upright, and his shrewd, steady eyes had lost none of their clear shining. Thus he gave an impression of superiority to the doubts and dislikes of smaller men. Having had his own way for innumerable years, he had earned a prescriptive right to it. It would never have occurred to old Jolyon that it was necessary to wear a look of doubt or of defiance.

Between him and the four other brothers who were present, James, Swithin, Nicholas, and Roger, there was much difference, much similarity. In turn, each of these four brothers was very different from the other, yet they, too, were alike.

Through the varying features and expression of those five faces could be marked a certain steadfastness of chin, underlying surface distinctions, marking a racial stamp, too prehistoric to trace, too remote and permanent to discuss--the very hall-mark and guarantee of the family fortunes.

Among the younger generation, in the tall, bull-like George, in pallid strenuous Archibald, in young Nicholas with his sweet and tentative obstinacy, in the grave and foppishly determined Eustace, there was this same stamp--less meaningful perhaps, but unmistakable--a sign of something ineradicable in the family soul. At one time or another during the afternoon, all these faces, so dissimilar and so alike, had worn an expression of distrust, the object of which was undoubtedly the man whose acquaintance they were thus assembled to make. Philip Bosinney was known to be a young man without fortune, but Forsyte girls had become engaged to such before, and had actually married them. It was not altogether for this reason, therefore, that the minds of the Forsytes misgave them. They could not have explained the origin of a misgiving obscured by the mist of family gossip. A story was undoubtedly told that he had paid his duty call to Aunts Ann, Juley, and Hester, in a soft grey hat--a soft grey hat, not even a new one--a dusty thing with a shapeless crown. "So, extraordinary, my dear--so odd," Aunt Hester, passing through the little, dark hall (she was rather short-sighted), had tried to 'shoo' it off a chair, taking it for a strange, disreputable cat--Tommy had such disgraceful friends! She was disturbed when it did not move.

Like an artist for ever seeking to discover the significant trifle which embodies the whole character of a scene, or place, or person, so those unconscious artists--the Forsytes had fastened by intuition on this hat; it was their significant trifle, the detail in which was embedded the meaning of the whole matter; for each had asked himself: "Come, now, should I have paid that visit in that hat?" and each had answered "No!" and some, with more imagination than others, had added: "It would never have come into my head!"

George, on hearing the story, grinned. The hat had obviously been worn as a practical joke! He himself was a connoisseur of such. "Very haughty!" he said, "the wild Buccaneer."

And this mot, the 'Buccaneer,' was bandied from mouth to mouth, till it became the favourite mode of alluding to Bosinney.

Her aunts reproached June afterwards about the hat.

"We don't think you ought to let him, dear!" they had said.

June had answered in her imperious brisk way, like the little embodiment of will she was: "Oh! what does it matter? Phil never knows what he's got on!"

No one had credited an answer so outrageous. A man not to know what he had on? No, no! What indeed was this young man, who, in becoming engaged to June, old Jolyon's acknowledged heiress, had done so well for himself? He was an architect, not in itself a sufficient reason for wearing such a hat. None of the Forsytes happened to be architects, but one of them knew two architects who would never have worn such a hat upon a call of ceremony in the London season.

Dangerous--ah, dangerous! June, of course, had not seen this, but, though not yet nineteen, she was notorious. Had she not said to Mrs. Soames--who was always so beautifully dressed--that feathers were vulgar? Mrs. Soames had actually given up wearing feathers, so dreadfully downright was dear June!

These misgivings, this disapproval, and perfectly genuine distrust, did not prevent the Forsytes from gathering to old Jolyon's invitation. An 'At Home' at Stanhope Gate was a great rarity; none had been held for twelve years, not indeed, since old Mrs. Jolyon had died.

Never had there been so full an assembly, for, mysteriously united in spite of all their differences, they had taken arms against a common peril. Like cattle when a dog comes into the field, they stood head to head and shoulder to shoulder, prepared to run upon and trample the invader to death. They had come, too, no doubt, to get some notion of what sort of presents they would ultimately be expected to give; for though the question of wedding gifts was usually graduated in this way: 'What are you givin'? Nicholas is givin' spoons!'--so very much depended on the bridegroom. If he were sleek, well-brushed, prosperous-looking, it was more necessary to give him nice things; he would expect them. In the end each gave exactly what was right and proper, by a species of family adjustment arrived at as prices are arrived at on the Stock Exchange--the exact niceties being regulated at Timothy's commodious, red-brick residence in Bayswater, overlooking the Park, where dwelt Aunts Ann, Juley, and Hester.

The uneasiness of the Forsyte family has been justified by the simple mention of the hat. How impossible and wrong would it have been for any family, with the regard for appearances which should ever characterize the great upper middle-class, to feel otherwise than uneasy!

The author of the uneasiness stood talking to June by the further door; his curly hair had a rumpled appearance, as though he found what was going on around him unusual. He had an air, too, of having a joke all to himself. George, speaking aside to his brother, Eustace, said:

"Looks as if he might make a bolt of it--the dashing Buccaneer!"

This 'very singular-looking man,' as Mrs. Small afterwards called him, was of medium height and strong build, with a pale, brown face, a dust-coloured moustache, very prominent cheek-bones, and hollow checks. His forehead sloped back towards the crown of his head, and bulged out in bumps over the eyes, like foreheads seen in the Lion-house at the Zoo. He had sherry-coloured eyes, disconcertingly inattentive at times. Old Jolyon's coachman, after driving June and Bosinney to the theatre, had remarked to the butler:

"I dunno what to make of 'im. Looks to me for all the world like an 'alf-tame leopard." And every now and then a Forsyte would come up, sidle round, and take a look at him.

June stood in front, fending off this idle curiosity--a little bit of a thing, as somebody once said, 'all hair and spirit,' with fearless blue eyes, a firm jaw, and a bright colour, whose face and body seemed too slender for her crown of red-gold hair.

A tall woman, with a beautiful figure, which some member of the family had once compared to a heathen goddess, stood looking at these two with a shadowy smile.

Her hands, gloved in French grey, were crossed one over the other, her grave, charming face held to one side, and the eyes of all men near were fastened on it. Her figure swayed, so balanced that the very air seemed to set it moving. There was warmth, but little colour, in her cheeks; her large, dark eyes were soft.

But it was at her lips--asking a question, giving an answer, with that shadowy smile--that men looked; they were sensitive lips, sensuous and sweet, and through them seemed to come warmth and perfume like the warmth and perfume of a flower.

The engaged couple thus scrutinized were unconscious of this passive goddess. It was Bosinney who first noticed her, and asked her name.

June took her lover up to the woman with the beautiful figure.

"Irene is my greatest chum," she said: "Please be good friends, you two!"

At the little lady's command they all three smiled; and while they were smiling, Soames Forsyte, silently appearing from behind the woman with the beautiful figure, who was his wife, said:

"Ah! introduce me too!"

He was seldom, indeed, far from Irene's side at public functions, and even when separated by the exigencies of social intercourse, could be seen following her about with his eyes, in which were strange expressions of watchfulness and longing.

At the window his father, James, was still scrutinizing the marks on the piece of china.

"I wonder at Jolyon's allowing this engagement," he said to Aunt Ann. "They tell me there's no chance of their getting married for years. This young Bosinney" (he made the word a dactyl in opposition to general usage of a short o) "has got nothing. When Winifred married Dartie, I made him bring every penny into settlement--lucky thing, too--they'd ha' had nothing by this time!"

Aunt Ann looked up from her velvet chair. Grey curls banded her forehead, curls that, unchanged for decades, had extinguished in the family all sense of time. She made no reply, for she rarely spoke, husbanding her aged voice; but to James, uneasy of conscience, her look was as good as an answer.

"Well," he said, "I couldn't help Irene's having no money. Soames was in such a hurry; he got quite thin dancing attendance on her."

Putting the bowl pettishly down on the piano, he let his eyes wander to the group by the door.

"It's my opinion," he said unexpectedly, "that it's just as well as it is."

Aunt Ann did not ask him to explain this strange utterance. She knew what he was thinking. If Irene had no money she would not be so foolish as to do anything wrong; for they said--they said--she had been asking for a separate room; but, of course, Soames had not....

James interrupted her reverie:

"But where," he asked, "was Timothy? Hadn't he come with them?"

Through Aunt Ann's compressed lips a tender smile forced its way:

"No, he didn't think it wise, with so much of this diphtheria about; and he so liable to take things."

James answered:

"Well, HE takes good care of himself. I can't afford to take the care of myself that he does."

Nor was it easy to say which, of admiration, envy, or contempt, was dominant in that remark.

Timothy, indeed, was seldom seen. The baby of the family, a publisher by profession, he had some years before, when business was at full tide, scented out the stagnation which, indeed, had not yet come, but which ultimately, as all agreed, was bound to set in, and, selling his share in a firm engaged mainly in the production of religious books, had invested the quite conspicuous proceeds in three per cent. consols. By this act he had at once assumed an isolated position, no other Forsyte being content with less than four per cent. for his money; and this isolation had slowly and surely undermined a spirit perhaps better than commonly endowed with caution. He had become almost a myth--a kind of incarnation of security haunting the background of the Forsyte universe. He had never committed the imprudence of marrying, or encumbering himself in any way with children.

James resumed, tapping the piece of china:

"This isn't real old Worcester. I s'pose Jolyon's told you something about the young man. From all I can learn, he's got no business, no income, and no connection worth speaking of; but then, I know nothing--nobody tells me anything."

Aunt Ann shook her head. Over her square-chinned, aquiline old face a trembling passed; the spidery fingers of her hands pressed against each other and interlaced, as though she were subtly recharging her will.

The eldest by some years of all the Forsytes, she held a peculiar position amongst them. Opportunists and egotists one and all--though not, indeed, more so than their neighbours--they quailed before her incorruptible figure, and, when opportunities were too strong, what could they do but avoid her!

Twisting his long, thin legs, James went on:

"Jolyon, he will have his own way. He's got no children"--and stopped, recollecting the continued existence of old Jolyon's son, young Jolyon, June's father, who had made such a mess of it, and done for himself by deserting his wife and child and running away with that foreign governess. "Well," he resumed hastily, "if he likes to do these things, I s'pose he can afford to. Now, what's he going to give her? I s'pose he'll give her a thousand a year; he's got nobody else to leave his money to."

He stretched out his hand to meet that of a dapper, clean-shaven man, with hardly a hair on his head, a long, broken nose, full lips, and cold grey eyes under rectangular brows.

"Well, Nick," he muttered, "how are you?"

Nicholas Forsyte, with his bird-like rapidity and the look of a preternaturally sage schoolboy (he had made a large fortune, quite legitimately, out of the companies of which he was a director), placed within that cold palm the tips of his still colder fingers and hastily withdrew them.

"I'm bad," he said, pouting--"been bad all the week; don't sleep at night. The doctor can't tell why. He's a clever fellow, or I shouldn't have him, but I get nothing out of him but bills."

"Doctors!" said James, coming down sharp on his words: "I've had all the doctors in London for one or another of us. There's no satisfaction to be got out of them; they'll tell you anything. There's Swithin, now. What good have they done him? There he is; he's bigger than ever; he's enormous; they can't get his weight down. Look at him!"

Swithin Forsyte, tall, square, and broad, with a chest like a pouter pigeon's in its plumage of bright waistcoats, came strutting towards them.

"Er--how are you?" he said in his dandified way, aspirating the 'h' strongly (this difficult letter was almost absolutely safe in his keeping)--"how are you?"

Each brother wore an air of aggravation as he looked at the other two, knowing by experience that they would try to eclipse his ailments.

"We were just saying," said James, "that you don't get any thinner."

Swithin protruded his pale round eyes with the effort of hearing.

"Thinner? I'm in good case," he said, leaning a little forward, "not one of your thread-papers like you!"

But, afraid of losing the expansion of his chest, he leaned back again into a state of immobility, for he prized nothing so highly as a distinguished appearance.

Aunt Ann turned her old eyes from one to the other. Indulgent and severe was her look. In turn the three brothers looked at Ann. She was getting shaky. Wonderful woman! Eighty-six if a day; might live another ten years, and had never been strong. Swithin and James, the twins, were only seventy-five, Nicholas a mere baby of seventy or so. All were strong, and the inference was comforting. Of all forms of property their respective healths naturally concerned them most.

"I'm very well in myself," proceeded James, "but my nerves are out of order. The least thing worries me to death. I shall have to go to Bath."

"Bath!" said Nicholas. "I've tried Harrogate. That's no good. What I want is sea air. There's nothing like Yarmouth. Now, when I go there I sleep...."

"My liver's very bad," interrupted Swithin slowly. "Dreadful pain here;" and he placed his hand on his right side.

"Want of exercise," muttered James, his eyes on the china. He quickly added: "I get a pain there, too."

Swithin reddened, a resemblance to a turkey-cock coming upon his old face.

"Exercise!" he said. "I take plenty: I never use the lift at the Club."

"I didn't know," James hurried out. "I know nothing about anybody; nobody tells me anything...."

Swithin fixed him with a stare:

"What do you do for a pain there?"

James brightened.

"I take a compound...."

"How are you, uncle?"

June stood before him, her resolute small face raised from her little height to his great height, and her hand outheld.

The brightness faded from James's visage.

"How are you?" he said, brooding over her. "So you're going to Wales to-morrow to visit your young man's aunts? You'll have a lot of rain there. This isn't real old Worcester." He tapped the bowl. "Now, that set I gave your mother when she married was the genuine thing."

June shook hands one by one with her three great-uncles, and turned to Aunt Ann. A very sweet look had come into the old lady's face, she kissed the girl's check with trembling fervour.

"Well, my dear," she said, "and so you're going for a whole month!"

The girl passed on, and Aunt Ann looked after her slim little figure. The old lady's round, steel grey eyes, over which a film like a bird's was beginning to come, followed her wistfully amongst the bustling crowd, for people were beginning to say good-bye; and her finger-tips, pressing and pressing against each other, were busy again with the recharging of her will against that inevitable ultimate departure of her own.

'Yes,' she thought, 'everybody's been most kind; quite a lot of people come to congratulate her. She ought to be very happy.' Amongst the throng of people by the door, the well-dressed throng drawn from the families of lawyers and doctors, from the Stock Exchange, and all the innumerable avocations of the upper-middle class--there were only some twenty percent of Forsytes; but to Aunt Ann they seemed all Forsytes--and certainly there was not much difference--she saw only her own flesh and blood. It was her world, this family, and she knew no other, had never perhaps known any other. All their little secrets, illnesses, engagements, and marriages, how they were getting on, and whether they were making money--all this was her property, her delight, her life; beyond this only a vague, shadowy mist of facts and persons of no real significance. This it was that she would have to lay down when it came to her turn to die; this which gave to her that importance, that secret self-importance, without which none of us can bear to live; and to this she clung wistfully, with a greed that grew each day! If life were slipping away from her, this she would retain to the end.

She thought of June's father, young Jolyon, who had run away with that foreign girl. And what a sad blow to his father and to them all. Such a promising young fellow! A sad blow, though there had been no public scandal, most fortunately, Jo's wife seeking for no divorce! A long time ago! And when June's mother died, six years ago, Jo had married that woman, and they had two children now, so she had heard. Still, he had forfeited his right to be there, had cheated her of the complete fulfilment of her family pride, deprived her of the rightful pleasure of seeing and kissing him of whom she had been so proud, such a promising young fellow! The thought rankled with the bitterness of a long-inflicted injury in her tenacious old heart. A little water stood in her eyes. With a handkerchief of the finest lawn she wiped them stealthily.

"Well, Aunt Ann?" said a voice behind.

Soames Forsyte, flat-shouldered, clean-shaven, flat-cheeked, flat-waisted, yet with something round and secret about his whole appearance, looked downwards and aslant at Aunt Ann, as though trying to see through the side of his own nose.

"And what do you think of the engagement?" he asked.

Aunt Ann's eyes rested on him proudly; of all the nephews since young Jolyon's departure from the family nest, he was now her favourite, for she recognised in him a sure trustee of the family soul that must so soon slip beyond her keeping.

"Very nice for the young man," she said; "and he's a good-looking young fellow; but I doubt if he's quite the right lover for dear June."

Soames touched the edge of a gold-lacquered lustre.

"She'll tame him," he said, stealthily wetting his finger and rubbing it on the knobby bulbs. "That's genuine old lacquer; you can't get it nowadays. It'd do well in a sale at Jobson's." He spoke with relish, as though he felt that he was cheering up his old aunt. It was seldom he was so confidential. "I wouldn't mind having it myself," he added; "you can always get your price for old lacquer."

"You're so clever with all those things," said Aunt Ann. "And how is dear Irene?"

Soames's smile died.

"Pretty well," he said. "Complains she can't sleep; she sleeps a great deal better than I do," and he looked at his wife, who was talking to Bosinney by the door.

Aunt Ann sighed.

"Perhaps," she said, "it will be just as well for her not to see so much of June. She's such a decided character, dear June!"

Soames flushed; his flushes passed rapidly over his flat cheeks and centered between his eyes, where they remained, the stamp of disturbing thoughts.

"I don't know what she sees in that little flibbertigibbet," he burst out, but noticing that they were no longer alone, he turned and again began examining the lustre.

"They tell me Jolyon's bought another house," said his father's voice close by; "he must have a lot of money--he must have more money than he knows what to do with! Montpellier Square, they say; close to Soames! They never told me, Irene never tells me anything!"

"Capital position, not two minutes from me," said the voice of Swithin, "and from my rooms I can drive to the Club in eight."

The position of their houses was of vital importance to the Forsytes, nor was this remarkable, since the whole spirit of their success was embodied therein.

Their father, of farming stock, had come from Dorsetshire near the beginning of the century.

'Superior Dosset Forsyte, as he was called by his intimates, had been a stonemason by trade, and risen to the position of a master-builder.

Towards the end of his life he moved to London, where, building on until he died, he was buried at Highgate. He left over thirty thousand pounds between his ten children. Old Jolyon alluded to him, if at all, as 'A hard, thick sort of man; not much refinement about him.' The second generation of Forsytes felt indeed that he was not greatly to their credit. The only aristocratic trait they could find in his character was a habit of drinking Madeira.

Aunt Hester, an authority on family history, described him thus: "I don't recollect that he ever did anything; at least, not in my time. He was er--an owner of houses, my dear. His hair about your Uncle Swithin's colour; rather a square build. Tall? No--not very tall" (he had been five feet five, with a mottled face); "a fresh-coloured man. I remember he used to drink Madeira; but ask your Aunt Ann. What was his father? He--er--had to do with the land down in Dorsetshire, by the sea."

James once went down to see for himself what sort of place this was that they had come from. He found two old farms, with a cart track rutted into the pink earth, leading down to a mill by the beach; a little grey church with a buttressed outer wall, and a smaller and greyer chapel. The stream which worked the mill came bubbling down in a dozen rivulets, and pigs were hunting round that estuary. A haze hovered over the prospect. Down this hollow, with their feet deep in the mud and their faces towards the sea, it appeared that the primeval Forsytes had been content to walk Sunday after Sunday for hundreds of years.

Whether or no James had cherished hopes of an inheritance, or of something rather distinguished to be found down there, he came back to town in a poor way, and went about with a pathetic attempt at making the best of a bad job.

"There's very little to be had out of that," he said; "regular country little place, old as the hills...."

Its age was felt to be a comfort. Old Jolyon, in whom a desperate honesty welled up at times, would allude to his ancestors as: "Yeomen--I suppose very small beer." Yet he would repeat the word 'yeomen' as if it afforded him consolation.

They had all done so well for themselves, these Forsytes, that they were all what is called 'of a certain position.' They had shares in all sorts of things, not as yet--with the exception of Timothy--in consols, for they had no dread in life like that of 3 per cent. for their money. They collected pictures, too, and were supporters of such charitable institutions as might be beneficial to their sick domestics. From their father, the builder, they inherited a talent for bricks and mortar. Originally, perhaps, members of some primitive sect, they were now in the natural course of things members of the Church of England, and caused their wives and children to attend with some regularity the more fashionable churches of the Metropolis. To have doubted their Christianity would have caused them both pain and surprise. Some of them paid for pews, thus expressing in the most practical form their sympathy with the teachings of Christ.

Their residences, placed at stated intervals round the park, watched like sentinels, lest the fair heart of this London, where their desires were fixed, should slip from their clutches, and leave them lower in their own estimations.

There was old Jolyon in Stanhope Place; the Jameses in Park Lane; Swithin in the lonely glory of orange and blue chambers in Hyde Park Mansions--he had never married, not he--the Soamses in their nest off Knightsbridge; the Rogers in Prince's Gardens (Roger was that remarkable Forsyte who had conceived and carried out the notion of bringing up his four sons to a new profession. "Collect house property, nothing like it," he would say; "I never did anything else").

The Haymans again--Mrs. Hayman was the one married Forsyte sister--in a house high up on Campden Hill, shaped like a giraffe, and so tall that it gave the observer a crick in the neck; the Nicholases in Ladbroke Grove, a spacious abode and a great bargain; and last, but not least, Timothy's on the Bayswater Road, where Ann, and Juley, and Hester, lived under his protection.

But all this time James was musing, and now he inquired of his host and brother what he had given for that house in Montpellier Square. He himself had had his eye on a house there for the last two years, but they wanted such a price.

Old Jolyon recounted the details of his purchase.

"Twenty-two years to run?" repeated James; "The very house I was after--you've given too much for it!"

Old Jolyon frowned.

"It's not that I want it," said James hastily; it wouldn't suit my purpose at that price. Soames knows the house, well--he'll tell you it's too dear--his opinion's worth having."

"I don't," said old Jolyon, "care a fig for his opinion."

"Well," murmured James, "you will have your own way--it's a good opinion. Good-bye! We're going to drive down to Hurlingham. They tell me June's going to Wales. You'll be lonely tomorrow. What'll you do with yourself? You'd better come and dine with us!"

Old Jolyon refused. He went down to the front door and saw them into their barouche, and twinkled at them, having already forgotten his spleen--Mrs. James facing the horses, tall and majestic with auburn hair; on her left, Irene--the two husbands, father and son, sitting forward, as though they expected something, opposite their wives. Bobbing and bounding upon the spring cushions, silent, swaying to each motion of their chariot, old Jolyon watched them drive away under the sunlight.

During the drive the silence was broken by Mrs. James.

"Did you ever see such a collection of rumty-too people?"

Soames, glancing at her beneath his eyelids, nodded, and he saw Irene steal at him one of her unfathomable looks. It is likely enough that each branch of the Forsyte family made that remark as they drove away from old Jolyon's 'At Home!'

Amongst the last of the departing guests the fourth and fifth brothers, Nicholas and Roger, walked away together, directing their steps alongside Hyde Park towards the Praed Street Station of the Underground. Like all other Forsytes of a certain age they kept carriages of their own, and never took cabs if by any means they could avoid it.

The day was bright, the trees of the Park in the full beauty of mid-June foliage; the brothers did not seem to notice phenomena, which contributed, nevertheless, to the jauntiness of promenade and conversation.

"Yes," said Roger, "she's a good-lookin' woman, that wife of Soames's. I'm told they don't get on."

This brother had a high forehead, and the freshest colour of any of the Forsytes; his light grey eyes measured the street frontage of the houses by the way, and now and then he would level his, umbrella and take a 'lunar,' as he expressed it, of the varying heights.

"She'd no money," replied Nicholas.

He himself had married a good deal of money, of which, it being then the golden age before the Married Women's Property Act, he had mercifully been enabled to make a successful use.

"What was her father?"

"Heron was his name, a Professor, so they tell me."

Roger shook his head.

"There's no money in that," he said.

"They say her mother's father was cement."

Roger's face brightened.

"But he went bankrupt," went on Nicholas.

"Ah!" exclaimed Roger, "Soames will have trouble with her; you mark my words, he'll have trouble--she's got a foreign look."

Nicholas licked his lips.

"She's a pretty woman," and he waved aside a crossing-sweeper.

"How did he get hold of her?" asked Roger presently. "She must cost him a pretty penny in dress!"

"Ann tells me," replied Nicholas, "he was half-cracked about her. She refused him five times. James, he's nervous about it, I can see."

"Ah!" said Roger again; "I'm sorry for James; he had trouble with Dartie." His pleasant colour was heightened by exercise, he swung his umbrella to the level of his eye more frequently than ever. Nicholas's face also wore a pleasant look.

"Too pale for me," he said, "but her figures capital!"

Roger made no reply.

"I call her distinguished-looking," he said at last--it was the highest praise in the Forsyte vocabulary. "That young Bosinney will never do any good for himself. They say at Burkitt's he's one of these artistic chaps--got an idea of improving English architecture; there's no money in that! I should like to hear what Timothy would say to it."

They entered the station.

"What class are you going? I go second."

"No second for me," said Nicholas;--"you never know what you may catch."

He took a first-class ticket to Notting Hill Gate; Roger a second to South Kensington. The train coming in a minute later, the two brothers parted and entered their respective compartments. Each felt aggrieved that the other had not modified his habits to secure his society a little longer; but as Roger voiced it in his thoughts:

'Always a stubborn beggar, Nick!'

And as Nicholas expressed it to himself:

'Cantankerous chap Roger--always was!'

There was little sentimentality about the Forsytes. In that great London, which they had conquered and become merged in, what time had they to be sentimental?

CHAPTER II

OLD JOLYON GOES TO THE OPERA

At five o'clock the following day old Jolyon sat alone, a cigar between his lips, and on a table by his side a cup of tea. He was tired, and before he had finished his cigar he fell asleep. A fly settled on his hair, his breathing sounded heavy in the drowsy silence, his upper lip under the white moustache puffed in and out. From between the fingers of his veined and wrinkled hand the cigar, dropping on the empty hearth, burned itself out.

The gloomy little study, with windows of stained glass to exclude the view, was full of dark green velvet and heavily-carved mahogany--a suite of which old Jolyon was wont to say: 'Shouldn't wonder if it made a big price some day!'

It was pleasant to think that in the after life he could get more for things than he had given.

In the rich brown atmosphere peculiar to back rooms in the mansion of a Forsyte, the Rembrandtesque effect of his great head, with its white hair, against the cushion of his high-backed seat, was spoiled by the moustache, which imparted a somewhat military look to his face. An old clock that had been with him since before his marriage forty years ago kept with its ticking a jealous record of the seconds slipping away forever from its old master.

He had never cared for this room, hardly going into it from one year's end to another, except to take cigars from the Japanese cabinet in the corner, and the room now had its revenge.

His temples, curving like thatches over the hollows beneath, his cheek-bones and chin, all were sharpened in his sleep, and there had come upon his face the confession that he was an old man.

He woke. June had gone! James had said he would be lonely. James had always been a poor thing. He recollected with satisfaction that he had bought that house over James's head.

Serve him right for sticking at the price; the only thing the fellow thought of was money. Had he given too much, though? It wanted a lot of doing to--He dared say he would want all his money before he had done with this affair of June's. He ought never to have allowed the engagement. She had met this Bosinney at the house of Baynes, Baynes and Bildeboy, the architects. He believed that Baynes, whom he knew--a bit of an old woman--was the young man's uncle by marriage. After that she'd been always running after him; and when she took a thing into her head there was no stopping her. She was continually taking up with 'lame ducks' of one sort or another. This fellow had no money, but she must needs become engaged to him--a harumscarum, unpractical chap, who would get himself into no end of difficulties.

She had come to him one day in her slap-dash way and told him; and, as if it were any consolation, she had added:

"He's so splendid; he's often lived on cocoa for a week!"

"And he wants you to live on cocoa too?"

"Oh no; he is getting into the swim now."

Old Jolyon had taken his cigar from under his white moustaches, stained by coffee at the edge, and looked at her, that little slip of a thing who had got such a grip of his heart. He knew more about 'swims' than his granddaughter. But she, having clasped her hands on his knees, rubbed her chin against him, making a sound like a purring cat. And, knocking the ash off his cigar, he had exploded

in nervous desperation:

"You're all alike: you won't be satisfied till you've got what you want. If you must come to grief, you must; I wash my hands of it."

So, he had washed his hands of it, making the condition that they should not marry until Bosinney had at least four hundred a year.

"I shan't be able to give you very much," he had said, a formula to which June was not unaccustomed. "Perhaps this What's-his-name will provide the cocoa."

He had hardly seen anything of her since it began. A bad business! He had no notion of giving her a lot of money to enable a fellow he knew nothing about to live on in idleness. He had seen that sort of thing before; no good ever came of it. Worst of all, he had no hope of shaking her resolution; she was as obstinate as a mule, always had been from a child. He didn't see where it was to end. They must cut their coat according to their cloth. He would not give way till he saw young Bosinney with an income of his own. That June would have trouble with the fellow was as plain as a pikestaff; he had no more idea of money than a cow. As to this rushing down to Wales to visit the young man's aunts, he fully expected they were old cats.

And, motionless, old Jolyon stared at the wall; but for his open eyes, he might have been asleep.... The idea of supposing that young cub Soames could give him advice! He had always been a cub, with his nose in the air! He would be setting up as a man of property next, with a place in the country! A man of property! H'mph! Like his father, he was always nosing out bargains, a cold-blooded young beggar!

He rose, and, going to the cabinet, began methodically stocking his cigar-case from a bundle fresh in. They were not bad at the price, but you couldn't get a good cigar, nowadays, nothing to hold a candle to those old Superfinos of Hanson and Bridger's. That was a cigar!

The thought, like some stealing perfume, carried him back to those wonderful nights at Richmond when after dinner he sat smoking on the terrace of the Crown and Sceptre with Nicholas Treffry and Traquair and Jack Herring and Anthony Thornworthy. How good his cigars were then! Poor old Nick!--dead, and Jack Herring--dead, and Traquair--dead of that wife of his, and Thornworthy--awfully shaky (no wonder, with his appetite).

Of all the company of those days he himself alone seemed left, except Swithin, of course, and he so outrageously big there was no doing anything with him.

Difficult to believe it was so long ago; he felt young still! Of all his thoughts, as he stood there counting his cigars, this was the most poignant, the most bitter. With his white head and his loneliness he had remained young and green at heart. And those Sunday afternoons on Hampstead Heath, when young Jolyon and he went for a stretch along the Spaniard's Road to Highgate, to Child's Hill, and back over the Heath again to dine at Jack Straw's Castle--how delicious his cigars were then! And such weather! There was no weather now.

When June was a toddler of five, and every other Sunday he took her to the Zoo, away from the society of those two good women, her mother and her grandmother, and at the top of the bear den baited his umbrella with buns for her favourite bears, how sweet his cigars were then!

Cigars! He had not even succeeded in out-living his palate--the famous palate that in the fifties men swore by, and speaking of him, said: "Forsyte's the best palate in London!" The palate that in a sense had made his fortune--the fortune of the celebrated tea men, Forsyte and Treffry, whose tea, like no other man's tea, had a romantic aroma, the charm of a quite singular genuineness. About the house of Forsyte and Treffry in the City had clung an air of enterprise and mystery, of special dealings in special ships, at special ports, with special Orientals.

He had worked at that business! Men did work in those days! these young pups hardly knew the meaning of the word. He had gone into every detail, known everything that went on, sometimes sat up all night over it. And he had always chosen his agents himself, prided himself on it. His eye for men, he used to say, had been the secret of his success, and the exercise of this masterful power of selection had been the only part of it all that he had really liked. Not a career for a man of his ability. Even now, when the business had been turned into a Limited Liability Company, and was declining (he had got out of his shares long ago), he felt a sharp chagrin in thinking of that time. How much better he might have done! He would have succeeded splendidly at the Bar! He had even thought of standing for Parliament. How often had not Nicholas Treffry said to him:

"You could do anything, Jo, if you weren't so d-damned careful of yourself!" Dear old Nick! Such a good fellow, but a racketty chap! The notorious Treffry! He had never taken any care of himself. So he was dead. Old Jolyon counted his cigars with a steady hand, and it came into his mind to wonder if perhaps he had been too careful of himself.

He put the cigar-case in the breast of his coat, buttoned it in, and walked up the long flights to his bedroom, leaning on one foot and the other, and helping himself by the bannister. The house was too big. After June was married, if she ever did marry this fellow, as he supposed she would, he would let it and go into rooms. What was the use of keeping half a dozen servants eating their heads off?

The butler came to the ring of his bell--a large man with a beard, a soft tread, and a peculiar capacity for silence. Old Jolyon told him to put his dress clothes out; he was going to dine at the Club.

How long had the carriage been back from taking Miss June to the station? Since two? Then let him come round at half-past six!

The Club which old Jolyon entered on the stroke of seven was one of those political institutions of the upper middle class which have seen better days. In spite of being talked about, perhaps in consequence of being talked about, it betrayed a disappointing vitality. People had grown tired of saying that the 'Disunion' was on its last legs. Old Jolyon would say it, too, yet disregarded the fact in a manner truly irritating to well-constituted Clubmen.

"Why do you keep your name on?" Swithin often asked him with profound vexation. "Why don't you join the 'Polyglot'? You can't get a wine like our Heidsieck under twenty shillin' a bottle anywhere in London;" and, dropping his voice, he added: "There's only five hundred dozen left. I drink it every night of my life."

"I'll think of it," old Jolyon would answer; but when he did think of it there was always the question of fifty guineas entrance fee, and it would take him four or five years to get in. He continued to think of it.

He was too old to be a Liberal, had long ceased to believe in the political doctrines of his Club, had even been known to allude to them as 'wretched stuff,' and it afforded him pleasure to continue a member in the teeth of principles so opposed to his own. He had always had a contempt for the place, having joined it many years ago when they refused to have him at the 'Hotch Potch' owing to his being 'in trade.' As if he were not as good as any of them! He naturally despised the Club that did take him. The members were a poor lot, many of them in the City --stockbrokers, solicitors, auctioneers--what not! Like most men of strong character but not too much originality, old Jolyon set small store by the class to which he belonged. Faithfully he followed their customs, social and otherwise, and secretly he thought them 'a common lot.'

Years and philosophy, of which he had his share, had dimmed the recollection of his defeat at the 'Hotch Potch'; and now in his thoughts it was enshrined as the Queen of Clubs. He would have been a member all these years himself, but, owing to the slipshod way his proposer, Jack Herring, had gone to work, they had not known what they were doing in keeping him out. Why! they had taken his son Jo at once, and he believed the boy was still a member; he had received a letter dated from there eight years ago.

He had not been near the 'Disunion' for months, and the house had undergone the piebald decoration which people bestow on old houses and old ships when anxious to sell them.

'Beastly colour, the smoking-room!' he thought. 'The dining-room is good!'

Its gloomy chocolate, picked out with light green, took his fancy.

He ordered dinner, and sat down in the very corner, at the very table perhaps! (things did not progress much at the 'Disunion,' a Club of almost Radical principles) at which he and young Jolyon used to sit twenty-five years ago, when he was taking the latter to Drury Lane, during his holidays.

The boy had loved the theatre, and old Jolyon recalled how he used to sit opposite, concealing his excitement under a careful but transparent nonchalance.

He ordered himself, too, the very dinner the boy had always chosen-soup, whitebait, cutlets, and a tart. Ah! if he were only opposite now!

The two had not met for fourteen years. And not for the first time during those fourteen years old Jolyon wondered whether he had been a little to blame in the matter of his son. An unfortunate love-affair with that precious flirt Danae Thornworthy (now Danae

Pellew), Anthony Thornworthy's daughter, had thrown him on the rebound into the arms of June's mother. He ought perhaps to have put a spoke in the wheel of their marriage; they were too young; but after that experience of Jo's susceptibility he had been only too anxious to see him married. And in four years the crash had come! To have approved his son's conduct in that crash was, of course, impossible; reason and training--that combination of potent factors which stood for his principles--told him of this impossibility, and his heart cried out. The grim remorselessness of that business had no pity for hearts. There was June, the atom with flaming hair, who had climbed all over him, twined and twisted herself about him--about his heart that was made to be the plaything and beloved resort of tiny, helpless things. With characteristic insight he saw he must part with one or with the other; no half-measures could serve in such a situation. In that lay its tragedy. And the tiny, helpless thing prevailed. He would not run with the hare and hunt with the hounds, and so to his son he said good-bye.

That good-bye had lasted until now.

He had proposed to continue a reduced allowance to young Jolyon, but this had been refused, and perhaps that refusal had hurt him more than anything, for with it had gone the last outlet of his penned-in affection; and there had come such tangible and solid proof of rupture as only a transaction in property, a bestowal or refusal of such, could supply.

His dinner tasted flat. His pint of champagne was dry and bitter stuff, not like the Veuve Clicquots of old days.

Over his cup of coffee, he bethought him that he would go to the opera. In the Times, therefore--he had a distrust of other papers--he read the announcement for the evening. It was 'Fidelio.'

Mercifully not one of those new-fangled German pantomimes by that fellow Wagner.

Putting on his ancient opera hat, which, with its brim flattened by use, and huge capacity, looked like an emblem of greater days, and, pulling out an old pair of very thin lavender kid gloves smelling strongly of Russia leather, from habitual proximity to the cigar-case in the pocket of his overcoat, he stepped into a hansom.

The cab rattled gaily along the streets, and old Jolyon was struck by their unwonted animation.

'The hotels must be doing a tremendous business,' he thought. A few years ago there had been none of these big hotels. He made a satisfactory reflection on some property he had in the neighbourhood. It must be going up in value by leaps and bounds! What traffic!

But from that he began indulging in one of those strange impersonal speculations, so uncharacteristic of a Forsyte, wherein lay, in part, the secret of his supremacy amongst them. What atoms men were, and what a lot of them! And what would become of them all?

He stumbled as he got out of the cab, gave the man his exact fare, walked up to the ticket office to take his stall, and stood there with his purse in his hand--he always carried his money in a purse, never having approved of that habit of carrying it loosely in the pockets, as so many young men did nowadays. The official leaned out, like an old dog from a kennel.

"Why," he said in a surprised voice, "it's Mr. Jolyon Forsyte! So it is! Haven't seen you, sir, for years. Dear me! Times aren't what they were. Why! you and your brother, and that auctioneer--Mr. Traquair, and Mr. Nicholas Treffry--you used to have six or seven stalls here regular every season. And how are you, sir? We don't get younger!"

The colour in old Jolyon's eyes deepened; he paid his guinea. They had not forgotten him. He marched in, to the sounds of the overture, like an old war-horse to battle.

Folding his opera hat, he sat down, drew out his lavender gloves in the old way, and took up his glasses for a long look round the house. Dropping them at last on his folded hat, he fixed his eyes on the curtain. More poignantly than ever he felt that it was all over and done with him. Where were all the women, the pretty women, the house used to be so full of? Where was that old feeling in the heart as he waited for one of those great singers? Where that sensation of the intoxication of life and of his own power to enjoy it all?

The greatest opera-goer of his day! There was no opera now! That fellow Wagner had ruined everything; no melody left, nor any voices to sing it. Ah! the wonderful singers! Gone! He sat watching the old scenes acted, a numb feeling at his heart.

From the curl of silver over his ear to the pose of his foot in its elastic-sided patent boot, there was nothing clumsy or weak about old Jolyon. He was as upright--very nearly--as in those old times when he came every night; his sight was as good--almost as good. But what a feeling of weariness and disillusion!

He had been in the habit all his life of enjoying things, even imperfect things--and there had been many imperfect things--he had enjoyed them all with moderation, so as to keep himself young. But now he was deserted by his power of enjoyment, by his philosophy, and left with this dreadful feeling that it was all done with. Not even the Prisoners' Chorus, nor Florian's Song, had the power to dispel the gloom of his loneliness.

If Jo were only with him! The boy must be forty by now. He had wasted fourteen years out of the life of his only son. And Jo was no longer a social pariah. He was married. Old Jolyon had been unable to refrain from marking his appreciation of the action by enclosing his son a cheque for L500. The cheque had been returned in a letter from the 'Hotch Potch,' couched in these words.

'MY DEAREST FATHER,

'Your generous gift was welcome as a sign that you might think worse of me. I return it, but should you think fit to invest it for the benefit of the little chap (we call him Jolly), who bears our Christian and, by courtesy, our surname, I shall be very glad.

'I hope with all my heart that your health is as good as ever.

'Your loving son,

'Jo.'

The letter was like the boy. He had always been an amiable chap. Old Jolyon had sent this reply:

'MY DEAR JO,

'The sum (L500) stands in my books for the benefit of your boy, under the name of Jolyon Forsyte, and will be duly-credited with interest at 5 per cent. I hope that you are doing well. My health remains good at present.

'With love, I am, 'Your affectionate Father, 'JOLYON FORSYTE.'

And every year on the 1st of January he had added a hundred and the interest. The sum was mounting up--next New Year's Day it would be fifteen hundred and odd pounds! And it is difficult to say how much satisfaction he had got out of that yearly transaction. But the correspondence had ended.

In spite of his love for his son, in spite of an instinct, partly constitutional, partly the result, as in thousands of his class, of the continual handling and watching of affairs, prompting him to judge conduct by results rather than by principle, there was at the bottom of his heart a sort of uneasiness. His son ought, under the circumstances, to have gone to the dogs; that law was laid down in all the novels, sermons, and plays he had ever read, heard, or witnessed.

After receiving the cheque back there seemed to him to be something wrong somewhere. Why had his son not gone to the dogs? But, then, who could tell?

He had heard, of course--in fact, he had made it his business to find out--that Jo lived in St. John's Wood, that he had a little house in Wistaria Avenue with a garden, and took his wife about with him into society--a queer sort of society, no doubt--and that they had two children--the little chap they called Jolly (considering the circumstances the name struck him as cynical, and old Jolyon both feared and disliked cynicism), and a girl called Holly, born since the marriage. Who could tell what his son's circumstances really were? He had capitalized the income he had inherited from his mother's father and joined Lloyd's as an underwriter; he painted pictures, too--water-colours. Old Jolyon knew this, for he had surreptitiously bought them from time to time, after chancing to see his son's name signed at the bottom of a representation of the river Thames in a dealer's window. He thought them bad, and did not hang them because of the signature; he kept them locked up in a drawer.

In the great opera-house a terrible yearning came on him to see his son. He remembered the days when he had been wont to slide him, in a brown holland suit, to and fro under the arch of his legs; the times when he ran beside the boy's pony, teaching him to ride; the day he first took him to school. He had been a loving, lovable little chap! After he went to Eton he had acquired, perhaps, a little too much of that desirable manner which old Jolyon knew was only to be obtained at such places and at great expense; but he had always been companionable. Always a companion, even after Cambridge--a little far off, perhaps, owing to the advantages he

had received. Old Jolyon's feeling towards our public schools and 'Varsities never wavered, and he retained touchingly his attitude of admiration and mistrust towards a system appropriate to the highest in the land, of which he had not himself been privileged to partake.... Now that June had gone and left, or as good as left him, it would have been a comfort to see his son again. Guilty of this treason to his family, his principles, his class, old Jolyon fixed his eyes on the singer. A poor thing--a wretched poor thing! And the Florian a perfect stick!

It was over. They were easily pleased nowadays!

In the crowded street he snapped up a cab under the very nose of a stout and much younger gentleman, who had already assumed it to be his own. His route lay through Pall Mall, and at the corner, instead of going through the Green Park, the cabman turned to drive up St. James's Street. Old Jolyon put his hand through the trap (he could not bear being taken out of his way); in turning, however, he found himself opposite the 'Hotch Potch,' and the yearning that had been secretly with him the whole evening prevailed. He called to the driver to stop. He would go in and ask if Jo still belonged there.

He went in. The hall looked exactly as it did when he used to dine there with Jack Herring, and they had the best cook in London; and he looked round with the shrewd, straight glance that had caused him all his life to be better served than most men.

"Mr. Jolyon Forsyte still a member here?"

"Yes, sir; in the Club now, sir. What name?"

Old Jolyon was taken aback.

"His father," he said.

And having spoken, he took his stand, back to the fireplace.

Young Jolyon, on the point of leaving the Club, had put on his hat, and was in the act of crossing the hall, as the porter met him. He was no longer young, with hair going grey, and face--a narrower replica of his father's, with the same large drooping moustache--decidedly worn. He turned pale. This meeting was terrible after all those years, for nothing in the world was so terrible as a scene. They met and crossed hands without a word. Then, with a quaver in his voice, the father said:

"How are you, my boy?"

The son answered:

"How are you, Dad?"

Old Jolyon's hand trembled in its thin lavender glove.

"If you're going my way," he said, "I can give you a lift."

And as though in the habit of taking each other home every night they went out and stepped into the cab.

To old Jolyon it seemed that his son had grown. 'More of a man altogether,' was his comment. Over the natural amiability of that son's face had come a rather sardonic mask, as though he had found in the circumstances of his life the necessity for armour. The features were certainly those of a Forsyte, but the expression was more the introspective look of a student or philosopher. He had no doubt been obliged to look into himself a good deal in the course of those fifteen years.

To young Jolyon the first sight of his father was undoubtedly a shock--he looked so worn and old. But in the cab he seemed hardly to have changed, still having the calm look so well remembered, still being upright and keen-eyed.

"You look well, Dad."

"Middling," old Jolyon answered.

He was the prey of an anxiety that he found he must put into words. Having got his son back like this, he felt he must know what was his financial position.

"Jo," he said, "I should like to hear what sort of water you're in. I suppose you're in debt?"

He put it this way that his son might find it easier to confess.

Young Jolyon answered in his ironical voice:

"No! I'm not in debt!"

Old Jolyon saw that he was angry, and touched his hand. He had run a risk. It was worth it, however, and Jo had never been sulky with him. They drove on, without speaking again, to Stanhope Gate. Old Jolyon invited him in, but young Jolyon shook his head.

"June's not here," said his father hastily: "went of to-day on a visit. I suppose you know that she's engaged to be married?"

"Already?" murmured young Jolyon'.

Old Jolyon stepped out, and, in paying the cab fare, for the first time in his life gave the driver a sovereign in mistake for a shilling.

Placing the coin in his mouth, the cabman whipped his horse secretly on the underneath and hurried away.

Old Jolyon turned the key softly in the lock, pushed open the door, and beckoned. His son saw him gravely hanging up his coat, with an expression on his face like that of a boy who intends to steal cherries.

The door of the dining-room was open, the gas turned low; a spirit-urn hissed on a tea-tray, and close to it a cynical looking cat had fallen asleep on the dining-table. Old Jolyon 'shoo'd' her off at once. The incident was a relief to his feelings; he rattled his opera hat behind the animal.

"She's got fleas," he said, following her out of the room. Through the door in the hall leading to the basement he called "Hssst!" several times, as though assisting the cat's departure, till by some strange coincidence the butler appeared below.

"You can go to bed, Parfitt," said old Jolyon. "I will lock up and put out."

When he again entered the dining-room the cat unfortunately preceded him, with her tail in the air, proclaiming that she had seen through this manouevre for suppressing the butler from the first....

A fatality had dogged old Jolyon's domestic stratagems all his life.

Young Jolyon could not help smiling. He was very well versed in irony, and everything that evening seemed to him ironical. The episode of the cat; the announcement of his own daughter's engagement. So he had no more part or parcel in her than he had in the Puss! And the poetical justice of this appealed to him.

"What is June like now?" he asked.

"She's a little thing," returned old Jolyon; they say she's like me, but that's their folly. She's more like your mother--the same eyes and hair."

"Ah! and she is pretty?"

Old Jolyon was too much of a Forsyte to praise anything freely; especially anything for which he had a genuine admiration.

"Not bad looking--a regular Forsyte chin. It'll be lonely here when she's gone, Jo."

The look on his face again gave young Jolyon the shock he had felt on first seeing his father.

"What will you do with yourself, Dad? I suppose she's wrapped up in him?"

"Do with myself?" repeated old Jolyon with an angry break in his voice. "It'll be miserable work living here alone. I don't know how it's to end. I wish to goodness...." He checked himself, and added: "The question is, what had I better do with this house?"

Young Jolyon looked round the room. It was peculiarly vast and dreary, decorated with the enormous pictures of still life that he remembered as a boy--sleeping dogs with their noses resting on bunches of carrots, together with onions and grapes lying side by side in mild surprise. The house was a white elephant, but he could not conceive of his father living in a smaller place; and all the more did it all seem ironical.

In his great chair with the book-rest sat old Jolyon, the figurehead of his family and class and creed, with his white head and dome-like forehead, the representative of moderation, and order, and love of property. As lonely an old man as there was in London.

There he sat in the gloomy comfort of the room, a puppet in the power of great forces that cared nothing for family or class or creed, but moved, machine-like, with dread processes to inscrutable ends. This was how it struck young Jolyon, who had the impersonal eye.

The poor old Dad! So this was the end, the purpose to which he had lived with such magnificent moderation! To be lonely, and grow older and older, yearning for a soul to speak to!

In his turn old Jolyon looked back at his son. He wanted to talk about many things that he had been unable to talk about all these years. It had been impossible to seriously confide in June his conviction that property in the Soho quarter would go up in value; his uneasiness about that tremendous silence of Pippin, the superintendent of the New Colliery Company, of which he had so long been chairman; his disgust at the steady fall in American Golgothas, or even to discuss how, by some sort of settlement, he could best avoid the payment of those death duties which would follow his decease. Under the influence, however, of a cup of tea, which he seemed to stir indefinitely, he began to speak at last. A new vista of life was thus opened up, a promised land of talk, where he could find a harbour against the waves of anticipation and regret; where he could soothe his soul with the opium of devising how to round off his property and make eternal the only part of him that was to remain alive.

Young Jolyon was a good listener; it was his great quality. He kept his eyes fixed on his father's face, putting a question now and then.

The clock struck one before old Jolyon had finished, and at the sound of its striking his principles came back. He took out his watch with a look of surprise:

"I must go to bed, Jo," he said.

Young Jolyon rose and held out his hand to help his father up. The old face looked worn and hollow again; the eyes were steadily averted.

"Good-bye, my boy; take care of yourself."

A moment passed, and young Jolyon, turning on his, heel, marched out at the door. He could hardly see; his smile quavered. Never in all the fifteen years since he had first found out that life was no simple business, had he found it so singularly complicated.

CHAPTER III DINNER AT SWITHIN'S

In Swithin's orange and light-blue dining-room, facing the Park, the round table was laid for twelve.

A cut-glass chandelier filled with lighted candles hung like a giant stalactite above its centre, radiating over large gilt-framed mirrors, slabs of marble on the tops of side-tables, and heavy gold chairs with crewel worked seats. Everything betokened that love of beauty so deeply implanted in each family which has had its own way to make into Society, out of the more vulgar heart of Nature. Swithin had indeed an impatience of simplicity, a love of ormolu, which had always stamped him amongst his associates as a man of great, if somewhat luxurious taste; and out of the knowledge that no one could possibly enter his rooms without perceiving him to be a man of wealth, he had derived a solid and prolonged happiness such as perhaps no other circumstance in life had afforded him.

Since his retirement from land agency, a profession deplorable in his estimation, especially as to its auctioneering department, he had abandoned himself to naturally aristocratic tastes.

The perfect luxury of his latter days had embedded him like a fly in sugar; and his mind, where very little took place from morning till night, was the junction of two curiously opposite emotions, a lingering and sturdy satisfaction that he had made his own way and his own fortune, and a sense that a man of his distinction should never have been allowed to soil his mind with work.

He stood at the sideboard in a white waistcoat with large gold and onyx buttons, watching his valet screw the necks of three champagne bottles deeper into ice-pails. Between the points of his stand-up collar, which--though it hurt him to move--he would on no account have had altered, the pale flesh of his under chin remained immovable. His eyes roved from bottle to bottle. He was

debating, and he argued like this: Jolyon drinks a glass, perhaps two, he's so careful of himself. James, he can't take his wine nowadays. Nicholas--Fanny and he would swill water he shouldn't wonder! Soames didn't count; these young nephews --Soames was thirty-one--couldn't drink! But Bosinney?

Encountering in the name of this stranger something outside the range of his philosophy, Swithin paused. A misgiving arose within him! It was impossible to tell! June was only a girl, in love too! Emily (Mrs. James) liked a good glass of champagne. It was too dry for Juley, poor old soul, she had no palate. As to Hatty Chessman! The thought of this old friend caused a cloud of thought to obscure the perfect glassiness of his eyes: He shouldn't wonder if she drank half a bottle!

But in thinking of his remaining guest, an expression like that of a cat who is just going to purr stole over his old face: Mrs. Soames! She mightn't take much, but she would appreciate what she drank; it was a pleasure to give her good wine! A pretty woman--and sympathetic to him!

The thought of her was like champagne itself! A pleasure to give a good wine to a young woman who looked so well, who knew how to dress, with charming manners, quite distinguished--a pleasure to entertain her. Between the points of his collar he gave his head the first small, painful oscillation of the evening.

"Adolf!" he said. "Put in another bottle."

He himself might drink a good deal, for, thanks to that prescription of Blight's, he found himself extremely well, and he had been careful to take no lunch. He had not felt so well for weeks. Puffing out his lower lip, he gave his last instructions:

"Adolf, the least touch of the West India when you come to the ham."

Passing into the anteroom, he sat down on the edge of a chair, with his knees apart; and his tall, bulky form was wrapped at once in an expectant, strange, primeval immobility. He was ready to rise at a moment's notice. He had not given a dinner-party for months. This dinner in honour of June's engagement had seemed a bore at first (among Forsytes the custom of solemnizing engagements by feasts was religiously observed), but the labours of sending invitations and ordering the repast over, he felt pleasantly stimulated.

And thus sitting, a watch in his hand, fat, and smooth, and golden, like a flattened globe of butter, he thought of nothing.

A long man, with side whiskers, who had once been in Swithin's service, but was now a greengrocer, entered and proclaimed:

"Mrs. Chessman, Mrs. Septimus Small!"

Two ladies advanced. The one in front, habited entirely in red, had large, settled patches of the same colour in her cheeks, and a hard, dashing eye. She walked at Swithin, holding out a hand cased in a long, primrose-coloured glove:

"Well! Swithin," she said, "I haven't seen you for ages. How are you? Why, my dear boy, how stout you're getting!"

The fixity of Swithin's eye alone betrayed emotion. A dumb and grumbling anger swelled his bosom. It was vulgar to be stout, to talk of being stout; he had a chest, nothing more. Turning to his sister, he grasped her hand, and said in a tone of command:

"Well, Juley."

Mrs. Septimus Small was the tallest of the four sisters; her good, round old face had gone a little sour; an innumerable pout clung all over it, as if it had been encased in an iron wire mask up to that evening, which, being suddenly removed, left little rolls of mutinous flesh all over her countenance. Even her eyes were pouting. It was thus that she recorded her permanent resentment at the loss of Septimus Small.

She had quite a reputation for saying the wrong thing, and, tenacious like all her breed, she would hold to it when she had said it, and add to it another wrong thing, and so on. With the decease of her husband the family tenacity, the family matter-of-factness, had gone sterile within her. A great talker, when allowed, she would converse without the faintest animation for hours together, relating, with epic monotony, the innumerable occasions on which Fortune had misused her; nor did she ever perceive that her hearers sympathized with Fortune, for her heart was kind.

Having sat, poor soul, long by the bedside of Small (a man of poor constitution), she had acquired, the habit, and there were countless subsequent occasions when she had sat immense periods of time to amuse sick people, children, and other helpless

persons, and she could never divest herself of the feeling that the world was the most ungrateful place anybody could live in. Sunday after Sunday she sat at the feet of that extremely witty preacher, the Rev. Thomas Scoles, who exercised a great influence over her; but she succeeded in convincing everybody that even this was a misfortune. She had passed into a proverb in the family, and when anybody was observed to be peculiarly distressing, he was known as a regular 'Juley.' The habit of her mind would have killed anybody but a Forsyte at forty; but she was seventy-two, and had never looked better. And one felt that there were capacities for enjoyment about her which might yet come out. She owned three canaries, the cat Tommy, and half a parrot--in common with her sister Hester;--and these poor creatures (kept carefully out of Timothy's way--he was nervous about animals), unlike human beings, recognising that she could not help being blighted, attached themselves to her passionately.

She was sombrely magnificent this evening in black bombazine, with a mauve front cut in a shy triangle, and crowned with a black velvet ribbon round the base of her thin throat; black and mauve for evening wear was esteemed very chaste by nearly every Forsyte.

Pouting at Swithin, she said:

"Ann has been asking for you. You haven't been near us for an age!"

Swithin put his thumbs within the armholes of his waistcoat, and replied:

"Ann's getting very shaky; she ought to have a doctor!"

"Mr. and Mrs. Nicholas Forsyte!"

Nicholas Forsyte, cocking his rectangular eyebrows, wore a smile. He had succeeded during the day in bringing to fruition a scheme for the employment of a tribe from Upper India in the gold-mines of Ceylon. A pet plan, carried at last in the teeth of great difficulties--he was justly pleased. It would double the output of his mines, and, as he had often forcibly argued, all experience tended to show that a man must die; and whether he died of a miserable old age in his own country, or prematurely of damp in the bottom of a foreign mine, was surely of little consequence, provided that by a change in his mode of life he benefited the British Empire.

His ability was undoubted. Raising his broken nose towards his listener, he would add:

"For want of a few hundred of these fellows we haven't paid a dividend for years, and look at the price of the shares. I can't get ten shillings for them."

He had been at Yarmouth, too, and had come back feeling that he had added at least ten years to his own life. He grasped Swithin's hand, exclaiming in a jocular voice:

"Well, so here we are again!"

Mrs. Nicholas, an effete woman, smiled a smile of frightened jollity behind his back.

"Mr. and Mrs. James Forsyte! Mr. and Mrs. Soames Forsyte!"

Swithin drew his heels together, his deportment ever admirable.

"Well, James, well Emily! How are you, Soames? How do you do?"

His hand enclosed Irene's, and his eyes swelled. She was a pretty woman--a little too pale, but her figure, her eyes, her teeth! Too good for that chap Soames!

The gods had given Irene dark brown eyes and golden hair, that strange combination, provocative of men's glances, which is said to be the mark of a weak character. And the full, soft pallor of her neck and shoulders, above a gold-coloured frock, gave to her personality an alluring strangeness.

Soames stood behind, his eyes fastened on his wife's neck. The hands of Swithin's watch, which he still held open in his hand, had left eight behind; it was half an hour beyond his dinner-time--he had had no lunch--and a strange primeval impatience surged up within him.

"It's not like Jolyon to be late!" he said to Irene, with uncontrollable vexation. "I suppose it'll be June keeping him!"

"People in love are always late," she answered.

Swithin stared at her; a dusky orange dyed his cheeks.

"They've no business to be. Some fashionable nonsense!"

And behind this outburst the inarticulate violence of primitive generations seemed to mutter and grumble.

"Tell me what you think of my new star, Uncle Swithin," said Irene softly.

Among the lace in the bosom of her dress was shining a five-pointed star, made of eleven diamonds. Swithin looked at the star. He had a pretty taste in stones; no question could have been more sympathetically devised to distract his attention.

"Who gave you that?" he asked.

"Soames."

There was no change in her face, but Swithin's pale eyes bulged as though he might suddenly have been afflicted with insight.

"I dare say you're dull at home," he said. "Any day you like to come and dine with me, I'll give you as good a bottle of wine as you'll get in London."

"Miss June Forsyte--Mr. Jolyon Forsyte!... Mr. Boswainey!..."

Swithin moved his arm, and said in a rumbling voice:

"Dinner, now--dinner!"

He took in Irene, on the ground that he had not entertained her since she was a bride. June was the portion of Bosinney, who was placed between Irene and his fiancee. On the other side of June was James with Mrs. Nicholas, then old Jolyon with Mrs. James, Nicholas with Hatty Chessman, Soames with Mrs. Small, completing, the circle to Swithin again.

Family dinners of the Forsytes observe certain traditions. There are, for instance, no hors d'oeuvre. The reason for this is unknown. Theory among the younger members traces it to the disgraceful price of oysters; it is more probably due to a desire to come to the point, to a good practical sense deciding at once that hors d'oeuvre are but poor things. The Jameses alone, unable to withstand a custom almost universal in Park Lane, are now and then unfaithful.

A silent, almost morose, inattention to each other succeeds to the subsidence into their seats, lasting till well into the first entree, but interspersed with remarks such as, "Tom's bad again; I can't tell what's the matter with him!" "I suppose Ann doesn't come down in the mornings?"--"What's the name of your doctor, Fanny?" "Stubbs?" "He's a quack!"--"Winifred? She's got too many children. Four, isn't it? She's as thin as a lath!"--"What d'you give for this sherry, Swithin? Too dry for me!"

With the second glass of champagne, a kind of hum makes itself heard, which, when divested of casual accessories and resolved into its primal element, is found to be James telling a story, and this goes on for a long time, encroaching sometimes even upon what must universally be recognised as the crowning point of a Forsyte feast--'the saddle of mutton.'

No Forsyte has given a dinner without providing a saddle of mutton. There is something in its succulent solidity which makes it suitable to people 'of a certain position.' It is nourishing and tasty; the sort of thing a man remembers eating. It has a past and a future, like a deposit paid into a bank; and it is something that can be argued about.

Each branch of the family tenaciously held to a particular locality--old Jolyon swearing by Dartmoor, James by Welsh, Swithin by Southdown, Nicholas maintaining that people might sneer, but there was nothing like New Zealand! As for Roger, the 'original' of the brothers, he had been obliged to invent a locality of his own, and with an ingenuity worthy of a man who had devised a new profession for his sons, he had discovered a shop where they sold German; on being remonstrated with, he had proved his point by producing a butcher's bill, which showed that he paid more than any of the others. It was on this occasion that old Jolyon, turning to June, had said in one of his bursts of philosophy:

"You may depend upon it, they're a cranky lot, the Forsytes--and you'll find it out, as you grow older!"

Timothy alone held apart, for though he ate saddle of mutton heartily, he was, he said, afraid of it.

To anyone interested psychologically in Forsytes, this great saddle-of-mutton trait is of prime importance; not only does it illustrate their tenacity, both collectively and as individuals, but it marks them as belonging in fibre and instincts to that great class which believes in nourishment and flavour, and yields to no sentimental craving for beauty.

Younger members of the family indeed would have done without a joint altogether, preferring guinea-fowl, or lobster salad--something which appealed to the imagination, and had less nourishment--but these were females; or, if not, had been corrupted by their wives, or by mothers, who having been forced to eat saddle of mutton throughout their married lives, had passed a secret hostility towards it into the fibre of their sons.

The great saddle-of-mutton controversy at an end, a Tewkesbury ham commenced, together with the least touch of West Indian--Swithin was so long over this course that he caused a block in the progress of the dinner. To devote himself to it with better heart, he paused in his conversation.

From his seat by Mrs. Septimus Small Soames was watching. He had a reason of his own connected with a pet building scheme, for observing Bosinney. The architect might do for his purpose; he looked clever, as he sat leaning back in his chair, moodily making little ramparts with bread-crumbs. Soames noted his dress clothes to be well cut, but too small, as though made many years ago.

He saw him turn to Irene and say something and her face sparkle as he often saw it sparkle at other people--never at himself. He tried to catch what they were saying, but Aunt Juley was speaking.

Hadn't that always seemed very extraordinary to Soames? Only last Sunday dear Mr. Scole, had been so witty in his sermon, so sarcastic, "For what," he had said, "shall it profit a man if he gain his own soul, but lose all his property?" That, he had said, was the motto of the middle-class; now, what had he meant by that? Of course, it might be what middle-class people believed--she didn't know; what did Soames think?

He answered abstractedly: "How should I know? Scoles is a humbug, though, isn't he?" For Bosinney was looking round the table, as if pointing out the peculiarities of the guests, and Soames wondered what he was saying. By her smile Irene was evidently agreeing with his remarks. She seemed always to agree with other people.

Her eyes were turned on himself; Soames dropped his glance at once. The smile had died off her lips.

A humbug? But what did Soames mean? If Mr. Scoles was a humbug, a clergyman--then anybody might be--it was frightful!

"Well, and so they are!" said Soames.

During Aunt Juley's momentary and horrified silence he caught some words of Irene's that sounded like: 'Abandon hope, all ye who enter here!'

But Swithin had finished his ham.

"Where do you go for your mushrooms?" he was saying to Irene in a voice like a courtier's; "you ought to go to Smileybob's--he'll give 'em you fresh. These little men, they won't take the trouble!"

Irene turned to answer him, and Soames saw Bosinney watching her and smiling to himself. A curious smile the fellow had. A half-simple arrangement, like a child who smiles when he is pleased. As for George's nickname--'The Buccaneer'--he did not think much of that. And, seeing Bosinney turn to June, Soames smiled too, but sardonically--he did not like June, who was not looking too pleased.

This was not surprising, for she had just held the following conversation with James:

"I stayed on the river on my way home, Uncle James, and saw a beautiful site for a house."

James, a slow and thorough eater, stopped the process of mastication.

"Eh?" he said. "Now, where was that?"

"Close to Pangbourne."

James placed a piece of ham in his mouth, and June waited.

"I suppose you wouldn't know whether the land about there was freehold?" he asked at last. "You wouldn't know anything about the price of land about there?"

"Yes," said June; "I made inquiries." Her little resolute face under its copper crown was suspiciously eager and aglow.

James regarded her with the air of an inquisitor.

"What? You're not thinking of buying land!" he ejaculated, dropping his fork.

June was greatly encouraged by his interest. It had long been her pet plan that her uncles should benefit themselves and Bosinney by building country-houses.

"Of course not," she said. "I thought it would be such a splendid place for--you or--someone to build a country-house!"

James looked at her sideways, and placed a second piece of ham in his mouth....

"Land ought to be very dear about there," he said.

What June had taken for personal interest was only the impersonal excitement of every Forsyte who hears of something eligible in danger of passing into other hands. But she refused to see the disappearance of her chance, and continued to press her point.

"You ought to go into the country, Uncle James. I wish I had a lot of money, I wouldn't live another day in London."

James was stirred to the depths of his long thin figure; he had no idea his niece held such downright views.

"Why don't you go into the country?" repeated June; "it would do you a lot of good."

"Why?" began James in a fluster. "Buying land--what good d'you suppose I can do buying land, building houses?--I couldn't get four per cent. for my money!"

"What does that matter? You'd get fresh air."

"Fresh air!" exclaimed James; "what should I do with fresh air,"

"I should have thought anybody liked to have fresh air," said June scornfully.

James wiped his napkin all over his mouth.

"You don't know the value of money," he said, avoiding her eye.

"No! and I hope I never shall!" and, biting her lip with inexpressible mortification, poor June was silent.

Why were her own relations so rich, and Phil never knew where the money was coming from for to-morrow's tobacco. Why couldn't they do something for him? But they were so selfish. Why couldn't they build country-houses? She had all that naive dogmatism which is so pathetic, and sometimes achieves such great results. Bosinney, to whom she turned in her discomfiture, was talking to Irene, and a chill fell on June's spirit. Her eyes grew steady with anger, like old Jolyon's when his will was crossed.

James, too, was much disturbed. He felt as though someone had threatened his right to invest his money at five per cent. Jolyon had spoiled her. None of his girls would have said such a thing. James had always been exceedingly liberal to his children, and the consciousness of this made him feel it all the more deeply. He trifled moodily with his strawberries, then, deluging them with cream, he ate them quickly; they, at all events, should not escape him.

No wonder he was upset. Engaged for fifty-four years (he had been admitted a solicitor on the earliest day sanctioned by the law) in arranging mortgages, preserving investments at a dead level of high and safe interest, conducting negotiations on the principle of securing the utmost possible out of other people compatible with safety to his clients and himself, in calculations as to the exact pecuniary possibilities of all the relations of life, he had come at last to think purely in terms of money. Money was now his light, his medium for seeing, that without which he was really unable to see, really not cognisant of phenomena; and to have this thing, "I hope I shall never know the value of money!" said to his face, saddened and exasperated him. He knew it to be nonsense, or it would have frightened him. What was the world coming to! Suddenly recollecting the story of young Jolyon, however, he felt a little comforted, for what could you expect with a father like that! This turned his thoughts into a channel still less pleasant. What was all this talk about Soames and Irene?

As in all self-respecting families, an emporium had been established where family secrets were bartered, and family stock priced. It was known on Forsyte 'Change that Irene regretted her marriage. Her regret was disapproved of. She ought to have known her own mind; no dependable woman made these mistakes.

James reflected sourly that they had a nice house (rather small) in an excellent position, no children, and no money troubles. Soames was reserved about his affairs, but he must be getting a very warm man. He had a capital income from the business--for Soames, like his father, was a member of that well-known firm of solicitors, Forsyte, Bustard and Forsyte--and had always been very careful. He had done quite unusually well with some mortgages he had taken up, too--a little timely foreclosure--most lucky hits!

There was no reason why Irene should not be happy, yet they said she'd been asking for a separate room. He knew where that ended. It wasn't as if Soames drank.

James looked at his daughter-in-law. That unseen glance of his was cold and dubious. Appeal and fear were in it, and a sense of personal grievance. Why should he be worried like this? It was very likely all nonsense; women were funny things! They exaggerated so, you didn't know what to believe; and then, nobody told him anything, he had to find out everything for himself. Again he looked furtively at Irene, and across from her to Soames. The latter, listening to Aunt Juley, was looking up, under his brows in the direction of Bosinney.

'He's fond of her, I know,' thought James. 'Look at the way he's always giving her things.'

And the extraordinary unreasonableness of her disaffection struck him with increased force.

It was a pity, too, she was a taking little thing, and he, James, would be really quite fond of her if she'd only let him. She had taken up lately with June; that was doing her no good, that was certainly doing her no good. She was getting to have opinions of her own. He didn't know what she wanted with anything of the sort. She'd a good home, and everything she could wish for. He felt that her friends ought to be chosen for her. To go on like this was dangerous.

June, indeed, with her habit of championing the unfortunate, had dragged from Irene a confession, and, in return, had preached the necessity of facing the evil, by separation, if need be. But in the face of these exhortations, Irene had kept a brooding silence, as though she found terrible the thought of this struggle carried through in cold blood. He would never give her up, she had said to June.

"Who cares?" June cried; "let him do what he likes--you've only to stick to it!" And she had not scrupled to say something of this sort at Timothy's; James, when he heard of it, had felt a natural indignation and horror.

What if Irene were to take it into her head to--he could hardly frame the thought--to leave Soames? But he felt this thought so unbearable that he at once put it away; the shady visions it conjured up, the sound of family tongues buzzing in his ears, the horror of the conspicuous happening so close to him, to one of his own children! Luckily, she had no money--a beggarly fifty pound a year! And he thought of the deceased Heron, who had had nothing to leave her, with contempt. Brooding over his glass, his long legs twisted under the table, he quite omitted to rise when the ladies left the room. He would have to speak to Soames --would have to put him on his guard; they could not go on like this, now that such a contingency had occurred to him. And he noticed with sour disfavour that June had left her wine-glasses full of wine.

'That little, thing's at the bottom of it all,' he mused; 'Irene'd never have thought of it herself.' James was a man of imagination.

The voice of Swithin roused him from his reverie.

"I gave four hundred pounds for it," he was saying. "Of course it's a regular work of art."

"Four hundred! H'm! that's a lot of money!" chimed in Nicholas.

The object alluded to was an elaborate group of statuary in Italian marble, which, placed upon a lofty stand (also of marble), diffused an atmosphere of culture throughout the room. The subsidiary figures, of which there were six, female, nude, and of highly ornate workmanship, were all pointing towards the central figure, also nude, and female, who was pointing at herself; and all this gave the observer a very pleasant sense of her extreme value. Aunt Juley, nearly opposite, had had the greatest difficulty in not looking at it all the evening.

Old Jolyon spoke; it was he who had started the discussion.

"Four hundred fiddlesticks! Don't tell me you gave four hundred for that?"

Between the points of his collar Swithin's chin made the second painful oscillatory movement of the evening.

"Four-hundred-pounds, of English money; not a farthing less. I don't regret it. It's not common English--it's genuine modern Italian!"

Soames raised the corner of his lip in a smile, and looked across at Bosinney. The architect was grinning behind the fumes of his cigarette. Now, indeed, he looked more like a buccaneer.

"There's a lot of work about it," remarked James hastily, who was really moved by the size of the group. "It'd sell well at Jobson's."

"The poor foreign dey-vil that made it," went on Swithin, "asked me five hundred--I gave him four. It's worth eight. Looked half-starved, poor dey-vil!"

"Ah!" chimed in Nicholas suddenly, "poor, seedy-lookin' chaps, these artists; it's a wonder to me how they live. Now, there's young Flageoletti, that Fanny and the girls are always hav'in' in, to play the fiddle; if he makes a hundred a year it's as much as ever he does!"

James shook his head. "Ah!" he said, "I don't know how they live!"

Old Jolyon had risen, and, cigar in mouth, went to inspect the group at close quarters.

"Wouldn't have given two for it!" he pronounced at last.

Soames saw his father and Nicholas glance at each other anxiously; and, on the other side of Swithin, Bosinney, still shrouded in smoke.

'I wonder what he thinks of it?' thought Soames, who knew well enough that this group was hopelessly vieux jeu; hopelessly of the last generation. There was no longer any sale at Jobson's for such works of art.

Swithin's answer came at last. "You never knew anything about a statue. You've got your pictures, and that's all!"

Old Jolyon walked back to his seat, puffing his cigar. It was not likely that he was going to be drawn into an argument with an obstinate beggar like Swithin, pig-headed as a mule, who had never known a statue from a---straw hat.

"Stucco!" was all he said.

It had long been physically impossible for Swithin to start; his fist came down on the table.

"Stucco! I should like to see anything you've got in your house half as good!"

And behind his speech seemed to sound again that rumbling violence of primitive generations.

It was James who saved the situation.

"Now, what do you say, Mr. Bosinney? You're an architect; you ought to know all about statues and things!"

Every eye was turned upon Bosinney; all waited with a strange, suspicious look for his answer.

And Soames, speaking for the first time, asked:

"Yes, Bosinney, what do you say?"

Bosinney replied coolly:

"The work is a remarkable one."

His words were addressed to Swithin, his eyes smiled slyly at old Jolyon; only Soames remained unsatisfied.

"Remarkable for what?"

"For its naivete"

The answer was followed by an impressive silence; Swithin alone was not sure whether a compliment was intended.

CHAPTER IV

PROJECTION OF THE HOUSE

Soames Forsyte walked out of his green-painted front door three days after the dinner at Swithin's, and looking back from across the Square, confirmed his impression that the house wanted painting.

He had left his wife sitting on the sofa in the drawing-room, her hands crossed in her lap, manifestly waiting for him to go out. This was not unusual. It happened, in fact, every day.

He could not understand what she found wrong with him. It was not as if he drank! Did he run into debt, or gamble, or swear; was he violent; were his friends rackety; did he stay out at night? On the contrary.

The profound, subdued aversion which he felt in his wife was a mystery to him, and a source of the most terrible irritation. That she had made a mistake, and did not love him, had tried to love him and could not love him, was obviously no reason.

He that could imagine so outlandish a cause for his wife's not getting on with him was certainly no Forsyte.

Soames was forced, therefore, to set the blame entirely down to his wife. He had never met a woman so capable of inspiring affection. They could not go anywhere without his seeing how all the men were attracted by her; their looks, manners, voices, betrayed it; her behaviour under this attention had been beyond reproach. That she was one of those women--not too common in the Anglo-Saxon race--born to be loved and to love, who when not loving are not living, had certainly never even occurred to him. Her power of attraction, he regarded as part of her value as his property; but it made him, indeed, suspect that she could give as well as receive; and she gave him nothing! 'Then why did she marry me?' was his continual thought. He had, forgotten his courtship; that year and a half when he had besieged and lain in wait for her, devising schemes for her entertainment, giving her presents, proposing to her periodically, and keeping her other admirers away with his perpetual presence. He had forgotten the day when, adroitly taking advantage of an acute phase of her dislike to her home surroundings, he crowned his labours with success. If he remembered anything, it was the dainty capriciousness with which the gold-haired, dark-eyed girl had treated him. He certainly did not remember the look on her face--strange, passive, appealing--when suddenly one day she had yielded, and said that she would marry him.

It had been one of those real devoted wooings which books and people praise, when the lover is at length rewarded for hammering the iron till it is malleable, and all must be happy ever after as the wedding bells.

Soames walked eastwards, mousing doggedly along on the shady side.

The house wanted doing, up, unless he decided to move into the country, and build.

For the hundredth time that month he turned over this problem. There was no use in rushing into things! He was very comfortably off, with an increasing income getting on for three thousand a year; but his invested capital was not perhaps so large as his father believed--James had a tendency to expect that his children should be better off than they were. 'I can manage eight thousand easily enough,' he thought, 'without calling in either Robertson's or Nicholl's.'

He had stopped to look in at a picture shop, for Soames was an 'amateur' of pictures, and had a little-room in No. 62, Montpellier Square, full of canvases, stacked against the wall, which he had no room to hang. He brought them home with him on his way back from the City, generally after dark, and would enter this room on Sunday afternoons, to spend hours turning the pictures to the light, examining the marks on their backs, and occasionally making notes.

They were nearly all landscapes with figures in the foreground, a sign of some mysterious revolt against London, its tall houses, its interminable streets, where his life and the lives of his breed and class were passed. Every now and then he would take one or two pictures away with him in a cab, and stop at Jobson's on his way into the City.

He rarely showed them to anyone; Irene, whose opinion he secretly respected and perhaps for that reason never solicited, had only been into the room on rare occasions, in discharge of some wifely duty. She was not asked to look at the pictures, and she never did. To Soames this was another grievance. He hated that pride of hers, and secretly dreaded it.

In the plate-glass window of the picture shop his image stood and looked at him.

His sleek hair under the brim of the tall hat had a sheen like the hat itself; his cheeks, pale and flat, the line of his clean-shaven lips, his firm chin with its greyish shaven tinge, and the buttoned strictness of his black cut-away coat, conveyed an appearance of reserve and secrecy, of imperturbable, enforced composure; but his eyes, cold,--grey, strained--looking, with a line in the brow between them, examined him wistfully, as if they knew of a secret weakness.

He noted the subjects of the pictures, the names of the painters, made a calculation of their values, but without the satisfaction he usually derived from this inward appraisement, and walked on.

No. 62 would do well enough for another year, if he decided to build! The times were good for building, money had not been so dear for years; and the site he had seen at Robin Hill, when he had gone down there in the spring to inspect the Nicholl mortgage--what could be better! Within twelve miles of Hyde Park Corner, the value of the land certain to go up, would always fetch more than he gave for it; so that a house, if built in really good style, was a first-class investment.

The notion of being the one member of his family with a country house weighed but little with him; for to a true Forsyte, sentiment, even the sentiment of social position, was a luxury only to be indulged in after his appetite for more material pleasure had been satisfied.

To get Irene out of London, away from opportunities of going about and seeing people, away from her friends and those who put ideas into her head! That was the thing! She was too thick with June! June disliked him. He returned the sentiment. They were of the same blood.

It would be everything to get Irene out of town. The house would please her she would enjoy messing about with the decoration, she was very artistic!

The house must be in good style, something that would always be certain to command a price, something unique, like that last house of Parkes, which had a tower; but Parkes had himself said that his architect was ruinous. You never knew where you were with those fellows; if they had a name they ran you into no end of expense and were conceited into the bargain.

And a common architect was no good--the memory of Parkes' tower precluded the employment of a common architect:

This was why he had thought of Bosinney. Since the dinner at Swithin's he had made enquiries, the result of which had been meagre, but encouraging: "One of the new school."

"Clever?"

"As clever as you like--a bit--a bit up in the air!"

He had not been able to discover what houses Bosinney had built, nor what his charges were. The impression he gathered was that he would be able to make his own terms. The more he reflected on the idea, the more he liked it. It would be keeping the thing in the family, with Forsytes almost an instinct; and he would be able to get 'favoured-nation,' if not nominal terms--only fair, considering the chance to Bosinney of displaying his talents, for this house must be no common edifice.

Soames reflected complacently on the work it would be sure to bring the young man; for, like every Forsyte, he could be a thorough optimist when there was anything to be had out of it.

Bosinney's office was in Sloane Street, close at, hand, so that he would be able to keep his eye continually on the plans.

Again, Irene would not be to likely to object to leave London if her greatest friend's lover were given the job. June's marriage might depend on it. Irene could not decently stand in the way of June's marriage; she would never do that, he knew her too well. And June would be pleased; of this he saw the advantage.

Bosinney looked clever, but he had also--and--it was one of his great attractions--an air as if he did not quite know on which side his bread were buttered; he should be easy to deal with in money matters. Soames made this reflection in no defrauding spirit; it was the natural attitude of his mind--of the mind of any good business man--of all those thousands of good business men through whom he was threading his way up Ludgate Hill.

Thus he fulfilled the inscrutable laws of his great class--of human nature itself--when he reflected, with a sense of comfort, that Bosinney would be easy to deal with in money matters.

While he elbowed his way on, his eyes, which he usually kept fixed on the ground before his feet, were attracted upwards by the dome of St. Paul's. It had a peculiar fascination for him, that old dome, and not once, but twice or three times a week, would he halt in his daily pilgrimage to enter beneath and stop in the side aisles for five or ten minutes, scrutinizing the names and epitaphs on the monuments. The attraction for him of this great church was inexplicable, unless it enabled him to concentrate his thoughts on the business of the day. If any affair of particular moment, or demanding peculiar acuteness, was weighing on his mind, he invariably went in, to wander with mouse-like attention from epitaph to epitaph. Then retiring in the same noiseless way, he would hold steadily on up Cheapside, a thought more of dogged purpose in his gait, as though he had seen something which he had made up his mind to buy.

He went in this morning, but, instead of stealing from monument to monument, turned his eyes upwards to the columns and spacings of the walls, and remained motionless.

His uplifted face, with the awed and wistful look which faces take on themselves in church, was whitened to a chalky hue in the vast building. His gloved hands were clasped in front over the handle of his umbrella. He lifted them. Some sacred inspiration perhaps had come to him.

'Yes,' he thought, 'I must have room to hang my pictures.

That evening, on his return from the City, he called at Bosinney's office. He found the architect in his shirt-sleeves, smoking a pipe, and ruling off lines on a plan. Soames refused a drink, and came at once to the point.

"If you've nothing better to do on Sunday, come down with me to Robin Hill, and give me your opinion on a building site."

"Are you going to build?"

"Perhaps," said Soames; "but don't speak of it. I just want your opinion."

"Quite so," said the architect.

Soames peered about the room.

"You're rather high up here," he remarked.

Any information he could gather about the nature and scope of Bosinney's business would be all to the good.

"It does well enough for me so far," answered the architect. "You're accustomed to the swells."

He knocked out his pipe, but replaced it empty between his teeth; it assisted him perhaps to carry on the conversation. Soames noted a hollow in each cheek, made as it were by suction.

"What do you pay for an office like this?" said he.

"Fifty too much," replied Bosinney.

This answer impressed Soames favourably.

"I suppose it is dear," he said. "I'll call for you--on Sunday about eleven."

The following Sunday therefore he called for Bosinney in a hansom, and drove him to the station. On arriving at Robin Hill, they found no cab, and started to walk the mile and a half to the site.

It was the 1st of August--a perfect day, with a burning sun and cloudless sky--and in the straight, narrow road leading up the hill their feet kicked up a yellow dust.

"Gravel soil," remarked Soames, and sideways he glanced at the coat Bosinney wore. Into the side-pockets of this coat were thrust bundles of papers, and under one arm was carried a queer-looking stick. Soames noted these and other peculiarities.

No one but a clever man, or, indeed, a buccaneer, would have taken such liberties with his appearance; and though these eccentricities were revolting to Soames, he derived a certain satisfaction from them, as evidence of qualities by which he must inevitably profit. If the fellow could build houses, what did his clothes matter?

"I told you," he said, "that I want this house to be a surprise, so don't say anything about it. I never talk of my affairs until they're carried through."

Bosinney nodded.

"Let women into your plans," pursued Soames, "and you never know where it'll end."

"Ah!" Said Bosinney, "women are the devil!"

This feeling had long been at the--bottom of Soames's heart; he had never, however, put it into words.

"Oh!" he Muttered, "so you're beginning to...." He stopped, but added, with an uncontrollable burst of spite: "June's got a temper of her own--always had."

"A temper's not a bad thing in an angel."

Soames had never called Irene an angel. He could not so have violated his best instincts, letting other people into the secret of her value, and giving himself away. He made no reply.

They had struck into a half-made road across a warren. A cart-track led at right-angles to a gravel pit, beyond which the chimneys of a cottage rose amongst a clump of trees at the border of a thick wood. Tussocks of feathery grass covered the rough surface of the ground, and out of these the larks soared into the hate of sunshine. On the far horizon, over a countless succession of fields and hedges, rose a line of downs.

Soames led till they had crossed to the far side, and there he stopped. It was the chosen site; but now that he was about to divulge the spot to another he had become uneasy.

"The agent lives in that cottage," he said; "he'll give us some lunch--we'd better have lunch before we go into this matter."

He again took the lead to the cottage, where the agent, a tall man named Oliver, with a heavy face and grizzled beard, welcomed them. During lunch, which Soames hardly touched, he kept looking at Bosinney, and once or twice passed his silk handkerchief stealthily over his forehead. The meal came to an end at last, and Bosinney rose.

"I dare say you've got business to talk over," he said; "I'll just go and nose about a bit." Without waiting for a reply he strolled out.

Soames was solicitor to this estate, and he spent nearly an hour in the agent's company, looking at ground-plans and discussing the Nicholl and other mortgages; it was as it were by an afterthought that he brought up the question of the building site.

"Your people," he said, "ought to come down in their price to me, considering that I shall be the first to build."

Oliver shook his head.

The site you've fixed on, Sir, he said, "is the cheapest we've got. Sites at the top of the slope are dearer by a good bit."

"Mind," said Soames, "I've not decided; it's quite possible I shan't build at all. The ground rent's very high."

"Well, Mr. Forsyte, I shall be sorry if you go off, and I think you'll make a mistake, Sir. There's not a bit of land near London with such a view as this, nor one that's cheaper, all things considered; we've only to advertise, to get a mob of people after it."

They looked at each other. Their faces said very plainly: 'I respect you as a man of business; and you can't expect me to believe a word you say.'

Well, repeated Soames, "I haven't made up my mind; the thing will very likely go off!" With these words, taking up his umbrella, he put his chilly hand into the agent's, withdrew it without the faintest pressure, and went out into the sun.

He walked slowly back towards the site in deep thought. His instinct told him that what the agent had said was true. A cheap site. And the beauty of it was, that he knew the agent did not really think it cheap; so that his own intuitive knowledge was a victory over

the agent's.

'Cheap or not, I mean to have it,' he thought.

The larks sprang up in front of his feet, the air was full of butterflies, a sweet fragrance rose from the wild grasses. The sappy scent of the bracken stole forth from the wood, where, hidden in the depths, pigeons were cooing, and from afar on the warm breeze, came the rhythmic chiming of church bells.

Soames walked with his eyes on the ground, his lips opening and closing as though in anticipation of a delicious morsel. But when he arrived at the site, Bosinney was nowhere to be seen. After waiting some little time, he crossed the warren in the direction of the slope. He would have shouted, but dreaded the sound of his voice.

The warren was as lonely as a prairie, its silence only broken by the rustle of rabbits bolting to their holes, and the song of the larks.

Soames, the pioneer-leader of the great Forsyte army advancing to the civilization of this wilderness, felt his spirit daunted by the loneliness, by the invisible singing, and the hot, sweet air. He had begun to retrace his steps when he at last caught sight of Bosinney.

The architect was sprawling under a large oak tree, whose trunk, with a huge spread of bough and foliage, ragged with age, stood on the verge of the rise.

Soames had to touch him on the shoulder before he looked up.

"Hallo! Forsyte," he said, "I've found the very place for your house! Look here!"

Soames stood and looked, then he said, coldly:

"You may be very clever, but this site will cost me half as much again."

"Hang the cost, man. Look at the view!"

Almost from their feet stretched ripe corn, dipping to a small dark copse beyond. A plain of fields and hedges spread to the distant grey-bluedowns. In a silver streak to the right could be seen the line of the river.

The sky was so blue, and the sun so bright, that an eternal summer seemed to reign over this prospect. Thistledown floated round them, enraptured by the serenity, of the ether. The heat danced over the corn, and, pervading all, was a soft, insensible hum, like the murmur of bright minutes holding revel between earth and heaven.

Soames looked. In spite of himself, something swelled in his breast. To live here in sight of all this, to be able to point it out to his friends, to talk of it, to possess it! His cheeks flushed. The warmth, the radiance, the glow, were sinking into his senses as, four years before, Irene's beauty had sunk into his senses and made him long for her. He stole a glance at Bosinney, whose eyes, the eyes of the coachman's 'half-tame leopard,' seemed running wild over the landscape. The sunlight had caught the promontories of the fellow's face, the bumpy cheekbones, the point of his chin, the vertical ridges above his brow; and Soames watched this rugged, enthusiastic, careless face with an unpleasant feeling.

A long, soft ripple of wind flowed over the corn, and brought a puff of warm air into their faces.

"I could build you a teaser here," said Bosinney, breaking the silence at last.

"I dare say," replied Soames, drily. "You haven't got to pay for it."

"For about eight thousand I could build you a palace."

Soames had become very pale--a struggle was going on within him. He dropped his eyes, and said stubbornly:

"I can't afford it."

And slowly, with his mousing walk, he led the way back to the first site.

They spent some time there going into particulars of the projected house, and then Soames returned to the agent's cottage.

He came out in about half an hour, and, joining Bosinney, started for the station.

"Well," he said, hardly opening his lips, "I've taken that site of yours, after all."

And again he was silent, confusedly debating how it was that this fellow, whom by habit he despised, should have overborne his own decision.

CHAPTER V

A FORSYTE MENAGE

Like the enlightened thousands of his class and generation in this great city of London, who no longer believe in red velvet chairs, and know that groups of modern Italian marble are 'vieux jeu,' Soames Forsyte inhabited a house which did what it could. It owned a copper door knocker of individual design, windows which had been altered to open outwards, hanging flower boxes filled with fuchsias, and at the back (a great feature) a little court tiled with jade-green tiles, and surrounded by pink hydrangeas in peacock-blue tubs. Here, under a parchment-coloured Japanese sunshade covering the whole end, inhabitants or visitors could be screened from the eyes of the curious while they drank tea and examined at their leisure the latest of Soames's little silver boxes.

The inner decoration favoured the First Empire and William Morris. For its size, the house was commodious; there were countless nooks resembling birds' nests, and little things made of silver were deposited like eggs.

In this general perfection two kinds of fastidiousness were at war. There lived here a mistress who would have dwelt daintily on a desert island; a master whose daintiness was, as it were, an investment, cultivated by the owner for his advancement, in accordance with the laws of competition. This competitive daintiness had caused Soames in his Marlborough days to be the first boy into white waistcoats in summer, and corduroy waistcoats in winter, had prevented him from ever appearing in public with his tie climbing up his collar, and induced him to dust his patent leather boots before a great multitude assembled on Speech Day to hear him recite Moliere.

Skin-like immaculateness had grown over Soames, as over many Londoners; impossible to conceive of him with a hair out of place, a tie deviating one-eighth of an inch from the perpendicular, a collar unglossed! He would not have gone without a bath for worlds--it was the fashion to take baths; and how bitter was his scorn of people who omitted them!

But Irene could be imagined, like some nymph, bathing in wayside streams, for the joy of the freshness and of seeing her own fair body.

In this conflict throughout the house the woman had gone to the wall. As in the struggle between Saxon and Celt still going on within the nation, the more impressionable and receptive temperament had had forced on it a conventional superstructure.

Thus the house had acquired a close resemblance to hundreds of other houses with the same high aspirations, having become: 'That very charming little house of the Soames Forsytes, quite individual, my dear--really elegant.'

For Soames Forsyte--read James Peabody, Thomas Atkins, or Emmanuel Spagnoletti, the name in fact of any upper-middle class Englishman in London with any pretensions to taste; and though the decoration be different, the phrase is just.

On the evening of August 8, a week after the expedition to Robin Hill, in the dining-room of this house--'quite individual, my dear--really elegant'--Soames and Irene were seated at dinner. A hot dinner on Sundays was a little distinguishing elegance common to this house and many others. Early in married life Soames had laid down the rule: 'The servants must give us hot dinner on Sundays--they've nothing to do but play the concertina.'

The custom had produced no revolution. For--to Soames a rather deplorable sign--servants were devoted to Irene, who, in defiance of all safe tradition, appeared to recognise their right to a share in the weaknesses of human nature.

The happy pair were seated, not opposite each other, but rectangularly, at the handsome rosewood table; they dined without a cloth--a distinguishing elegance--and so far had not spoken a word.

Soames liked to talk during dinner about business, or what he had been buying, and so long as he talked Irene's silence did not distress him. This evening he had found it impossible to talk. The decision to build had been weighing on his mind all the week, and he had made up his mind to tell her.

His nervousness about this disclosure irritated him profoundly; she had no business to make him feel like that--a wife and a husband being one person. She had not looked at him once since they sat down; and he wondered what on earth she had been thinking about all the time. It was hard, when a man worked as he did, making money for her--yes, and with an ache in his heart--that she should sit there, looking--looking as if she saw the walls of the room closing in. It was enough to make a man get up and leave the table.

The light from the rose-shaded lamp fell on her neck and arms--Soames liked her to dine in a low dress, it gave him an inexpressible feeling of superiority to the majority of his acquaintance, whose wives were contented with their best high frocks or with tea-gowns, when they dined at home. Under that rosy light her amber-coloured hair and fair skin made strange contrast with her dark brown eyes.

Could a man own anything prettier than this dining-table with its deep tints, the starry, soft-petalled roses, the ruby-coloured glass, and quaint silver furnishing; could a man own anything prettier than the woman who sat at it? Gratitude was no virtue among Forsytes, who, competitive, and full of common-sense, had no occasion for it; and Soames only experienced a sense of exasperation amounting to pain, that he did not own her as it was his right to own her, that he could not, as by stretching out his hand to that rose, pluck her and sniff the very secrets of her heart.

Out of his other property, out of all the things he had collected, his silver, his pictures, his houses, his investments, he got a secret and intimate feeling; out of her he got none.

In this house of his there was writing on every wall. His business-like temperament protested against a mysterious warning that she was not made for him. He had married this woman, conquered her, made her his own, and it seemed to him contrary to the most fundamental of all laws, the law of possession, that he could do no more than own her body--if indeed he could do that, which he was beginning to doubt. If any one had asked him if he wanted to own her soul, the question would have seemed to him both ridiculous and sentimental. But he did so want, and the writing said he never would.

She was ever silent, passive, gracefully averse; as though terrified lest by word, motion, or sign she might lead him to believe that she was fond of him; and he asked himself: Must I always go on like this?

Like most novel readers of his generation (and Soames was a great novel reader), literature coloured his view of life; and he had imbibed the belief that it was only a question of time.

In the end the husband always gained the affection of his wife. Even in those cases--a class of book he was not very fond of--which ended in tragedy, the wife always died with poignant regrets on her lips, or if it were the husband who died--unpleasant thought--threw herself on his body in an agony of remorse.

He often took Irene to the theatre, instinctively choosing the modern Society Plays with the modern Society conjugal problem, so fortunately different from any conjugal problem in real life. He found that they too always ended in the same way, even when there was a lover in the case. While he was watching the play Soames often sympathized with the lover; but before he reached home again, driving with Irene in a hansom, he saw that this would not do, and he was glad the play had ended as it had. There was one class of husband that had just then come into fashion, the strong, rather rough, but extremely sound man, who was peculiarly successful at the end of the play; with this person Soames was really not in sympathy, and had it not been for his own position, would have expressed his disgust with the fellow. But he was so conscious of how vital to himself was the necessity for being a successful, even a 'strong,' husband, that he never spoke of a distaste born perhaps by the perverse processes of Nature out of a secret fund of brutality in himself.

But Irene's silence this evening was exceptional. He had never before seen such an expression on her face. And since it is always the unusual which alarms, Soames was alarmed. He ate his savoury, and hurried the maid as she swept off the crumbs with the silver sweeper. When she had left the room, he filled his glass with wine and said:

"Anybody been here this afternoon?"

"June."

"What did she want?" It was an axiom with the Forsytes that people did not go anywhere unless they wanted something. "Came to talk about her lover, I suppose?"

Irene made no reply.

"It looks to me," continued Soames, "as if she were sweeter on him than he is on her. She's always following him about."

Irene's eyes made him feel uncomfortable.

"You've no business to say such a thing!" she exclaimed.

"Why not? Anybody can see it."

"They cannot. And if they could, it's disgraceful to say so."

Soames's composure gave way.

"You're a pretty wife!" he said. But secretly he wondered at the heat of her reply; it was unlike her. "You're cracked about June! I can tell you one thing: now that she has the Buccaneer in tow, she doesn't care twopence about you, and, you'll find it out. But you won't see so much of her in future; we're going to live in the country."

He had been glad to get his news out under cover of this burst of irritation. He had expected a cry of dismay; the silence with which his pronouncement was received alarmed him.

"You don't seem interested," he was obliged to add.

"I knew it already."

He looked at her sharply.

"Who told you?"

"June."

"How did she know?"

Irene did not answer. Baffled and uncomfortable, he said:

"It's a fine thing for Bosinney, it'll be the making of him. I suppose she's told you all about it?"

"Yes."

There was another pause, and then Soames said:

"I suppose you don't want to, go?"

Irene made no reply.

"Well, I can't tell what you want. You never seem contented here."

"Have my wishes anything to do with it?"

She took the vase of roses and left the room. Soames remained seated. Was it for this that he had signed that contract? Was it for this that he was going to spend some ten thousand pounds? Bosinney's phrase came back to him: "Women are the devil!"

But presently he grew calmer. It might have, been worse. She might have flared up. He had expected something more than this. It was lucky, after all, that June had broken the ice for him. She must have wormed it out of Bosinney; he might have known she would.

He lighted his cigarette. After all, Irene had not made a scene! She would come round--that was the best of her; she was cold, but not sulky. And, puffing the cigarette smoke at a lady-bird on the shining table, he plunged into a reverie about the house. It was no good worrying; he would go and make it up presently. She would be sitting out there in the dark, under the Japanese sunshade, knitting. A beautiful, warm night....

In truth, June had come in that afternoon with shining eyes, and the words: "Soames is a brick! It's splendid for Phil--the very thing for him!"

Irene's face remaining dark and puzzled, she went on:

"Your new house at Robin Hill, of course. What? Don't you know?"

Irene did not know.

"Oh! then, I suppose I oughtn't to have told you!" Looking impatiently at her friend, she cried: "You look as if you didn't care. Don't you see, it's what I've' been praying for--the very chance he's been wanting all this time. Now you'll see what he can do;" and thereupon she poured out the whole story.

Since her own engagement she had not seemed much interested in her friend's position; the hours she spent with Irene were given to confidences of her own; and at times, for all her affectionate pity, it was impossible to keep out of her smile a trace of compassionate contempt for the woman who had made such a mistake in her life--such a vast, ridiculous mistake.

"He's to have all the decorations as well--a free hand. It's perfect--" June broke into laughter, her little figure quivered gleefully; she raised her hand, and struck a blow at a muslin curtain. "Do you, know I even asked Uncle James...." But, with a sudden dislike to mentioning that incident, she stopped; and presently, finding her friend so unresponsive, went away. She looked back from the pavement, and Irene was still standing in the doorway. In response to her farewell wave, Irene put her hand to her brow, and, turning slowly, shut the door....

Soames went to the drawing-room presently, and peered at her through the window.

Out in the shadow of the Japanese sunshade she was sitting very still, the lace on her white shoulders stirring with the soft rise and fall of her bosom.

But about this silent creature sitting there so motionless, in the dark, there seemed a warmth, a hidden fervour of feeling, as if the whole of her being had been stirred, and some change were taking place in its very depths.

He stole back to the dining-room unnoticed.

CHAPTER VI

JAMES AT LARGE

It was not long before Soames's determination to build went the round of the family, and created the flutter that any decision connected with property should make among Forsytes.

It was not his fault, for he had been determined that no one should know. June, in the fulness of her heart, had told Mrs. Small, giving her leave only to tell Aunt Ann--she thought it would cheer her, the poor old sweet! for Aunt Ann had kept her room now for many days.

Mrs. Small told Aunt Ann at once, who, smiling as she lay back on her pillows, said in her distinct, trembling old voice:

"It's very nice for dear June; but I hope they will be careful--it's rather dangerous!"

When she was left alone again, a frown, like a cloud presaging a rainy morrow, crossed her face.

While she was lying there so many days the process of recharging her will went on all the time; it spread to her face, too, and tightening movements were always in action at the corners of her lips.

The maid Smither, who had been in her service since girlhood, and was spoken of as "Smither--a good girl--but so slow!"--the maid Smither performed every morning with extreme punctiliousness the crowning ceremony of that ancient toilet. Taking from the recesses of their pure white band-box those flat, grey curls, the insignia of personal dignity, she placed them securely in her mistress's hands, and turned her back.

And every day Aunts Juley and Hester were required to come and report on Timothy; what news there was of Nicholas; whether dear June had succeeded in getting Jolyon to shorten the engagement, now that Mr. Bosinney was building Soames a house; whether young Roger's wife was really--expecting; how the operation on Archie had succeeded; and what Swithin had done about that empty house in Wigmore Street, where the tenant had lost all his money and treated him so badly; above all, about Soames; was Irene still--still asking for a separate room? And every morning Smither was told: "I shall be coming down this afternoon,

Smither, about two o'clock. I shall want your arm, after all these days in bed!"

After telling Aunt Ann, Mrs. Small had spoken of the house in the strictest confidence to Mrs. Nicholas, who in her turn had asked Winifred Dartie for confirmation, supposing, of course, that, being Soames's sister, she would know all about it. Through her it had in due course come round to the ears of James. He had been a good deal agitated.

"Nobody," he said, "told him anything." And, rather than go direct to Soames himself, of whose taciturnity he was afraid, he took his umbrella and went round to Timothy's.

He found Mrs. Septimus and Hester (who had been told--she was so safe, she found it tiring to talk) ready, and indeed eager, to discuss the news. It was very good of dear Soames, they thought, to employ Mr. Bosinney, but rather risky. What had George named him? 'The Buccaneer' How droll! But George was always droll! However, it would be all in the family they supposed they must really look upon Mr. Bosinney as belonging to the family, though it seemed strange.

James here broke in:

"Nobody knows anything about him. I don't see what Soames wants with a young man like that. I shouldn't be surprised if Irene had put her oar in. I shall speak to...."

"Soames," interposed Aunt Juley, "told Mr. Bosinney that he didn't wish it mentioned. He wouldn't like it to be talked about, I'm sure, and if Timothy knew he would be very vexed, I...."

James put his hand behind his ear:

"What?" he said. "I'm getting very deaf. I suppose I don't hear people. Emily's got a bad toe. We shan't be able to start for Wales till the end of the month. There' s always something!" And, having got what he wanted, he took his hat and went away.

It was a fine afternoon, and he walked across the Park towards Soames's, where he intended to dine, for Emily's toe kept her in bed, and Rachel and Cicely were on a visit to the country. He took the slanting path from the Bayswater side of the Row to the Knightsbridge Gate, across a pasture of short, burnt grass, dotted with blackened sheep, strewn with seated couples and strange waifs; lying prone on their faces, like corpses on a field over which the wave of battle has rolled.

He walked rapidly, his head bent, looking neither to right nor, left. The appearance of this park, the centre of his own battle-field, where he had all his life been fighting, excited no thought or speculation in his mind. These corpses flung down, there, from out the press and turmoil of the struggle, these pairs of lovers sitting cheek by jowl for an hour of idle Elysium snatched from the monotony of their treadmill, awakened no fancies in his mind; he had outlived that kind of imagination; his nose, like the nose of a sheep, was fastened to the pastures on which he browsed.

One of his tenants had lately shown a disposition to be behind-hand in his rent, and it had become a grave question whether he had not better turn him out at once, and so run the risk of not re-letting before Christmas. Swithin had just been let in very badly, but it had served him right--he had held on too long.

He pondered this as he walked steadily, holding his umbrella carefully by the wood, just below the crook of the handle, so as to keep the ferule off the ground, and not fray the silk in the middle. And, with his thin, high shoulders stooped, his long legs moving with swift mechanical precision, this passage through the Park, where the sun shone with a clear flame on so much idleness--on so many human evidences of the remorseless battle of Property, raging beyond its ring--was like the flight of some land bird across the sea.

He felt a--touch on the arm as he came out at Albert Gate.

It was Soames, who, crossing from the shady side of Piccadilly, where he had been walking home from the office, had suddenly appeared alongside.

"Your mother's in bed," said James; "I was, just coming to you, but I suppose I shall be in the way."

The outward relations between James and his son were marked by a lack of sentiment peculiarly Forsytean, but for all that the two were by no means unattached. Perhaps they regarded one another as an investment; certainly they were solicitous of each other's welfare, glad of each other's company. They had never exchanged two words upon the more intimate problems of life, or revealed in each other's presence the existence of any deep feeling.

Something beyond the power of word-analysis bound them together, something hidden deep in the fibre of nations and families--for blood, they say, is thicker than water--and neither of them was a cold-blooded man. Indeed, in James love of his children was now the prime motive of his existence. To have creatures who were parts of himself, to whom he might transmit the money he saved, was at the root of his saving; and, at seventy-five, what was left that could give him pleasure, but--saving? The kernel of life was in this saving for his children.

Than James Forsyte, notwithstanding all his 'Jonah-isms,' there was no saner man (if the leading symptom of sanity, as we are told, is self-preservation, though without doubt Timothy went too far) in all this London, of which he owned so much, and loved with such a dumb love, as the centre of his opportunities. He had the marvellous instinctive sanity of the middle class. In him--more than in Jolyon, with his masterful will and his moments of tenderness and philosophy--more than in Swithin, the martyr to crankiness--Nicholas, the sufferer from ability--and Roger, the victim of enterprise--beat the true pulse of compromise; of all the brothers he was least remarkable in mind and person, and for that reason more likely to live for ever.

To James, more than to any of the others, was "the family" significant and dear. There had always been something primitive and cosy in his attitude towards life; he loved the family hearth, he loved gossip, and he loved grumbling. All his decisions were formed of a cream which he skimmed off the family mind; and, through that family, off the minds of thousands of other families of similar fibre. Year after year, week after week, he went to Timothy's, and in his brother's front drawing-room--his legs twisted, his long white whiskers framing his clean-shaven mouth--would sit watching the family pot simmer, the cream rising to the top; and he would go away sheltered, refreshed, comforted, with an indefinable sense of comfort.

Beneath the adamant of his self-preserving instinct there was much real softness in James; a visit to Timothy's was like an hour spent in the lap of a mother; and the deep craving he himself had for the protection of the family wing reacted in turn on his feelings towards his own children; it was a nightmare to him to think of them exposed to the treatment of the world, in money, health, or reputation. When his old friend John Street's son volunteered for special service, he shook his head querulously, and wondered what John Street was about to allow it; and when young Street was assagaied, he took it so much to heart that he made a point of calling everywhere with the special object of saying: He knew how it would be--he'd no patience with them!

When his son-in-law Dartie had that financial crisis, due to speculation in Oil Shares, James made himself ill worrying over it; the knell of all prosperity seemed to have sounded. It took him three months and a visit to Baden-Baden to get better; there was something terrible in the idea that but for his, James's, money, Dartie's name might have appeared in the Bankruptcy List.

Composed of a physiological mixture so sound that if he had an earache he thought he was dying, he regarded the occasional ailments of his wife and children as in the nature of personal grievances, special interventions of Providence for the purpose of destroying his peace of mind; but he did not believe at all in the ailments of people outside his own immediate family, affirming them in every case to be due to neglected liver.

His universal comment was: "What can they expect? I have it myself, if I'm not careful!"

When he went to Soames's that evening he felt that life was hard on him: There was Emily with a bad toe, and Rachel gadding about in the country; he got no sympathy from anybody; and Ann, she was ill--he did not believe she would last through the summer; he had called there three times now without her being able to see him! And this idea of Soames's, building a house, that would have to be looked into. As to the trouble with Irene, he didn't know what was to come of that--anything might come of it!

He entered 62, Montpellier Square with the fullest intentions of being miserable. It was already half-past seven, and Irene, dressed for dinner, was seated in the drawing-room. She was wearing her gold-coloured frock--for, having been displayed at a dinner-party, a soiree, and a dance, it was now to be worn at home--and she had adorned the bosom with a cascade of lace, on which James's eyes riveted themselves at once.

"Where do you get your things?" he said in an aggravated voice. "I never see Rachel and Cicely looking half so well. That rose-point, now--that's not real!"

Irene came close, to prove to him that he was in error.

And, in spite of himself, James felt the influence of her deference, of the faint seductive perfume exhaling from her. No self-respecting Forsyte surrendered at a blow; so he merely said: He didn't know--he expected she was spending a pretty penny on dress.

The gong sounded, and, putting her white arm within his, Irene took him into the dining-room. She seated him in Soames's usual place, round the corner on her left. The light fell softly there, so that he would not be worried by the gradual dying of the day; and she began to talk to him about himself.

Presently, over James came a change, like the mellowing that steals upon a fruit in the, sun; a sense of being caressed, and praised, and petted, and all without the bestowal of a single caress or word of praise. He felt that what he was eating was agreeing with him; he could not get that feeling at home; he did not know when he had enjoyed a glass of champagne so much, and, on inquiring the brand and price, was surprised to find that it was one of which he had a large stock himself, but could never drink; he instantly formed the resolution to let his wine merchant know that he had been swindled.

Looking up from his food, he remarked:

"You've a lot of nice things about the place. Now, what did you give for that sugar-sifter? Shouldn't wonder if it was worth money!"

He was particularly pleased with the appearance of a picture, on the wall opposite, which he himself had given them:

"I'd no idea it was so good!" he said.

They rose to go into the drawing-room, and James followed Irene closely.

"That's what I call a capital little dinner," he murmured, breathing pleasantly down on her shoulder; "nothing heavy--and not too Frenchified. But I can't get it at home. I pay my cook sixty pounds a year, but she can't give me a dinner like that!"

He had as yet made no allusion to the building of the house, nor did he when Soames, pleading the excuse of business, betook himself to the room at the top, where he kept his pictures.

James was left alone with his daughter-in-law. The glow of the wine, and of an excellent liqueur, was still within him. He felt quite warm towards her. She was really a taking little thing; she listened to you, and seemed to understand what you were saying; and, while talking, he kept examining her figure, from her bronze-coloured shoes to the waved gold of her hair. She was leaning back in an Empire chair, her shoulders poised against the top--her body, flexibly straight and unsupported from the hips, swaying when she moved, as though giving to the arms of a lover. Her lips were smiling, her eyes half-closed.

It may have been a recognition of danger in the very charm of her attitude, or a twang of digestion, that caused a sudden dumbness to fall on James. He did not remember ever having been quite alone with Irene before. And, as he looked at her, an odd feeling crept over him, as though he had come across something strange and foreign.

Now what was she thinking about--sitting back like that?

Thus when he spoke it was in a sharper voice, as if he had been awakened from a pleasant dream.

"What d'you do with yourself all day?" he said. "You never come round to Park Lane!"

She seemed to be making very lame excuses, and James did not look at her. He did not want to believe that she was really avoiding them--it would mean too much.

"I expect the fact is, you haven't time," he said; "You're always about with June. I expect you're useful to her with her young man, chaperoning, and one thing and another. They tell me she's never at home now; your Uncle Jolyon he doesn't like it, I fancy, being left so much alone as he is. They tell me she's always hanging about for this young Bosinney; I suppose he comes here every day. Now, what do you think of him? D'you think he knows his own mind? He seems to me a poor thing. I should say the grey mare was the better horse!"

The colour deepened in Irene's face; and James watched her suspiciously.

"Perhaps you don't quite understand Mr. Bosinney," she said.

"Don't understand him!" James hummed out: "Why not?--you can see he's one of these artistic chaps. They say he's clever--they all think they're clever. You know more about him than I do," he added; and again his suspicious glance rested on her.

"He is designing a house for Soames," she said softly, evidently trying to smooth things over.

"That brings me to what I was going to say," continued James; "I don't know what Soames wants with a young man like that; why doesn't he go to a first-rate man?"

"Perhaps Mr. Bosinney is first-rate!"

James rose, and took a turn with bent head.

"That's it'," he said, "you young people, you all stick together; you all think you know best!"

Halting his tall, lank figure before her, he raised a finger, and levelled it at her bosom, as though bringing an indictment against her beauty:

"All I can say is, these artistic people, or whatever they call themselves, they're as unreliable as they can be; and my advice to you is, don't you have too much to do with him!"

Irene smiled; and in the curve of her lips was a strange provocation. She seemed to have lost her deference. Her breast rose and fell as though with secret anger; she drew her hands inwards from their rest on the arms of her chair until the tips of her fingers met, and her dark eyes looked unfathomably at James.

The latter gloomily scrutinized the floor.

"I tell you my opinion," he said, "it's a pity you haven't got a child to think about, and occupy you!"

A brooding look came instantly on Irene's face, and even James became conscious of the rigidity that took possession of her whole figure beneath the softness of its silk and lace clothing.

He was frightened by the effect he had produced, and like most men with but little courage, he sought at once to justify himself by bullying.

"You don't seem to care about going about. Why don't you drive down to Hurlingham with us? And go to the theatre now and then. At your time of life you ought to take an interest in things. You're a young woman!"

The brooding look darkened on her face; he grew nervous.

"Well, I know nothing about it," he said; "nobody tells me anything. Soames ought to be able to take care of himself. If he can't take care of himself he mustn't look to me--that's all."

Biting the corner of his forefinger he stole a cold, sharp look at his daughter-in-law.

He encountered her eyes fixed on his own, so dark and deep, that he stopped, and broke into a gentle perspiration.

"Well, I must be going," he said after a short pause, and a minute later rose, with a slight appearance of surprise, as though he had expected to be asked to stop. Giving his hand to Irene, he allowed himself to be conducted to the door, and let out into the street. He would not have a cab, he would walk, Irene was to say good-night to Soames for him, and if she wanted a little gaiety, well, he would drive her down to Richmond any day.

He walked home, and going upstairs, woke Emily out of the first sleep she had had for four and twenty hours, to tell her that it was his impression things were in a bad way at Soames's; on this theme he descanted for half an hour, until at last, saying that he would not sleep a wink, he turned on his side and instantly began to snore.

In Montpellier Square Soames, who had come from the picture room, stood invisible at the top of the stairs, watching Irene sort the letters brought by the last post. She turned back into the drawing-room; but in a minute came out, and stood as if listening. Then she came stealing up the stairs, with a kitten in her arms. He could see her face bent over the little beast, which was purring against her neck. Why couldn't she look at him like that?

Suddenly she saw him, and her face changed.

"Any letters for me?" he said.

"Three."

He stood aside, and without another word she passed on into the bedroom.

CHAPTER VII

OLD JOLYON'S PECCADILLO

Old Jolyon came out of Lord's cricket ground that same afternoon with the intention of going home. He had not reached Hamilton Terrace before he changed his mind, and hailing a cab, gave the driver an address in Wistaria Avenue. He had taken a resolution.

June had hardly been at home at all that week; she had given him nothing of her company for a long time past, not, in fact, since she had become engaged to Bosinney. He never asked her for her company. It was not his habit to ask people for things! She had just that one idea now--Bosinney and his affairs--and she left him stranded in his great house, with a parcel of servants, and not a soul to speak to from morning to night. His Club was closed for cleaning; his Boards in recess; there was nothing, therefore, to take him into the City. June had wanted him to go away; she would not go herself, because Bosinney was in London.

But where was he to go by himself? He could not go abroad alone; the sea upset his liver; he hated hotels. Roger went to a hydropathic--he was not going to begin that at his time of life, those new-fangled places we're all humbug!

With such formulas he clothed to himself the desolation of his spirit; the lines down his face deepening, his eyes day by day looking forth with the melancholy which sat so strangely on a face wont to be strong and serene.

And so that afternoon he took this journey through St. John's Wood, in the golden-light that sprinkled the rounded green bushes of the acacia's before the little houses, in the summer sunshine that seemed holding a revel over the little gardens; and he looked about him with interest; for this was a district which no Forsyte entered without open disapproval and secret curiosity.

His cab stopped in front of a small house of that peculiar buff colour which implies a long immunity from paint. It had an outer gate, and a rustic approach.

He stepped out, his bearing extremely composed; his massive head, with its drooping moustache and wings of white hair, very upright, under an excessively large top hat; his glance firm, a little angry. He had been driven into this!

"Mrs. Jolyon Forsyte at home?"

"Oh, yes sir!--what name shall I say, if you please, sir?"

Old Jolyon could not help twinkling at the little maid as he gave his name. She seemed to him such a funny little toad!

And he followed her through the dark hall, into a small double, drawing-room, where the furniture was covered in chintz, and the little maid placed him in a chair.

"They're all in the garden, sir; if you'll kindly take a seat, I'll tell them."

Old Jolyon sat down in the chintz-covered chair, and looked around him. The whole place seemed to him, as he would have expressed it, pokey; there was a certain--he could not tell exactly what--air of shabbiness, or rather of making two ends meet, about everything. As far as he could see, not a single piece of furniture was worth a five-pound note. The walls, distempered rather a long time ago, were decorated with water-colour sketches; across the ceiling meandered a long crack.

These little houses were all old, second-rate concerns; he should hope the rent was under a hundred a year; it hurt him more than he could have said, to think of a Forsyte--his own son living in such a place.

The little maid came back. Would he please to go down into the garden?

Old Jolyon marched out through the French windows. In descending the steps he noticed that they wanted painting.

Young Jolyon, his wife, his two children, and his dog Balthasar, were all out there under a pear-tree.

This walk towards them was the most courageous act of old Jolyon's life; but no muscle of his face moved, no nervous gesture betrayed him. He kept his deep-set eyes steadily on the enemy.

In those two minutes he demonstrated to perfection all that unconscious soundness, balance, and vitality of fibre that made, of him and so many others of his class the core of the nation. In the unostentatious conduct of their own affairs, to the neglect of everything else, they typified the essential individualism, born in the Briton from the natural isolation of his country's life.

The dog Balthasar sniffed round the edges of his trousers; this friendly and cynical mongrel--offspring of a liaison between a Russian poodle and a fox-terrier--had a nose for the unusual.

The strange greetings over, old Jolyon seated himself in a wicker chair, and his two grandchildren, one on each side of his knees, looked at him silently, never having seen so old a man.

They were unlike, as though recognising the difference set between them by the circumstances of their births. Jolly, the child of sin, pudgy-faced, with his tow-coloured hair brushed off his forehead, and a dimple in his chin, had an air of stubborn amiability, and the eyes of a Forsyte; little Holly, the child of wedlock, was a dark-skinned, solemn soul, with her mother's, grey and wistful eyes.

The dog Balthasar, having walked round the three small flower-beds, to show his extreme contempt for things at large, had also taken a seat in front of old Jolyon, and, oscillating a tail curled by Nature tightly over his back, was staring up with eyes that did not blink.

Even in the garden, that sense of things being pokey haunted old Jolyon; the wicker chair creaked under his weight; the garden-beds looked 'daverdy'; on the far side, under the smut-stained wall, cats had made a path.

While he and his grandchildren thus regarded each other with the peculiar scrutiny, curious yet trustful, that passes between the very young and the very old, young Jolyon watched his wife.

The colour had deepened in her thin, oval face, with its straight brows, and large, grey eyes. Her hair, brushed in fine, high curves back from her forehead, was going grey, like his own, and this greyness made the sudden vivid colour in her cheeks painfully pathetic.

The look on her face, such as he had never seen there before, such as she had always hidden from him, was full of secret resentments, and longings, and fears. Her eyes, under their twitching brows, stared painfully. And she was silent.

Jolly alone sustained the conversation; he had many possessions, and was anxious that his unknown friend with extremely large moustaches, and hands all covered with blue veins, who sat with legs crossed like his own father (a habit he was himself trying to acquire), should know it; but being a Forsyte, though not yet quite eight years old, he made no mention of the thing at the moment dearest to his heart--a camp of soldiers in a shop-window, which his father had promised to buy. No doubt it seemed to him too precious; a tempting of Providence to mention it yet.

And the sunlight played through the leaves on that little party of the three generations grouped tranquilly under the pear-tree, which had long borne no fruit.

Old Jolyon's furrowed face was reddening patchily, as old men's faces redden in the sun. He took one of Jolly's hands in his own; the boy climbed on to his knee; and little Holly, mesmerized by this sight, crept up to them; the sound of the dog Balthasar's scratching arose rhythmically.

Suddenly young Mrs. Jolyon got up and hurried indoors. A minute later her husband muttered an excuse, and followed. Old Jolyon was left alone with his grandchildren.

And Nature with her quaint irony began working in him one of her strange revolutions, following her cyclic laws into the depths of his heart. And that tenderness for little children, that passion for the beginnings of life which had once made him forsake his son and follow June, now worked in him to forsake June and follow these littler things. Youth, like a flame, burned ever in his breast, and to youth he turned, to the round little limbs, so reckless, that wanted care, to the small round faces so unreasonably solemn or bright, to the treble tongues, and the shrill, chuckling laughter, to the insistent tugging hands, and the feel of small bodies against his legs, to all that was young and young, and once more young. And his eyes grew soft, his voice, and thin-veined hands soft, and soft his heart within him. And to those small creatures he became at once a place of pleasure, a place where they were secure, and could talk and laugh and play; till, like sunshine, there radiated from old Jolyon's wicker chair the perfect gaiety of three hearts.

But with young Jolyon following to his wife's room it was different.

He found her seated on a chair before her dressing-glass, with her hands before her face.

Her shoulders were shaking with sobs. This passion of hers for suffering was mysterious to him. He had been through a hundred of these moods; how he had survived them he never knew, for he could never believe they were moods, and that the last hour of his partnership had not struck.

In the night she would be sure to throw her arms round his neck and say: "Oh! Jo, how I make you suffer!" as she had done a hundred times before.

He reached out his hand, and, unseen, slipped his razor-case into his pocket. 'I cannot stay here,' he thought, 'I must go down!' Without a word he left the room, and went back to the lawn.

Old Jolyon had little Holly on his knee; she had taken possession of his watch; Jolly, very red in the face, was trying to show that he could stand on his head. The dog Balthasar, as close as he might be to the tea-table, had fixed his eyes on the cake.

Young Jolyon felt a malicious desire to cut their enjoyment short.

What business had his father to come and upset his wife like this? It was a shock, after all these years! He ought to have known; he ought to have given them warning; but when did a Forsyte ever imagine that his conduct could upset anybody! And in his thoughts he did old Jolyon wrong.

He spoke sharply to the children, and told them to go in to their tea. Greatly surprised, for they had never heard their father speak sharply before, they went off, hand in hand, little Holly looking back over her shoulder.

Young Jolyon poured out the tea.

"My wife's not the thing today," he said, but he knew well enough that his father had penetrated the cause of that sudden withdrawal, and almost hated the old man for sitting there so calmly.

"You've got a nice little house here," said old Jolyon with a shrewd look; "I suppose you've taken a lease of it!"

Young Jolyon nodded.

"I don't like the neighbourhood," said old Jolyon; "a ramshackle lot."

Young Jolyon replied: "Yes, we're a ramshackle lot.'"

The silence was now only broken by the sound of the dog Balthasar's scratching.

Old Jolyon said simply: "I suppose I oughtn't to have come here, Jo; but I get so lonely!"

At these words young Jolyon got up and put his hand on his father's shoulder.

In the next house someone was playing over and over again: 'La Donna mobile' on an untuned piano; and the little garden had fallen into shade, the sun now only reached the wall at the end, whereon basked a crouching cat, her yellow eyes turned sleepily down on the dog Balthasar. There was a drowsy hum of very distant traffic; the creepered trellis round the garden shut out everything but sky, and house, and pear-tree, with its top branches still gilded by the sun.

For some time they sat there, talking but little. Then old Jolyon rose to go, and not a word was said about his coming again.

He walked away very sadly. What a poor miserable place; and he thought of the great, empty house in Stanhope Gate, fit residence for a Forsyte, with its huge billiard-room and drawing-room that no one entered from one week's end to another.

That woman, whose face he had rather liked, was too thin-skinned by half; she gave Jo a bad time he knew! And those sweet children! Ah! what a piece of awful folly!

He walked towards the Edgware Road, between rows of little houses, all suggesting to him (erroneously no doubt, but the prejudices of a Forsyte are sacred) shady histories of some sort or kind.

Society, forsooth, the chattering hags and jackanapes--had set themselves up to pass judgment on his flesh and blood! A parcel of old women! He stumped his umbrella on the ground, as though to drive it into the heart of that unfortunate body, which had dared to

ostracize his son and his son's son, in whom he could have lived again!

He stumped his umbrella fiercely; yet he himself had followed Society's behaviour for fifteen years--had only today been false to it!

He thought of June, and her dead mother, and the whole story, with all his old bitterness. A wretched business!

He was a long time reaching Stanhope Gate, for, with native perversity, being extremely tired, he walked the whole way.

After washing his hands in the lavatory downstairs, he went to the dining-room to wait for dinner, the only room he used when June was out--it was less lonely so. The evening paper had not yet come; he had finished the Times, there was therefore nothing to do.

The room faced the backwater of traffic, and was very silent. He disliked dogs, but a dog even would have been company. His gaze, travelling round the walls, rested on a picture entitled: 'Group of Dutch fishing boats at sunset'; the chef d'oeuvre of his collection. It gave him no pleasure. He closed his eyes. He was lonely! He oughtn't to complain, he knew, but he couldn't help it: He was a poor thing--had always been a poor thing--no pluck! Such was his thought.

The butler came to lay the table for dinner, and seeing his master apparently asleep, exercised extreme caution in his movements. This bearded man also wore a moustache, which had given rise to grave doubts in the minds of many members--of the family--, especially those who, like Soames, had been to public schools, and were accustomed to niceness in such matters. Could he really be considered a butler? Playful spirits alluded to him as: 'Uncle Jolyon's Nonconformist'; George, the acknowledged wag, had named him: 'Sankey.'

He moved to and fro between the great polished sideboard and the great polished table inimitably sleek and soft.

Old Jolyon watched him, feigning sleep. The fellow was a sneak--he had always thought so--who cared about nothing but rattling through his work, and getting out to his betting or his woman or goodness knew what! A slug! Fat too! And didn't care a pin about his master!

But then against his will, came one of those moments of philosophy which made old Jolyon different from other Forsytes:

After all why should the man care? He wasn't paid to care, and why expect it? In this world people couldn't look for affection unless they paid for it. It might be different in the next--he didn't know--couldn't tell! And again he shut his eyes.

Relentless and stealthy, the butler pursued his labours, taking things from the various compartments of the sideboard. His back seemed always turned to old Jolyon; thus, he robbed his operations of the unseemliness of being carried on in his master's presence; now and then he furtively breathed on the silver, and wiped it with a piece of chamois leather. He appeared to pore over the quantities of wine in the decanters, which he carried carefully and rather high, letting his heard droop over them protectingly. When he had finished, he stood for over a minute watching his master, and in his greenish eyes there was a look of contempt:

After all, this master of his was an old buffer, who hadn't much left in him!

Soft as a tom-cat, he crossed the room to press the bell. His orders were 'dinner at seven.' What if his master were asleep; he would soon have him out of that; there was the night to sleep in! He had himself to think of, for he was due at his Club at half-past eight!

In answer to the ring, appeared a page boy with a silver soup tureen. The butler took it from his hands and placed it on the table, then, standing by the open door, as though about to usher company into the room, he said in a solemn voice:

"Dinner is on the table, sir!"

Slowly old Jolyon got up out of his chair, and sat down at the table to eat his dinner.

CHAPTER VIII

PLANS OF THE HOUSE

Forsytes, as is generally admitted, have shells, like that extremely useful little animal which is made into Turkish delight, in other words, they are never seen, or if seen would not be recognised, without habitats, composed of circumstance, property, acquaintances, and wives, which seem to move along with them in their passage through a world composed of thousands of other Forsytes with their habitats. Without a habitat a Forsyte is inconceivable--he would be like a novel without a plot, which is

well-known to be an anomaly.

To Forsyte eyes Bosinney appeared to have no habitat, he seemed one of those rare and unfortunate men who go through life surrounded by circumstance, property, acquaintances, and wives that do not belong to them.

His rooms in Sloane Street, on the top floor, outside which, on a plate, was his name, 'Philip Baynes Bosinney, Architect,' were not those of a Forsyte.--He had no sitting-room apart from his office, but a large recess had been screened off to conceal the necessaries of life--a couch, an easy chair, his pipes, spirit case, novels and slippers. The business part of the room had the usual furniture; an open cupboard with pigeon-holes, a round oak table, a folding wash-stand, some hard chairs, a standing desk of large dimensions covered with drawings and designs. June had twice been to tea there under the chaperonage of his aunt.

He was believed to have a bedroom at the back.

As far as the family had been able to ascertain his income, it consisted of two consulting appointments at twenty pounds a year, together with an odd fee once in a way, and--more worthy item--a private annuity under his father's will of one hundred and fifty pounds a year.

What had transpired concerning that father was not so reassuring. It appeared that he had been a Lincolnshire country doctor of Cornish extraction, striking appearance, and Byronic tendencies--a well-known figure, in fact, in his county. Bosinney's uncle by marriage, Baynes, of Baynes and Bildeboy, a Forsyte in instincts if not in name, had but little that was worthy to relate of his brother-in-law.

"An odd fellow!' he would say: 'always spoke of his three eldest boys as 'good creatures, but so dull'; they're all doing capitally in the Indian Civil! Philip was the only one he liked. I've heard him talk in the queerest way; he once said to me: 'My dear fellow, never let your poor wife know what you're thinking of! But I didn't follow his advice; not I! An eccentric man! He would say to Phil: 'Whether you live like a gentleman or not, my boy, be sure you die like one! and he had himself embalmed in a frock coat suit, with a satin cravat and a diamond pin. Oh, quite an original, I can assure you!"

Of Bosinney himself Baynes would speak warmly, with a certain compassion: "He's got a streak of his father's Byronism. Why, look at the way he threw up his chances when he left my office; going off like that for six months with a knapsack, and all for what?--to study foreign architecture--foreign! What could he expect? And there he is--a clever young fellow--doesn't make his hundred a year! Now this engagement is the best thing that could have happened--keep him steady; he's one of those that go to bed all day and stay up all night, simply because they've no method; but no vice about him--not an ounce of vice. Old Forsyte's a rich man!"

Mr. Baynes made himself extremely pleasant to June, who frequently visited his house in Lowndes Square at this period.

"This house of your cousin's--what a capital man of business--is the very thing for Philip," he would say to her; "you mustn't expect to see too much of him just now, my dear young lady. The good cause--the good cause! The young man must make his way. When I was his age I was at work day and night. My dear wife used to say to me, 'Bobby, don't work too hard, think of your health'; but I never spared myself!"

June had complained that her lover found no time to come to Stanhope Gate.

The first time he came again they had not been together a quarter of an hour before, by one of those coincidences of which she was a mistress, Mrs. Septimus Small arrived. Thereon Bosinney rose and hid himself, according to previous arrangement, in the little study, to wait for her departure.

"My dear," said Aunt Juley, "how thin he is! I've often noticed it with engaged people; but you mustn't let it get worse. There's Barlow's extract of veal; it did your Uncle Swithin a lot of good."

June, her little figure erect before the hearth, her small face quivering grimly, for she regarded her aunt's untimely visit in the light of a personal injury, replied with scorn:

"It's because he's busy; people who can do anything worth doing are never fat!"

Aunt Juley pouted; she herself had always been thin, but the only pleasure she derived from the fact was the opportunity of longing to be stouter.

"I don't think," she said mournfully, "that you ought to let them call him 'The Buccaneer'; people might think it odd, now that he's going to build a house for Soames. I do hope he will be careful; it's so important for him. Soames has such good taste!"

"Taste!" cried June, flaring up at once; "wouldn't give that for his taste, or any of the family's!"

Mrs. Small was taken aback.

"Your Uncle Swithin," she said, "always had beautiful taste! And Soames's little house is lovely; you don't mean to say you don't think so!"

"H'mph!" said June, "that's only because Irene's there!"

Aunt Juley tried to say something pleasant:

"And how will dear Irene like living in the country?"

June gazed at her intently, with a look in her eyes as if her conscience had suddenly leaped up into them; it passed; and an even more intent look took its place, as if she had stared that conscience out of countenance. She replied imperiously:

"Of course she'll like it; why shouldn't she?"

Mrs. Small grew nervous.

"I didn't know," she said; "I thought she mightn't like to leave her friends. Your Uncle James says she doesn't take enough interest in life. We think--I mean Timothy thinks--she ought to go out more. I expect you'll miss her very much!"

June clasped her hands behind her neck.

"I do wish," she cried, "Uncle Timothy wouldn't talk about what doesn't concern him!"

Aunt Juley rose to the full height of her tall figure.

"He never talks about what doesn't concern him," she said.

June was instantly compunctious; she ran to her aunt and kissed her.

"I'm very sorry, auntie; but I wish they'd let Irene alone."

Aunt Juley, unable to think of anything further on the subject that would be suitable, was silent; she prepared for departure, hooking her black silk cape across her chest, and, taking up her green reticule:

"And how is your dear grandfather?" she asked in the hall, "I expect he's very lonely now that all your time is taken up with Mr. Bosinney."

She bent and kissed her niece hungrily, and with little, mincing steps passed away.

The tears sprang up in June's eyes; running into the little study, where Bosinney was sitting at the table drawing birds on the back of an envelope, she sank down by his side and cried:

"Oh, Phil! it's all so horrid!" Her heart was as warm as the colour of her hair.

On the following Sunday morning, while Soames was shaving, a message was brought him to the effect that Mr. Bosinney was below, and would be glad to see him. Opening the door into his wife's room, he said:

"Bosinney's downstairs. Just go and entertain him while I finish shaving. I'll be down in a minute. It's about the plans, I expect."

Irene looked at him, without reply, put the finishing touch to her dress and went downstairs. He could not make her out about this house. She had said nothing against it, and, as far as Bosinney was concerned, seemed friendly enough.

From the window of his dressing-room he could see them talking together in the little court below. He hurried on with his shaving, cutting his chin twice. He heard them laugh, and thought to himself: "Well, they get on all right, anyway!"

As he expected, Bosinney had come round to fetch him to look at the plans.

He took his hat and went over.

The plans were spread on the oak table in the architect's room; and pale, imperturbable, inquiring, Soames bent over them for a long time without speaking.

He said at last in a puzzled voice:

"It's an odd sort of house!"

A rectangular house of two stories was designed in a quadrangle round a covered-in court. This court, encircled by a gallery on the upper floor, was roofed with a glass roof, supported by eight columns running up from the ground.

It was indeed, to Forsyte eyes, an odd house.

"There's a lot of room cut to waste," pursued Soames.

Bosinney began to walk about, and Soames did not like the expression on his face.

"The principle of this house," said the architect, "was that you should have room to breathe--like a gentleman!"

Soames extended his finger and thumb, as if measuring the extent of the distinction he should acquire; and replied:

"Oh! yes; I see."

The peculiar look came into Bosinney's face which marked all his enthusiasms.

"I've tried to plan you a house here with some self-respect of its own. If you don't like it, you'd better say so. It's certainly the last thing to be considered--who wants self-respect in a house, when you can squeeze in an extra lavatory?" He put his finger suddenly down on the left division of the centre oblong: "You can swing a cat here. This is for your pictures, divided from this court by curtains; draw them back and you'll have a space of fifty-one by twenty-three six. This double-faced stove in the centre, here, looks one way towards the court, one way towards the picture room; this end wall is all window; You've a southeast light from that, a north light from the court. The rest of your pictures you can hang round the gallery upstairs, or in the other rooms." "In architecture," he went on--and though looking at Soames he did not seem to see him, which gave Soames an unpleasant feeling--"as in life, you'll get no self-respect without regularity. Fellows tell you that's old fashioned. It appears to be peculiar any way; it never occurs to us to embody the main principle of life in our buildings; we load our houses with decoration, gimcracks, corners, anything to distract the eye. On the contrary the eye should rest; get your effects with a few strong lines. The whole thing is regularity there's no self-respect without it."

Soames, the unconscious ironist, fixed his gaze on Bosinney's tie, which was far from being in the perpendicular; he was unshaven too, and his dress not remarkable for order. Architecture appeared to have exhausted his regularity.

"Won't it look like a barrack?" he inquired.

He did not at once receive a reply.

"I can see what it is," said Bosinney, "you want one of Littlemaster's houses--one of the pretty and commodious sort, where the servants will live in garrets, and the front door be sunk so that you may come up again. By all means try Littlemaster, you'll find him a capital fellow, I've known him all my life!"

Soames was alarmed. He had really been struck by the plans, and the concealment of his satisfaction had been merely instinctive. It was difficult for him to pay a compliment. He despised people who were lavish with their praises.

He found himself now in the embarrassing position of one who must pay a compliment or run the risk of losing a good thing. Bosinney was just the fellow who might tear up the plans and refuse to act for him; a kind of grown-up child!

This grown-up childishness, to which he felt so superior, exercised a peculiar and almost mesmeric effect on Soames, for he had never felt anything like it in himself.

"Well," he stammered at last, "it's--it's, certainly original."

He had such a private distrust and even dislike of the word 'original' that he felt he had not really given himself away by this remark.

Bosinney seemed pleased. It was the sort of thing that would please a fellow like that! And his success encouraged Soames.

"It's--a big place," he said.

"Space, air, light," he heard Bosinney murmur, "you can't live like a gentleman in one of Littlemaster's--he builds for manufacturers."

Soames made a deprecating movement; he had been identified with a gentleman; not for a good deal of money now would he be classed with manufacturers. But his innate distrust of general principles revived. What the deuce was the good of talking about regularity and self-respect? It looked to him as if the house would be cold.

"Irene can't stand the cold!" he said.

"Ah!" said Bosinney sarcastically. "Your wife? She doesn't like the cold? I'll see to that; she shan't be cold. Look here!" he pointed, to four marks at regular intervals on the walls of the court. "I've given you hot-water pipes in aluminium casings; you can get them with very good designs."

Soames looked suspiciously at these marks.

"It's all very well, all this," he said, "but what's it going to cost?"

The architect took a sheet of paper from his pocket:

"The house, of course, should be built entirely of stone, but, as I thought you wouldn't stand that, I've compromised for a facing. It ought to have a copper roof, but I've made it green slate. As it is, including metal work, it'll cost you eight thousand five hundred."

"Eight thousand five hundred?" said Soames. "Why, I gave you an outside limit of eight!"

"Can't be done for a penny less," replied Bosinney coolly.

"You must take it or leave it!"

It was the only way, probably, that such a proposition could have been made to Soames. He was nonplussed. Conscience told him to throw the whole thing up. But the design was good, and he knew it--there was completeness about it, and dignity; the servants' apartments were excellent too. He would gain credit by living in a house like that--with such individual features, yet perfectly well-arranged.

He continued poring over the plans, while Bosinney went into his bedroom to shave and dress.

The two walked back to Montpellier Square in silence, Soames watching him out of the corner of his eye.

The Buccaneer was rather a good-looking fellow--so he thought--when he was properly got up.

Irene was bending over her flowers when the two men came in.

She spoke of sending across the Park to fetch June.

"No, no," said Soames, "we've still got business to talk over!"

At lunch he was almost cordial, and kept pressing Bosinney to eat. He was pleased to see the architect in such high spirits, and left him to spend the afternoon with Irene, while he stole off to his pictures, after his Sunday habit. At tea-time he came down to the drawing-room, and found them talking, as he expressed it, nineteen to the dozen.

Unobserved in the doorway, he congratulated himself that things were taking the right turn. It was lucky she and Bosinney got on; she seemed to be falling into line with the idea of the new house.

Quiet meditation among his pictures had decided him to spring the five hundred if necessary; but he hoped that the afternoon might have softened Bosinney's estimates. It was so purely a matter which Bosinney could remedy if he liked; there must be a dozen ways in which he could cheapen the production of a house without spoiling the effect.

He awaited, therefore, his opportunity till Irene was handing the architect his first cup of tea. A chink of sunshine through the lace of the blinds warmed her cheek, shone in the gold of her hair, and in her soft eyes. Possibly the same gleam deepened Bosinney's colour, gave the rather startled look to his face.

Soames hated sunshine, and he at once got up, to draw the blind. Then he took his own cup of tea from his wife, and said, more coldly than he had intended:

"Can't you see your way to do it for eight thousand after all? There must be a lot of little things you could alter."

Bosinney drank off his tea at a gulp, put down his cup, and answered:

"Not one!"

Soames saw that his suggestion had touched some unintelligible point of personal vanity.

"Well," he agreed, with sulky resignation; "you must have it your own way, I suppose."

A few minutes later Bosinney rose to go, and Soames rose too, to see him off the premises. The architect seemed in absurdly high spirits. After watching him walk away at a swinging pace, Soames returned moodily to the drawing-room, where Irene was putting away the music, and, moved by an uncontrollable spasm of curiosity, he asked:

"Well, what do you think of 'The Buccaneer'?"

He looked at the carpet while waiting for her answer, and he had to wait some time.

"I don't know," she said at last.

"Do you think he's good-looking?"

Irene smiled. And it seemed to Soames that she was mocking him.

"Yes," she answered; "very."

CHAPTER IX

DEATH OF AUNT ANN

There came a morning at the end of September when Aunt Ann was unable to take from Smither's hands the insignia of personal dignity. After one look at the old face, the doctor, hurriedly sent for, announced that Miss Forsyte had passed away in her sleep.

Aunts Juley and Hester were overwhelmed by the shock. They had never imagined such an ending. Indeed, it is doubtful whether they had ever realized that an ending was bound to come. Secretly they felt it unreasonable of Ann to have left them like this without a word, without even a struggle. It was unlike her.

Perhaps what really affected them so profoundly was the thought that a Forsyte should have let go her grasp on life. If one, then why not all!

It was a full hour before they could make up their minds to tell Timothy. If only it could be kept from him! If only it could be broken to him by degrees!

And long they stood outside his door whispering together. And when it was over they whispered together again.

He would feel it more, they were afraid, as time went on. Still, he had taken it better than could have been expected. He would keep his bed, of course!

They separated, crying quietly.

Aunt Juley stayed in her room, prostrated by the blow. Her face, discoloured by tears, was divided into compartments by the little ridges of pouting flesh which had swollen with emotion. It was impossible to conceive of life without Ann, who had lived with her for seventy-three years, broken only by the short interregnum of her married life, which seemed now so unreal. At fixed intervals she went to her drawer, and took from beneath the lavender bags a fresh pocket-handkerchief. Her warm heart could not bear the thought that Ann was lying there so cold.

Aunt Hester, the silent, the patient, that backwater of the family energy, sat in the drawing-room, where the blinds were drawn; and she, too, had wept at first, but quietly, without visible effect. Her guiding principle, the conservation of energy, did not abandon her

in sorrow. She sat, slim, motionless, studying the grate, her hands idle in the lap of her black silk dress. They would want to rouse her into doing something, no doubt. As if there were any good in that! Doing something would not bring back Ann! Why worry her?

Five o'clock brought three of the brothers, Jolyon and James and Swithin; Nicholas was at Yarmouth, and Roger had a bad attack of gout. Mrs. Hayman had been by herself earlier in the day, and, after seeing Ann, had gone away, leaving a message for Timothy--which was kept from him--that she ought to have been told sooner. In fact, there was a feeling amongst them all that they ought to have been told sooner, as though they had missed something; and James said:

"I knew how it'd be; I told you she wouldn't last through the summer."

Aunt Hester made no reply; it was nearly October, but what was the good of arguing; some people were never satisfied.

She sent up to tell her sister that the brothers were there. Mrs. Small came down at once. She had bathed her face, which was still swollen, and though she looked severely at Swithin's trousers, for they were of light blue--he had come straight from the club, where the news had reached him--she wore a more cheerful expression than usual, the instinct for doing the wrong thing being even now too strong for her.

Presently all five went up to look at the body. Under the pure white sheet a quilted counter-pane had been placed, for now, more than ever, Aunt Ann had need of warmth; and, the pillows removed, her spine and head rested flat, with the semblance of their life-long inflexibility; the coif banding the top of her brow was drawn on either side to the level of the ears, and between it and the sheet her face, almost as white, was turned with closed eyes to the faces of her brothers and sisters. In its extraordinary peace the face was stronger than ever, nearly all bone now under the scarce-wrinkled parchment of skin--square jaw and chin, cheekbones, forehead with hollow temples, chiselled nose--the fortress of an unconquerable spirit that had yielded to death, and in its upward sightlessness seemed trying to regain that spirit, to regain the guardianship it had just laid down.

Swithin took but one look at the face, and left the room; the sight, he said afterwards, made him very queer. He went downstairs shaking the whole house, and, seizing his hat, clambered into his brougham, without giving any directions to the coachman. He was driven home, and all the evening sat in his chair without moving.

He could take nothing for dinner but a partridge, with an imperial pint of champagne....

Old Jolyon stood at the bottom of the bed, his hands folded in front of him. He alone of those in the room remembered the death of his mother, and though he looked at Ann, it was of that he was thinking. Ann was an old woman, but death had come to her at last--death came to all! His face did not move, his gaze seemed travelling from very far.

Aunt Hester stood beside him. She did not cry now, tears were exhausted--her nature refused to permit a further escape of force; she twisted her hands, looking not at Ann, but from side to side, seeking some way of escaping the effort of realization.

Of all the brothers and sisters James manifested the most emotion. Tears rolled down the parallel furrows of his thin face; where he should go now to tell his troubles he did not know; Juley was no good, Hester worse than useless! He felt Ann's death more than he had ever thought he should; this would upset him for weeks!

Presently Aunt Hester stole out, and Aunt Juley began moving about, doing 'what was necessary,' so that twice she knocked against something. Old Jolyon, roused from his reverie, that reverie of the long, long past, looked sternly at her, and went away. James alone was left by the bedside; glancing stealthily round, to see that he was not observed, he twisted his long body down, placed a kiss on the dead forehead, then he, too, hastily left the room. Encountering Smither in the hall, he began to ask her about the funeral, and, finding that she knew nothing, complained bitterly that, if they didn't take care, everything would go wrong. She had better send for Mr. Soames--he knew all about that sort of thing; her master was very much upset, he supposed--he would want looking after; as for her mistresses, they were no good--they had no gumption! They would be ill too, he shouldn't wonder. She had better send for the doctor; it was best to take things in time. He didn't think his sister Ann had had the best opinion; if she'd had Blank she would have been alive now. Smither might send to Park Lane any time she wanted advice. Of course, his carriage was at their service for the funeral. He supposed she hadn't such a thing as a glass of claret and a biscuit--he had had no lunch!

The days before the funeral passed quietly. It had long been known, of course, that Aunt Ann had left her little property to Timothy. There was, therefore, no reason for the slightest agitation. Soames, who was sole executor, took charge of all arrangements, and in due course sent out the following invitation to every male member of the family:

To.....

Your presence is requested at the funeral of Miss Ann Forsyte, in Highgate Cemetery, at noon of Oct. 1st. Carriages will meet at "The Bower," Bayswater Road, at 10.45. No flowers by request. 'R.S.V.P.'

The morning came, cold, with a high, grey, London sky, and at half-past ten the first carriage, that of James, drove up. It contained James and his son-in-law Dartie, a fine man, with a square chest, buttoned very tightly into a frock coat, and a sallow, fattish face adorned with dark, well-curled moustaches, and that incorrigible commencement of whisker which, eluding the strictest attempts at shaving, seems the mark of something deeply ingrained in the personality of the shaver, being especially noticeable in men who speculate.

Soames, in his capacity of executor, received the guests, for Timothy still kept his bed; he would get up after the funeral; and Aunts Juley and Hester would not be coming down till all was over, when it was understood there would be lunch for anyone who cared to come back. The next to arrive was Roger, still limping from the gout, and encircled by three of his sons--young Roger, Eustace, and Thomas. George, the remaining son, arrived almost immediately afterwards in a hansom, and paused in the hall to ask Soames how he found undertaking pay.

They disliked each other.

Then came two Haymans--Giles and Jesse perfectly silent, and very well dressed, with special creases down their evening trousers. Then old Jolyon alone. Next, Nicholas, with a healthy colour in his face, and a carefully veiled sprightliness in every movement of his head and body. One of his sons followed him, meek and subdued. Swithin Forsyte, and Bosinney arrived at the same moment,--and stood--bowing precedence to each other,--but on the door opening they tried to enter together; they renewed their apologies in the hall, and, Swithin, settling his stock, which had become disarranged in the struggle, very slowly mounted the stairs. The other Hayman; two married sons of Nicholas, together with Tweetyman, Spender, and Warry, the husbands of married Forsyte and Hayman daughters. The company was then complete, twenty-one in all, not a male member of the family being absent but Timothy and young Jolyon.

Entering the scarlet and green drawing-room, whose apparel made so vivid a setting for their unaccustomed costumes, each tried nervously to find a seat, desirous of hiding the emphatic blackness of his trousers. There seemed a sort of indecency in that blackness and in the colour of their gloves--a sort of exaggeration of the feelings; and many cast shocked looks of secret envy at 'the Buccaneer,' who had no gloves, and was wearing grey trousers. A subdued hum of conversation rose, no one speaking of the departed, but each asking after the other, as though thereby casting an indirect libation to this event, which they had come to honour.

And presently James said:

"Well, I think we ought to be starting."

They went downstairs, and, two and two, as they had been told off in strict precedence, mounted the carriages.

The hearse started at a foot's pace; the carriages moved slowly after. In the first went old Jolyon with Nicholas; in the second, the twins, Swithin and James; in the third, Roger and young Roger; Soames, young Nicholas, George, and Bosinney followed in the fourth. Each of the other carriages, eight in all, held three or four of the family; behind them came the doctor's brougham; then, at a decent interval, cabs containing family clerks and servants; and at the very end, one containing nobody at all, but bringing the total cortege up to the number of thirteen.

So long as the procession kept to the highway of the Bayswater Road, it retained the foot's-pace, but, turning into less important thorough-fares, it soon broke into a trot, and so proceeded, with intervals of walking in the more fashionable streets, until it arrived. In the first carriage old Jolyon and Nicholas were talking of their wills. In the second the twins, after a single attempt, had lapsed into complete silence; both were rather deaf, and the exertion of making themselves heard was too great. Only once James broke this silence:

"I shall have to be looking about for some ground somewhere. What arrangements have you made, Swithin?"

And Swithin, fixing him with a dreadful stare, answered:

"Don't talk to me about such things!"

In the third carriage a disjointed conversation was carried on in the intervals of looking out to see how far they had got, George remarking, "Well, it was really time that the poor old lady went." He didn't believe in people living beyond seventy, Young Nicholas replied mildly that the rule didn't seem to apply to the Forsytes. George said he himself intended to commit suicide at sixty. Young Nicholas, smiling and stroking a long chin, didn't think his father would like that theory; he had made a lot of money since he was sixty. Well, seventy was the outside limit; it was then time, George said, for them to go and leave their money to their children. Soames, hitherto silent, here joined in; he had not forgotten the remark about the 'undertaking,' and, lifting his eyelids almost imperceptibly, said it was all very well for people who never made money to talk. He himself intended to live as long as he could. This was a hit at George, who was notoriously hard up. Bosinney muttered abstractedly "Hear, hear!" and, George yawning, the conversation dropped.

Upon arriving, the coffin was borne into the chapel, and, two by two, the mourners filed in behind it. This guard of men, all attached to the dead by the bond of kinship, was an impressive and singular sight in the great city of London, with its overwhelming diversity of life, its innumerable vocations, pleasures, duties, its terrible hardness, its terrible call to individualism.

The family had gathered to triumph over all this, to give a show of tenacious unity, to illustrate gloriously that law of property underlying the growth of their tree, by which it had thriven and spread, trunk and branches, the sap flowing through all, the full growth reached at the appointed time. The spirit of the old woman lying in her last sleep had called them to this demonstration. It was her final appeal to that unity which had been their strength--it was her final triumph that she had died while the tree was yet whole.

She was spared the watching of the branches jut out beyond the point of balance. She could not look into the hearts of her followers. The same law that had worked in her, bringing her up from a tall, straight-backed slip of a girl to a woman strong and grown, from a woman grown to a woman old, angular, feeble, almost witchlike, with individuality all sharpened and sharpened, as all rounding from the world's contact fell off from her--that same law would work, was working, in the family she had watched like a mother.

She had seen it young, and growing, she had seen it strong and grown, and before her old eyes had time or strength to see any more, she died. She would have tried, and who knows but she might have kept it young and strong, with her old fingers, her trembling kisses--a little longer; alas! not even Aunt Ann could fight with Nature.

'Pride comes before a fall!' In accordance with this, the greatest of Nature's ironies, the Forsyte family had gathered for a last proud pageant before they fell. Their faces to right and left, in single lines, were turned for the most part impassively toward the ground, guardians of their thoughts; but here and there, one looking upward, with a line between his brows, searched to see some sight on the chapel walls too much for him, to be listening to something that appalled. And the responses, low-muttered, in voices through which rose the same tone, the same unseizable family ring, sounded weird, as though murmured in hurried duplication by a single person.

The service in the chapel over, the mourners filed up again to guard the body to the tomb. The vault stood open, and, round it, men in black were waiting.

From that high and sacred field, where thousands of the upper middle class lay in their last sleep, the eyes of the Forsytes travelled down across the flocks of graves. There--spreading to the distance, lay London, with no sun over it, mourning the loss of its daughter, mourning with this family, so dear, the loss of her who was mother and guardian. A hundred thousand spires and houses, blurred in the great grey web of property, lay there like prostrate worshippers before the grave of this, the oldest Forsyte of them all.

A few words, a sprinkle of earth, the thrusting of the coffin home, and Aunt Ann had passed to her last rest.

Round the vault, trustees of that passing, the five brothers stood, with white heads bowed; they would see that Ann was comfortable where she was going. Her little property must stay behind, but otherwise, all that could be should be done....

Then severally, each stood aside, and putting on his hat, turned back to inspect the new inscription on the marble of the family vault:

SACRED TO THE MEMORY OF ANN FORSYTE, THE DAUGHTER OF THE ABOVE JOLYON AND ANN FORSYTE, WHO DEPARTED THIS LIFE THE 27TH DAY OF SEPTEMBER, 1886, AGED EIGHTY-SEVEN YEARS AND FOUR DAYS

Soon perhaps, someone else would be wanting an inscription. It was strange and intolerable, for they had not thought somehow, that Forsytes could die. And one and all they had a longing to get away from this painfulness, this ceremony which had reminded them of things they could not bear to think about--to get away quickly and go about their business and forget.

It was cold, too; the wind, like some slow, disintegrating force, blowing up the hill over the graves, struck them with its chilly breath; they began to split into groups, and as quickly as possible to fill the waiting carriages.

Swithin said he should go back to lunch at Timothy's, and he offered to take anybody with him in his brougham. It was considered a doubtful privilege to drive with Swithin in his brougham, which was not a large one; nobody accepted, and he went off alone. James and Roger followed immediately after; they also would drop in to lunch. The others gradually melted away, Old Jolyon taking three nephews to fill up his carriage; he had a want of those young faces.

Soames, who had to arrange some details in the cemetery office, walked away with Bosinney. He had much to talk over with him, and, having finished his business, they strolled to Hampstead, lunched together at the Spaniard's Inn, and spent a long time in going into practical details connected with the building of the house; they then proceeded to the tram-line, and came as far as the Marble Arch, where Bosinney went off to Stanhope Gate to see June.

Soames felt in excellent spirits when he arrived home, and confided to Irene at dinner that he had had a good talk with Bosinney, who really seemed a sensible fellow; they had had a capital walk too, which had done his liver good--he had been short of exercise for a long time--and altogether a very satisfactory day. If only it hadn't been for poor Aunt Ann, he would have taken her to the theatre; as it was, they must make the best of an evening at home.

"The Buccaneer asked after you more than once," he said suddenly. And moved by some inexplicable desire to assert his proprietorship, he rose from his chair and planted a kiss on his wife's shoulder.

PART II

CHAPTER I

PROGRESS OF THE HOUSE

The winter had been an open one. Things in the trade were slack; and as Soames had reflected before making up his mind, it had been a good time for building. The shell of the house at Robin Hill was thus completed by the end of April.

Now that there was something to be seen for his money, he had been coming down once, twice, even three times a week, and would mouse about among the debris for hours, careful never to soil his clothes, moving silently through the unfinished brickwork of doorways, or circling round the columns in the central court.

And he would stand before them for minutes' together, as though peering into the real quality of their substance.

On April 30 he had an appointment with Bosinney to go over the accounts, and five minutes before the proper time he entered the tent which the architect had pitched for himself close to the old oak tree.

The accounts were already prepared on a folding table, and with a nod Soames sat down to study them. It was some time before he raised his head.

"I can't make them out," he said at last; "they come to nearly seven hundred more than they ought"

After a glance at Bosinney's face he went on quickly:

"If you only make a firm stand against these builder chaps you'll get them down. They stick you with everything if you don't look sharp.... Take ten per cent. off all round. I shan't mind it's coming out a hundred or so over the mark!"

Bosinney shook his head:

"I've taken off every farthing I can!"

Soames pushed back the table with a movement of anger, which sent the account sheets fluttering to the ground.

"Then all I can say is," he flustered out, "you've made a pretty mess of it!"

"I've told you a dozen times," Bosinney answered sharply, "that there'd be extras. I've pointed them out to you over and over again!"

"I know that," growled Soames: "I shouldn't have objected to a ten pound note here and there. How was I to know that by 'extras' you meant seven hundred pounds?"

The qualities of both men had contributed to this not-inconsiderable discrepancy. On the one hand, the architect's devotion to his idea, to the image of a house which he had created and believed in--had made him nervous of being stopped, or forced to the use of makeshifts; on the other, Soames' not less true and wholehearted devotion to the very best article that could be obtained for the money, had rendered him averse to believing that things worth thirteen shillings could not be bought with twelve.

"I wish I'd never undertaken your house," said Bosinney suddenly. "You come down here worrying me out of my life. You want double the value for your money anybody else would, and now that you've got a house that for its size is not to be beaten in the county, you don't want to pay for it. If you're anxious to be off your bargain, I daresay I can find the balance above the estimates myself, but I'm d----d if I do another stroke of work for you!"

Soames regained his composure. Knowing that Bosinney had no capital, he regarded this as a wild suggestion. He saw, too, that he would be kept indefinitely out of this house on which he had set his heart, and just at the crucial point when the architect's personal care made all the difference. In the meantime there was Irene to be thought of! She had been very queer lately. He really believed it was only because she had taken to Bosinney that she tolerated the idea of the house at all. It would not do to make an open breach with her.

"You needn't get into a rage," he said. "If I'm willing to put up with it, I suppose you needn't cry out. All I meant was that when you tell me a thing is going to cost so much, I like to--well, in fact, I--like to know where I am."

"Look here!" said Bosinney, and Soames was both annoyed and surprised by the shrewdness of his glance. "You've got my services dirt cheap. For the kind of work I've put into this house, and the amount of time I've given to it, you'd have had to pay Littlemaster or some other fool four times as much. What you want, in fact, is a first-rate man for a fourth-rate fee, and that's exactly what you've got!"

Soames saw that he really meant what he said, and, angry though he was, the consequences of a row rose before him too vividly. He saw his house unfinished, his wife rebellious, himself a laughingstock.

"Let's go over it," he said sulkily, "and see how the money's gone."

"Very well," assented Bosinney. "But we'll hurry up, if you don't mind. I have to get back in time to take June to the theatre."

Soames cast a stealthy look at him, and said: "Coming to our place, I suppose to meet her?" He was always coming to their place!

There had been rain the night before-a spring rain, and the earth smelt of sap and wild grasses. The warm, soft breeze swung the leaves and the golden buds of the old oak tree, and in the sunshine the blackbirds were whistling their hearts out.

It was such a spring day as breathes into a man an ineffable yearning, a painful sweetness, a longing that makes him stand motionless, looking at the leaves or grass, and fling out his arms to embrace he knows not what. The earth gave forth a fainting warmth, stealing up through the chilly garment in which winter had wrapped her. It was her long caress of invitation, to draw men down to lie within her arms, to roll their bodies on her, and put their lips to her breast.

On just such a day as this Soames had got from Irene the promise he had asked her for so often. Seated on the fallen trunk of a tree, he had promised for the twentieth time that if their marriage were not a success, she should be as free as if she had never married him!

"Do you swear it?" she had said. A few days back she had reminded him of that oath. He had answered: "Nonsense! I couldn't have sworn any such thing!" By some awkward fatality he remembered it now. What queer things men would swear for the sake of women! He would have sworn it at any time to gain her! He would swear it now, if thereby he could touch her--but nobody could touch her, she was cold-hearted!

And memories crowded on him with the fresh, sweet savour of the spring wind-memories of his courtship.

In the spring of the year 1881 he was visiting his old school-fellow and client, George Liversedge, of Branksome, who, with the view of developing his pine-woods in the neighbourhood of Bournemouth, had placed the formation of the company necessary to the scheme in Soames's hands. Mrs. Liversedge, with a sense of the fitness of things, had given a musical tea in his honour. Later in the course of this function, which Soames, no musician, had regarded as an unmitigated bore, his eye had been caught by the face of a girl dressed in mourning, standing by herself. The lines of her tall, as yet rather thin figure, showed through the wispy, clinging stuff of her black dress, her black-gloved hands were crossed in front of her, her lips slightly parted, and her large, dark eyes wandered from face to face. Her hair, done low on her neck, seemed to gleam above her black collar like coils of shining metal. And as Soames stood looking at her, the sensation that most men have felt at one time or another went stealing through him--a peculiar satisfaction of the senses, a peculiar certainty, which novelists and old ladies call love at first sight. Still stealthily watching her, he at once made his way to his hostess, and stood doggedly waiting for the music to cease.

"Who is that girl with yellow hair and dark eyes?" he asked.

"That--oh! Irene Heron. Her father, Professor Heron, died this year. She lives with her stepmother. She's a nice girl, a pretty girl, but no money!"

"Introduce me, please," said Soames.

It was very little that he found to say, nor did he find her responsive to that little. But he went away with the resolution to see her again. He effected his object by chance, meeting her on the pier with her stepmother, who had the habit of walking there from twelve to one of a forenoon. Soames made this lady's acquaintance with alacrity, nor was it long before he perceived in her the ally he was looking for. His keen scent for the commercial side of family life soon told him that Irene cost her stepmother more than the fifty pounds a year she brought her; it also told him that Mrs. Heron, a woman yet in the prime of life, desired to be married again. The strange ripening beauty of her stepdaughter stood in the way of this desirable consummation. And Soames, in his stealthy tenacity, laid his plans.

He left Bournemouth without having given himself away, but in a month's time came back, and this time he spoke, not to the girl, but to her stepmother. He had made up his mind, he said; he would wait any time. And he had long to wait, watching Irene bloom, the lines of her young figure softening, the stronger blood deepening the gleam of her eyes, and warming her face to a creamy glow; and at each visit he proposed to her, and when that visit was at an end, took her refusal away with him, back to London, sore at heart, but steadfast and silent as the grave. He tried to come at the secret springs of her resistance; only once had he a gleam of light. It was at one of those assembly dances, which afford the only outlet to the passions of the population of seaside watering-places. He was sitting with her in an embrasure, his senses tingling with the contact of the waltz. She had looked at him over her, slowly waving fan; and he had lost his head. Seizing that moving wrist, he pressed his lips to the flesh of her arm. And she had shuddered--to this day he had not forgotten that shudder--nor the look so passionately averse she had given him.

A year after that she had yielded. What had made her yield he could never make out; and from Mrs. Heron, a woman of some diplomatic talent, he learnt nothing. Once after they were married he asked her, "What made you refuse me so often?" She had answered by a strange silence. An enigma to him from the day that he first saw her, she was an enigma to him still....

Bosinney was waiting for him at the door; and on his rugged, good-looking, face was a queer, yearning, yet happy look, as though he too saw a promise of bliss in the spring sky, sniffed a coming happiness in the spring air. Soames looked at him waiting there. What was the matter with the fellow that he looked so happy? What was he waiting for with that smile on his lips and in his eyes? Soames could not see that for which Bosinney was waiting as he stood there drinking in the flower-scented wind. And once more he felt baffled in the presence of this man whom by habit he despised. He hastened on to the house.

"The only colour for those tiles," he heard Bosinney say,--"is ruby with a grey tint in the stuff, to give a transparent effect. I should like Irene's opinion. I'm ordering the purple leather curtains for the doorway of this court; and if you distemper the drawing-room ivory cream over paper, you'll get an illusive look. You want to aim all through the decorations at what I call charm."

Soames said: "You mean that my wife has charm!"

Bosinney evaded the question.

"You should have a clump of iris plants in the centre of that court."

Soames smiled superciliously.

"I'll look into Beech's some time," he said, "and see what's appropriate!"

They found little else to say to each other, but on the way to the Station Soames asked:

"I suppose you find Irene very artistic."

"Yes." The abrupt answer was as distinct a snub as saying: "If you want to discuss her you can do it with someone else!"

And the slow, sulky anger Soames had felt all the afternoon burned the brighter within him.

Neither spoke again till they were close to the Station, then Soames asked:

"When do you expect to have finished?"

"By the end of June, if you really wish me to decorate as well."

Soames nodded. "But you quite understand," he said, "that the house is costing me a lot beyond what I contemplated. I may as well tell you that I should have thrown it up, only I'm not in the habit of giving up what I've set my mind on."

Bosinney made no reply. And Soames gave him askance a look of dogged dislike--for in spite of his fastidious air and that supercilious, dandified taciturnity, Soames, with his set lips and squared chin, was not unlike a bulldog....

When, at seven o'clock that evening, June arrived at 62, Montpellier Square, the maid Bilson told her that Mr. Bosinney was in the drawing-room; the mistress--she said--was dressing, and would be down in a minute. She would tell her that Miss June was here.

June stopped her at once.

"All right, Bilson," she said, "I'll just go in. You, needn't hurry Mrs. Soames."

She took off her cloak, and Bilson, with an understanding look, did not even open the drawing-room door for her, but ran downstairs.

June paused for a moment to look at herself in the little old-fashioned silver mirror above the oaken rug chest--a slim, imperious young figure, with a small resolute face, in a white frock, cut moon-shaped at the base of a neck too slender for her crown of twisted red-gold hair.

She opened the drawing-room door softly, meaning to take him by surprise. The room was filled with a sweet hot scent of flowering azaleas.

She took a long breath of the perfume, and heard Bosinney's voice, not in the room, but quite close, saying.

"Ah! there were such heaps of things I wanted to talk about, and now we shan't have time!"

Irene's voice answered: "Why not at dinner?"

"How can one talk...."

June's first thought was to go away, but instead she crossed to the long window opening on the little court. It was from there that the scent of the azaleas came, and, standing with their backs to her, their faces buried in the golden-pink blossoms, stood her lover and Irene.

Silent but unashamed, with flaming cheeks and angry eyes, the girl watched.

"Come on Sunday by yourself--We can go over the house together."

June saw Irene look up at him through her screen of blossoms. It was not the look of a coquette, but--far worse to the watching girl--of a woman fearful lest that look should say too much.

"I've promised to go for a drive with Uncle...."

"The big one! Make him bring you; it's only ten miles--the very thing for his horses."

"Poor old Uncle Swithin!"

A wave of the azalea scent drifted into June's face; she felt sick and dizzy.

"Do! ah! do!"

"But why?"

"I must see you there--I thought you'd like to help me...."

The answer seemed to the girl to come softly with a tremble from amongst the blossoms: "So I do!"

And she stepped into the open space of the window.

"How stuffy it is here!" she said; "I can't bear this scent!"

Her eyes, so angry and direct, swept both their faces.

"Were you talking about the house? I haven't seen it yet, you know--shall we all go on Sunday?"'

From Irene's face the colour had flown.

"I am going for a drive that day with Uncle Swithin," she answered.

"Uncle Swithin! What does he matter? You can throw him over!"

"I am not in the habit of throwing people over!"

There was a sound of footsteps and June saw Soames standing just behind her.

"Well! if you are all ready," said Irene, looking from one to the other with a strange smile, "dinner is too!"

CHAPTER II

JUNE'S TREAT

Dinner began in silence; the women facing one another, and the men.

In silence the soup was finished--excellent, if a little thick; and fish was brought. In silence it was handed.

Bosinney ventured: "It's the first spring day."

Irene echoed softly: "Yes--the first spring day."

"Spring!" said June: "there isn't a breath of air!" No one replied.

The fish was taken away, a fine fresh sole from Dover. And Bilson brought champagne, a bottle swathed around the neck with white....

Soames said: "You'll find it dry."

Cutlets were handed, each pink-frilled about the legs. They were refused by June, and silence fell.

Soames said: "You'd better take a cutlet, June; there's nothing coming."

But June again refused, so they were borne away. And then Irene asked: "Phil, have you heard my blackbird?"

Bosinney answered: "Rather--he's got a hunting-song. As I came round I heard him in the Square."

"He's such a darling!"

"Salad, sir?" Spring chicken was removed.

But Soames was speaking: "The asparagus is very poor. Bosinney, glass of sherry with your sweet? June, you're drinking nothing!"

June said: "You know I never do. Wine's such horrid stuff!"

An apple charlotte came upon a silver dish, and smilingly Irene said: "The azaleas are so wonderful this year!"

To this Bosinney murmured: "Wonderful! The scent's extraordinary!"

June said: "How can you like the scent? Sugar, please, Bilson."

Sugar was handed her, and Soames remarked: "This charlottes good!"

The charlotte was removed. Long silence followed. Irene, beckoning, said: "Take out the azalea, Bilson. Miss June can't bear the scent."

"No; let it stay," said June.

Olives from France, with Russian caviare, were placed on little plates. And Soames remarked: "Why can't we have the Spanish?" But no one answered.

The olives were removed. Lifting her tumbler June demanded: "Give me some water, please." Water was given her. A silver tray was brought, with German plums. There was a lengthy pause. In perfect harmony all were eating them.

Bosinney counted up the stones: "This year--next year--some time."

Irene finished softly: "Never! There was such a glorious sunset. The sky's all ruby still--so beautiful!"

He answered: "Underneath the dark."

Their eyes had met, and June cried scornfully: "A London sunset!"

Egyptian cigarettes were handed in a silver box. Soames, taking one, remarked: "What time's your play begin?"

No one replied, and Turkish coffee followed in enamelled cups.

Irene, smiling quietly, said: "If only...."

"Only what?" said June.

"If only it could always be the spring!"

Brandy was handed; it was pale and old.

Soames said: "Bosinney, better take some brandy."

Bosinney took a glass; they all arose.

"You want a cab?" asked Soames.

June answered: "No! My cloaks please, Bilson." Her cloak was brought.

Irene, from the window, murmured: "Such a lovely night! The stars are coming out!"

Soames added: "Well, I hope you'll both enjoy yourselves."

From the door June answered: "Thanks. Come, Phil."

Bosinney cried: "I'm coming."

Soames smiled a sneering smile, and said: "I wish you luck!"

And at the door Irene watched them go.

Bosinney called: "Good night!"

"Good night!" she answered softly....

June made her lover take her on the top of a 'bus, saying she wanted air, and there sat silent, with her face to the breeze.

The driver turned once or twice, with the intention of venturing a remark, but thought better of it. They were a lively couple! The spring had got into his blood, too; he felt the need for letting steam escape, and clucked his tongue, flourishing his whip, wheeling his horses, and even they, poor things, had smelled the spring, and for a brief half-hour spurned the pavement with happy hoofs.

The whole town was alive; the boughs, curled upward with their decking of young leaves, awaited some gift the breeze could bring. New-lighted lamps were gaining mastery, and the faces of the crowd showed pale under that glare, while on high the great white clouds slid swiftly, softly, over the purple sky.

Men in, evening dress had thrown back overcoats, stepping jauntily up the steps of Clubs; working folk loitered; and women--those women who at that time of night are solitary--solitary and moving eastward in a stream--swung slowly along, with expectation in their gait, dreaming of good wine and a good supper, or--for an unwonted minute, of kisses given for love.

Those countless figures, going their ways under the lamps and the moving-sky, had one and all received some restless blessing from the stir of spring. And one and all, like those clubmen with their opened coats, had shed something of caste, and creed, and custom, and by the cock of their hats, the pace of their walk, their laughter, or their silence, revealed their common kinship under the passionate heavens.

Bosinney and June entered the theatre in silence, and mounted to their seats in the upper boxes. The piece had just begun, and the half-darkened house, with its rows of creatures peering all one way, resembled a great garden of flowers turning their faces to the sun.

June had never before been in the upper boxes. From the age of fifteen she had habitually accompanied her grandfather to the stalls, and not common stalls, but the best seats in the house, towards the centre of the third row, booked by old Jolyon, at Grogan and Boyne's, on his way home from the City, long before the day; carried in his overcoat pocket, together with his cigar-case and his old kid gloves, and handed to June to keep till the appointed night. And in those stalls--an erect old figure with a serene white head, a little figure, strenuous and eager, with a red-gold head--they would sit through every kind of play, and on the way home old Jolyon would say of the principal actor: "Oh, he's a poor stick! You should have seen little Bobson!"

She had looked forward to this evening with keen delight; it was stolen, chaperone-less, undreamed of at Stanhope Gate, where she was supposed to be at Soames'. She had expected reward for her subterfuge, planned for her lover's sake; she had expected it to break up the thick, chilly cloud, and make the relations between them which of late had been so puzzling, so tormenting--sunny and simple again as they had been before the winter. She had come with the intention of saying something definite; and she looked at the stage with a furrow between her brows, seeing nothing, her hands squeezed together in her lap. A swarm of jealous suspicions stung and stung her.

If Bosinney was conscious of her trouble he made no sign.

The curtain dropped. The first act had come to an end.

"It's awfully hot here!" said the girl; "I should like to go out."

She was very white, and she knew--for with her nerves thus sharpened she saw everything--that he was both uneasy and compunctious.

At the back of the theatre an open balcony hung over the street; she took possession of this, and stood leaning there without a word, waiting for him to begin.

At last she could bear it no longer.

"I want to say something to you, Phil," she said.

"Yes?"

The defensive tone of his voice brought the colour flying to her cheek, the words flying to her lips: "You don't give me a chance to be nice to you; you haven't for ages now!"

Bosinney stared down at the street. He made no answer....

June cried passionately: "You know I want to do everything for you--that I want to be everything to you...."

A hum rose from the street, and, piercing it with a sharp 'ping,' the bell sounded for the raising of the curtain. June did not stir. A desperate struggle was going on within her. Should she put everything to the proof? Should she challenge directly that influence, that attraction which was driving him away from her? It was her nature to challenge, and she said: "Phil, take me to see the house on Sunday!"

With a smile quivering and breaking on her lips, and trying, how hard, not to show that she was watching, she searched his face, saw it waver and hesitate, saw a troubled line come between his brows, the blood rush into his face. He answered: "Not Sunday, dear; some other day!"

"Why not Sunday? I shouldn't be in the way on Sunday."

He made an evident effort, and said: "I have an engagement."

"You are going to take...."

His eyes grew angry; he shrugged his shoulders, and answered: "An engagement that will prevent my taking you to see the house!"

June bit her lip till the blood came, and walked back to her seat without another word, but she could not help the tears of rage rolling down her face. The house had been mercifully darkened for a crisis, and no one could see her trouble.

Yet in this world of Forsytes let no man think himself immune from observation.

In the third row behind, Euphemia, Nicholas's youngest daughter, with her married-sister, Mrs. Tweetyman, were watching.

They reported at Timothy's, how they had seen June and her fiance at the theatre.

"In the stalls?" "No, not in the...." "Oh! in the dress circle, of course. That seemed to be quite fashionable nowadays with young people!"

Well--not exactly. In the.... Anyway, that engagement wouldn't last long. They had never seen anyone look so thunder and lightningy as that little June! With tears of enjoyment in their eyes, they related how she had kicked a man's hat as she returned to her seat in the middle of an act, and how the man had looked. Euphemia had a noted, silent laugh, terminating most disappointingly in squeaks; and when Mrs. Small, holding up her hands, said: "My dear! Kicked a ha-at?" she let out such a number of these that she had to be recovered with smelling-salts. As she went away she said to Mrs. Tweetyman:

"Kicked a--ha-at! Oh! I shall die."

For 'that little June' this evening, that was to have been 'her treat,' was the most miserable she had ever spent. God knows she tried to stifle her pride, her suspicion, her jealousy!

She parted from Bosinney at old Jolyon's door without breaking down; the feeling that her lover must be conquered was strong enough to sustain her till his retiring footsteps brought home the true extent of her wretchedness.

The noiseless 'Sankey' let her in. She would have slipped up to her own room, but old Jolyon, who had heard her entrance, was in the dining-room doorway.

"Come in and have your milk," he said. "It's been kept hot for you. You're very late. Where have you been?"

June stood at the fireplace, with a foot on the fender and an arm on the mantelpiece, as her grandfather had done when he came in that night of the opera. She was too near a breakdown to care what she told him.

"We dined at Soames's."

"H'm! the man of property! His wife there and Bosinney?"

"Yes."

Old Jolyon's glance was fixed on her with the penetrating gaze from which it was difficult to hide; but she was not looking at him, and when she turned her face, he dropped his scrutiny at once. He had seen enough, and too much. He bent down to lift the cup of milk for her from the hearth, and, turning away, grumbled: "You oughtn't to stay out so late; it makes you fit for nothing."

He was invisible now behind his paper, which he turned with a vicious crackle; but when June came up to kiss him, he said: "Good-night, my darling," in a tone so tremulous and unexpected, that it was all the girl could do to get out of the room without breaking into the fit of sobbing which lasted her well on into the night.

When the door was closed, old Jolyon dropped his paper, and stared long and anxiously in front of him.

'The beggar!' he thought. 'I always knew she'd have trouble with him!'

Uneasy doubts and suspicions, the more poignant that he felt himself powerless to check or control the march of events, came crowding upon him.

Was the fellow going to jilt her? He longed to go and say to him: "Look here, you sir! Are you going to jilt my grand-daughter?" But how could he? Knowing little or nothing, he was yet certain, with his unerring astuteness, that there was something going on. He suspected Bosinney of being too much at Montpellier Square.

'This fellow,' he thought, 'may not be a scamp; his face is not a bad one, but he's a queer fish. I don't know what to make of him. I shall never know what to make of him! They tell me he works like a nigger, but I see no good coming of it. He's unpractical, he has no method. When he comes here, he sits as glum as a monkey. If I ask him what wine he'll have, he says: "Thanks, any wine." If I offer him a cigar, he smokes it as if it were a twopenny German thing. I never see him looking at June as he ought to look at her; and yet, he's not after her money. If she were to make a sign, he'd be off his bargain to-morrow. But she won't--not she! She'll stick to him! She's as obstinate as fate--She'll never let go!'

Sighing deeply, he turned the paper; in its columns, perchance he might find consolation.

And upstairs in her room June sat at her open window, where the spring wind came, after its revel across the Park, to cool her hot cheeks and burn her heart.

CHAPTER III

DRIVE WITH SWITHIN

Two lines of a certain song in a certain famous old school's songbook run as follows:

'How the buttons on his blue frock shone, tra-la-la! How he carolled and he sang, like a bird!....'

Swithin did not exactly carol and sing like a bird, but he felt almost like endeavouring to hum a tune, as he stepped out of Hyde Park Mansions, and contemplated his horses drawn up before the door.

The afternoon was as balmy as a day in June, and to complete the simile of the old song, he had put on a blue frock-coat, dispensing with an overcoat, after sending Adolf down three times to make sure that there was not the least suspicion of east in the wind; and the frock-coat was buttoned so tightly around his personable form, that, if the buttons did not shine, they might pardonably have done so. Majestic on the pavement he fitted on a pair of dog-skin gloves; with his large bell-shaped top hat, and his great stature and bulk he looked too primeval for a Forsyte. His thick white hair, on which Adolf had bestowed a touch of pomatum, exhaled the fragrance of opoponax and cigars--the celebrated Swithin brand, for which he paid one hundred and forty shillings the hundred, and of which old Jolyon had unkindly said, he wouldn't smoke them as a gift; they wanted the stomach of a horse!

"Adolf!"

"Sare!"

"The new plaid rug!"

He would never teach that fellow to look smart; and Mrs. Soames he felt sure, had an eye!

"The phaeton hood down; I am going--to--drive--a--lady!"

A pretty woman would want to show off her frock; and well--he was going to drive a lady! It was like a new beginning to the good old days.

Ages since he had driven a woman! The last time, if he remembered, it had been Juley; the poor old soul had been as nervous as a cat the whole time, and so put him out of patience that, as he dropped her in the Bayswater Road, he had said: "Well I'm d---d if I ever drive you again!" And he never had, not he!

Going up to his horses' heads, he examined their bits; not that he knew anything about bits--he didn't pay his coachman sixty pounds a year to do his work for him, that had never been his principle. Indeed, his reputation as a horsey man rested mainly on the fact that once, on Derby Day, he had been welshed by some thimble-riggers. But someone at the Club, after seeing him drive his greys up to the door--he always drove grey horses, you got more style for the money, some thought--had called him 'Four-in-hand Forsyte.' The name having reached his ears through that fellow Nicholas Treffry, old Jolyon's dead partner, the great driving man notorious for more carriage accidents than any man in the kingdom--Swithin had ever after conceived it right to act up to it. The name had taken his fancy, not because he had ever driven four-in-hand, or was ever likely to, but because of something distinguished in the sound. Four-in-hand Forsyte! Not bad! Born too soon, Swithin had missed his vocation. Coming upon London twenty years later, he could not have failed to have become a stockbroker, but at the time when he was obliged to select, this great profession had not as yet became the chief glory of the upper-middle class. He had literally been forced into land agency.

Once in the driving seat, with the reins handed to him, and blinking over his pale old cheeks in the full sunlight, he took a slow look round--Adolf was already up behind; the cockaded groom at the horses' heads stood ready to let go; everything was prepared for the signal, and Swithin gave it. The equipage dashed forward, and before you could say Jack Robinson, with a rattle and flourish drew up at Soames' door.

Irene came out at once, and stepped in--he afterward described it at Timothy's--"as light as--er--Taglioni, no fuss about it, no wanting this or wanting that;" and above all, Swithin dwelt on this, staring at Mrs. Septimus in a way that disconcerted her a good deal, "no silly nervousness!" To Aunt Hester he portrayed Irene's hat. "Not one of your great flopping things, sprawling about, and catching the dust, that women are so fond of nowadays, but a neat little--" he made a circular motion of his hand, "white veil--capital taste."

"What was it made of?" inquired Aunt Hester, who manifested a languid but permanent excitement at any mention of dress.

"Made of?" returned Swithin; "now how should I know?"

He sank into silence so profound that Aunt Hester began to be afraid he had fallen into a trance. She did not try to rouse him herself, it not being her custom.

'I wish somebody would come,' she thought; 'I don't like the look of him!'

But suddenly Swithin returned to life. "Made of" he wheezed out slowly, "what should it be made of?"

They had not gone four miles before Swithin received the impression that Irene liked driving with him. Her face was so soft behind that white veil, and her dark eyes shone so in the spring light, and whenever he spoke she raised them to him and smiled.

On Saturday morning Soames had found her at her writing-table with a note written to Swithin, putting him off. Why did she want to put him off? he asked. She might put her own people off when she liked, he would not have her putting off his people!

She had looked at him intently, had torn up the note, and said: "Very well!"

And then she began writing another. He took a casual glance presently, and saw that it was addressed to Bosinney.

"What are you writing to him about?" he asked.

Irene, looking at him again with that intent look, said quietly: "Something he wanted me to do for him!"

"Humph!" said Soames,--"Commissions!"

"You'll have your work cut out if you begin that sort of thing!" He said no more.

Swithin opened his eyes at the mention of Robin Hill; it was a long way for his horses, and he always dined at half-past seven, before the rush at the Club began; the new chef took more trouble with an early dinner--a lazy rascal!

He would like to have a look at the house, however. A house appealed to any Forsyte, and especially to one who had been an auctioneer. After all he said the distance was nothing. When he was a younger man he had had rooms at Richmond for many

years, kept his carriage and pair there, and drove them up and down to business every day of his life.

Four-in-hand Forsyte they called him! His T-cart, his horses had been known from Hyde Park Corner to the Star and Garter. The Duke of Z.... wanted to get hold of them, would have given him double the money, but he had kept them; know a good thing when you have it, eh? A look of solemn pride came portentously on his shaven square old face, he rolled his head in his stand-up collar, like a turkey-cock preening himself.

She was really--a charming woman! He enlarged upon her frock afterwards to Aunt Juley, who held up her hands at his way of putting it.

Fitted her like a skin--tight as a drum; that was how he liked 'em, all of a piece, none of your daverdy, scarecrow women! He gazed at Mrs. Septimus Small, who took after James--long and thin.

"There's style about her," he went on, "fit for a king! And she's so quiet with it too!"

"She seems to have made quite a conquest of you, any way," drawled Aunt Hester from her corner.

Swithin heard extremely well when anybody attacked him.

"What's that?" he said. "I know a--pretty--woman when I see one, and all I can say is, I don't see the young man about that's fit for her; but perhaps--you--do, come, perhaps--you-do!"

"Oh?" murmured Aunt Hester, "ask Juley!"

Long before they reached Robin Hill, however, the unaccustomed airing had made him terribly sleepy; he drove with his eyes closed, a life-time of deportment alone keeping his tall and bulky form from falling askew.

Bosinney, who was watching, came out to meet them, and all three entered the house together; Swithin in front making play with a stout gold-mounted Malacca cane, put into his hand by Adolf, for his knees were feeling the effects of their long stay in the same position. He had assumed his fur coat, to guard against the draughts of the unfinished house.

The staircase--he said--was handsome! the baronial style! They would want some statuary about! He came to a standstill between the columns of the doorway into the inner court, and held out his cane inquiringly.

What was this to be--this vestibule, or whatever they called it? But gazing at the skylight, inspiration came to him.

"Ah! the billiard-room!"

When told it was to be a tiled court with plants in the centre, he turned to Irene:

"Waste this on plants? You take my advice and have a billiard table here!"

Irene smiled. She had lifted her veil, banding it like a nun's coif across her forehead, and the smile of her dark eyes below this seemed to Swithin more charming than ever. He nodded. She would take his advice he saw.

He had little to say of the drawing or dining-rooms, which he described as "spacious"; but fell into such raptures as he permitted to a man of his dignity, in the wine-cellar, to which he descended by stone steps, Bosinney going first with a light.

"You'll have room here," he said, "for six or seven hundred dozen--a very pooty little cellar!"

Bosinney having expressed the wish to show them the house from the copse below, Swithin came to a stop.

"There's a fine view from here," he remarked; "you haven't such a thing as a chair?"

A chair was brought him from Bosinney's tent.

"You go down," he said blandly; "you two! I'll sit here and look at the view."

He sat down by the oak tree, in the sun; square and upright, with one hand stretched out, resting on the nob of his cane, the other planted on his knee; his fur coat thrown open, his hat, roofing with its flat top the pale square of his face; his stare, very blank, fixed on the landscape.

He nodded to them as they went off down through the fields. He was, indeed, not sorry to be left thus for a quiet moment of reflection. The air was balmy, not too much heat in the sun; the prospect a fine one, a remarka.... His head fell a little to one side; he jerked it up and thought: Odd! He--ah! They were waving to him from the bottom! He put up his hand, and moved it more than once. They were active--the prospect was remar.... His head fell to the left, he jerked it up at once; it fell to the right. It remained there; he was asleep.

And asleep, a sentinel on the--top of the rise, he appeared to rule over this prospect--remarkable--like some image blocked out by the special artist, of primeval Forsytes in pagan days, to record the domination of mind over matter!

And all the unnumbered generations of his yeoman ancestors, wont of a Sunday to stand akimbo surveying their little plots of land, their grey unmoving eyes hiding their instinct with its hidden roots of violence, their instinct for possession to the exclusion of all the world--all these unnumbered generations seemed to sit there with him on the top of the rise.

But from him, thus slumbering, his jealous Forsyte spirit travelled far, into God-knows-what jungle of fancies; with those two young people, to see what they were doing down there in the copse--in the copse where the spring was running riot with the scent of sap and bursting buds, the song of birds innumerable, a carpet of bluebells and sweet growing things, and the sun caught like gold in the tops of the trees; to see what they were doing, walking along there so close together on the path that was too narrow; walking along there so close that they were always touching; to watch Irene's eyes, like dark thieves, stealing the heart out of the spring. And a great unseen chaperon, his spirit was there, stopping with them to look at the little furry corpse of a mole, not dead an hour, with his mushroom-and-silver coat untouched by the rain or dew; watching over Irene's bent head, and the soft look of her pitying eyes; and over that young man's head, gazing at her so hard, so strangely. Walking on with them, too, across the open space where a wood-cutter had been at work, where the bluebells were trampled down, and a trunk had swayed and staggered down from its gashed stump. Climbing it with them, over, and on to the very edge of the copse, whence there stretched an undiscovered country, from far away in which came the sounds, 'Cuckoo-cuckoo!'

Silent, standing with them there, and uneasy at their silence! Very queer, very strange!

Then back again, as though guilty, through the wood--back to the cutting, still silent, amongst the songs of birds that never ceased, and the wild scent--hum! what was it--like that herb they put in--back to the log across the path....

And then unseen, uneasy, flapping above them, trying to make noises, his Forsyte spirit watched her balanced on the log, her pretty figure swaying, smiling down at that young man gazing up with such strange, shining eyes, slipping now--a--ah! falling, o--oh! sliding--down his breast; her soft, warm body clutched, her head bent back from his lips; his kiss; her recoil; his cry: "You must know--I love you!" Must know--indeed, a pretty...? Love! Hah!

Swithin awoke; virtue had gone out of him. He had a taste in his mouth. Where was he?

Damme! He had been asleep!

He had dreamed something about a new soup, with a taste of mint in it.

Those young people--where had they got to? His left leg had pins and needles.

"Adolf!" The rascal was not there; the rascal was asleep somewhere.

He stood up, tall, square, bulky in his fur, looking anxiously down over the fields, and presently he saw them coming.

Irene was in front; that young fellow--what had they nicknamed him--'The Buccaneer?' looked precious hangdog there behind her; had got a flea in his ear, he shouldn't wonder. Serve him right, taking her down all that way to look at the house! The proper place to look at a house from was the lawn.

They saw him. He extended his arm, and moved it spasmodically to encourage them. But they had stopped. What were they standing there for, talking--talking? They came on again. She had been, giving him a rub, he had not the least doubt of it, and no wonder, over a house like that--a great ugly thing, not the sort of house he was accustomed to.

He looked intently at their faces, with his pale, immovable stare. That young man looked very queer!

"You'll never make anything of this!" he said tartly, pointing at the mansion;--"too newfangled!"

Bosinney gazed at him as though he had not heard; and Swithin afterwards described him to Aunt Hester as "an extravagant sort of fellow very odd way of looking at you--a bumpy beggar!"

What gave rise to this sudden piece of psychology he did not state; possibly Bosinney's, prominent forehead and cheekbones and chin, or something hungry in his face, which quarrelled with Swithin's conception of the calm satiety that should characterize the perfect gentleman.

He brightened up at the mention of tea. He had a contempt for tea--his brother Jolyon had been in tea; made a lot of money by it--but he was so thirsty, and had such a taste in his mouth, that he was prepared to drink anything. He longed to inform Irene of the taste in his mouth--she was so sympathetic--but it would not be a distinguished thing to do; he rolled his tongue round, and faintly smacked it against his palate.

In a far corner of the tent Adolf was bending his cat-like moustaches over a kettle. He left it at once to draw the cork of a pint-bottle of champagne. Swithin smiled, and, nodding at Bosinney, said: "Why, you're quite a Monte Cristo!" This celebrated novel--one of the half-dozen he had read--had produced an extraordinary impression on his mind.

Taking his glass from the table, he held it away from him to scrutinize the colour; thirsty as he was, it was not likely that he was going to drink trash! Then, placing it to his lips, he took a sip.

"A very nice wine," he said at last, passing it before his nose; "not the equal of my Heidsieck!"

It was at this moment that the idea came to him which he afterwards imparted at Timothy's in this nutshell: "I shouldn't wonder a bit if that architect chap were sweet upon Mrs. Soames!"

And from this moment his pale, round eyes never ceased to bulge with the interest of his discovery.

"The fellow," he said to Mrs. Septimus, "follows her about with his eyes like a dog--the bumpy beggar! I don't wonder at it--she's a very charming woman, and, I should say, the pink of discretion!" A vague consciousness of perfume caging about Irene, like that from a flower with half-closed petals and a passionate heart, moved him to the creation of this image. "But I wasn't sure of it," he said, "till I saw him pick up her handkerchief."

Mrs. Small's eyes boiled with excitement.

"And did he give it her back?" she asked.

"Give it back?" said Swithin: "I saw him slobber on it when he thought I wasn't looking!"

Mrs. Small gasped--too interested to speak.

"But she gave him no encouragement," went on Swithin; he stopped, and stared for a minute or two in the way that alarmed Aunt Hester so--he had suddenly recollected that, as they were starting back in the phaeton, she had given Bosinney her hand a second time, and let it stay there too.... He had touched his horses smartly with the whip, anxious to get her all to himself. But she had looked back, and she had not answered his first question; neither had he been able to see her face--she had kept it hanging down.

There is somewhere a picture, which Swithin has not seen, of a man sitting on a rock, and by him, immersed in the still, green water, a sea-nymph lying on her back, with her hand on her naked breast. She has a half-smile on her face--a smile of hopeless surrender and of secret joy.

Seated by Swithin's side, Irene may have been smiling like that.

When, warmed by champagne, he had her all to himself, he unbosomed himself of his wrongs; of his smothered resentment against the new chef at the club; his worry over the house in Wigmore Street, where the rascally tenant had gone bankrupt through helping his brother-in-law as if charity did not begin at home; of his deafness, too, and that pain he sometimes got in his right side. She listened, her eyes swimming under their lids. He thought she was thinking deeply of his troubles, and pitied himself terribly. Yet in his fur coat, with frogs across the breast, his top hat aslant, driving this beautiful woman, he had never felt more distinguished.

A coster, however, taking his girl for a Sunday airing, seemed to have the same impression about himself. This person had flogged his donkey into a gallop alongside, and sat, upright as a waxwork, in his shallopy chariot, his chin settled pompously on a red handkerchief, like Swithin's on his full cravat; while his girl, with the ends of a fly-blown boa floating out behind, aped a woman of

fashion. Her swain moved a stick with a ragged bit of string dangling from the end, reproducing with strange fidelity the circular flourish of Swithin's whip, and rolled his head at his lady with a leer that had a weird likeness to Swithin's primeval stare.

Though for a time unconscious of the lowly ruffian's presence, Swithin presently took it into his head that he was being guyed. He laid his whip-lash across the mares flank. The two chariots, however, by some unfortunate fatality continued abreast. Swithin's yellow, puffy face grew red; he raised his whip to lash the costermonger, but was saved from so far forgetting his dignity by a special intervention of Providence. A carriage driving out through a gate forced phaeton and donkey-cart into proximity; the wheels grated, the lighter vehicle skidded, and was overturned.

Swithin did not look round. On no account would he have pulled up to help the ruffian. Serve him right if he had broken his neck!

But he could not if he would. The greys had taken alarm. The phaeton swung from side to side, and people raised frightened faces as they went dashing past. Swithin's great arms, stretched at full length, tugged at the reins. His cheeks were puffed, his lips compressed, his swollen face was of a dull, angry red.

Irene had her hand on the rail, and at every lurch she gripped it tightly. Swithin heard her ask:

"Are we going to have an accident, Uncle Swithin?"

He gasped out between his pants: "It's nothing; a--little fresh!"

"I've never been in an accident."

"Don't you move!" He took a look at her. She was smiling, perfectly calm. "Sit still," he repeated. "Never fear, I'll get you home!"

And in the midst of all his terrible efforts, he was surprised to hear her answer in a voice not like her own:

"I don't care if I never get home!"

The carriage giving a terrific lurch, Swithin's exclamation was jerked back into his throat. The horses, winded by the rise of a hill, now steadied to a trot, and finally stopped of their own accord.

"When"--Swithin described it at Timothy's--"I pulled 'em up, there she was as cool as myself. God bless my soul! she behaved as if she didn't care whether she broke her neck or not! What was it she said: 'I don't care if I never get home?" Leaning over the handle of his cane, he wheezed out, to Mrs. Small's terror: "And I'm not altogether surprised, with a finickin' feller like young Soames for a husband!"

It did not occur to him to wonder what Bosinney had done after they had left him there alone; whether he had gone wandering about like the dog to which Swithin had compared him; wandering down to that copse where the spring was still in riot, the cuckoo still calling from afar; gone down there with her handkerchief pressed to lips, its fragrance mingling with the scent of mint and thyme. Gone down there with such a wild, exquisite pain in his heart that he could have cried out among the trees. Or what, indeed, the fellow had done. In fact, till he came to Timothy's, Swithin had forgotten all about him.

CHAPTER IV

JAMES GOES TO SEE FOR HIMSELF

Those ignorant of Forsyte 'Change would not, perhaps, foresee all the stir made by Irene's visit to the house.

After Swithin had related at Timothy's the full story of his memorable drive, the same, with the least suspicion of curiosity, the merest touch of malice, and a real desire to do good, was passed on to June.

"And what a dreadful thing to say, my dear!" ended Aunt Juley; "that about not going home. What did she mean?"

It was a strange recital for the girl. She heard it flushing painfully, and, suddenly, with a curt handshake, took her departure.

"Almost rude!" Mrs. Small said to Aunt Hester, when June was gone.

The proper construction was put on her reception of the news. She was upset. Something was therefore very wrong. Odd! She and Irene had been such friends!

It all tallied too well with whispers and hints that had been going about for some time past. Recollections of Euphemia's account of the visit to the theatre--Mr. Bosinney always at Soames's? Oh, indeed! Yes, of course, he would be about the house! Nothing open. Only upon the greatest, the most important provocation was it necessary to say anything open on Forsyte 'Change. This machine was too nicely adjusted; a hint, the merest trifling expression of regret or doubt, sufficed to set the family soul so sympathetic--vibrating. No one desired that harm should come of these vibrations--far from it; they were set in motion with the best intentions, with the feeling, that each member of the family had a stake in the family soul.

And much kindness lay at the bottom of the gossip; it would frequently result in visits of condolence being made, in accordance with the customs of Society, thereby conferring a real benefit upon the sufferers, and affording consolation to the sound, who felt pleasantly that someone at all events was suffering from that from which they themselves were not suffering. In fact, it was simply a desire to keep things well-aired, the desire which animates the Public Press, that brought James, for instance, into communication with Mrs. Septimus, Mrs. Septimus, with the little Nicholases, the little Nicholases with who-knows-whom, and so on. That great class to which they had risen, and now belonged, demanded a certain candour, a still more certain reticence. This combination guaranteed their membership.

Many of the younger Forsytes felt, very naturally, and would openly declare, that they did not want their affairs pried into; but so powerful was the invisible, magnetic current of family gossip, that for the life of them they could not help knowing all about everything. It was felt to be hopeless.

One of them (young Roger) had made an heroic attempt to free the rising generation, by speaking of Timothy as an 'old cat.' The effort had justly recoiled upon himself; the words, coming round in the most delicate way to Aunt Juley's ears, were repeated by her in a shocked voice to Mrs. Roger, whence they returned again to young Roger.

And, after all, it was only the wrong-doers who suffered; as, for instance, George, when he lost all that money playing billiards; or young Roger himself, when he was so dreadfully near to marrying the girl to whom, it was whispered, he was already married by the laws of Nature; or again Irene, who was thought, rather than said, to be in danger.

All this was not only pleasant but salutary. And it made so many hours go lightly at Timothy's in the Bayswater Road; so many hours that must otherwise have been sterile and heavy to those three who lived there; and Timothy's was but one of hundreds of such homes in this City of London--the homes of neutral persons of the secure classes, who are out of the battle themselves, and must find their reason for existing, in the battles of others.

But for the sweetness of family gossip, it must indeed have been lonely there. Rumours and tales, reports, surmises--were they not the children of the house, as dear and precious as the prattling babes the brother and sisters had missed in their own journey? To talk about them was as near as they could get to the possession of all those children and grandchildren, after whom their soft hearts yearned. For though it is doubtful whether Timothy's heart yearned, it is indubitable that at the arrival of each fresh Forsyte child he was quite upset.

Useless for young Roger to say, "Old cat!" for Euphemia to hold up her hands and cry: "Oh! those three!" and break into her silent laugh with the squeak at the end. Useless, and not too kind.

The situation which at this stage might seem, and especially to Forsyte eyes, strange--not to say 'impossible'--was, in view of certain facts, not so strange after all. Some things had been lost sight of. And first, in the security bred of many harmless marriages, it had been forgotten that Love is no hot-house flower, but a wild plant, born of a wet night, born of an hour of sunshine; sprung from wild seed, blown along the road by a wild wind. A wild plant that, when it blooms by chance within the hedge of our gardens, we call a flower; and when it blooms outside we call a weed; but, flower or weed, whose scent and colour are always, wild! And further--the facts and figures of their own lives being against the perception of this truth--it was not generally recognised by Forsytes that, where, this wild plant springs, men and women are but moths around the pale, flame-like blossom.

It was long since young Jolyon's escapade--there was danger of a tradition again arising that people in their position never cross the hedge to pluck that flower; that one could reckon on having love, like measles, once in due season, and getting over it comfortably for all time--as with measles, on a soothing mixture of butter and honey--in the arms of wedlock.

Of all those whom this strange rumour about Bosinney and Mrs. Soames reached, James was the most affected. He had long forgotten how he had hovered, lanky and pale, in side whiskers of chestnut hue, round Emily, in the days of his own courtship. He had long forgotten the small house in the purlieus of Mayfair, where he had spent the early days of his married life, or rather, he had

long forgotten the early days, not the small house,--a Forsyte never forgot a house--he had afterwards sold it at a clear profit of four hundred pounds.

He had long forgotten those days, with their hopes and fears and doubts about the prudence of the match (for Emily, though pretty, had nothing, and he himself at that time was making a bare thousand a year), and that strange, irresistible attraction which had drawn him on, till he felt he must die if he could not marry the girl with the fair hair, looped so neatly back, the fair arms emerging from a skin-tight bodice, the fair form decorously shielded by a cage of really stupendous circumference.

James had passed through the fire, but he had passed also through the river of years which washes out the fire; he had experienced the saddest experience of all--forgetfulness of what it was like to be in love.

Forgotten! Forgotten so long, that he had forgotten even that he had forgotten.

And now this rumour had come upon him, this rumour about his son's wife; very vague, a shadow dodging among the palpable, straightforward appearances of things, unreal, unintelligible as a ghost, but carrying with it, like a ghost, inexplicable terror.

He tried to bring it home to his mind, but it was no more use than trying to apply to himself one of those tragedies he read of daily in his evening paper. He simply could not. There could be nothing in it. It was all their nonsense. She didn't get on with Soames as well as she might, but she was a good little thing--a good little thing!

Like the not inconsiderable majority of men, James relished a nice little bit of scandal, and would say, in a matter-of-fact tone, licking his lips, "Yes, yes--she and young Dyson; they tell me they're living at Monte Carlo!"

But the significance of an affair of this sort--of its past, its present, or its future--had never struck him. What it meant, what torture and raptures had gone to its construction, what slow, overmastering fate had lurked within the facts, very naked, sometimes sordid, but generally spicy, presented to his gaze. He was not in the habit of blaming, praising, drawing deductions, or generalizing at all about such things; he simply listened rather greedily, and repeated what he was told, finding considerable benefit from the practice, as from the consumption of a sherry and bitters before a meal.

Now, however, that such a thing--or rather the rumour, the breath of it--had come near him personally, he felt as in a fog, which filled his mouth full of a bad, thick flavour, and made it difficult to draw breath.

A scandal! A possible scandal!

To repeat this word to himself thus was the only way in which he could focus or make it thinkable. He had forgotten the sensations necessary for understanding the progress, fate, or meaning of any such business; he simply could no longer grasp the possibilities of people running any risk for the sake of passion.

Amongst all those persons of his acquaintance, who went into the City day after day and did their business there, whatever it was, and in their leisure moments bought shares, and houses, and ate dinners, and played games, as he was told, it would have seemed to him ridiculous to suppose that there were any who would run risks for the sake of anything so recondite, so figurative, as passion.

Passion! He seemed, indeed, to have heard of it, and rules such as 'A young man and a young woman ought never to be trusted together' were fixed in his mind as the parallels of latitude are fixed on a map (for all Forsytes, when it comes to 'bed-rock' matters of fact, have quite a fine taste in realism); but as to anything else--well, he could only appreciate it at all through the catch-word 'scandal.'

Ah! but there was no truth in it--could not be. He was not afraid; she was really a good little thing. But there it was when you got a thing like that into your mind. And James was of a nervous temperament--one of those men whom things will not leave alone, who suffer tortures from anticipation and indecision. For fear of letting something slip that he might otherwise secure, he was physically unable to make up his mind until absolutely certain that, by not making it up, he would suffer loss.

In life, however, there were many occasions when the business of making up his mind did not even rest with himself, and this was one of them.

What could he do? Talk it over with Soames? That would only make matters worse. And, after all, there was nothing in it, he felt sure.

It was all that house. He had mistrusted the idea from the first. What did Soames want to go into the country for? And, if he must go spending a lot of money building himself a house, why not have a first-rate man, instead of this young Bosinney, whom nobody knew anything about? He had told them how it would be. And he had heard that the house was costing Soames a pretty penny beyond what he had reckoned on spending.

This fact, more than any other, brought home to James the real danger of the situation. It was always like this with these 'artistic' chaps; a sensible man should have nothing to say to them. He had warned Irene, too. And see what had come of it!

And it suddenly sprang into James's mind that he ought to go and see for himself. In the midst of that fog of uneasiness in which his mind was enveloped the notion that he could go and look at the house afforded him inexplicable satisfaction. It may have been simply the decision to do something--more possibly the fact that he was going to look at a house--that gave him relief. He felt that in staring at an edifice of bricks and mortar, of wood and stone, built by the suspected man himself, he would be looking into the heart of that rumour about Irene.

Without saying a word, therefore, to anyone, he took a hansom to the station and proceeded by train to Robin Hill; thence--there being no 'flies,' in accordance with the custom of the neighbourhood--he found himself obliged to walk.

He started slowly up the hill, his angular knees and high shoulders bent complainingly, his eyes fixed on his feet, yet, neat for all that, in his high hat and his frock-coat, on which was the speckless gloss imparted by perfect superintendence. Emily saw to that; that is, she did not, of course, see to it--people of good position not seeing to each other's buttons, and Emily was of good position--but she saw that the butler saw to it.

He had to ask his way three times; on each occasion he repeated the directions given him, got the man to repeat them, then repeated them a second time, for he was naturally of a talkative disposition, and one could not be too careful in a new neighbourhood.

He kept assuring them that it was a new house he was looking for; it was only, however, when he was shown the roof through the trees that he could feel really satisfied that he had not been directed entirely wrong.

A heavy sky seemed to cover the world with the grey whiteness of a whitewashed ceiling. There was no freshness or fragrance in the air. On such a day even British workmen scarcely cared to do more then they were obliged, and moved about their business without the drone of talk which whiles away the pangs of labour.

Through spaces of the unfinished house, shirt-sleeved figures worked slowly, and sounds arose--spasmodic knockings, the scraping of metal, the sawing of wood, with the rumble of wheelbarrows along boards; now and again the foreman's dog, tethered by a string to an oaken beam, whimpered feebly, with a sound like the singing of a kettle.

The fresh-fitted window-panes, daubed each with a white patch in the centre, stared out at James like the eyes of a blind dog.

And the building chorus went on, strident and mirthless under the grey-white sky. But the thrushes, hunting amongst the fresh-turned earth for worms, were silent quite.

James picked his way among the heaps of gravel--the drive was being laid--till he came opposite the porch. Here he stopped and raised his eyes. There was but little to see from this point of view, and that little he took in at once; but he stayed in this position many minutes, and who shall know of what he thought.

His china-blue eyes under white eyebrows that jutted out in little horns, never stirred; the long upper lip of his wide mouth, between the fine white whiskers, twitched once or twice; it was easy to see from that anxious rapt expression, whence Soames derived the handicapped look which sometimes came upon his face. James might have been saying to himself: 'I don't know--life's a tough job.'

In this position Bosinney surprised him.

James brought his eyes down from whatever bird's-nest they had been looking for in the sky to Bosinney's face, on which was a kind of humorous scorn.

"How do you do, Mr. Forsyte? Come down to see for yourself?"

It was exactly what James, as we know, had come for, and he was made correspondingly uneasy. He held out his hand, however, saying:

"How are you?" without looking at Bosinney.

The latter made way for him with an ironical smile.

James scented something suspicious in this courtesy. "I should like to walk round the outside first," he said, "and see what you've been doing!"

A flagged terrace of rounded stones with a list of two or three inches to port had been laid round the south-east and south-west sides of the house, and ran with a bevelled edge into mould, which was in preparation for being turfed; along this terrace James led the way.

"Now what did this cost?" he asked, when he saw the terrace extending round the corner.

"What should you think?" inquired Bosinney.

"How should I know?" replied James somewhat nonplussed; "two or three hundred, I dare say!"

"The exact sum!"

James gave him a sharp look, but the architect appeared unconscious, and he put the answer down to mishearing.

On arriving at the garden entrance, he stopped to look at the view.

"That ought to come down," he said, pointing to the oak-tree.

"You think so? You think that with the tree there you don't get enough view for your money."

Again James eyed him suspiciously--this young man had a peculiar way of putting things: "Well!" he said, with a perplexed, nervous, emphasis, "I don't see what you want with a tree."

"It shall come down to-morrow," said Bosinney.

James was alarmed. "Oh," he said, "don't go saying I said it was to come down! I know nothing about it!"

"No?"

James went on in a fluster: "Why, what should I know about it? It's nothing to do with me! You do it on your own responsibility."

"You'll allow me to mention your name?"

James grew more and more alarmed: "I don't know what you want mentioning my name for," he muttered; "you'd better leave the tree alone. It's not your tree!"

He took out a silk handkerchief and wiped his brow. They entered the house. Like Swithin, James was impressed by the inner court-yard.

"You must have spent a douce of a lot of money here," he said, after staring at the columns and gallery for some time. "Now, what did it cost to put up those columns?"

"I can't tell you off-hand," thoughtfully answered Bosinney, "but I know it was a deuce of a lot!"

"I should think so," said James. "I should...." He caught the architect's eye, and broke off. And now, whenever he came to anything of which he desired to know the cost, he stifled that curiosity.

Bosinney appeared determined that he should see everything, and had not James been of too 'noticing' a nature, he would certainly have found himself going round the house a second time. He seemed so anxious to be asked questions, too, that James felt he must be on his guard. He began to suffer from his exertions, for, though wiry enough for a man of his long build, he was seventy-five years old.

He grew discouraged; he seemed no nearer to anything, had not obtained from his inspection any of the knowledge he had vaguely hoped for. He had merely increased his dislike and mistrust of this young man, who had tired him out with his politeness, and in whose manner he now certainly detected mockery.

The fellow was sharper than he had thought, and better-looking than he had hoped. He had a--a 'don't care' appearance that James, to whom risk was the most intolerable thing in life, did not appreciate; a peculiar smile, too, coming when least expected; and very queer eyes. He reminded James, as he said afterwards, of a hungry cat. This was as near as he could get, in conversation with Emily, to a description of the peculiar exasperation, velvetiness, and mockery, of which Bosinney's manner had been composed.

At last, having seen all that was to be seen, he came out again at the door where he had gone in; and now, feeling that he was wasting time and strength and money, all for nothing, he took the courage of a Forsyte in both hands, and, looking sharply at Bosinney, said:

"I dare say you see a good deal of my daughter-in-law; now, what does she think of the house? But she hasn't seen it, I suppose?"

This he said, knowing all about Irene's visit not, of course, that there was anything in the visit, except that extraordinary remark she had made about 'not caring to get home'--and the story of how June had taken the news!

He had determined, by this way of putting the question, to give Bosinney a chance, as he said to himself.

The latter was long in answering, but kept his eyes with uncomfortable steadiness on James.

"She has seen the house, but I can't tell you what she thinks of it."

Nervous and baffled, James was constitutionally prevented from letting the matter drop.

"Oh!" he said, "she has seen it? Soames brought her down, I suppose?"

Bosinney smilingly replied: "Oh, no!"

"What, did she come down alone?"

"Oh, no!"

"Then--who brought her?"

"I really don't know whether I ought to tell you who brought her."

To James, who knew that it was Swithin, this answer appeared incomprehensible.

"Why!" he stammered, "you know that...." but he stopped, suddenly perceiving his danger.

"Well," he said, "if you don't want to tell me I suppose you won't! Nobody tells me anything."

Somewhat to his surprise Bosinney asked him a question.

"By the by," he said, "could you tell me if there are likely to be any more of you coming down? I should like to be on the spot!"

"Any more?" said James bewildered, "who should there be more? I don't know of any more. Good-bye?"

Looking at the ground he held out his hand, crossed the palm of it with Bosinney's, and taking his umbrella just above the silk, walked away along the terrace.

Before he turned the corner he glanced back, and saw Bosinney following him slowly--'slinking along the wall' as he put it to himself, 'like a great cat.' He paid no attention when the young fellow raised his hat.

Outside the drive, and out of sight, he slackened his pace still more. Very slowly, more bent than when he came, lean, hungry, and disheartened, he made his way back to the station.

The Buccaneer, watching him go so sadly home, felt sorry perhaps for his behaviour to the old man.

CHAPTER V

SOAMES AND BOSINNEY CORRESPOND

James said nothing to his son of this visit to the house; but, having occasion to go to Timothy's on morning on a matter connected with a drainage scheme which was being forced by the sanitary authorities on his brother, he mentioned it there.

It was not, he said, a bad house. He could see that a good deal could be made of it. The fellow was clever in his way, though what it was going to cost Soames before it was done with he didn't know.

Euphemia Forsyte, who happened to be in the room--she had come round to borrow the Rev. Mr. Scoles' last novel, 'Passion and Paregoric', which was having such a vogue--chimed in.

"I saw Irene yesterday at the Stores; she and Mr. Bosinney were having a nice little chat in the Groceries."

It was thus, simply, that she recorded a scene which had really made a deep and complicated impression on her. She had been hurrying to the silk department of the Church and Commercial Stores--that Institution than which, with its admirable system, admitting only guaranteed persons on a basis of payment before delivery, no emporium can be more highly recommended to Forsytes--to match a piece of prunella silk for her mother, who was waiting in the carriage outside.

Passing through the Groceries her eye was unpleasantly attracted by the back view of a very beautiful figure. It was so charmingly proportioned, so balanced, and so well clothed, that Euphemia's instinctive propriety was at once alarmed; such figures, she knew, by intuition rather than experience, were rarely connected with virtue--certainly never in her mind, for her own back was somewhat difficult to fit.

Her suspicions were fortunately confirmed. A young man coming from the Drugs had snatched off his hat, and was accosting the lady with the unknown back.

It was then that she saw with whom she had to deal; the lady was undoubtedly Mrs. Soames, the young man Mr. Bosinney. Concealing herself rapidly over the purchase of a box of Tunisian dates, for she was impatient of awkwardly meeting people with parcels in her hands, and at the busy time of the morning, she was quite unintentionally an interested observer of their little interview.

Mrs. Soames, usually somewhat pale, had a delightful colour in her cheeks; and Mr. Bosinney's manner was strange, though attractive (she thought him rather a distinguished-looking man, and George's name for him, 'The Buccaneer'--about which there was something romantic--quite charming). He seemed to be pleading. Indeed, they talked so earnestly--or, rather, he talked so earnestly, for Mrs. Soames did not say much--that they caused, inconsiderately, an eddy in the traffic. One nice old General, going towards Cigars, was obliged to step quite out of the way, and chancing to look up and see Mrs. Soames' face, he actually took off his hat, the old fool! So like a man!

But it was Mrs. Soames' eyes that worried Euphemia. She never once looked at Mr. Bosinney until he moved on, and then she looked after him. And, oh, that look!

On that look Euphemia had spent much anxious thought. It is not too much to say that it had hurt her with its dark, lingering softness, for all the world as though the woman wanted to drag him back, and unsay something she had been saying.

Ah, well, she had had no time to go deeply into the matter just then, with that prunella silk on her hands; but she was 'very intriguee'--very! She had just nodded to Mrs. Soames, to show her that she had seen; and, as she confided, in talking it over afterwards, to her chum Francie (Roger's daughter), "Didn't she look caught out just? ...."

James, most averse at the first blush to accepting any news confirmatory of his own poignant suspicions, took her up at once.

"Oh" he said, "they'd be after wall-papers no doubt."

Euphemia smiled. "In the Groceries?" she said softly; and, taking 'Passion and Paregoric' from the table, added: "And so you'll lend me this, dear Auntie? Good-bye!" and went away.

James left almost immediately after; he was late as it was.

When he reached the office of Forsyte, Bustard and Forsyte, he found Soames, sitting in his revolving, chair, drawing up a defence. The latter greeted his father with a curt good-morning, and, taking an envelope from his pocket, said:

"It may interest you to look through this."

James read as follows:

309D, SLOANE STREET, May 15. 'DEAR FORSYTE,

'The construction of your house being now completed, my duties as architect have come to an end. If I am to go on with the business of decoration, which at your request I undertook, I should like you to clearly understand that I must have a free hand.

'You never come down without suggesting something that goes counter to my scheme. I have here three letters from you, each of which recommends an article I should never dream of putting in. I had your father here yesterday afternoon, who made further valuable suggestions.

'Please make up your mind, therefore, whether you want me to decorate for you, or to retire which on the whole I should prefer to do.

'But understand that, if I decorate, I decorate alone, without interference of any sort.

If I do the thing, I will do it thoroughly, but I must have a free hand.

'Yours truly, 'PHILIP BOSINNEY.'

The exact and immediate cause of this letter cannot, of course, be told, though it is not improbable that Bosinney may have been moved by some sudden revolt against his position towards Soames--that eternal position of Art towards Property--which is so admirably summed up, on the back of the most indispensable of modern appliances, in a sentence comparable to the very finest in Tacitus:

THOS. T. SORROW, Inventor. BERT M. PADLAND, Proprietor.

"What are you going to say to him?" James asked.

Soames did not even turn his head. "I haven't made up my mind," he said, and went on with his defence.

A client of his, having put some buildings on a piece of ground that did not belong to him, had been suddenly and most irritatingly warned to take them off again. After carefully going into the facts, however, Soames had seen his way to advise that his client had what was known as a title by possession, and that, though undoubtedly the ground did not belong to him, he was entitled to keep it, and had better do so; and he was now following up this advice by taking steps to--as the sailors say--'make it so.'

He had a distinct reputation for sound advice; people saying of him: "Go to young Forsyte--a long-headed fellow!" and he prized this reputation highly.

His natural taciturnity was in his favour; nothing could be more calculated to give people, especially people with property (Soames had no other clients), the impression that he was a safe man. And he was safe. Tradition, habit, education, inherited aptitude, native caution, all joined to form a solid professional honesty, superior to temptation--from the very fact that it was built on an innate avoidance of risk. How could he fall, when his soul abhorred circumstances which render a fall possible--a man cannot fall off the floor!

And those countless Forsytes, who, in the course of innumerable transactions concerned with property of all sorts (from wives to water rights), had occasion for the services of a safe man, found it both reposeful and profitable to confide in Soames. That slight supercilliousness of his, combined with an air of mousing amongst precedents, was in his favour too--a man would not be supercilious unless he knew!

He was really at the head of the business, for though James still came nearly every day to, see for himself, he did little now but sit in his chair, twist his legs, slightly confuse things already decided, and presently go away again, and the other partner, Bustard, was a poor thing, who did a great deal of work, but whose opinion was never taken.

So Soames went steadily on with his defence. Yet it would be idle to say that his mind was at ease. He was suffering from a sense of impending trouble, that had haunted him for some time past. He tried to think it physical--a condition of his liver--but knew that it was not.

He looked at his watch. In a quarter of an hour he was due at the General Meeting of the New Colliery Company--one of Uncle Jolyon's concerns; he should see Uncle Jolyon there, and say something to him about Bosinney--he had not made up his mind

what, but something--in any case he should not answer this letter until he had seen Uncle Jolyon. He got up and methodically put away the draft of his defence. Going into a dark little cupboard, he turned up the light, washed his hands with a piece of brown Windsor soap, and dried them on a roller towel. Then he brushed his hair, paying strict attention to the parting, turned down the light, took his hat, and saying he would be back at half-past two, stepped into the Poultry.

It was not far to the Offices of the New Colliery Company in Ironmonger Lane, where, and not at the Cannon Street Hotel, in accordance with the more ambitious practice of other companies, the General Meeting was always held. Old Jolyon had from the first set his face against the Press. What business--he said--had the Public with his concerns!

Soames arrived on the stroke of time, and took his seat alongside the Board, who, in a row, each Director behind his own ink-pot, faced their Shareholders.

In the centre of this row old Jolyon, conspicuous in his black, tightly-buttoned frock-coat and his white moustaches, was leaning back with finger tips crossed on a copy of the Directors' report and accounts.

On his right hand, always a little larger than life, sat the Secretary, 'Down-by-the-starn' Hemmings; an all-too-sad sadness beaming in his fine eyes; his iron-grey beard, in mourning like the rest of him, giving the feeling of an all-too-black tie behind it.

The occasion indeed was a melancholy one, only six weeks having elapsed since that telegram had come from Scorrier, the mining expert, on a private mission to the Mines, informing them that Pippin, their Superintendent, had committed suicide in endeavouring, after his extraordinary two years' silence, to write a letter to his Board. That letter was on the table now; it would be read to the Shareholders, who would of course be put into possession of all the facts.

Hemmings had often said to Soames, standing with his coat-tails divided before the fireplace:

"What our Shareholders don't know about our affairs isn't worth knowing. You may take that from me, Mr. Soames."

On one occasion, old Jolyon being present, Soames recollected a little unpleasantness. His uncle had looked up sharply and said: "Don't talk nonsense, Hemmings! You mean that what they do know isn't worth knowing!" Old Jolyon detested humbug.

Hemmings, angry-eyed, and wearing a smile like that of a trained poodle, had replied in an outburst of artificial applause: "Come, now, that's good, sir--that's very good. Your uncle will have his joke!"

The next time he had seen Soames he had taken the opportunity of saying to him: "The chairman's getting very old!--I can't get him to understand things; and he's so wilful--but what can you expect, with a chin like his?"

Soames had nodded.

Everyone knew that Uncle Jolyon's chin was a caution. He was looking worried to-day, in spite of his General Meeting look; he (Soames) should certainly speak to him about Bosinney.

Beyond old Jolyon on the left was little Mr. Booker, and he, too, wore his General Meeting look, as though searching for some particularly tender shareholder. And next him was the deaf director, with a frown; and beyond the deaf director, again, was old Mr. Bleedham, very bland, and having an air of conscious virtue--as well he might, knowing that the brown-paper parcel he always brought to the Board-room was concealed behind his hat (one of that old-fashioned class, of flat-brimmed top-hats which go with very large bow ties, clean-shaven lips, fresh cheeks, and neat little, white whiskers).

Soames always attended the General Meeting; it was considered better that he should do so, in case 'anything should arise!' He glanced round with his close, supercilious air at the walls of the room, where hung plans of the mine and harbour, together with a large photograph of a shaft leading to a working which had proved quite remarkably unprofitable. This photograph--a witness to the eternal irony underlying commercial enterprise till retained its position on the--wall, an effigy of the directors' pet, but dead, lamb.

And now old Jolyon rose, to present the report and accounts.

Veiling under a Jove-like serenity that perpetual antagonism deep-seated in the bosom of a director towards his shareholders, he faced them calmly. Soames faced them too. He knew most of them by sight. There was old Scrubsole, a tar man, who always came, as Hemmings would say, 'to make himself nasty,' a cantankerous-looking old fellow with a red face, a jowl, and an enormous low-crowned hat reposing on his knee. And the Rev. Mr. Boms, who always proposed a vote of thanks to the chairman, in which he invariably expressed the hope that the Board would not forget to elevate their employees, using the word with a double e, as being

more vigorous and Anglo-Saxon (he had the strong Imperialistic tendencies of his cloth). It was his salutary custom to buttonhole a director afterwards, and ask him whether he thought the coming year would be good or bad; and, according to the trend of the answer, to buy or sell three shares within the ensuing fortnight.

And there was that military man, Major O'Bally, who could not help speaking, if only to second the re-election of the auditor, and who sometimes caused serious consternation by taking toasts--proposals rather--out of the hands of persons who had been flattered with little slips of paper, entrusting the said proposals to their care.

These made up the lot, together with four or five strong, silent shareholders, with whom Soames could sympathize--men of business, who liked to keep an eye on their affairs for themselves, without being fussy--good, solid men, who came to the City every day and went back in the evening to good, solid wives.

Good, solid wives! There was something in that thought which roused the nameless uneasiness in Soames again.

What should he say to his uncle? What answer should he make to this letter?

. . . . "If any shareholder has any question to put, I shall be glad to answer it." A soft thump. Old Jolyon had let the report and accounts fall, and stood twisting his tortoise-shell glasses between thumb and forefinger.

The ghost of a smile appeared on Soames' face. They had better hurry up with their questions! He well knew his uncle's method (the ideal one) of at once saying: "I propose, then, that the report and accounts be adopted!" Never let them get their wind--shareholders were notoriously wasteful of time!

A tall, white-bearded man, with a gaunt, dissatisfied face, arose:

"I believe I am in order, Mr. Chairman, in raising a question on this figure of L5000 in the accounts. 'To the widow and family'" (he looked sourly round), "'of our late superintendent,' who so--er--ill-advisedly (I say--ill-advisedly) committed suicide, at a time when his services were of the utmost value to this Company. You have stated that the agreement which he has so unfortunately cut short with his own hand was for a period of five years, of which one only had expired--I--"

Old Jolyon made a gesture of impatience.

"I believe I am in order, Mr. Chairman--I ask whether this amount paid, or proposed to be paid, by the Board to the er--deceased--is for services which might have been rendered to the Company--had he not committed suicide?"

"It is in recognition of past services, which we all know--you as well as any of us--to have been of vital value."

"Then, sir, all I have to say is that the services being past, the amount is too much."

The shareholder sat down.

Old Jolyon waited a second and said: "I now propose that the report and--"

The shareholder rose again: "May I ask if the Board realizes that it is not their money which--I don't hesitate to say that if it were their money...."

A second shareholder, with a round, dogged face, whom Soames recognised as the late superintendent's brother-in-law, got up and said warmly: "In my opinion, sir, the sum is not enough!"

The Rev. Mr. Boms now rose to his feet. "If I may venture to express myself," he said, "I should say that the fact of the--er--deceased having committed suicide should weigh very heavily--very heavily with our worthy chairman. I have no doubt it has weighed with him, for--I say this for myself and I think for everyone present (hear, hear)--he enjoys our confidence in a high degree. We all desire, I should hope, to be charitable. But I feel sure" (he-looked severely at the late superintendent's brother-in-law) "that he will in some way, by some written expression, or better perhaps by reducing the amount, record our grave disapproval that so promising and valuable a life should have been thus impiously removed from a sphere where both its own interests and--if I may say so--our interests so imperatively demanded its continuance. We should not--nay, we may not--countenance so grave a dereliction of all duty, both human and divine."

The reverend gentleman resumed his seat. The late superintendent's brother-in-law again rose: "What I have said I stick to," he said; "the amount is not enough!"

The first shareholder struck in: "I challenge the legality of the payment. In my opinion this payment is not legal. The Company's solicitor is present; I believe I am in order in asking him the question."

All eyes were now turned upon Soames. Something had arisen!

He stood up, close-lipped and cold; his nerves inwardly fluttered, his attention tweaked away at last from contemplation of that cloud looming on the horizon of his mind.

"The point," he said in a low, thin voice, "is by no means clear. As there is no possibility of future consideration being received, it is doubtful whether the payment is strictly legal. If it is desired, the opinion of the court could be taken."

The superintendent's brother-in-law frowned, and said in a meaning tone: "We have no doubt the opinion of the court could be taken. May I ask the name of the gentleman who has given us that striking piece of information? Mr. Soames Forsyte? Indeed!" He looked from Soames to old Jolyon in a pointed manner.

A flush coloured Soames' pale cheeks, but his superciliousness did not waver. Old Jolyon fixed his eyes on the speaker.

"If," he said, "the late superintendents brother-in-law has nothing more to say, I propose that the report and accounts...."

At this moment, however, there rose one of those five silent, stolid shareholders, who had excited Soames' sympathy. He said:

"I deprecate the proposal altogether. We are expected to give charity to this man's wife and children, who, you tell us, were dependent on him. They may have been; I do not care whether they were or not. I object to the whole thing on principle. It is high time a stand was made against this sentimental humanitarianism. The country is eaten up with it. I object to my money being paid to these people of whom I know nothing, who have done nothing to earn it. I object in toto; it is not business. I now move that the report and accounts be put back, and amended by striking out the grant altogether."

Old Jolyon had remained standing while the strong, silent man was speaking. The speech awoke an echo in all hearts, voicing, as it did, the worship of strong men, the movement against generosity, which had at that time already commenced among the saner members of the community.

The words 'it is not business' had moved even the Board; privately everyone felt that indeed it was not. But they knew also the chairman's domineering temper and tenacity. He, too, at heart must feel that it was not business; but he was committed to his own proposition. Would he go back upon it? It was thought to be unlikely.

All waited with interest. Old Jolyon held up his hand; dark-rimmed glasses depending between his finger and thumb quivered slightly with a suggestion of menace.

He addressed the strong, silent shareholder.

"Knowing, as you do, the efforts of our late superintendent upon the occasion of the explosion at the mines, do you seriously wish me to put that amendment, sir?"

"I do."

Old Jolyon put the amendment.

"Does anyone second this?" he asked, looking calmly round.

And it was then that Soames, looking at his uncle, felt the power of will that was in that old man. No one stirred. Looking straight into the eyes of the strong, silent shareholder, old Jolyon said:

"I now move, 'That the report and accounts for the year 1886 be received and adopted.' You second that? Those in favour signify the same in the usual way. Contrary--no. Carried. The next business, gentlemen...."

Soames smiled. Certainly Uncle Jolyon had a way with him!

But now his attention relapsed upon Bosinney.

Odd how that fellow haunted his thoughts, even in business hours.

Irene's visit to the house--but there was nothing in that, except that she might have told him; but then, again, she never did tell him anything. She was more silent, more touchy, every day. He wished to God the house were finished, and they were in it, away from London. Town did not suit her; her nerves were not strong enough. That nonsense of the separate room had cropped up again!

The meeting was breaking up now. Underneath the photograph of the lost shaft Hemmings was buttonholed by the Rev. Mr. Boms. Little Mr. Booker, his bristling eyebrows wreathed in angry smiles, was having a parting turn-up with old Scrubsole. The two hated each other like poison. There was some matter of a tar-contract between them, little Mr. Booker having secured it from the Board for a nephew of his, over old Scrubsole's head. Soames had heard that from Hemmings, who liked a gossip, more especially about his directors, except, indeed, old Jolyon, of whom he was afraid.

Soames awaited his opportunity. The last shareholder was vanishing through the door, when he approached his uncle, who was putting on his hat.

"Can I speak to you for a minute, Uncle Jolyon?"

It is uncertain what Soames expected to get out of this interview.

Apart from that somewhat mysterious awe in which Forsytes in general held old Jolyon, due to his philosophic twist, or perhaps--as Hemmings would doubtless have said--to his chin, there was, and always had been, a subtle antagonism between the younger man and the old. It had lurked under their dry manner of greeting, under their non-committal allusions to each other, and arose perhaps from old Jolyon's perception of the quiet tenacity ('obstinacy,' he rather naturally called it) of the young man, of a secret doubt whether he could get his own way with him.

Both these Forsytes, wide asunder as the poles in many respects, possessed in their different ways--to a greater degree than the rest of the family--that essential quality of tenacious and prudent insight into 'affairs,' which is the highwater mark of their great class. Either of them, with a little luck and opportunity, was equal to a lofty career; either of them would have made a good financier, a great contractor, a statesman, though old Jolyon, in certain of his moods when under the influence of a cigar or of Nature--would have been capable of, not perhaps despising, but certainly of questioning, his own high position, while Soames, who never smoked cigars, would not.

Then, too, in old Jolyon's mind there was always the secret ache, that the son of James--of James, whom he had always thought such a poor thing, should be pursuing the paths of success, while his own son...!

And last, not least--for he was no more outside the radiation of family gossip than any other Forsyte--he had now heard the sinister, indefinite, but none the less disturbing rumour about Bosinney, and his pride was wounded to the quick.

Characteristically, his irritation turned not against Irene but against Soames. The idea that his nephew's wife (why couldn't the fellow take better care of her--Oh! quaint injustice! as though Soames could possibly take more care!)--should be drawing to herself June's lover, was intolerably humiliating. And seeing the danger, he did not, like James, hide it away in sheer nervousness, but owned with the dispassion of his broader outlook, that it was not unlikely; there was something very attractive about Irene!

He had a presentiment on the subject of Soames' communication as they left the Board Room together, and went out into the noise and hurry of Cheapside. They walked together a good minute without speaking, Soames with his mousing, mincing step, and old Jolyon upright and using his umbrella languidly as a walking-stick.

They turned presently into comparative quiet, for old Jolyon's way to a second Board led him in the direction of Moorage Street.

Then Soames, without lifting his eyes, began: "I've had this letter from Bosinney. You see what he says; I thought I'd let you know. I've spent a lot more than I intended on this house, and I want the position to be clear."

Old Jolyon ran his eyes unwillingly over the letter: "What he says is clear enough," he said.

"He talks about 'a free hand,'" replied Soames.

Old Jolyon looked at him. The long-suppressed irritation and antagonism towards this young fellow, whose affairs were beginning to intrude upon his own, burst from him.

"Well, if you don't trust him, why do you employ him?"

Soames stole a sideway look: "It's much too late to go into that," he said, "I only want it to be quite understood that if I give him a free hand, he doesn't let me in. I thought if you were to speak to him, it would carry more weight!"

"No," said old Jolyon abruptly; "I'll have nothing to do with it!"

The words of both uncle and nephew gave the impression of unspoken meanings, far more important, behind. And the look they interchanged was like a revelation of this consciousness.

"Well," said Soames; "I thought, for June's sake, I'd tell you, that's all; I thought you'd better know I shan't stand any nonsense!"

"What is that to me?" old Jolyon took him up.

"Oh! I don't know," said Soames, and flurried by that sharp look he was unable to say more. "Don't say I didn't tell you," he added sulkily, recovering his composure.

"Tell me!" said old Jolyon; "I don't know what you mean. You come worrying me about a thing like this. I don't want to hear about your affairs; you must manage them yourself!"

"Very well," said Soames immovably, "I will!"

"Good-morning, then," said old Jolyon, and they parted.

Soames retraced his steps, and going into a celebrated eating-house, asked for a plate of smoked salmon and a glass of Chablis; he seldom ate much in the middle of the day, and generally ate standing, finding the position beneficial to his liver, which was very sound, but to which he desired to put down all his troubles.

When he had finished he went slowly back to his office, with bent head, taking no notice of the swarming thousands on the pavements, who in their turn took no notice of him.

The evening post carried the following reply to Bosinney:

'FORSYTE, BUSTARD AND FORSYTE, 'Commissioners for Oaths, '92001, BRANCH LANE, POULTRY, E.C.,

'May 17, 1887. 'DEAR BOSINNEY,

'I have, received your letter, the terms of which not a little surprise me. I was under the impression that you had, and have had all along, a "free hand"; for I do not recollect that any suggestions I have been so unfortunate as to make have met with your approval. In giving you, in accordance with your request, this "free hand," I wish you to clearly understand that the total cost of the house as handed over to me completely decorated, inclusive of your fee (as arranged between us), must not exceed twelve thousand pounds--L12,000. This gives you an ample margin, and, as you know, is far more than I originally contemplated.

'I am, 'Yours truly,

'SOAMES FORSYTE.'

On the following day he received a note from Bosinney:

'PHILIP BAYNES BOSINNEY, 'Architect, '309D, SLOANE STREET, S.W., 'May 18. 'DEAR FORSYTE,

'If you think that in such a delicate matter as decoration I can bind myself to the exact pound, I am afraid you are mistaken. I can see that you are tired of the arrangement, and of me, and I had better, therefore, resign.

'Yours faithfully, 'PHILIP BAYNES BOSINNEY.'

Soames pondered long and painfully over his answer, and late at night in the dining-room, when Irene had gone to bed, he composed the following:

'62, MONTPELLIER SQUARE, S.W., 'May 19, 1887. 'DEAR BOSINNEY,

'I think that in both our interests it would be extremely undesirable that matters should be so left at this stage. I did not mean to say that if you should exceed the sum named in my letter to you by ten or twenty or even fifty pounds, there would be any difficulty between us. This being so, I should like you to reconsider your answer. You have a "free hand" in the terms of this correspondence,

and I hope you will see your way to completing the decorations, in the matter of which I know it is difficult to be absolutely exact.

'Yours truly, 'SOAMES FORSYTE.'

Bosinney's answer, which came in the course of the next day, was:

'May 20. 'DEAR FORSYTE,

'Very well. 'PH. BOSINNEY.'

CHAPTER VI

OLD JOLYON AT THE ZOO

Old Jolyon disposed of his second Meeting--an ordinary Board--summarily. He was so dictatorial that his fellow directors were left in cabal over the increasing domineeringness of old Forsyte, which they were far from intending to stand much longer, they said.

He went out by Underground to Portland Road Station, whence he took a cab and drove to the Zoo.

He had an assignation there, one of those assignations that had lately been growing more frequent, to which his increasing uneasiness about June and the 'change in her,' as he expressed it, was driving him.

She buried herself away, and was growing thin; if he spoke to her he got no answer, or had his head snapped off, or she looked as if she would burst into tears. She was as changed as she could be, all through this Bosinney. As for telling him about anything, not a bit of it!

And he would sit for long spells brooding, his paper unread before him, a cigar extinct between his lips. She had been such a companion to him ever since she was three years old! And he loved her so!

Forces regardless of family or class or custom were beating down his guard; impending events over which he had no control threw their shadows on his head. The irritation of one accustomed to have his way was roused against he knew not what.

Chafing at the slowness of his cab, he reached the Zoo door; but, with his sunny instinct for seizing the good of each moment, he forgot his vexation as he walked towards the tryst.

From the stone terrace above the bear-pit his son and his two grandchildren came hastening down when they saw old Jolyon coming, and led him away towards the lion-house. They supported him on either side, holding one to each of his hands,--whilst Jolly, perverse like his father, carried his grandfather's umbrella in such a way as to catch people's legs with the crutch of the handle.

Young Jolyon followed.

It was as good as a play to see his father with the children, but such a play as brings smiles with tears behind. An old man and two small children walking together can be seen at any hour of the day; but the sight of old Jolyon, with Jolly and Holly seemed to young Jolyon a special peep-show of the things that lie at the bottom of our hearts. The complete surrender of that erect old figure to those little figures on either hand was too poignantly tender, and, being a man of an habitual reflex action, young Jolyon swore softly under his breath. The show affected him in a way unbecoming to a Forsyte, who is nothing if not undemonstrative.

Thus they reached the lion-house.

There had been a morning fete at the Botanical Gardens, and a large number of Forsy...'--that is, of well-dressed people who kept carriages had brought them on to the Zoo, so as to have more, if possible, for their money, before going back to Rutland Gate or Bryanston Square.

"Let's go on to the Zoo," they had said to each other; "it'll be great fun!" It was a shilling day; and there would not be all those horrid common people.

In front of the long line of cages they were collected in rows, watching the tawny, ravenous beasts behind the bars await their only pleasure of the four-and-twenty hours. The hungrier the beast, the greater the fascination. But whether because the spectators envied his appetite, or, more humanely, because it was so soon to be satisfied, young Jolyon could not tell. Remarks kept falling on

his ears: "That's a nasty-looking brute, that tiger!" "Oh, what a love! Look at his little mouth!" "Yes, he's rather nice! Don't go too near, mother."

And frequently, with little pats, one or another would clap their hands to their pockets behind and look round, as though expecting young Jolyon or some disinterested-looking person to relieve them of the contents.

A well-fed man in a white waistcoat said slowly through his teeth: "It's all greed; they can't be hungry. Why, they take no exercise." At these words a tiger snatched a piece of bleeding liver, and the fat man laughed. His wife, in a Paris model frock and gold nose-nippers, reproved him: "How can you laugh, Harry? Such a horrid sight!"

Young Jolyon frowned.

The circumstances of his life, though he had ceased to take a too personal view of them, had left him subject to an intermittent contempt; and the class to which he had belonged--the carriage class--especially excited his sarcasm.

To shut up a lion or tiger in confinement was surely a horrible barbarity. But no cultivated person would admit this.

The idea of its being barbarous to confine wild animals had probably never even occurred to his father for instance; he belonged to the old school, who considered it at once humanizing and educational to confine baboons and panthers, holding the view, no doubt, that in course of time they might induce these creatures not so unreasonably to die of misery and heart-sickness against the bars of their cages, and put the society to the expense of getting others! In his eyes, as in the eyes of all Forsytes, the pleasure of seeing these beautiful creatures in a state of captivity far outweighed the inconvenience of imprisonment to beasts whom God had so improvidently placed in a state of freedom! It was for the animals good, removing them at once from the countless dangers of open air and exercise, and enabling them to exercise their functions in the guaranteed seclusion of a private compartment! Indeed, it was doubtful what wild animals were made for but to be shut up in cages!

But as young Jolyon had in his constitution the elements of impartiality, he reflected that to stigmatize as barbarity that which was merely lack of imagination must be wrong; for none who held these views had been placed in a similar position to the animals they caged, and could not, therefore, be expected to enter into their sensations. It was not until they were leaving the gardens--Jolly and Holly in a state of blissful delirium--that old Jolyon found an opportunity of speaking to his son on the matter next his heart. "I don't know what to make of it," he said; "if she's to go on as she's going on now, I can't tell what's to come. I wanted her to see the doctor, but she won't. She's not a bit like me. She's your mother all over. Obstinate as a mule! If she doesn't want to do a thing, she won't, and there's an end of it!"

Young Jolyon smiled; his eyes had wandered to his father's chin. 'A pair of you,' he thought, but he said nothing.

"And then," went on old Jolyon, "there's this Bosinney. I should like to punch the fellow's head, but I can't, I suppose, though--I don't see why you shouldn't," he added doubtfully.

"What has he done? Far better that it should come to an end, if they don't hit it off!"

Old Jolyon looked at his son. Now they had actually come to discuss a subject connected with the relations between the sexes he felt distrustful. Jo would be sure to hold some loose view or other.

"Well, I don't know what you think," he said; "I dare say your sympathy's with him--shouldn't be surprised; but I think he's behaving precious badly, and if he comes my way I shall tell him so." He dropped the subject.

It was impossible to discuss with his son the true nature and meaning of Bosinney's defection. Had not his son done the very same thing (worse, if possible) fifteen years ago? There seemed no end to the consequences of that piece of folly.

Young Jolyon also was silent; he had quickly penetrated his father's thought, for, dethroned from the high seat of an obvious and uncomplicated view of things, he had become both perceptive and subtle.

The attitude he had adopted towards sexual matters fifteen years before, however, was too different from his father's. There was no bridging the gulf.

He said coolly: "I suppose he's fallen in love with some other woman?"

Old Jolyon gave him a dubious look: "I can't tell," he said; "they say so!"

"Then, it's probably true," remarked young Jolyon unexpectedly; "and I suppose they've told you who she is?"

"Yes," said old Jolyon, "Soames's wife!"

Young Jolyon did not whistle: The circumstances of his own life had rendered him incapable of whistling on such a subject, but he looked at his father, while the ghost of a smile hovered over his face.

If old Jolyon saw, he took no notice.

"She and June were bosom friends!" he muttered.

"Poor little June!" said young Jolyon softly. He thought of his daughter still as a babe of three.

Old Jolyon came to a sudden halt.

"I don't believe a word of it," he said, "it's some old woman's tale. Get me a cab, Jo, I'm tired to death!"

They stood at a corner to see if an empty cab would come along, while carriage after carriage drove past, bearing Forsytes of all descriptions from the Zoo. The harness, the liveries, the gloss on the horses' coats, shone and glittered in the May sunlight, and each equipage, landau, sociable, barouche, Victoria, or brougham, seemed to roll out proudly from its wheels:

'I and my horses and my men you know,' Indeed the whole turn-out have cost a pot. But we were worth it every penny. Look At Master and at Missis now, the dawgs! Ease with security--ah! that's the ticket!

And such, as everyone knows, is fit accompaniment for a perambulating Forsyte.

Amongst these carriages was a barouche coming at a greater pace than the others, drawn by a pair of bright bay horses. It swung on its high springs, and the four people who filled it seemed rocked as in a cradle.

This chariot attracted young Jolyon's attention; and suddenly, on the back seat, he recognised his Uncle James, unmistakable in spite of the increased whiteness of his whiskers; opposite, their backs defended by sunshades, Rachel Forsyte and her elder but married sister, Winifred Dartie, in irreproachable toilettes, had posed their heads haughtily, like two of the birds they had been seeing at the Zoo; while by James' side reclined Dartie, in a brand-new frock-coat buttoned tight and square, with a large expanse of carefully shot linen protruding below each wristband.

An extra, if subdued, sparkle, an added touch of the best gloss or varnish characterized this vehicle, and seemed to distinguish it from all the others, as though by some happy extravagance--like that which marks out the real 'work of art' from the ordinary 'picture'--it were designated as the typical car, the very throne of Forsytedom.

Old Jolyon did not see them pass; he was petting poor Holly who was tired, but those in the carriage had taken in the little group; the ladies' heads tilted suddenly, there was a spasmodic screening movement of parasols; James' face protruded naively, like the head of a long bird, his mouth slowly opening. The shield-like rounds of the parasols grew smaller and smaller, and vanished.

Young Jolyon saw that he had been recognised, even by Winifred, who could not have been more than fifteen when he had forfeited the right to be considered a Forsyte.

There was not much change in them! He remembered the exact look of their turn-out all that time ago: Horses, men, carriage--all different now, no doubt--but of the precise stamp of fifteen years before; the same neat display, the same nicely calculated arrogance ease with security! The swing exact, the pose of the sunshades exact, exact the spirit of the whole thing.

And in the sunlight, defended by the haughty shields of parasols, carriage after carriage went by.

"Uncle James has just passed, with his female folk," said young Jolyon.

His father looked black. "Did your uncle see us? Yes? Hmph! What's he want, coming down into these parts?"

An empty cab drove up at this moment, and old Jolyon stopped it.

"I shall see you again before long, my boy!" he said. "Don't you go paying any attention to what I've been saying about young Bosinney--I don't believe a word of it!"

Kissing the children, who tried to detain him, he stepped in and was borne away.

Young Jolyon, who had taken Holly up in his arms, stood motionless at the corner, looking after the cab.

CHAPTER VII

AFTERNOON AT TIMOTHY'S

If old Jolyon, as he got into his cab, had said: 'I won't believe a word of it!' he would more truthfully have expressed his sentiments.

The notion that James and his womankind had seen him in the company of his son had awakened in him not only the impatience he always felt when crossed, but that secret hostility natural between brothers, the roots of which--little nursery rivalries--sometimes toughen and deepen as life goes on, and, all hidden, support a plant capable of producing in season the bitterest fruits.

Hitherto there had been between these six brothers no more unfriendly feeling than that caused by the secret and natural doubt that the others might be richer than themselves; a feeling increased to the pitch of curiosity by the approach of death--that end of all handicaps--and the great 'closeness' of their man of business, who, with some sagacity, would profess to Nicholas ignorance of James' income, to James ignorance of old Jolyon's, to Jolyon ignorance of Roger's, to Roger ignorance of Swithin's, while to Swithin he would say most irritatingly that Nicholas must be a rich man. Timothy alone was exempt, being in gilt-edged securities.

But now, between two of them at least, had arisen a very different sense of injury. From the moment when James had the impertinence to pry into his affairs--as he put it--old Jolyon no longer chose to credit this story about Bosinney. His grand-daughter slighted through a member of 'that fellow's' family! He made up his mind that Bosinney was maligned. There must be some other reason for his defection.

June had flown out at him, or something; she was as touchy as she could be!

He would, however, let Timothy have a bit of his mind, and see if he would go on dropping hints! And he would not let the grass grow under his feet either, he would go there at once, and take very good care that he didn't have to go again on the same errand.

He saw James' carriage blocking the pavement in front of 'The Bower.' So they had got there before him--cackling about having seen him, he dared say! And further on, Swithin's greys were turning their noses towards the noses of James' bays, as though in conclave over the family, while their coachmen were in conclave above.

Old Jolyon, depositing his hat on the chair in the narrow hall, where that hat of Bosinney's had so long ago been mistaken for a cat, passed his thin hand grimly over his face with its great drooping white moustaches, as though to remove all traces of expression, and made his way upstairs.

He found the front drawing-room full. It was full enough at the best of times--without visitors--without any one in it--for Timothy and his sisters, following the tradition of their generation, considered that a room was not quite 'nice' unless it was 'properly' furnished. It held, therefore, eleven chairs, a sofa, three tables, two cabinets, innumerable knicknacks, and part of a large grand piano. And now, occupied by Mrs. Small, Aunt Hester, by Swithin, James, Rachel, Winifred, Euphemia, who had come in again to return 'Passion and Paregoric' which she had read at lunch, and her chum Frances, Roger's daughter (the musical Forsyte, the one who composed songs), there was only one chair left unoccupied, except, of course, the two that nobody ever sat on--and the only standing room was occupied by the cat, on whom old Jolyon promptly stepped.

In these days it was by no means unusual for Timothy to have so many visitors. The family had always, one and all, had a real respect for Aunt Ann, and now that she was gone, they were coming far more frequently to The Bower, and staying longer.

Swithin had been the first to arrive, and seated torpid in a red satin chair with a gilt back, he gave every appearance of lasting the others out. And symbolizing Bosinney's name 'the big one,' with his great stature and bulk, his thick white hair, his puffy immovable shaven face, he looked more primeval than ever in the highly upholstered room.

His conversation, as usual of late, had turned at once upon Irene, and he had lost no time in giving Aunts Juley and Hester his opinion with regard to this rumour he heard was going about. No--as he said--she might want a bit of flirtation--a pretty woman must have her fling; but more than that he did not believe. Nothing open; she had too much good sense, too much proper appreciation of what was due to her position, and to the family! No sc..., he was going to say 'scandal' but the very idea was so preposterous that he waved his hand as though to say--'but let that pass!'

Granted that Swithin took a bachelor's view of the situation--still what indeed was not due to that family in which so many had done so well for themselves, had attained a certain position? If he had heard in dark, pessimistic moments the words 'yeomen' and 'very small beer' used in connection with his origin, did he believe them?

No! he cherished, hugging it pathetically to his bosom the secret theory that there was something distinguished somewhere in his ancestry.

"Must be," he once said to young Jolyon, before the latter went to the bad. "Look at us, we've got on! There must be good blood in us somewhere."

He had been fond of young Jolyon: the boy had been in a good set at College, had known that old ruffian Sir Charles Fiste's sons--a pretty rascal one of them had turned out, too; and there was style about him--it was a thousand pities he had run off with that half-foreign governess! If he must go off like that why couldn't he have chosen someone who would have done them credit! And what was he now?--an underwriter at Lloyd's; they said he even painted pictures--pictures! Damme! he might have ended as Sir Jolyon Forsyte, Bart., with a seat in Parliament, and a place in the country!

It was Swithin who, following the impulse which sooner or later urges thereto some member of every great family, went to the Heralds' Office, where they assured him that he was undoubtedly of the same family as the well-known Forsites with an 'i,' whose arms were 'three dexter buckles on a sable ground gules,' hoping no doubt to get him to take them up.

Swithin, however, did not do this, but having ascertained that the crest was a 'pheasant proper,' and the motto 'For Forsite,' he had the pheasant proper placed upon his carriage and the buttons of his coachman, and both crest and motto on his writing-paper. The arms he hugged to himself, partly because, not having paid for them, he thought it would look ostentatious to put them on his carriage, and he hated ostentation, and partly because he, like any practical man all over the country, had a secret dislike and contempt for things he could not understand he found it hard, as anyone might, to swallow 'three dexter buckles on a sable ground gules.'

He never forgot, however, their having told him that if he paid for them he would be entitled to use them, and it strengthened his conviction that he was a gentleman. Imperceptibly the rest of the family absorbed the 'pheasant proper,' and some, more serious than others, adopted the motto; old Jolyon, however, refused to use the latter, saying that it was humbug meaning nothing, so far as he could see.

Among the older generation it was perhaps known at bottom from what great historical event they derived their crest; and if pressed on the subject, sooner than tell a lie--they did not like telling lies, having an impression that only Frenchmen and Russians told them--they would confess hurriedly that Swithin had got hold of it somehow.

Among the younger generation the matter was wrapped in a discretion proper. They did not want to hurt the feelings of their elders, nor to feel ridiculous themselves; they simply used the crest....

"No," said Swithin, "he had had an opportunity of seeing for himself, and what he should say was, that there was nothing in her manner to that young Buccaneer or Bosinney or whatever his name was, different from her manner to himself; in fact, he should rather say...." But here the entrance of Frances and Euphemia put an unfortunate stop to the conversation, for this was not a subject which could be discussed before young people.

And though Swithin was somewhat upset at being stopped like this on the point of saying something important, he soon recovered his affability. He was rather fond of Frances--Francie, as she was called in the family. She was so smart, and they told him she made a pretty little pot of pin-money by her songs; he called it very clever of her.

He rather prided himself indeed on a liberal attitude towards women, not seeing any reason why they shouldn't paint pictures, or write tunes, or books even, for the matter of that, especially if they could turn a useful penny by it; not at all--kept them out of mischief. It was not as if they were men!

'Little Francie,' as she was usually called with good-natured contempt, was an important personage, if only as a standing illustration of the attitude of Forsytes towards the Arts. She was not really 'little,' but rather tall, with dark hair for a Forsyte, which, together with a grey eye, gave her what was called 'a Celtic appearance.' She wrote songs with titles like 'Breathing Sighs,' or 'Kiss me, Mother, ere I die,' with a refrain like an anthem:

'Kiss me, Mother, ere I die; Kiss me-kiss me, Mother, ah! Kiss, ah! kiss me e-ere I-- Kiss me, Mother, ere I d-d-die!'

She wrote the words to them herself, and other poems. In lighter moments she wrote waltzes, one of which, the 'Kensington Coil,' was almost national to Kensington, having a sweet dip in it.

It was very original. Then there were her 'Songs for Little People,' at once educational and witty, especially 'Gran'ma's Porgie,' and that ditty, almost prophetically imbued with the coming Imperial spirit, entitled 'Black Him In His Little Eye.'

Any publisher would take these, and reviews like 'High Living,' and the 'Ladies' Genteel Guide' went into raptures over: 'Another of Miss Francie Forsyte's spirited ditties, sparkling and pathetic. We ourselves were moved to tears and laughter. Miss Forsyte should go far.'

With the true instinct of her breed, Francie had made a point of knowing the right people--people who would write about her, and talk about her, and people in Society, too--keeping a mental register of just where to exert her fascinations, and an eye on that steady scale of rising prices, which in her mind's eye represented the future. In this way she caused herself to be universally respected.

Once, at a time when her emotions were whipped by an attachment--for the tenor of Roger's life, with its whole-hearted collection of house property, had induced in his only daughter a tendency towards passion--she turned to great and sincere work, choosing the sonata form, for the violin. This was the only one of her productions that troubled the Forsytes. They felt at once that it would not sell.

Roger, who liked having a clever daughter well enough, and often alluded to the amount of pocket-money she made for herself, was upset by this violin sonata.

"Rubbish like that!" he called it. Francie had borrowed young Flageoletti from Euphemia, to play it in the drawing-room at Prince's Gardens.

As a matter of fact Roger was right. It was rubbish, but--annoying! the sort of rubbish that wouldn't sell. As every Forsyte knows, rubbish that sells is not rubbish at all--far from it.

And yet, in spite of the sound common sense which fixed the worth of art at what it would fetch, some of the Forsytes--Aunt Hester, for instance, who had always been musical--could not help regretting that Francie's music was not 'classical'; the same with her poems. But then, as Aunt Hester said, they didn't see any poetry nowadays, all the poems were 'little light things.'

There was nobody who could write a poem like 'Paradise Lost,' or 'Childe Harold'; either of which made you feel that you really had read something. Still, it was nice for Francie to have something to occupy her; while other girls were spending money shopping she was making it!

And both Aunt Hester and Aunt Juley were always ready to listen to the latest story of how Francie had got her price increased.

They listened now, together with Swithin, who sat pretending not to, for these young people talked so fast and mumbled so, he never could catch what they said.

"And I can't think," said Mrs. Septimus, "how you do it. I should never have the audacity!"

Francie smiled lightly. "I'd much rather deal with a man than a woman. Women are so sharp!"

"My dear," cried Mrs. Small, "I'm sure we're not."

Euphemia went off into her silent laugh, and, ending with the squeak, said, as though being strangled: "Oh, you'll kill me some day, auntie."

Swithin saw no necessity to laugh; he detested people laughing when he himself perceived no joke. Indeed, he detested Euphemia altogether, to whom he always alluded as 'Nick's daughter, what's she called--the pale one?' He had just missed being her god-father--indeed, would have been, had he not taken a firm stand against her outlandish name. He hated becoming a godfather. Swithin then said to Francie with dignity: "It's a fine day--er--for the time of year." But Euphemia, who knew perfectly well that he had refused to be her godfather, turned to Aunt Hester, and began telling her how she had seen Irene--Mrs. Soames--at the Church and Commercial Stores.

"And Soames was with her?" said Aunt Hester, to whom Mrs. Small had as yet had no opportunity of relating the incident.

"Soames with her? Of course not!"

"But was she all alone in London?"

"Oh, no; there was Mr. Bosinney with her. She was perfectly dressed."

But Swithin, hearing the name Irene, looked severely at Euphemia, who, it is true, never did look well in a dress, whatever she may have done on other occasions, and said:

"Dressed like a lady, I've no doubt. It's a pleasure to see her."

At this moment James and his daughters were announced. Dartie, feeling badly in want of a drink, had pleaded an appointment with his dentist, and, being put down at the Marble Arch, had got into a hansom, and was already seated in the window of his club in Piccadilly.

His wife, he told his cronies, had wanted to take him to pay some calls. It was not in his line--not exactly. Haw!

Hailing the waiter, he sent him out to the hall to see what had won the 4.30 race. He was dog-tired, he said, and that was a fact; had been drivin' about with his wife to 'shows' all the afternoon. Had put his foot down at last. A fellow must live his own life.

At this moment, glancing out of the bay window--for he loved this seat whence he could see everybody pass--his eye unfortunately, or perhaps fortunately, chanced to light on the figure of Soames, who was mousing across the road from the Green Park-side, with the evident intention of coming in, for he, too, belonged to 'The Iseeum.'

Dartie sprang to his feet; grasping his glass, he muttered something about 'that 4.30 race,' and swiftly withdrew to the card-room, where Soames never came. Here, in complete isolation and a dim light, he lived his own life till half past seven, by which hour he knew Soames must certainly have left the club.

It would not do, as he kept repeating to himself whenever he felt the impulse to join the gossips in the bay-window getting too strong for him--it absolutely would not do, with finances as low as his, and the 'old man' (James) rusty ever since that business over the oil shares, which was no fault of his, to risk a row with Winifred.

If Soames were to see him in the club it would be sure to come round to her that he wasn't at the dentist's at all. He never knew a family where things 'came round' so. Uneasily, amongst the green baize card-tables, a frown on his olive coloured face, his check trousers crossed, and patent-leather boots shining through the gloom, he sat biting his forefinger, and wondering where the deuce he was to get the money if Erotic failed to win the Lancashire Cup.

His thoughts turned gloomily to the Forsytes. What a set they were! There was no getting anything out of them--at least, it was a matter of extreme difficulty. They were so d---d particular about money matters; not a sportsman amongst the lot, unless it were George. That fellow Soames, for instance, would have a ft if you tried to borrow a tenner from him, or, if he didn't have a fit, he looked at you with his cursed supercilious smile, as if you were a lost soul because you were in want of money.

And that wife of his (Dartie's mouth watered involuntarily), he had tried to be on good terms with her, as one naturally would with any pretty sister-in-law, but he would be cursed if the (he mentally used a coarse word)--would have anything to say to him--she looked at him, indeed, as if he were dirt--and yet she could go far enough, he wouldn't mind betting. He knew women; they weren't made with soft eyes and figures like that for nothing, as that fellow Soames would jolly soon find out, if there were anything in what he had heard about this Buccaneer Johnny.

Rising from his chair, Dartie took a turn across the room, ending in front of the looking-glass over the marble chimney-piece; and there he stood for a long time contemplating in the glass the reflection of his face. It had that look, peculiar to some men, of having been steeped in linseed oil, with its waxed dark moustaches and the little distinguished commencements of side whiskers; and concernedly he felt the promise of a pimple on the side of his slightly curved and fattish nose.

In the meantime old Jolyon had found the remaining chair in Timothy's commodious drawing-room. His advent had obviously put a stop to the conversation, decided awkwardness having set in. Aunt Juley, with her well-known kindheartedness, hastened to set people at their ease again.

"Yes, Jolyon," she said, "we were just saying that you haven't been here for a long time; but we mustn't be surprised. You're busy, of course? James was just saying what a busy time of year...."

"Was he?" said old Jolyon, looking hard at James. "It wouldn't be half so busy if everybody minded their own business."

James, brooding in a small chair from which his knees ran uphill, shifted his feet uneasily, and put one of them down on the cat, which had unwisely taken refuge from old Jolyon beside him.

"Here, you've got a cat here," he said in an injured voice, withdrawing his foot nervously as he felt it squeezing into the soft, furry body.

"Several," said old Jolyon, looking at one face and another; "I trod on one just now."

A silence followed.

Then Mrs. Small, twisting her fingers and gazing round with 'pathetic calm', asked: "And how is dear June?"

A twinkle of humour shot through the sternness of old Jolyon's eyes. Extraordinary old woman, Juley! No one quite like her for saying the wrong thing!

"Bad!" he said; "London don't agree with her--too many people about, too much clatter and chatter by half." He laid emphasis on the words, and again looked James in the face.

Nobody spoke.

A feeling of its being too dangerous to take a step in any direction, or hazard any remark, had fallen on them all. Something of the sense of the impending, that comes over the spectator of a Greek tragedy, had entered that upholstered room, filled with those white-haired, frock-coated old men, and fashionably attired women, who were all of the same blood, between all of whom existed an unseizable resemblance.

Not that they were conscious of it--the visits of such fateful, bitter spirits are only felt.

Then Swithin rose. He would not sit there, feeling like that--he was not to be put down by anyone! And, manoeuvring round the room with added pomp, he shook hands with each separately.

"You tell Timothy from me," he said, "that he coddles himself too much!" Then, turning to Francie, whom he considered 'smart,' he added: "You come with me for a drive one of these days." But this conjured up the vision of that other eventful drive which had been so much talked about, and he stood quite still for a second, with glassy eyes, as though waiting to catch up with the significance of what he himself had said; then, suddenly recollecting that he didn't care a damn, he turned to old Jolyon: "Well, good-bye, Jolyon! You shouldn't go about without an overcoat; you'll be getting sciatica or something!" And, kicking the cat slightly with the pointed tip of his patent leather boot, he took his huge form away.

When he had gone everyone looked secretly at the others, to see how they had taken the mention of the word 'drive'--the word which had become famous, and acquired an overwhelming importance, as the only official--so to speak--news in connection with the vague and sinister rumour clinging to the family tongue.

Euphemia, yielding to an impulse, said with a short laugh: "I'm glad Uncle Swithin doesn't ask me to go for drives."

Mrs. Small, to reassure her and smooth over any little awkwardness the subject might have, replied: "My dear, he likes to take somebody well dressed, who will do him a little credit. I shall never forget the drive he took me. It was an experience!" And her chubby round old face was spread for a moment with a strange contentment; then broke into pouts, and tears came into her eyes. She was thinking of that long ago driving tour she had once taken with Septimus Small.

James, who had relapsed into his nervous brooding in the little chair, suddenly roused himself: "He's a funny fellow, Swithin," he said, but in a half-hearted way.

Old Jolyon's silence, his stern eyes, held them all in a kind of paralysis. He was disconcerted himself by the effect of his own words--an effect which seemed to deepen the importance of the very rumour he had come to scotch; but he was still angry.

He had not done with them yet--No, no--he would give them another rub or two.

He did not wish to rub his nieces, he had no quarrel with them--a young and presentable female always appealed to old Jolyon's clemency--but that fellow James, and, in a less degree perhaps, those others, deserved all they would get. And he, too, asked for Timothy.

As though feeling that some danger threatened her younger brother, Aunt Juley suddenly offered him tea: "There it is," she said, "all cold and nasty, waiting for you in the back drawing room, but Smither shall make you some fresh."

Old Jolyon rose: "Thank you," he said, looking straight at James, "but I've no time for tea, and--scandal, and the rest of it! It's time I was at home. Good-bye, Julia; good-bye, Hester; good-bye, Winifred."

Without more ceremonious adieux, he marched out.

Once again in his cab, his anger evaporated, for so it ever was with his wrath--when he had rapped out, it was gone. Sadness came over his spirit. He had stopped their mouths, maybe, but at what a cost! At the cost of certain knowledge that the rumour he had been resolved not to believe was true. June was abandoned, and for the wife of that fellow's son! He felt it was true, and hardened himself to treat it as if it were not; but the pain he hid beneath this resolution began slowly, surely, to vent itself in a blind resentment against James and his son.

The six women and one man left behind in the little drawing-room began talking as easily as might be after such an occurrence, for though each one of them knew for a fact that he or she never talked scandal, each one of them also knew that the other six did; all were therefore angry and at a loss. James only was silent, disturbed, to the bottom of his soul.

Presently Francie said: "Do you know, I think Uncle Jolyon is terribly changed this last year. What do you think, Aunt Hester?"

Aunt Hester made a little movement of recoil: "Oh, ask your Aunt Julia!" she said; "I know nothing about it."

No one else was afraid of assenting, and James muttered gloomily at the floor: "He's not half the man he was."

"I've noticed it a long time," went on Francie; "he's aged tremendously."

Aunt Juley shook her head; her face seemed suddenly to have become one immense pout.

"Poor dear Jolyon," she said, "somebody ought to see to it for him!"

There was again silence; then, as though in terror of being left solitarily behind, all five visitors rose simultaneously, and took their departure.

Mrs. Small, Aunt Hester, and their cat were left once more alone, the sound of a door closing in the distance announced the approach of Timothy.

That evening, when Aunt Hester had just got off to sleep in the back bedroom that used to be Aunt Juley's before Aunt Juley took Aunt Ann's, her door was opened, and Mrs. Small, in a pink night-cap, a candle in her hand, entered: "Hester!" she said. "Hester!"

Aunt Hester faintly rustled the sheet.

"Hester," repeated Aunt Juley, to make quite sure that she had awakened her, "I am quite troubled about poor dear Jolyon. What," Aunt Juley dwelt on the word, "do you think ought to be done?"

Aunt Hester again rustled the sheet, her voice was heard faintly pleading: "Done? How should I know?"

Aunt Juley turned away satisfied, and closing the door with extra gentleness so as not to disturb dear Hester, let it slip through her fingers and fall to with a 'crack.'

Back in her own room, she stood at the window gazing at the moon over the trees in the Park, through a chink in the muslin curtains, close drawn lest anyone should see. And there, with her face all round and pouting in its pink cap, and her eyes wet, she thought of 'dear Jolyon,' so old and so lonely, and how she could be of some use to him; and how he would come to love her, as she had never been loved since--since poor Septimus went away.

CHAPTER VIII

DANCE AT ROGER'S

Roger's house in Prince's Gardens was brilliantly alight. Large numbers of wax candles had been collected and placed in cut-glass chandeliers, and the parquet floor of the long, double drawing-room reflected these constellations. An appearance of real spaciousness had been secured by moving out all the furniture on to the upper landings, and enclosing the room with those strange appendages of civilization known as 'rout' seats. In a remote corner, embowered in palms, was a cottage piano, with a copy of the 'Kensington Coil' open on the music-stand.

Roger had objected to a band. He didn't see in the least what they wanted with a band; he wouldn't go to the expense, and there was an end of it. Francie (her mother, whom Roger had long since reduced to chronic dyspepsia, went to bed on such occasions), had been obliged to content herself with supplementing the piano by a young man who played the cornet, and she so arranged with palms that anyone who did not look into the heart of things might imagine there were several musicians secreted there. She made up her mind to tell them to play loud--there was a lot of music in a cornet, if the man would only put his soul into it.

In the more cultivated American tongue, she was 'through' at last--through that tortuous labyrinth of make-shifts, which must be traversed before fashionable display can be combined with the sound economy of a Forsyte. Thin but brilliant, in her maize-coloured frock with much tulle about the shoulders, she went from place to place, fitting on her gloves, and casting her eye over it all.

To the hired butler (for Roger only kept maids) she spoke about the wine. Did he quite understand that Mr. Forsyte wished a dozen bottles of the champagne from Whiteley's to be put out? But if that were finished (she did not suppose it would be, most of the ladies would drink water, no doubt), but if it were, there was the champagne cup, and he must do the best he could with that.

She hated having to say this sort of thing to a butler, it was so infra dig.; but what could you do with father? Roger, indeed, after making himself consistently disagreeable about the dance, would come down presently, with his fresh colour and bumpy forehead, as though he had been its promoter; and he would smile, and probably take the prettiest woman in to supper; and at two o'clock, just as they were getting into the swing, he would go up secretly to the musicians and tell them to play 'God Save the Queen,' and go away.

Francie devoutly hoped he might soon get tired, and slip off to bed.

The three or four devoted girl friends who were staying in the house for this dance had partaken with her, in a small, abandoned room upstairs, of tea and cold chicken-legs, hurriedly served; the men had been sent out to dine at Eustace's Club, it being felt that they must be fed up.

Punctually on the stroke of nine arrived Mrs. Small alone. She made elaborate apologies for the absence of Timothy, omitting all mention of Aunt Hester, who, at the last minute, had said she could not be bothered. Francie received her effusively, and placed her on a rout seat, where she left her, pouting and solitary in lavender-coloured satin--the first time she had worn colour since Aunt Ann's death.

The devoted maiden friends came now from their rooms, each by magic arrangement in a differently coloured frock, but all with the same liberal allowance of tulle on the shoulders and at the bosom--for they were, by some fatality, lean to a girl. They were all taken up to Mrs. Small. None stayed with her more than a few seconds, but clustering together talked and twisted their programmes, looking secretly at the door for the first appearance of a man.

Then arrived in a group a number of Nicholases, always punctual--the fashion up Ladbroke Grove way; and close behind them Eustace and his men, gloomy and smelling rather of smoke.

Three or four of Francie's lovers now appeared, one after the other; she had made each promise to come early. They were all clean-shaven and sprightly, with that peculiar kind of young-man sprightliness which had recently invaded Kensington; they did not seem to mind each other's presence in the least, and wore their ties bunching out at the ends, white waistcoats, and socks with clocks. All had handkerchiefs concealed in their cuffs. They moved buoyantly, each armoured in professional gaiety, as though he had come to do great deeds. Their faces when they danced, far from wearing the traditional solemn look of the dancing Englishman, were irresponsible, charming, suave; they bounded, twirling their partners at great pace, without pedantic attention to the rhythm of the music.

At other dancers they looked with a kind of airy scorn--they, the light brigade, the heroes of a hundred Kensington 'hops'--from whom alone could the right manner and smile and step be hoped.

After this the stream came fast; chaperones silting up along the wall facing the entrance, the volatile element swelling the eddy in the larger room.

Men were scarce, and wallflowers wore their peculiar, pathetic expression, a patient, sourish smile which seemed to say: "Oh, no! don't mistake me, I know you are not coming up to me. I can hardly expect that!" And Francie would plead with one of her lovers, or with some callow youth: "Now, to please me, do let me introduce you to Miss Pink; such a nice girl, really!" and she would bring him up, and say: "Miss Pink--Mr. Gathercole. Can you spare him a dance?" Then Miss Pink, smiling her forced smile, colouring a little, answered: "Oh! I think so!" and screening her empty card, wrote on it the name of Gathercole, spelling it passionately in the district that he proposed, about the second extra.

But when the youth had murmured that it was hot, and passed, she relapsed into her attitude of hopeless expectation, into her patient, sourish smile.

Mothers, slowly fanning their faces, watched their daughters, and in their eyes could be read all the story of those daughters' fortunes. As for themselves, to sit hour after hour, dead tired, silent, or talking spasmodically--what did it matter, so long as the girls were having a good time! But to see them neglected and passed by! Ah! they smiled, but their eyes stabbed like the eyes of an offended swan; they longed to pluck young Gathercole by the slack of his dandified breeches, and drag him to their daughters--the jackanapes!

And all the cruelties and hardness of life, its pathos and unequal chances, its conceit, self-forgetfulness, and patience, were presented on the battle-field of this Kensington ball-room.

Here and there, too, lovers--not lovers like Francie's, a peculiar breed, but simply lovers--trembling, blushing, silent, sought each other by flying glances, sought to meet and touch in the mazes of the dance, and now and again dancing together, struck some beholder by the light in their eyes.

Not a second before ten o'clock came the Jameses--Emily, Rachel, Winifred (Dartie had been left behind, having on a former occasion drunk too much of Roger's champagne), and Cicely, the youngest, making her debut; behind them, following in a hansom from the paternal mansion where they had dined, Soames and Irene.

All these ladies had shoulder-straps and no tulle--thus showing at once, by a bolder exposure of flesh, that they came from the more fashionable side of the Park.

Soames, sidling back from the contact of the dancers, took up a position against the wall. Guarding himself with his pale smile, he stood watching. Waltz after waltz began and ended, couple after couple brushed by with smiling lips, laughter, and snatches of talk; or with set lips, and eyes searching the throng; or again, with silent, parted lips, and eyes on each other. And the scent of festivity, the odour of flowers, and hair, of essences that women love, rose suffocatingly in the heat of the summer night.

Silent, with something of scorn in his smile, Soames seemed to notice nothing; but now and again his eyes, finding that which they sought, would fix themselves on a point in the shifting throng, and the smile die off his lips.

He danced with no one. Some fellows danced with their wives; his sense of 'form' had never permitted him to dance with Irene since their marriage, and the God of the Forsytes alone can tell whether this was a relief to him or not.

She passed, dancing with other men, her dress, iris-coloured, floating away from her feet. She danced well; he was tired of hearing women say with an acid smile: "How beautifully your wife dances, Mr. Forsyte--it's quite a pleasure to watch her!" Tired of answering them with his sidelong glance: "You think so?"

A young couple close by flirted a fan by turns, making an unpleasant draught. Francie and one of her lovers stood near. They were talking of love.

He heard Roger's voice behind, giving an order about supper to a servant. Everything was very second-class! He wished that he had not come! He had asked Irene whether she wanted him; she had answered with that maddening smile of hers "Oh, no!"

Why had he come? For the last quarter of an hour he had not even seen her. Here was George advancing with his Quilpish face; it was too late to get out of his way.

"Have you seen 'The Buccaneer'?" said this licensed wag; "he's on the warpath--hair cut and everything!"

Soames said he had not, and crossing the room, half-empty in an interval of the dance, he went out on the balcony, and looked down into the street.

A carriage had driven up with late arrivals, and round the door hung some of those patient watchers of the London streets who spring up to the call of light or music; their faces, pale and upturned above their black and rusty figures, had an air of stolid watching that annoyed Soames. Why were they allowed to hang about; why didn't the bobby move them on?

But the policeman took no notice of them; his feet were planted apart on the strip of crimson carpet stretched across the pavement; his face, under the helmet, wore the same stolid, watching look as theirs.

Across the road, through the railings, Soames could see the branches of trees shining, faintly stirring in the breeze, by the gleam of the street lamps; beyond, again, the upper lights of the houses on the other side, so many eyes looking down on the quiet blackness of the garden; and over all, the sky, that wonderful London sky, dusted with the innumerable reflection of countless lamps; a dome woven over between its stars with the refraction of human needs and human fancies--immense mirror of pomp and misery that night after night stretches its kindly mocking over miles of houses and gardens, mansions and squalor, over Forsytes, policemen, and patient watchers in the streets.

Soames turned away, and, hidden in the recess, gazed into the lighted room. It was cooler out there. He saw the new arrivals, June and her grandfather, enter. What had made them so late? They stood by the doorway. They looked fagged. Fancy Uncle Jolyon turning out at this time of night! Why hadn't June come to Irene, as she usually did, and it occurred to him suddenly that he had seen nothing of June for a long time now.

Watching her face with idle malice, he saw it change, grow so pale that he thought she would drop, then flame out crimson. Turning to see at what she was looking, he saw his wife on Bosinney's arm, coming from the conservatory at the end of the room. Her eyes were raised to his, as though answering some question he had asked, and he was gazing at her intently.

Soames looked again at June. Her hand rested on old Jolyon's arm; she seemed to be making a request. He saw a surprised look on his uncle's face; they turned and passed through the door out of his sight.

The music began again--a waltz--and, still as a statue in the recess of the window, his face unmoved, but no smile on his lips, Soames waited. Presently, within a yard of the dark balcony, his wife and Bosinney passed. He caught the perfume of the gardenias that she wore, saw the rise and fall of her bosom, the languor in her eyes, her parted lips, and a look on her face that he did not know. To the slow, swinging measure they danced by, and it seemed to him that they clung to each other; he saw her raise her eyes, soft and dark, to Bosinney's, and drop them again.

Very white, he turned back to the balcony, and leaning on it, gazed down on the Square; the figures were still there looking up at the light with dull persistency, the policeman's face, too, upturned, and staring, but he saw nothing of them. Below, a carriage drew up, two figures got in, and drove away....

That evening June and old Jolyon sat down to dinner at the usual hour. The girl was in her customary high-necked frock, old Jolyon had not dressed.

At breakfast she had spoken of the dance at Uncle Roger's, she wanted to go; she had been stupid enough, she said, not to think of asking anyone to take her. It was too late now.

Old Jolyon lifted his keen eyes. June was used to go to dances with Irene as a matter of course! and deliberately fixing his gaze on her, he asked: "Why don't you get Irene?"

No! June did not want to ask Irene; she would only go if--if her grandfather wouldn't mind just for once for a little time!

At her look, so eager and so worn, old Jolyon had grumblingly consented. He did not know what she wanted, he said, with going to a dance like this, a poor affair, he would wager; and she no more fit for it than a cat! What she wanted was sea air, and after his general meeting of the Globular Gold Concessions he was ready to take her. She didn't want to go away? Ah! she would knock

herself up! Stealing a mournful look at her, he went on with his breakfast.

June went out early, and wandered restlessly about in the heat. Her little light figure that lately had moved so languidly about its business, was all on fire. She bought herself some flowers. She wanted--she meant to look her best. He would be there! She knew well enough that he had a card. She would show him that she did not care. But deep down in her heart she resolved that evening to win him back. She came in flushed, and talked brightly all lunch; old Jolyon was there, and he was deceived.

In the afternoon she was overtaken by a desperate fit of sobbing. She strangled the noise against the pillows of her bed, but when at last it ceased she saw in the glass a swollen face with reddened eyes, and violet circles round them. She stayed in the darkened room till dinner time.

All through that silent meal the struggle went on within her.

She looked so shadowy and exhausted that old Jolyon told 'Sankey' to countermand the carriage, he would not have her going out.... She was to go to bed! She made no resistance. She went up to her room, and sat in the dark. At ten o'clock she rang for her maid.

"Bring some hot water, and go down and tell Mr. Forsyte that I feel perfectly rested. Say that if he's too tired I can go to the dance by myself."

The maid looked askance, and June turned on her imperiously. "Go," she said, "bring the hot water at once!"

Her ball-dress still lay on the sofa, and with a sort of fierce care she arrayed herself, took the flowers in her hand, and went down, her small face carried high under its burden of hair. She could hear old Jolyon in his room as she passed.

Bewildered and vexed, he was dressing. It was past ten, they would not get there till eleven; the girl was mad. But he dared not cross her--the expression of her face at dinner haunted him.

With great ebony brushes he smoothed his hair till it shone like silver under the light; then he, too, came out on the gloomy staircase.

June met him below, and, without a word, they went to the carriage.

When, after that drive which seemed to last for ever, she entered Roger's drawing-room, she disguised under a mask of resolution a very torment of nervousness and emotion. The feeling of shame at what might be called 'running after him' was smothered by the dread that he might not be there, that she might not see him after all, and by that dogged resolve--somehow, she did not know how--to win him back.

The sight of the ballroom, with its gleaming floor, gave her a feeling of joy, of triumph, for she loved dancing, and when dancing she floated, so light was she, like a strenuous, eager little spirit. He would surely ask her to dance, and if he danced with her it would all be as it was before. She looked about her eagerly.

The sight of Bosinney coming with Irene from the conservatory, with that strange look of utter absorption on his face, struck her too suddenly. They had not seen--no one should see--her distress, not even her grandfather.

She put her hand on Jolyon's arm, and said very low:

"I must go home, Gran; I feel ill."

He hurried her away, grumbling to himself that he had known how it would be.

To her he said nothing; only when they were once more in the carriage, which by some fortunate chance had lingered near the door, he asked her: "What is it, my darling?"

Feeling her whole slender body shaken by sobs, he was terribly alarmed. She must have Blank to-morrow. He would insist upon it. He could not have her like this.... There, there!

June mastered her sobs, and squeezing his hand feverishly, she lay back in her corner, her face muffled in a shawl.

He could only see her eyes, fixed and staring in the dark, but he did not cease to stroke her hand with his thin fingers.

CHAPTER IX

EVENING AT RICHMOND

Other eyes besides the eyes of June and of Soames had seen 'those two' (as Euphemia had already begun to call them) coming from the conservatory; other eyes had noticed the look on Bosinney's face.

There are moments when Nature reveals the passion hidden beneath the careless calm of her ordinary moods--violent spring flashing white on almond-blossom through the purple clouds; a snowy, moonlit peak, with its single star, soaring up to the passionate blue; or against the flames of sunset, an old yew-tree standing dark guardian of some fiery secret.

There are moments, too, when in a picture-gallery, a work, noted by the casual spectator as '.....Titian--remarkably fine,' breaks through the defences of some Forsyte better lunched perhaps than his fellows, and holds him spellbound in a kind of ecstasy. There are things, he feels--there are things here which--well, which are things. Something unreasoning, unreasonable, is upon him; when he tries to define it with the precision of a practical man, it eludes him, slips away, as the glow of the wine he has drunk is slipping away, leaving him cross, and conscious of his liver. He feels that he has been extravagant, prodigal of something; virtue has gone out of him. He did not desire this glimpse of what lay under the three stars of his catalogue. God forbid that he should know anything about the forces of Nature! God forbid that he should admit for a moment that there are such things! Once admit that, and where was he? One paid a shilling for entrance, and another for the programme.

The look which June had seen, which other Forsytes had seen, was like the sudden flashing of a candle through a hole in some imaginary canvas, behind which it was being moved--the sudden flaming-out of a vague, erratic glow, shadowy and enticing. It brought home to onlookers the consciousness that dangerous forces were at work. For a moment they noticed it with pleasure, with interest, then felt they must not notice it at all.

It supplied, however, the reason of June's coming so late and disappearing again without dancing, without even shaking hands with her lover. She was ill, it was said, and no wonder.

But here they looked at each other guiltily. They had no desire to spread scandal, no desire to be ill-natured. Who would have? And to outsiders no word was breathed, unwritten law keeping them silent.

Then came the news that June had gone to the seaside with old Jolyon.

He had carried her off to Broadstairs, for which place there was just then a feeling, Yarmouth having lost caste, in spite of Nicholas, and no Forsyte going to the sea without intending to have an air for his money such as would render him bilious in a week. That fatally aristocratic tendency of the first Forsyte to drink Madeira had left his descendants undoubtedly accessible.

So June went to the sea. The family awaited developments; there was nothing else to do.

But how far--how far had 'those two' gone? How far were they going to go? Could they really be going at all? Nothing could surely come of it, for neither of them had any money. At the most a flirtation, ending, as all such attachments should, at the proper time.

Soames' sister, Winifred Dartie, who had imbibed with the breezes of Mayfair--she lived in Green Street--more fashionable principles in regard to matrimonial behaviour than were current, for instance, in Ladbroke Grove, laughed at the idea of there being anything in it. The 'little thing'--Irene was taller than herself, and it was real testimony to the solid worth of a Forsyte that she should always thus be a 'little thing'--the little thing was bored. Why shouldn't she amuse herself? Soames was rather tiring; and as to Mr. Bosinney--only that buffoon George would have called him the Buccaneer--she maintained that he was very chic.

This dictum--that Bosinney was chic--caused quit a sensation. It failed to convince. That he was 'good-looking in a way' they were prepared to admit, but that anyone could call a man with his pronounced cheekbones, curious eyes, and soft felt hats chic was only another instance of Winifred's extravagant way of running after something new.

It was that famous summer when extravagance was fashionable, when the very earth was extravagant, chestnut-trees spread with blossom, and flowers drenched in perfume, as they had never been before; when roses blew in every garden; and for the swarming stars the nights had hardly space; when every day and all day long the sun, in full armour, swung his brazen shield above the Park, and people did strange things, lunching and dining in the open air. Unprecedented was the tale of cabs and carriages that streamed across the bridges of the shining river, bearing the upper-middle class in thousands to the green glories of Bushey, Richmond,

Kew, and Hampton Court. Almost every family with any pretensions to be of the carriage-class paid one visit that year to the horse-chestnuts at Bushey, or took one drive amongst the Spanish chestnuts of Richmond Park. Bowling smoothly, if dustily, along, in a cloud of their own creation, they would stare fashionably at the antlered heads which the great slow deer raised out of a forest of bracken that promised to autumn lovers such cover as was never seen before. And now and again, as the amorous perfume of chestnut flowers and of fern was drifted too near, one would say to the other: "My dear! What a peculiar scent!"

And the lime-flowers that year were of rare prime, near honey-coloured. At the corners of London squares they gave out, as the sun went down, a perfume sweeter than the honey bees had taken--a perfume that stirred a yearning unnamable in the hearts of Forsytes and their peers, taking the cool after dinner in the precincts of those gardens to which they alone had keys.

And that yearning made them linger amidst the dim shapes of flower-beds in the failing daylight, made them turn, and turn, and turn again, as though lovers were waiting for them--waiting for the last light to die away under the shadow of the branches.

Some vague sympathy evoked by the scent of the limes, some sisterly desire to see for herself, some idea of demonstrating the soundness of her dictum that there was 'nothing in it'; or merely the craving to drive down to Richmond, irresistible that summer, moved the mother of the little Darties (of little Publius, of Imogen, Maud, and Benedict) to write the following note to her sister-in-law:

'DEAR IRENE, 'June 30.

'I hear that Soames is going to Henley tomorrow for the night. I thought it would be great fun if we made up a little party and drove down to, Richmond. Will you ask Mr. Bosinney, and I will get young Flippard.

'Emily (they called their mother Emily--it was so chic) will lend us the carriage. I will call for you and your young man at seven o'clock.

'Your affectionate sister, 'WINIFRED DARTIE.

'Montague believes the dinner at the Crown and Sceptre to be quite eatable.'

Montague was Dartie's second and better known name--his first being Moses; for he was nothing if not a man of the world.

Her plan met with more opposition from Providence than so benevolent a scheme deserved. In the first place young Flippard wrote:

'DEAR Mrs. DARTIE,

'Awfully sorry. Engaged two deep.

'Yours, 'AUGUSTUS FLIPPARD.'

It was late to send into the by-ways and hedges to remedy this misfortune. With the promptitude and conduct of a mother, Winifred fell back on her husband. She had, indeed, the decided but tolerant temperament that goes with a good deal of profile, fair hair, and greenish eyes. She was seldom or never at a loss; or if at a loss, was always able to convert it into a gain.

Dartie, too, was in good feather. Erotic had failed to win the Lancashire Cup. Indeed, that celebrated animal, owned as he was by a pillar of the turf, who had secretly laid many thousands against him, had not even started. The forty-eight hours that followed his scratching were among the darkest in Dartie's life.

Visions of James haunted him day and night. Black thoughts about Soames mingled with the faintest hopes. On the Friday night he got drunk, so greatly was he affected. But on Saturday morning the true Stock Exchange instinct triumphed within him. Owing some hundreds, which by no possibility could he pay, he went into town and put them all on Concertina for the Saltown Borough Handicap.

As he said to Major Scrotton, with whom he lunched at the Iseeum: "That little Jew boy, Nathans, had given him the tip. He didn't care a cursh. He wash in--a mucker. If it didn't come up--well then, damme, the old man would have to pay!"

A bottle of Pol Roger to his own cheek had given him a new contempt for James.

It came up. Concertina was squeezed home by her neck--a terrible squeak! But, as Dartie said: There was nothing like pluck!

He was by no means averse to the expedition to Richmond. He would 'stand' it himself! He cherished an admiration for Irene, and wished to be on more playful terms with her.

At half-past five the Park Lane footman came round to say: Mrs. Forsyte was very sorry, but one of the horses was coughing!

Undaunted by this further blow, Winifred at once despatched little Publius (now aged seven) with the nursery governess to Montpellier Square.

They would go down in hansoms and meet at the Crown and Sceptre at 7.45.

Dartie, on being told, was pleased enough. It was better than going down with your back to the horses! He had no objection to driving down with Irene. He supposed they would pick up the others at Montpellier Square, and swop hansoms there?

Informed that the meet was at the Crown and Sceptre, and that he would have to drive with his wife, he turned sulky, and said it was d---d slow!

At seven o'clock they started, Dartie offering to bet the driver half-a-crown he didn't do it in the three-quarters of an hour.

Twice only did husband and wife exchange remarks on the way.

Dartie said: "It'll put Master Soames's nose out of joint to hear his wife's been drivin' in a hansom with Master Bosinney!"

Winifred replied: "Don't talk such nonsense, Monty!"

"Nonsense!" repeated Dartie. "You don't know women, my fine lady!"

On the other occasion he merely asked: "How am I looking? A bit puffy about the gills? That fizz old George is so fond of is a windy wine!"

He had been lunching with George Forsyte at the Haversnake.

Bosinney and Irene had arrived before them. They were standing in one of the long French windows overlooking the river.

Windows that summer were open all day long, and all night too, and day and night the scents of flowers and trees came in, the hot scent of parching grass, and the cool scent of the heavy dews.

To the eye of the observant Dartie his two guests did not appear to be making much running, standing there close together, without a word. Bosinney was a hungry-looking creature--not much go about him.

He left them to Winifred, however, and busied himself to order the dinner.

A Forsyte will require good, if not delicate feeding, but a Dartie will tax the resources of a Crown and Sceptre. Living as he does, from hand to mouth, nothing is too good for him to eat; and he will eat it. His drink, too, will need to be carefully provided; there is much drink in this country 'not good enough' for a Dartie; he will have the best. Paying for things vicariously, there is no reason why he should stint himself. To stint yourself is the mark of a fool, not of a Dartie.

The best of everything! No sounder principle on which a man can base his life, whose father-in-law has a very considerable income, and a partiality for his grandchildren.

With his not unable eye Dartie had spotted this weakness in James the very first year after little Publius's arrival (an error); he had profited by his perspicacity. Four little Darties were now a sort of perpetual insurance.

The feature of the feast was unquestionably the red mullet. This delectable fish, brought from a considerable distance in a state of almost perfect preservation, was first fried, then boned, then served in ice, with Madeira punch in place of sauce, according to a recipe known to a few men of the world.

Nothing else calls for remark except the payment of the bill by Dartie.

He had made himself extremely agreeable throughout the meal; his bold, admiring stare seldom abandoning Irene's face and figure. As he was obliged to confess to himself, he got no change out of her--she was cool enough, as cool as her shoulders looked under their veil of creamy lace. He expected to have caught her out in some little game with Bosinney; but not a bit of it, she kept up

her end remarkably well. As for that architect chap, he was as glum as a bear with a sore head--Winifred could barely get a word out of him; he ate nothing, but he certainly took his liquor, and his face kept getting whiter, and his eyes looked queer.

It was all very amusing.

For Dartie himself was in capital form, and talked freely, with a certain poignancy, being no fool. He told two or three stories verging on the improper, a concession to the company, for his stories were not used to verging. He proposed Irene's health in a mock speech. Nobody drank it, and Winifred said: "Don't be such a clown, Monty!"

At her suggestion they went after dinner to the public terrace overlooking the river.

"I should like to see the common people making love," she said, "it's such fun!"

There were numbers of them walking in the cool, after the day's heat, and the air was alive with the sound of voices, coarse and loud, or soft as though murmuring secrets.

It was not long before Winifred's better sense--she was the only Forsyte present--secured them an empty bench. They sat down in a row. A heavy tree spread a thick canopy above their heads, and the haze darkened slowly over the river.

Dartie sat at the end, next to him Irene, then Bosinney, then Winifred. There was hardly room for four, and the man of the world could feel Irene's arm crushed against his own; he knew that she could not withdraw it without seeming rude, and this amused him; he devised every now and again a movement that would bring her closer still. He thought: 'That Buccaneer Johnny shan't have it all to himself! It's a pretty tight fit, certainly!'

From far down below on the dark river came drifting the tinkle of a mandoline, and voices singing the old round:

'A boat, a boat, unto the ferry, For we'll go over and be merry; And laugh, and quaff, and drink brown sherry!'

And suddenly the moon appeared, young and tender, floating up on her back from behind a tree; and as though she had breathed, the air was cooler, but down that cooler air came always the warm odour of the limes.

Over his cigar Dartie peered round at Bosinney, who was sitting with his arms crossed, staring straight in front of him, and on his face the look of a man being tortured.

And Dartie shot a glance at the face between, so veiled by the overhanging shadow that it was but like a darker piece of the darkness shaped and breathed on; soft, mysterious, enticing.

A hush had fallen on the noisy terrace, as if all the strollers were thinking secrets too precious to be spoken.

And Dartie thought: 'Women!'

The glow died above the river, the singing ceased; the young moon hid behind a tree, and all was dark. He pressed himself against Irene.

He was not alarmed at the shuddering that ran through the limbs he touched, or at the troubled, scornful look of her eyes. He felt her trying to draw herself away, and smiled.

It must be confessed that the man of the world had drunk quite as much as was good for him.

With thick lips parted under his well-curled moustaches, and his bold eyes aslant upon her, he had the malicious look of a satyr.

Along the pathway of sky between the hedges of the tree tops the stars clustered forth; like mortals beneath, they seemed to shift and swarm and whisper. Then on the terrace the buzz broke out once more, and Dartie thought: 'Ah! he's a poor, hungry-looking devil, that Bosinney!' and again he pressed himself against Irene.

The movement deserved a better success. She rose, and they all followed her.

The man of the world was more than ever determined to see what she was made of. Along the terrace he kept close at her elbow. He had within him much good wine. There was the long drive home, the long drive and the warm dark and the pleasant closeness of the hansom cab--with its insulation from the world devised by some great and good man. That hungry architect chap might drive with his wife--he wished him joy of her! And, conscious that his voice was not too steady, he was careful not to speak; but a smile

had become fixed on his thick lips.

They strolled along toward the cabs awaiting them at the farther end. His plan had the merit of all great plans, an almost brutal simplicity he would merely keep at her elbow till she got in, and get in quickly after her.

But when Irene reached the cab she did not get in; she slipped, instead, to the horse's head. Dartie was not at the moment sufficiently master of his legs to follow. She stood stroking the horse's nose, and, to his annoyance, Bosinney was at her side first. She turned and spoke to him rapidly, in a low voice; the words 'That man' reached Dartie. He stood stubbornly by the cab step, waiting for her to come back. He knew a trick worth two of that!

Here, in the lamp-light, his figure (no more than medium height), well squared in its white evening waistcoat, his light overcoat flung over his arm, a pink flower in his button-hole, and on his dark face that look of confident, good-humoured insolence, he was at his best--a thorough man of the world.

Winifred was already in her cab. Dartie reflected that Bosinney would have a poorish time in that cab if he didn't look sharp! Suddenly he received a push which nearly overturned him in the road. Bosinney's voice hissed in his ear: "I am taking Irene back; do you understand?" He saw a face white with passion, and eyes that glared at him like a wild cat's.

"Eh?" he stammered. "What? Not a bit. You take my wife!"

"Get away!" hissed Bosinney--"or I'll throw you into the road!"

Dartie recoiled; he saw as plainly as possible that the fellow meant it. In the space he made Irene had slipped by, her dress brushed his legs. Bosinney stepped in after her.

"Go on!" he heard the Buccaneer cry. The cabman flicked his horse. It sprang forward.

Dartie stood for a moment dumbfounded; then, dashing at the cab where his wife sat, he scrambled in.

"Drive on!" he shouted to the driver, "and don't you lose sight of that fellow in front!"

Seated by his wife's side, he burst into imprecations. Calming himself at last with a supreme effort, he added: "A pretty mess you've made of it, to let the Buccaneer drive home with her; why on earth couldn't you keep hold of him? He's mad with love; any fool can see that!"

He drowned Winifred's rejoinder with fresh calls to the Almighty; nor was it until they reached Barnes that he ceased a Jeremiad, in the course of which he had abused her, her father, her brother, Irene, Bosinney, the name of Forsyte, his own children, and cursed the day when he had ever married.

Winifred, a woman of strong character, let him have his say, at the end of which he lapsed into sulky silence. His angry eyes never deserted the back of that cab, which, like a lost chance, haunted the darkness in front of him.

Fortunately he could not hear Bosinney's passionate pleading--that pleading which the man of the world's conduct had let loose like a flood; he could not see Irene shivering, as though some garment had been torn from her, nor her eyes, black and mournful, like the eyes of a beaten child. He could not hear Bosinney entreating, entreating, always entreating; could not hear her sudden, soft weeping, nor see that poor, hungry-looking devil, awed and trembling, humbly touching her hand.

In Montpellier Square their cabman, following his instructions to the letter, faithfully drew up behind the cab in front. The Darties saw Bosinney spring out, and Irene follow, and hasten up the steps with bent head. She evidently had her key in her hand, for she disappeared at once. It was impossible to tell whether she had turned to speak to Bosinney.

The latter came walking past their cab; both husband and wife had an admirable view of his face in the light of a street lamp. It was working with violent emotion.

"Good-night, Mr. Bosinney!" called Winifred.

Bosinney started, clawed off his hat, and hurried on. He had obviously forgotten their existence.

"There!" said Dartie, "did you see the beast's face? What did I say? Fine games!" He improved the occasion.

There had so clearly been a crisis in the cab that Winifred was unable to defend her theory.

She said: "I shall say nothing about it. I don't see any use in making a fuss!"

With that view Dartie at once concurred; looking upon James as a private preserve, he disapproved of his being disturbed by the troubles of others.

"Quite right," he said; "let Soames look after himself. He's jolly well able to!"

Thus speaking, the Darties entered their habitat in Green Street, the rent of which was paid by James, and sought a well-earned rest. The hour was midnight, and no Forsytes remained abroad in the streets to spy out Bosinney's wanderings; to see him return and stand against the rails of the Square garden, back from the glow of the street lamp; to see him stand there in the shadow of trees, watching the house where in the dark was hidden she whom he would have given the world to see for a single minute--she who was now to him the breath of the lime-trees, the meaning of the light and the darkness, the very beating of his own heart.

CHAPTER X

DIAGNOSIS OF A FORSYTE

It is in the nature of a Forsyte to be ignorant that he is a Forsyte; but young Jolyon was well aware of being one. He had not known it till after the decisive step which had made him an outcast; since then the knowledge had been with him continually. He felt it throughout his alliance, throughout all his dealings with his second wife, who was emphatically not a Forsyte.

He knew that if he had not possessed in great measure the eye for what he wanted, the tenacity to hold on to it, the sense of the folly of wasting that for which he had given so big a price--in other words, the 'sense of property' he could never have retained her (perhaps never would have desired to retain her) with him through all the financial troubles, slights, and misconstructions of those fifteen years; never have induced her to marry him on the death of his first wife; never have lived it all through, and come up, as it were, thin, but smiling.

He was one of those men who, seated cross-legged like miniature Chinese idols in the cages of their own hearts, are ever smiling at themselves a doubting smile. Not that this smile, so intimate and eternal, interfered with his actions, which, like his chin and his temperament, were quite a peculiar blend of softness and determination.

He was conscious, too, of being a Forsyte in his work, that painting of water-colours to which he devoted so much energy, always with an eye on himself, as though he could not take so unpractical a pursuit quite seriously, and always with a certain queer uneasiness that he did not make more money at it.

It was, then, this consciousness of what it meant to be a Forsyte, that made him receive the following letter from old Jolyon, with a mixture of sympathy and disgust:

'SHELDRAKE HOUSE, 'BROADSTAIRS,

'July 1. 'MY DEAR JO,'

(The Dad's handwriting had altered very little in the thirty odd years that he remembered it.)

'We have been here now a fortnight, and have had good weather on the whole. The air is bracing, but my liver is out of order, and I shall be glad enough to get back to town. I cannot say much for June, her health and spirits are very indifferent, and I don't see what is to come of it. She says nothing, but it is clear that she is harping on this engagement, which is an engagement and no engagement, and--goodness knows what. I have grave doubts whether she ought to be allowed to return to London in the present state of affairs, but she is so self-willed that she might take it into her head to come up at any moment. The fact is someone ought to speak to Bosinney and ascertain what he means. I'm afraid of this myself, for I should certainly rap him over the knuckles, but I thought that you, knowing him at the Club, might put in a word, and get to ascertain what the fellow is about. You will of course in no way commit June. I shall be glad to hear from you in the course of a few days whether you have succeeded in gaining any information. The situation is very distressing to me, I worry about it at night.

With my love to Jolly and Holly. 'I am, 'Your affect. father, 'JOLYON FORSYTE.'

Young Jolyon pondered this letter so long and seriously that his wife noticed his preoccupation, and asked him what was the matter. He replied: "Nothing."

It was a fixed principle with him never to allude to June. She might take alarm, he did not know what she might think; he hastened, therefore, to banish from his manner all traces of absorption, but in this he was about as successful as his father would have been, for he had inherited all old Jolyon's transparency in matters of domestic finesse; and young Mrs. Jolyon, busying herself over the affairs of the house, went about with tightened lips, stealing at him unfathomable looks.

He started for the Club in the afternoon with the letter in his pocket, and without having made up his mind.

To sound a man as to 'his intentions' was peculiarly unpleasant to him; nor did his own anomalous position diminish this unpleasantness. It was so like his family, so like all the people they knew and mixed with, to enforce what they called their rights over a man, to bring him up to the mark; so like them to carry their business principles into their private relations.

And how that phrase in the letter--'You will, of course, in no way commit June'--gave the whole thing away.

Yet the letter, with the personal grievance, the concern for June, the 'rap over the knuckles,' was all so natural. No wonder his father wanted to know what Bosinney meant, no wonder he was angry.

It was difficult to refuse! But why give the thing to him to do? That was surely quite unbecoming; but so long as a Forsyte got what he was after, he was not too particular about the means, provided appearances were saved.

How should he set about it, or how refuse? Both seemed impossible. So, young Jolyon!

He arrived at the Club at three o'clock, and the first person he saw was Bosinney himself, seated in a corner, staring out of the window.

Young Jolyon sat down not far off, and began nervously to reconsider his position. He looked covertly at Bosinney sitting there unconscious. He did not know him very well, and studied him attentively for perhaps the first time; an unusual looking man, unlike in dress, face, and manner to most of the other members of the Club--young Jolyon himself, however different he had become in mood and temper, had always retained the neat reticence of Forsyte appearance. He alone among Forsytes was ignorant of Bosinney's nickname. The man was unusual, not eccentric, but unusual; he looked worn, too, haggard, hollow in the cheeks beneath those broad, high cheekbones, though without any appearance of ill-health, for he was strongly built, with curly hair that seemed to show all the vitality of a fine constitution.

Something in his face and attitude touched young Jolyon. He knew what suffering was like, and this man looked as if he were suffering.

He got up and touched his arm.

Bosinney started, but exhibited no sign of embarrassment on seeing who it was.

Young Jolyon sat down.

"I haven't seen you for a long time," he said. "How are you getting on with my cousin's house?"

"It'll be finished in about a week."

"I congratulate you!"

"Thanks--I don't know that it's much of a subject for congratulation."

"No?" queried young Jolyon; "I should have thought you'd be glad to get a long job like that off your hands; but I suppose you feel it much as I do when I part with a picture--a sort of child?"

He looked kindly at Bosinney.

"Yes," said the latter more cordially, "it goes out from you and there's an end of it. I didn't know you painted."

"Only water-colours; I can't say I believe in my work."

"Don't believe in it? There--how can you do it? Work's no use unless you believe in it!"

"Good," said young Jolyon; "it's exactly what I've always said. By-the-bye, have you noticed that whenever one says 'Good,' one always adds 'it's exactly what I've always said'! But if you ask me how I do it, I answer, because I'm a Forsyte."

"A Forsyte! I never thought of you as one!"

"A Forsyte," replied young Jolyon, "is not an uncommon animal. There are hundreds among the members of this Club. Hundreds out there in the streets; you meet them wherever you go!"

"And how do you tell them, may I ask?" said Bosinney.

"By their sense of property. A Forsyte takes a practical--one might say a commonsense--view of things, and a practical view of things is based fundamentally on a sense of property. A Forsyte, you will notice, never gives himself away."

"Joking?"

Young Jolyon's eye twinkled.

"Not much. As a Forsyte myself, I have no business to talk. But I'm a kind of thoroughbred mongrel; now, there's no mistaking you: You're as different from me as I am from my Uncle James, who is the perfect specimen of a Forsyte. His sense of property is extreme, while you have practically none. Without me in between, you would seem like a different species. I'm the missing link. We are, of course, all of us the slaves of property, and I admit that it's a question of degree, but what I call a 'Forsyte' is a man who is decidedly more than less a slave of property. He knows a good thing, he knows a safe thing, and his grip on property--it doesn't matter whether it be wives, houses, money, or reputation--is his hall-mark."

"Ah!" murmured Bosinney. "You should patent the word."

"I should like," said young Jolyon, "to lecture on it:

"Properties and quality of a Forsyte: This little animal, disturbed by the ridicule of his own sort, is unaffected in his motions by the laughter of strange creatures (you or I). Hereditarily disposed to myopia, he recognises only the persons of his own species, amongst which he passes an existence of competitive tranquillity."

"You talk of them," said Bosinney, "as if they were half England."

"They are," repeated young Jolyon, "half England, and the better half, too, the safe half, the three per cent. half, the half that counts. It's their wealth and security that makes everything possible; makes your art possible, makes literature, science, even religion, possible. Without Forsytes, who believe in none of these things, and habitats but turn them all to use, where should we be? My dear sir, the Forsytes are the middlemen, the commercials, the pillars of society, the cornerstones of convention; everything that is admirable!"

"I don't know whether I catch your drift," said Bosinney, "but I fancy there are plenty of Forsytes, as you call them, in my profession."

"Certainly," replied young Jolyon. "The great majority of architects, painters, or writers have no principles, like any other Forsytes. Art, literature, religion, survive by virtue of the few cranks who really believe in such things, and the many Forsytes who make a commercial use of them. At a low estimate, three-fourths of our Royal Academicians are Forsytes, seven-eighths of our novelists, a large proportion of the press. Of science I can't speak; they are magnificently represented in religion; in the House of Commons perhaps more numerous than anywhere; the aristocracy speaks for itself. But I'm not laughing. It is dangerous to go against the majority and what a majority!" He fixed his eyes on Bosinney: "It's dangerous to let anything carry you away--a house, a picture, a--woman!"

They looked at each other.--And, as though he had done that which no Forsyte did--given himself away, young Jolyon drew into his shell. Bosinney broke the silence.

"Why do you take your own people as the type?" said he.

"My people," replied young Jolyon, "are not very extreme, and they have their own private peculiarities, like every other family, but they possess in a remarkable degree those two qualities which are the real tests of a Forsyte--the power of never being able to give

yourself up to anything soul and body, and the 'sense of property'."

Bosinney smiled: "How about the big one, for instance?"

"Do you mean Swithin?" asked young Jolyon. "Ah! in Swithin there's something primeval still. The town and middle-class life haven't digested him yet. All the old centuries of farm work and brute force have settled in him, and there they've stuck, for all he's so distinguished."

Bosinney seemed to ponder. "Well, you've hit your cousin Soames off to the life," he said suddenly. "He'll never blow his brains out."

Young Jolyon shot at him a penetrating glance.

"No," he said; "he won't. That's why he's to be reckoned with. Look out for their grip! It's easy to laugh, but don't mistake me. It doesn't do to despise a Forsyte; it doesn't do to disregard them!"

"Yet you've done it yourself!"

Young Jolyon acknowledged the hit by losing his smile.

"You forget," he said with a queer pride, "I can hold on, too--I'm a Forsyte myself. We're all in the path of great forces. The man who leaves the shelter of the wall--well--you know what I mean. I don't," he ended very low, as though uttering a threat, "recommend every man to-go-my-way. It depends."

The colour rushed into Bosinney's face, but soon receded, leaving it sallow-brown as before. He gave a short laugh, that left his lips fixed in a queer, fierce smile; his eyes mocked young Jolyon.

"Thanks," he said. "It's deuced kind of you. But you're not the only chaps that can hold on." He rose.

Young Jolyon looked after him as he walked away, and, resting his head on his hand, sighed.

In the drowsy, almost empty room the only sounds were the rustle of newspapers, the scraping of matches being struck. He stayed a long time without moving, living over again those days when he, too, had sat long hours watching the clock, waiting for the minutes to pass--long hours full of the torments of uncertainty, and of a fierce, sweet aching; and the slow, delicious agony of that season came back to him with its old poignancy. The sight of Bosinney, with his haggard face, and his restless eyes always wandering to the clock, had roused in him a pity, with which was mingled strange, irresistible envy.

He knew the signs so well. Whither was he going--to what sort of fate? What kind of woman was it who was drawing him to her by that magnetic force which no consideration of honour, no principle, no interest could withstand; from which the only escape was flight.

Flight! But why should Bosinney fly? A man fled when he was in danger of destroying hearth and home, when there were children, when he felt himself trampling down ideals, breaking something. But here, so he had heard, it was all broken to his hand.

He himself had not fled, nor would he fly if it were all to come over again. Yet he had gone further than Bosinney, had broken up his own unhappy home, not someone else's: And the old saying came back to him: 'A man's fate lies in his own heart.'

In his own heart! The proof of the pudding was in the eating--Bosinney had still to eat his pudding.

His thoughts passed to the woman, the woman whom he did not know, but the outline of whose story he had heard.

An unhappy marriage! No ill-treatment--only that indefinable malaise, that terrible blight which killed all sweetness under Heaven; and so from day to day, from night to night, from week to week, from year to year, till death should end it.

But young Jolyon, the bitterness of whose own feelings time had assuaged, saw Soames' side of the question too. Whence should a man like his cousin, saturated with all the prejudices and beliefs of his class, draw the insight or inspiration necessary to break up this life? It was a question of imagination, of projecting himself into the future beyond the unpleasant gossip, sneers, and tattle that followed on such separations, beyond the passing pangs that the lack of the sight of her would cause, beyond the grave disapproval of the worthy. But few men, and especially few men of Soames' class, had imagination enough for that. A deal of mortals in this world, and not enough imagination to go round! And sweet Heaven, what a difference between theory and practice;

many a man, perhaps even Soames, held chivalrous views on such matters, who when the shoe pinched found a distinguishing factor that made of himself an exception.

Then, too, he distrusted his judgment. He had been through the experience himself, had tasted too the dregs the bitterness of an unhappy marriage, and how could he take the wide and dispassionate view of those who had never been within sound of the battle? His evidence was too first-hand--like the evidence on military matters of a soldier who has been through much active service, against that of civilians who have not suffered the disadvantage of seeing things too close. Most people would consider such a marriage as that of Soames and Irene quite fairly successful; he had money, she had beauty; it was a case for compromise. There was no reason why they should not jog along, even if they hated each other. It would not matter if they went their own ways a little so long as the decencies were observed--the sanctity of the marriage tie, of the common home, respected. Half the marriages of the upper classes were conducted on these lines: Do not offend the susceptibilities of Society; do not offend the susceptibilities of the Church. To avoid offending these is worth the sacrifice of any private feelings. The advantages of the stable home are visible, tangible, so many pieces of property; there is no risk in the statu quo. To break up a home is at the best a dangerous experiment, and selfish into the bargain.

This was the case for the defence, and young Jolyon sighed.

'The core of it all,' he thought, 'is property, but there are many people who would not like it put that way. To them it is "the sanctity of the marriage tie"; but the sanctity of the marriage tie is dependent on the sanctity of the family, and the sanctity of the family is dependent on the sanctity of property. And yet I imagine all these people are followers of One who never owned anything. It is curious!

And again young Jolyon sighed.

'Am I going on my way home to ask any poor devils I meet to share my dinner, which will then be too little for myself, or, at all events, for my wife, who is necessary to my health and happiness? It may be that after all Soames does well to exercise his rights and support by his practice the sacred principle of property which benefits us all, with the exception of those who suffer by the process.'

And so he left his chair, threaded his way through the maze of seats, took his hat, and languidly up the hot streets crowded with carriages, reeking with dusty odours, wended his way home.

Before reaching Wistaria Avenue he removed old Jolyon's letter from his pocket, and tearing it carefully into tiny pieces, scattered them in the dust of the road.

He let himself in with his key, and called his wife's name. But she had gone out, taking Jolly and Holly, and the house was empty; alone in the garden the dog Balthasar lay in the shade snapping at flies.

Young Jolyon took his seat there, too, under the pear-tree that bore no fruit.

CHAPTER XI

BOSINNEY ON PAROLE

The day after the evening at Richmond Soames returned from Henley by a morning train. Not constitutionally interested in amphibious sports, his visit had been one of business rather than pleasure, a client of some importance having asked him down.

He went straight to the City, but finding things slack, he left at three o'clock, glad of this chance to get home quietly. Irene did not expect him. Not that he had any desire to spy on her actions, but there was no harm in thus unexpectedly surveying the scene.

After changing to Park clothes he went into the drawing-room. She was sitting idly in the corner of the sofa, her favourite seat; and there were circles under her eyes, as though she had not slept.

He asked: "How is it you're in? Are you expecting somebody?"

"Yes that is, not particularly."

"Who?"

"Mr. Bosinney said he might come."

"Bosinney. He ought to be at work."

To this she made no answer.

"Well," said Soames, "I want you to come out to the Stores with me, and after that we'll go to the Park."

"I don't want to go out; I have a headache."

Soames replied: "If ever I want you to do anything, you've always got a headache. It'll do you good to come and sit under the trees."

She did not answer.

Soames was silent for some minutes; at last he said: "I don't know what your idea of a wife's duty is. I never have known!"

He had not expected her to reply, but she did.

"I have tried to do what you want; it's not my fault that I haven't been able to put my heart into it."

"Whose fault is it, then?" He watched her askance.

"Before we were married you promised to let me go if our marriage was not a success. Is it a success?"

Soames frowned.

"Success," he stammered--"it would be a success if you behaved yourself properly!"

"I have tried," said Irene. "Will you let me go?"

Soames turned away. Secretly alarmed, he took refuge in bluster.

"Let you go? You don't know what you're talking about. Let you go? How can I let you go? We're married, aren't we? Then, what are you talking about? For God's sake, don't let's have any of this sort of nonsense! Get your hat on, and come and sit in the Park."

"Then, you won't let me go?"

He felt her eyes resting on him with a strange, touching look.

"Let you go!" he said; "and what on earth would you do with yourself if I did? You've got no money!"

"I could manage somehow."

He took a swift turn up and down the room; then came and stood before her.

"Understand," he said, "once and for all, I won't have you say this sort of thing. Go and get your hat on!"

She did not move.

"I suppose," said Soames, "you don't want to miss Bosinney if he comes!"

Irene got up slowly and left the room. She came down with her hat on.

They went out.

In the Park, the motley hour of mid-afternoon, when foreigners and other pathetic folk drive, thinking themselves to be in fashion, had passed; the right, the proper, hour had come, was nearly gone, before Soames and Irene seated themselves under the Achilles statue.

It was some time since he had enjoyed her company in the Park. That was one of the past delights of the first two seasons of his married life, when to feel himself the possessor of this gracious creature before all London had been his greatest, though secret, pride. How many afternoons had he not sat beside her, extremely neat, with light grey gloves and faint, supercilious smile, nodding to acquaintances, and now and again removing his hat.

His light grey gloves were still on his hands, and on his lips his smile sardonic, but where the feeling in his heart?

The seats were emptying fast, but still he kept her there, silent and pale, as though to work out a secret punishment. Once or twice he made some comment, and she bent her head, or answered "Yes" with a tired smile.

Along the rails a man was walking so fast that people stared after him when he passed.

"Look at that ass!" said Soames; "he must be mad to walk like that in this heat!"

He turned; Irene had made a rapid movement.

"Hallo!" he said: "it's our friend the Buccaneer!"

And he sat still, with his sneering smile, conscious that Irene was sitting still, and smiling too.

"Will she bow to him?" he thought.

But she made no sign.

Bosinney reached the end of the rails, and came walking back amongst the chairs, quartering his ground like a pointer. When he saw them he stopped dead, and raised his hat.

The smile never left Soames' face; he also took off his hat.

Bosinney came up, looking exhausted, like a man after hard physical exercise; the sweat stood in drops on his brow, and Soames' smile seemed to say: "You've had a trying time, my friend .....What are you doing in the Park?" he asked. "We thought you despised such frivolity!"

Bosinney did not seem to hear; he made his answer to Irene: "I've been round to your place; I hoped I should find you in."

Somebody tapped Soames on the back, and spoke to him; and in the exchange of those platitudes over his shoulder, he missed her answer, and took a resolution.

"We're just going in," he said to Bosinney; "you'd better come back to dinner with us." Into that invitation he put a strange bravado, a stranger pathos: "You, can't deceive me," his look and voice seemed saying, "but see--I trust you--I'm not afraid of you!"

They started back to Montpellier Square together, Irene between them. In the crowded streets Soames went on in front. He did not listen to their conversation; the strange resolution of trustfulness he had taken seemed to animate even his secret conduct. Like a gambler, he said to himself: 'It's a card I dare not throw away--I must play it for what it's worth. I have not too many chances.'

He dressed slowly, heard her leave her room and go downstairs, and, for full five minutes after, dawdled about in his dressing-room. Then he went down, purposely shutting the door loudly to show that he was coming. He found them standing by the hearth, perhaps talking, perhaps not; he could not say.

He played his part out in the farce, the long evening through--his manner to his guest more friendly than it had ever been before; and when at last Bosinney went, he said: "You must come again soon; Irene likes to have you to talk about the house!" Again his voice had the strange bravado and the stranger pathos; but his hand was cold as ice.

Loyal to his resolution, he turned away from their parting, turned away from his wife as she stood under the hanging lamp to say good-night--away from the sight of her golden head shining so under the light, of her smiling mournful lips; away from the sight of Bosinney's eyes looking at her, so like a dog's looking at its master.

And he went to bed with the certainty that Bosinney was in love with his wife.

The summer night was hot, so hot and still that through every opened window came in but hotter air. For long hours he lay listening to her breathing.

She could sleep, but he must lie awake. And, lying awake, he hardened himself to play the part of the serene and trusting husband.

In the small hours he slipped out of bed, and passing into his dressing-room, leaned by the open window.

He could hardly breathe.

A night four years ago came back to him--the night but one before his marriage; as hot and stifling as this.

He remembered how he had lain in a long cane chair in the window of his sitting-room off Victoria Street. Down below in a side street a man had banged at a door, a woman had cried out; he remembered, as though it were now, the sound of the scuffle, the slam of the door, the dead silence that followed. And then the early water-cart, cleansing the reek of the streets, had approached through the strange-seeming, useless lamp-light; he seemed to hear again its rumble, nearer and nearer, till it passed and slowly died away.

He leaned far out of the dressing-room window over the little court below, and saw the first light spread. The outlines of dark walls and roofs were blurred for a moment, then came out sharper than before.

He remembered how that other night he had watched the lamps paling all the length of Victoria Street; how he had hurried on his clothes and gone down into the street, down past houses and squares, to the street where she was staying, and there had stood and looked at the front of the little house, as still and grey as the face of a dead man.

And suddenly it shot through his mind; like a sick man's fancy: What's he doing?--that fellow who haunts me, who was here this evening, who's in love with my wife--prowling out there, perhaps, looking for her as I know he was looking for her this afternoon; watching my house now, for all I can tell!

He stole across the landing to the front of the house, stealthily drew aside a blind, and raised a window.

The grey light clung about the trees of the square, as though Night, like a great downy moth, had brushed them with her wings. The lamps were still alight, all pale, but not a soul stirred--no living thing in sight.

Yet suddenly, very faint, far off in the deathly stillness, he heard a cry writhing, like the voice of some wandering soul barred out of heaven, and crying for its happiness. There it was again--again! Soames shut the window, shuddering.

Then he thought: 'Ah! it's only the peacocks, across the water.'

CHAPTER XII

JUNE PAYS SOME CALLS

Jolyon stood in the narrow hall at Broadstairs, inhaling that odour of oilcloth and herrings which permeates all respectable seaside lodging-houses. On a chair--a shiny leather chair, displaying its horsehair through a hole in the top left-hand corner--stood a black despatch case. This he was filling with papers, with the Times, and a bottle of Eau-de Cologne. He had meetings that day of the 'Globular Gold Concessions' and the 'New Colliery Company, Limited,' to which he was going up, for he never missed a Board; to 'miss a Board' would be one more piece of evidence that he was growing old, and this his jealous Forsyte spirit could not bear.

His eyes, as he filled that black despatch case, looked as if at any moment they might blaze up with anger. So gleams the eye of a schoolboy, baited by a ring of his companions; but he controls himself, deterred by the fearful odds against him. And old Jolyon controlled himself, keeping down, with his masterful restraint now slowly wearing out, the irritation fostered in him by the conditions of his life.

He had received from his son an unpractical letter, in which by rambling generalities the boy seemed trying to get out of answering a plain question. 'I've seen Bosinney,' he said; 'he is not a criminal. The more I see of people the more I am convinced that they are never good or bad--merely comic, or pathetic. You probably don't agree with me!'

Old Jolyon did not; he considered it cynical to so express oneself; he had not yet reached that point of old age when even Forsytes, bereft of those illusions and principles which they have cherished carefully for practical purposes but never believed in, bereft of all corporeal enjoyment, stricken to the very heart by having nothing left to hope for--break through the barriers of reserve and say things they would never have believed themselves capable of saying.

Perhaps he did not believe in 'goodness' and 'badness' any more than his son; but as he would have said: He didn't know--couldn't tell; there might be something in it; and why, by an unnecessary expression of disbelief, deprive yourself of possible advantage?

Accustomed to spend his holidays among the mountains, though (like a true Forsyte) he had never attempted anything too adventurous or too foolhardy, he had been passionately fond of them. And when the wonderful view (mentioned in Baedeker--'fatiguing but repaying')--was disclosed to him after the effort of the climb, he had doubtless felt the existence of some

great, dignified principle crowning the chaotic strivings, the petty precipices, and ironic little dark chasms of life. This was as near to religion, perhaps, as his practical spirit had ever gone.

But it was many years since he had been to the mountains. He had taken June there two seasons running, after his wife died, and had realized bitterly that his walking days were over.

To that old mountain--given confidence in a supreme order of things he had long been a stranger.

He knew himself to be old, yet he felt young; and this troubled him. It troubled and puzzled him, too, to think that he, who had always been so careful, should be father and grandfather to such as seemed born to disaster. He had nothing to say against Jo--who could say anything against the boy, an amiable chap?--but his position was deplorable, and this business of June's nearly as bad. It seemed like a fatality, and a fatality was one of those things no man of his character could either understand or put up with.

In writing to his son he did not really hope that anything would come of it. Since the ball at Roger's he had seen too clearly how the land lay--he could put two and two together quicker than most men--and, with the example of his own son before his eyes, knew better than any Forsyte of them all that the pale flame singes men's wings whether they will or no.

In the days before June's engagement, when she and Mrs. Soames were always together, he had seen enough of Irene to feel the spell she cast over men. She was not a flirt, not even a coquette--words dear to the heart of his generation, which loved to define things by a good, broad, inadequate word--but she was dangerous. He could not say why. Tell him of a quality innate in some women--a seductive power beyond their own control! He would but answer: 'Humbug!' She was dangerous, and there was an end of it. He wanted to close his eyes to that affair. If it was, it was; he did not want to hear any more about it--he only wanted to save June's position and her peace of mind. He still hoped she might once more become a comfort to himself.

And so he had written. He got little enough out of the answer. As to what young Jolyon had made of the interview, there was practically only the queer sentence: 'I gather that he's in the stream.' The stream! What stream? What was this new-fangled way of talking?

He sighed, and folded the last of the papers under the flap of the bag; he knew well enough what was meant.

June came out of the dining-room, and helped him on with his summer coat. From her costume, and the expression of her little resolute face, he saw at once what was coming.

"I'm going with you," she said.

"Nonsense, my dear; I go straight into the City. I can't have you racketting about!"

"I must see old Mrs. Smeech."

"Oh, your precious 'lame ducks!" grumbled out old Jolyon. He did not believe her excuse, but ceased his opposition. There was no doing anything with that pertinacity of hers.

At Victoria he put her into the carriage which had been ordered for himself--a characteristic action, for he had no petty selfishnesses.

"Now, don't you go tiring yourself, my darling," he said, and took a cab on into the city.

June went first to a back-street in Paddington, where Mrs. Smeech, her 'lame duck,' lived--an aged person, connected with the charring interest; but after half an hour spent in hearing her habitually lamentable recital, and dragooning her into temporary comfort, she went on to Stanhope Gate. The great house was closed and dark.

She had decided to learn something at all costs. It was better to face the worst, and have it over. And this was her plan: To go first to Phil's aunt, Mrs. Baynes, and, failing information there, to Irene herself. She had no clear notion of what she would gain by these visits.

At three o'clock she was in Lowndes Square. With a woman's instinct when trouble is to be faced, she had put on her best frock, and went to the battle with a glance as courageous as old Jolyon's itself. Her tremors had passed into eagerness.

Mrs. Baynes, Bosinney's aunt (Louisa was her name), was in her kitchen when June was announced, organizing the cook, for she was an excellent housewife, and, as Baynes always said, there was 'a lot in a good dinner.' He did his best work after dinner. It was Baynes who built that remarkably fine row of tall crimson houses in Kensington which compete with so many others for the title of 'the ugliest in London.'

On hearing June's name, she went hurriedly to her bedroom, and, taking two large bracelets from a red morocco case in a locked drawer, put them on her white wrists--for she possessed in a remarkable degree that 'sense of property,' which, as we know, is the touchstone of Forsyteism, and the foundation of good morality.

Her figure, of medium height and broad build, with a tendency to embonpoint, was reflected by the mirror of her whitewood wardrobe, in a gown made under her own organization, of one of those half-tints, reminiscent of the distempered walls of corridors in large hotels. She raised her hands to her hair, which she wore a la Princesse de Galles, and touched it here and there, settling it more firmly on her head, and her eyes were full of an unconscious realism, as though she were looking in the face one of life's sordid facts, and making the best of it. In youth her cheeks had been of cream and roses, but they were mottled now by middle-age, and again that hard, ugly directness came into her eyes as she dabbed a powder-puff across her forehead. Putting the puff down, she stood quite still before the glass, arranging a smile over her high, important nose, her, chin, (never large, and now growing smaller with the increase of her neck), her thin-lipped, down-drooping mouth. Quickly, not to lose the effect, she grasped her skirts strongly in both hands, and went downstairs.

She had been hoping for this visit for some time past. Whispers had reached her that things were not all right between her nephew and his fiancee. Neither of them had been near her for weeks. She had asked Phil to dinner many times; his invariable answer had been 'Too busy.'

Her instinct was alarmed, and the instinct in such matters of this excellent woman was keen. She ought to have been a Forsyte; in young Jolyon's sense of the word, she certainly had that privilege, and merits description as such.

She had married off her three daughters in a way that people said was beyond their deserts, for they had the professional plainness only to be found, as a rule, among the female kind of the more legal callings. Her name was upon the committees of numberless charities connected with the Church-dances, theatricals, or bazaars--and she never lent her name unless sure beforehand that everything had been thoroughly organized.

She believed, as she often said, in putting things on a commercial basis; the proper function of the Church, of charity, indeed, of everything, was to strengthen the fabric of 'Society.' Individual action, therefore, she considered immoral. Organization was the only thing, for by organization alone could you feel sure that you were getting a return for your money. Organization--and again, organization! And there is no doubt that she was what old Jolyon called her--"a 'dab' at that"--he went further, he called her "a humbug."

The enterprises to which she lent her name were organized so admirably that by the time the takings were handed over, they were indeed skim milk divested of all cream of human kindness. But as she often justly remarked, sentiment was to be deprecated. She was, in fact, a little academic.

This great and good woman, so highly thought of in ecclesiastical circles, was one of the principal priestesses in the temple of Forsyteism, keeping alive day and night a sacred flame to the God of Property, whose altar is inscribed with those inspiring words: 'Nothing for nothing, and really remarkably little for sixpence.'

When she entered a room it was felt that something substantial had come in, which was probably the reason of her popularity as a patroness. People liked something substantial when they had paid money for it; and they would look at her--surrounded by her staff in charity ballrooms, with her high nose and her broad, square figure, attired in an uniform covered with sequins--as though she were a general.

The only thing against her was that she had not a double name. She was a power in upper middle-class society, with its hundred sets and circles, all intersecting on the common battlefield of charity functions, and on that battlefield brushing skirts so pleasantly with the skirts of Society with the capital 'S.' She was a power in society with the smaller 's,' that larger, more significant, and more powerful body, where the commercially Christian institutions, maxims, and 'principle,' which Mrs. Baynes embodied, were real life-blood, circulating freely, real business currency, not merely the sterilized imitation that flowed in the veins of smaller Society with the larger 'S.' People who knew her felt her to be sound--a sound woman, who never gave herself away, nor anything else, if

she could possibly help it.

She had been on the worst sort of terms with Bosinney's father, who had not infrequently made her the object of an unpardonable ridicule. She alluded to him now that he was gone as her 'poor, dear, irreverend brother.'

She greeted June with the careful effusion of which she was a mistress, a little afraid of her as far as a woman of her eminence in the commercial and Christian world could be afraid--for so slight a girl June had a great dignity, the fearlessness of her eyes gave her that. And Mrs. Baynes, too, shrewdly recognized that behind the uncompromising frankness of June's manner there was much of the Forsyte. If the girl had been merely frank and courageous, Mrs. Baynes would have thought her 'cranky,' and despised her; if she had been merely a Forsyte, like Francie--let us say--she would have patronized her from sheer weight of metal; but June, small though she was--Mrs. Baynes habitually admired quantity--gave her an uneasy feeling; and she placed her in a chair opposite the light.

There was another reason for her respect which Mrs. Baynes, too good a churchwoman to be worldly, would have been the last to admit--she often heard her husband describe old Jolyon as extremely well off, and was biassed towards his granddaughter for the soundest of all reasons. To-day she felt the emotion with which we read a novel describing a hero and an inheritance, nervously anxious lest, by some frightful lapse of the novelist, the young man should be left without it at the end.

Her manner was warm; she had never seen so clearly before how distinguished and desirable a girl this was. She asked after old Jolyon's health. A wonderful man for his age; so upright, and young looking, and how old was he? Eighty-one! She would never have thought it! They were at the sea! Very nice for them; she supposed June heard from Phil every day? Her light grey eyes became more prominent as she asked this question; but the girl met the glance without flinching.

"No," she said, "he never writes!"

Mrs. Baynes's eyes dropped; they had no intention of doing so, but they did. They recovered immediately.

"Of course not. That's Phil all over--he was always like that!"

"Was he?" said June.

The brevity of the answer caused Mrs. Baynes's bright smile a moment's hesitation; she disguised it by a quick movement, and spreading her skirts afresh, said: "Why, my dear--he's quite the most harum-scarum person; one never pays the slightest attention to what he does!"

The conviction came suddenly to June that she was wasting her time; even were she to put a question point-blank, she would never get anything out of this woman.

'Do you see him?' she asked, her face crimsoning.

The perspiration broke out on Mrs. Baynes' forehead beneath the powder.

"Oh, yes! I don't remember when he was here last--indeed, we haven't seen much of him lately. He's so busy with your cousin's house; I'm told it'll be finished directly. We must organize a little dinner to celebrate the event; do come and stay the night with us!"

"Thank you," said June. Again she thought: 'I'm only wasting my time. This woman will tell me nothing.'

She got up to go. A change came over Mrs. Baynes. She rose too; her lips twitched, she fidgeted her hands. Something was evidently very wrong, and she did not dare to ask this girl, who stood there, a slim, straight little figure, with her decided face, her set jaw, and resentful eyes. She was not accustomed to be afraid of asking question's--all organization was based on the asking of questions!

But the issue was so grave that her nerve, normally strong, was fairly shaken; only that morning her husband had said: "Old Mr. Forsyte must be worth well over a hundred thousand pounds!"

And this girl stood there, holding out her hand--holding out her hand!

The chance might be slipping away--she couldn't tell--the chance of keeping her in the family, and yet she dared not speak.

Her eyes followed June to the door.

It closed.

Then with an exclamation Mrs. Baynes ran forward, wobbling her bulky frame from side to side, and opened it again.

Too late! She heard the front door click, and stood still, an expression of real anger and mortification on her face.

June went along the Square with her bird-like quickness. She detested that woman now whom in happier days she had been accustomed to think so kind. Was she always to be put off thus, and forced to undergo this torturing suspense?

She would go to Phil himself, and ask him what he meant. She had the right to know. She hurried on down Sloane Street till she came to Bosinney's number. Passing the swing-door at the bottom, she ran up the stairs, her heart thumping painfully.

At the top of the third flight she paused for breath, and holding on to the bannisters, stood listening. No sound came from above.

With a very white face she mounted the last flight. She saw the door, with his name on the plate. And the resolution that had brought her so far evaporated.

The full meaning of her conduct came to her. She felt hot all over; the palms of her hands were moist beneath the thin silk covering of her gloves.

She drew back to the stairs, but did not descend. Leaning against the rail she tried to get rid of a feeling of being choked; and she gazed at the door with a sort of dreadful courage. No! she refused to go down. Did it matter what people thought of her? They would never know! No one would help her if she did not help herself! She would go through with it.

Forcing herself, therefore, to leave the support of the wall, she rang the bell. The door did not open, and all her shame and fear suddenly abandoned her; she rang again and again, as though in spite of its emptiness she could drag some response out of that closed room, some recompense for the shame and fear that visit had cost her. It did not open; she left off ringing, and, sitting down at the top of the stairs, buried her face in her hands.

Presently she stole down, out into the air. She felt as though she had passed through a bad illness, and had no desire now but to get home as quickly as she could. The people she met seemed to know where she had been, what she had been doing; and suddenly--over on the opposite side, going towards his rooms from the direction of Montpellier Square--she saw Bosinney himself.

She made a movement to cross into the traffic. Their eyes met, and he raised his hat. An omnibus passed, obscuring her view; then, from the edge of the pavement, through a gap in the traffic, she saw him walking on.

And June stood motionless, looking after him.

CHAPTER XIII

PERFECTION OF THE HOUSE

'One mockturtle, clear; one oxtail; two glasses of port.'

In the upper room at French's, where a Forsyte could still get heavy English food, James and his son were sitting down to lunch.

Of all eating-places James liked best to come here; there was something unpretentious, well-flavoured, and filling about it, and though he had been to a certain extent corrupted by the necessity for being fashionable, and the trend of habits keeping pace with an income that would increase, he still hankered in quiet City moments after the tasty fleshpots of his earlier days. Here you were served by hairy English waiters in aprons; there was sawdust on the floor, and three round gilt looking-glasses hung just above the line of sight. They had only recently done away with the cubicles, too, in which you could have your chop, prime chump, with a floury-potato, without seeing your neighbours, like a gentleman.

He tucked the top corner of his napkin behind the third button of his waistcoat, a practice he had been obliged to abandon years ago in the West End. He felt that he should relish his soup--the entire morning had been given to winding up the estate of an old friend.

After filling his mouth with household bread, stale, he at once began: "How are you going down to Robin Hill? You going to take Irene? You'd better take her. I should think there'll be a lot that'll want seeing to."

Without looking up, Soames answered: "She won't go."

"Won't go? What's the meaning of that? She's going to live in the house, isn't she?"

Soames made no reply.

"I don't know what's coming to women nowadays," mumbled James; "I never used to have any trouble with them. She's had too much liberty. She's spoiled...."

Soames lifted his eyes: "I won't have anything said against her," he said unexpectedly.

The silence was only broken now by the supping of James's soup.

The waiter brought the two glasses of port, but Soames stopped him.

"That's not the way to serve port," he said; "take them away, and bring the bottle."

Rousing himself from his reverie over the soup, James took one of his rapid shifting surveys of surrounding facts.

"Your mother's in bed," he said; "you can have the carriage to take you down. I should think Irene'd like the drive. This young Bosinney'll be there, I suppose, to show you over"

Soames nodded.

"I should like to go and see for myself what sort of a job he's made finishing off," pursued James. "I'll just drive round and pick you both up."

"I am going down by train," replied Soames. "If you like to drive round and see, Irene might go with you, I can't tell."

He signed to the waiter to bring the bill, which James paid.

They parted at St. Paul's, Soames branching off to the station, James taking his omnibus westwards.

He had secured the corner seat next the conductor, where his long legs made it difficult for anyone to get in, and at all who passed him he looked resentfully, as if they had no business to be using up his air.

He intended to take an opportunity this afternoon of speaking to Irene. A word in time saved nine; and now that she was going to live in the country there was a chance for her to turn over a new leaf! He could see that Soames wouldn't stand very much more of her goings on!

It did not occur to him to define what he meant by her 'goings on'; the expression was wide, vague, and suited to a Forsyte. And James had more than his common share of courage after lunch.

On reaching home, he ordered out the barouche, with special instructions that the groom was to go too. He wished to be kind to her, and to give her every chance.

When the door of No.62 was opened he could distinctly hear her singing, and said so at once, to prevent any chance of being denied entrance.

Yes, Mrs. Soames was in, but the maid did not know if she was seeing people.

James, moving with the rapidity that ever astonished the observers of his long figure and absorbed expression, went forthwith into the drawing-room without permitting this to be ascertained. He found Irene seated at the piano with her hands arrested on the keys, evidently listening to the voices in the hall. She greeted him without smiling.

"Your mother-in-law's in bed," he began, hoping at once to enlist her sympathy. "I've got the carriage here. Now, be a good girl, and put on your hat and come with me for a drive. It'll do you good!"

Irene looked at him as though about to refuse, but, seeming to change her mind, went upstairs, and came down again with her hat on.

"Where are you going to take me?" she asked.

"We'll just go down to Robin Hill," said James, spluttering out his words very quick; "the horses want exercise, and I should like to see what they've been doing down there."

Irene hung back, but again changed her mind, and went out to the carriage, James brooding over her closely, to make quite sure.

It was not before he had got her more than half way that he began: "Soames is very fond of you--he won't have anything said against you; why don't you show him more affection?"

Irene flushed, and said in a low voice: "I can't show what I haven't got."

James looked at her sharply; he felt that now he had her in his own carriage, with his own horses and servants, he was really in command of the situation. She could not put him off; nor would she make a scene in public.

"I can't think what you're about," he said. "He's a very good husband!"

Irene's answer was so low as to be almost inaudible among the sounds of traffic. He caught the words: "You are not married to him!"

"What's that got to do with it? He's given you everything you want. He's always ready to take you anywhere, and now he's built you this house in the country. It's not as if you had anything of your own."

"No."

Again James looked at her; he could not make out the expression on her face. She looked almost as if she were going to cry, and yet....

"I'm sure," he muttered hastily, "we've all tried to be kind to you."

Irene's lips quivered; to his dismay James saw a tear steal down her cheek. He felt a choke rise in his own throat.

"We're all fond of you," he said, "if you'd only"--he was going to say, "behave yourself," but changed it to--"if you'd only be more of a wife to him."

Irene did not answer, and James, too, ceased speaking. There was something in her silence which disconcerted him; it was not the silence of obstinacy, rather that of acquiescence in all that he could find to say. And yet he felt as if he had not had the last word. He could not understand this.

He was unable, however, to long keep silence.

"I suppose that young Bosinney," he said, "will be getting married to June now?"

Irene's face changed. "I don't know," she said; "you should ask her."

"Does she write to you?" No.

"How's that?" said James. "I thought you and she were such great friends."

Irene turned on him. "Again," she said, "you should ask her!"

"Well," flustered James, frightened by her look, "it's very odd that I can't get a plain answer to a plain question, but there it is."

He sat ruminating over his rebuff, and burst out at last:

"Well, I've warned you. You won't look ahead. Soames he doesn't say much, but I can see he won't stand a great deal more of this sort of thing. You'll have nobody but yourself to blame, and, what's more, you'll get no sympathy from anybody."

Irene bent her head with a little smiling bow. "I am very much obliged to you."

James did not know what on earth to answer.

The bright hot morning had changed slowly to a grey, oppressive afternoon; a heavy bank of clouds, with the yellow tinge of coming thunder, had risen in the south, and was creeping up.

The branches of the trees dropped motionless across the road without the smallest stir of foliage. A faint odour of glue from the heated horses clung in the thick air; the coachman and groom, rigid and unbending, exchanged stealthy murmurs on the box, without ever turning their heads.

To James' great relief they reached the house at last; the silence and impenetrability of this woman by his side, whom he had always thought so soft and mild, alarmed him.

The carriage put them down at the door, and they entered.

The hall was cool, and so still that it was like passing into a tomb; a shudder ran down James's spine. He quickly lifted the heavy leather curtains between the columns into the inner court.

He could not restrain an exclamation of approval.

The decoration was really in excellent taste. The dull ruby tiles that extended from the foot of the walls to the verge of a circular clump of tall iris plants, surrounding in turn a sunken basin of white marble filled with water, were obviously of the best quality. He admired extremely the purple leather curtains drawn along one entire side, framing a huge white-tiled stove. The central partitions of the skylight had been slid back, and the warm air from outside penetrated into the very heart of the house.

He stood, his hands behind him, his head bent back on his high, narrow shoulders, spying the tracery on the columns and the pattern of the frieze which ran round the ivory-coloured walls under the gallery. Evidently, no pains had been spared. It was quite the house of a gentleman. He went up to the curtains, and, having discovered how they were worked, drew them asunder and disclosed the picture-gallery, ending in a great window taking up the whole end of the room. It had a black oak floor, and its walls, again, were of ivory white. He went on throwing open doors, and peeping in. Everything was in apple-pie order, ready for immediate occupation.

He turned round at last to speak to Irene, and saw her standing over in the garden entrance, with her husband and Bosinney.

Though not remarkable for sensibility, James felt at once that something was wrong. He went up to them, and, vaguely alarmed, ignorant of the nature of the trouble, made an attempt to smooth things over.

"How are you, Mr. Bosinney?" he said, holding out his hand. "You've been spending money pretty freely down here, I should say!"

Soames turned his back, and walked away.

James looked from Bosinney's frowning face to Irene, and, in his agitation, spoke his thoughts aloud: "Well, I can't tell what's the matter. Nobody tells me anything!" And, making off after his son, he heard Bosinney's short laugh, and his "Well, thank God! You look so...." Most unfortunately he lost the rest.

What had happened? He glanced back. Irene was very close to the architect, and her face not like the face he knew of her. He hastened up to his son.

Soames was pacing the picture-gallery.

"What's the matter?" said James. "What's all this?"

Soames looked at him with his supercilious calm unbroken, but James knew well enough that he was violently angry.

"Our friend," he said, "has exceeded his instructions again, that's all. So much the worse for him this time."

He turned round and walked back towards the door. James followed hurriedly, edging himself in front. He saw Irene take her finger from before her lips, heard her say something in her ordinary voice, and began to speak before he reached them.

"There's a storm coming on. We'd better get home. We can't take you, I suppose, Mr. Bosinney? No, I suppose not. Then, good-bye!" He held out his hand. Bosinney did not take it, but, turning with a laugh, said:

"Good-bye, Mr. Forsyte. Don't get caught in the storm!" and walked away.

"Well," began James, "I don't know...."

But the 'sight of Irene's face stopped him. Taking hold of his daughter-in-law by the elbow, he escorted her towards the carriage. He felt certain, quite certain, they had been making some appointment or other....

Nothing in this world is more sure to upset a Forsyte than the discovery that something on which he has stipulated to spend a certain sum has cost more. And this is reasonable, for upon the accuracy of his estimates the whole policy of his life is ordered. If he cannot rely on definite values of property, his compass is amiss; he is adrift upon bitter waters without a helm.

After writing to Bosinney in the terms that have already been chronicled, Soames had dismissed the cost of the house from his mind. He believed that he had made the matter of the final cost so very plain that the possibility of its being again exceeded had really never entered his head. On hearing from Bosinney that his limit of twelve thousand pounds would be exceeded by something like four hundred, he had grown white with anger. His original estimate of the cost of the house completed had been ten thousand pounds, and he had often blamed himself severely for allowing himself to be led into repeated excesses. Over this last expenditure, however, Bosinney had put himself completely in the wrong. How on earth a fellow could make such an ass of himself Soames could not conceive; but he had done so, and all the rancour and hidden jealousy that had been burning against him for so long was now focussed in rage at this crowning piece of extravagance. The attitude of the confident and friendly husband was gone. To preserve property--his wife--he had assumed it, to preserve property of another kind he lost it now.

"Ah!" he had said to Bosinney when he could speak, "and I suppose you're perfectly contented with yourself. But I may as well tell you that you've altogether mistaken your man!"

What he meant by those words he did not quite know at the time, but after dinner he looked up the correspondence between himself and Bosinney to make quite sure. There could be no two opinions about it--the fellow had made himself liable for that extra four hundred, or, at all events, for three hundred and fifty of it, and he would have to make it good.

He was looking at his wife's face when he came to this conclusion. Seated in her usual seat on the sofa, she was altering the lace on a collar. She had not once spoken to him all the evening.

He went up to the mantelpiece, and contemplating his face in the mirror said: "Your friend the Buccaneer has made a fool of himself; he will have to pay for it!"

She looked at him scornfully, and answered: "I don't know what you are talking about!"

"You soon will. A mere trifle, quite beneath your contempt--four hundred pounds."

"Do you mean that you are going to make him pay that towards this hateful, house?"

"I do."

"And you know he's got nothing?"

"Yes."

"Then you are meaner than I thought you."

Soames turned from the mirror, and unconsciously taking a china cup from the mantelpiece, clasped his hands around it as though praying. He saw her bosom rise and fall, her eyes darkening with anger, and taking no notice of the taunt, he asked quietly:

"Are you carrying on a flirtation with Bosinney?"

"No, I am not!"

Her eyes met his, and he looked away. He neither believed nor disbelieved her, but he knew that he had made a mistake in asking; he never had known, never would know, what she was thinking. The sight of her inscrutable face, the thought of all the hundreds of evenings he had seen her sitting there like that soft and passive, but unreadable, unknown, enraged him beyond measure.

"I believe you are made of stone," he said, clenching his fingers so hard that he broke the fragile cup. The pieces fell into the grate. And Irene smiled.

"You seem to forget," she said, "that cup is not!"

Soames gripped her arm. "A good beating," he said, "is the only thing that would bring you to your senses," but turning on his heel, he left the room.

CHAPTER XIV

SOAMES SITS ON THE STAIRS

Soames went upstairs that night that he had gone too far. He was prepared to offer excuses for his words.

He turned out the gas still burning in the passage outside their room. Pausing, with his hand on the knob of the door, he tried to shape his apology, for he had no intention of letting her see that he was nervous.

But the door did not open, nor when he pulled it and turned the handle firmly. She must have locked it for some reason, and forgotten.

Entering his dressing-room where the gas was also light and burning low, he went quickly to the other door. That too was locked. Then he noticed that the camp bed which he occasionally used was prepared, and his sleeping-suit laid out upon it. He put his hand up to his forehead, and brought it away wet. It dawned on him that he was barred out.

He went back to the door, and rattling the handle stealthily, called: "Unlock the door, do you hear? Unlock the door!"

There was a faint rustling, but no answer.

"Do you hear? Let me in at once--I insist on being let in!"

He could catch the sound of her breathing close to the door, like the breathing of a creature threatened by danger.

There was something terrifying in this inexorable silence, in the impossibility of getting at her. He went back to the other door, and putting his whole weight against it, tried to burst it open. The door was a new one--he had had them renewed himself, in readiness for their coming in after the honeymoon. In a rage he lifted his foot to kick in the panel; the thought of the servants restrained him, and he felt suddenly that he was beaten.

Flinging himself down in the dressing-room, he took up a book.

But instead of the print he seemed to see his wife--with her yellow hair flowing over her bare shoulders, and her great dark eyes--standing like an animal at bay. And the whole meaning of her act of revolt came to him. She meant it to be for good.

He could not sit still, and went to the door again. He could still hear her, and he called: "Irene! Irene!"

He did not mean to make his voice pathetic.

In ominous answer, the faint sounds ceased. He stood with clenched hands, thinking.

Presently he stole round on tiptoe, and running suddenly at the other door, made a supreme effort to break it open. It creaked, but did not yield. He sat down on the stairs and buried his face in his hands.

For a long time he sat there in the dark, the moon through the skylight above laying a pale smear which lengthened slowly towards him down the stairway. He tried to be philosophical.

Since she had locked her doors she had no further claim as a wife, and he would console himself with other women.

It was but a spectral journey he made among such delights--he had no appetite for these exploits. He had never had much, and he had lost the habit. He felt that he could never recover it. His hunger could only be appeased by his wife, inexorable and frightened, behind these shut doors. No other woman could help him.

This conviction came to him with terrible force out there in the dark.

His philosophy left him; and surly anger took its place. Her conduct was immoral, inexcusable, worthy of any punishment within his power. He desired no one but her, and she refused him!

She must really hate him, then! He had never believed it yet. He did not believe it now. It seemed to him incredible. He felt as though he had lost for ever his power of judgment. If she, so soft and yielding as he had always judged her, could take this decided step--what could not happen?

Then he asked himself again if she were carrying on an intrigue with Bosinney. He did not believe that she was; he could not afford to believe such a reason for her conduct--the thought was not to be faced.

It would be unbearable to contemplate the necessity of making his marital relations public property. Short of the most convincing proofs he must still refuse to believe, for he did not wish to punish himself. And all the time at heart--he did believe.

The moonlight cast a greyish tinge over his figure, hunched against the staircase wall.

Bosinney was in love with her! He hated the fellow, and would not spare him now. He could and would refuse to pay a penny piece over twelve thousand and fifty pounds--the extreme limit fixed in the correspondence; or rather he would pay, he would pay and sue him for damages. He would go to Jobling and Boulter and put the matter in their hands. He would ruin the impecunious beggar! And suddenly--though what connection between the thoughts?--he reflected that Irene had no money either. They were both beggars. This gave him a strange satisfaction.

The silence was broken by a faint creaking through the wall. She was going to bed at last. Ah! Joy and pleasant dreams! If she threw the door open wide he would not go in now!

But his lips, that were twisted in a bitter smile, twitched; he covered his eyes with his hands....

It was late the following afternoon when Soames stood in the dining-room window gazing gloomily into the Square.

The sunlight still showered on the plane-trees, and in the breeze their gay broad leaves shone and swung in rhyme to a barrel organ at the corner. It was playing a waltz, an old waltz that was out of fashion, with a fateful rhythm in the notes; and it went on and on, though nothing indeed but leaves danced to the tune.

The woman did not look too gay, for she was tired; and from the tall houses no one threw her down coppers. She moved the organ on, and three doors off began again.

It was the waltz they had played at Roger's when Irene had danced with Bosinney; and the perfume of the gardenias she had worn came back to Soames, drifted by the malicious music, as it had been drifted to him then, when she passed, her hair glistening, her eyes so soft, drawing Bosinney on and on down an endless ballroom.

The organ woman plied her handle slowly; she had been grinding her tune all day-grinding it in Sloane Street hard by, grinding it perhaps to Bosinney himself.

Soames turned, took a cigarette from the carven box, and walked back to the window. The tune had mesmerized him, and there came into his view Irene, her sunshade furled, hastening homewards down the Square, in a soft, rose-coloured blouse with drooping sleeves, that he did not know. She stopped before the organ, took out her purse, and gave the woman money.

Soames shrank back and stood where he could see into the hall.

She came in with her latch-key, put down her sunshade, and stood looking at herself in the glass. Her cheeks were flushed as if the sun had burned them; her lips were parted in a smile. She stretched her arms out as though to embrace herself, with a laugh that for all the world was like a sob.

Soames stepped forward.

"Very-pretty!" he said.

But as though shot she spun round, and would have passed him up the stairs. He barred the way.

"Why such a hurry?" he said, and his eyes fastened on a curl of hair fallen loose across her ear....

He hardly recognised her. She seemed on fire, so deep and rich the colour of her cheeks, her eyes, her lips, and of the unusual blouse she wore.

She put up her hand and smoothed back the curl. She was breathing fast and deep, as though she had been running, and with every breath perfume seemed to come from her hair, and from her body, like perfume from an opening flower.

"I don't like that blouse," he said slowly, "it's a soft, shapeless thing!"

He lifted his finger towards her breast, but she dashed his hand aside.

"Don't touch me!" she cried.

He caught her wrist; she wrenched it away.

"And where may you have been?" he asked.

"In heaven--out of this house!" With those words she fled upstairs.

Outside--in thanksgiving--at the very door, the organ-grinder was playing the waltz.

And Soames stood motionless. What prevented him from following her?

Was it that, with the eyes of faith, he saw Bosinney looking down from that high window in Sloane Street, straining his eyes for yet another glimpse of Irene's vanished figure, cooling his flushed face, dreaming of the moment when she flung herself on his breast--the scent of her still in the air around, and the sound of her laugh that was like a sob?

PART III

CHAPTER I

Mrs. MACANDER'S EVIDENCE

Many people, no doubt, including the editor of the 'Ultra Vivisectionist,' then in the bloom of its first youth, would say that Soames was less than a man not to have removed the locks from his wife's doors, and, after beating her soundly, resumed wedded happiness.

Brutality is not so deplorably diluted by humaneness as it used to be, yet a sentimental segment of the population may still be relieved to learn that he did none of these things. For active brutality is not popular with Forsytes; they are too circumspect, and, on the whole, too softhearted. And in Soames there was some common pride, not sufficient to make him do a really generous action, but enough to prevent his indulging in an extremely mean one, except, perhaps, in very hot blood. Above all this a true Forsyte refused to feel himself ridiculous. Short of actually beating his wife, he perceived nothing to be done; he therefore accepted the situation without another word.

Throughout the summer and autumn he continued to go to the office, to sort his pictures, and ask his friends to dinner.

He did not leave town; Irene refused to go away. The house at Robin Hill, finished though it was, remained empty and ownerless. Soames had brought a suit against the Buccaneer, in which he claimed from him the sum of three hundred and fifty pounds.

A firm of solicitors, Messrs. Freak and Able, had put in a defence on Bosinney's behalf. Admitting the facts, they raised a point on the correspondence which, divested of legal phraseology, amounted to this: To speak of 'a free hand in the terms of this correspondence' is an Irish bull.

By a chance, fortuitous but not improbable in the close borough of legal circles, a good deal of information came to Soames' ear anent this line of policy, the working partner in his firm, Bustard, happening to sit next at dinner at Walmisley's, the Taxing Master, to young Chankery, of the Common Law Bar.

The necessity for talking what is known as 'shop,' which comes on all lawyers with the removal of the ladies, caused Chankery, a young and promising advocate, to propound an impersonal conundrum to his neighbour, whose name he did not know, for, seated as he permanently was in the background, Bustard had practically no name.

He had, said Chankery, a case coming on with a 'very nice point.' He then explained, preserving every professional discretion, the riddle in Soames' case. Everyone, he said, to whom he had spoken, thought it a nice point. The issue was small unfortunately, 'though d----d serious for his client he believed'--Walmisley's champagne was bad but plentiful. A Judge would make short work of

it, he was afraid. He intended to make a big effort--the point was a nice one. What did his neighbour say?

Bustard, a model of secrecy, said nothing. He related the incident to Soames however with some malice, for this quiet man was capable of human feeling, ending with his own opinion that the point was 'a very nice one.'

In accordance with his resolve, our Forsyte had put his interests into the hands of Jobling and Boulter. From the moment of doing so he regretted that he had not acted for himself. On receiving a copy of Bosinney's defence he went over to their offices.

Boulter, who had the matter in hand, Jobling having died some years before, told him that in his opinion it was rather a nice point; he would like counsel's opinion on it.

Soames told him to go to a good man, and they went to Waterbuck, Q.C., marking him ten and one, who kept the papers six weeks and then wrote as follows:

'In my opinion the true interpretation of this correspondence depends very much on the intention of the parties, and will turn upon the evidence given at the trial. I am of opinion that an attempt should be made to secure from the architect an admission that he understood he was not to spend at the outside more than twelve thousand and fifty pounds. With regard to the expression, "a free hand in the terms of this correspondence," to which my attention is directed, the point is a nice one; but I am of opinion that upon the whole the ruling in "Boileau v. The Blasted Cement Co., Ltd.," will apply.'

Upon this opinion they acted, administering interrogatories, but to their annoyance Messrs. Freak and Able answered these in so masterly a fashion that nothing whatever was admitted and that without prejudice.

It was on October 1 that Soames read Waterbuck's opinion, in the dining-room before dinner.

It made him nervous; not so much because of the case of 'Boileau v. The Blasted Cement Co., Ltd.,' as that the point had lately begun to seem to him, too, a nice one; there was about it just that pleasant flavour of subtlety so attractive to the best legal appetites. To have his own impression confirmed by Waterbuck, Q.C., would have disturbed any man.

He sat thinking it over, and staring at the empty grate, for though autumn had come, the weather kept as gloriously fine that jubilee year as if it were still high August. It was not pleasant to be disturbed; he desired too passionately to set his foot on Bosinney's neck.

Though he had not seen the architect since the last afternoon at Robin Hill, he was never free from the sense of his presence--never free from the memory of his worn face with its high cheek bones and enthusiastic eyes. It would not be too much to say that he had never got rid of the feeling of that night when he heard the peacock's cry at dawn--the feeling that Bosinney haunted the house. And every man's shape that he saw in the dark evenings walking past, seemed that of him whom George had so appropriately named the Buccaneer.

Irene still met him, he was certain; where, or how, he neither knew, nor asked; deterred by a vague and secret dread of too much knowledge. It all seemed subterranean nowadays.

Sometimes when he questioned his wife as to where she had been, which he still made a point of doing, as every Forsyte should, she looked very strange. Her self-possession was wonderful, but there were moments when, behind the mask of her face, inscrutable as it had always been to him, lurked an expression he had never been used to see there.

She had taken to lunching out too; when he asked Bilson if her mistress had been in to lunch, as often as not she would answer: "No, sir."

He strongly disapproved of her gadding about by herself, and told her so. But she took no notice. There was something that angered, amazed, yet almost amused him about the calm way in which she disregarded his wishes. It was really as if she were hugging to herself the thought of a triumph over him.

He rose from the perusal of Waterbuck, Q.C.'s opinion, and, going upstairs, entered her room, for she did not lock her doors till bed-time--she had the decency, he found, to save the feelings of the servants. She was brushing her hair, and turned to him with strange fierceness.

"What do you want?" she said. "Please leave my room!"

He answered: "I want to know how long this state of things between us is to last? I have put up with it long enough."

"Will you please leave my room?"

"Will you treat me as your husband?"

"No."

"Then, I shall take steps to make you."

"Do!"

He stared, amazed at the calmness of her answer. Her lips were compressed in a thin line; her hair lay in fluffy masses on her bare shoulders, in all its strange golden contrast to her dark eyes--those eyes alive with the emotions of fear, hate, contempt, and odd, haunting triumph.

"Now, please, will you leave my room?" He turned round, and went sulkily out.

He knew very well that he had no intention of taking steps, and he saw that she knew too--knew that he was afraid to.

It was a habit with him to tell her the doings of his day: how such and such clients had called; how he had arranged a mortgage for Parkes; how that long-standing suit of Fryer v. Forsyte was getting on, which, arising in the preternaturally careful disposition of his property by his great uncle Nicholas, who had tied it up so that no one could get at it at all, seemed likely to remain a source of income for several solicitors till the Day of Judgment.

And how he had called in at Jobson's, and seen a Boucher sold, which he had just missed buying of Talleyrand and Sons in Pall Mall.

He had an admiration for Boucher, Watteau, and all that school. It was a habit with him to tell her all these matters, and he continued to do it even now, talking for long spells at dinner, as though by the volubility of words he could conceal from himself the ache in his heart.

Often, if they were alone, he made an attempt to kiss her when she said good-night. He may have had some vague notion that some night she would let him; or perhaps only the feeling that a husband ought to kiss his wife. Even if she hated him, he at all events ought not to put himself in the wrong by neglecting this ancient rite.

And why did she hate him? Even now he could not altogether believe it. It was strange to be hated!--the emotion was too extreme; yet he hated Bosinney, that Buccaneer, that prowling vagabond, that night-wanderer. For in his thoughts Soames always saw him lying in wait--wandering. Ah, but he must be in very low water! Young Burkitt, the architect, had seen him coming out of a third-rate restaurant, looking terribly down in the mouth!

During all the hours he lay awake, thinking over the situation, which seemed to have no end--unless she should suddenly come to her senses--never once did the thought of separating from his wife seriously enter his head....

And the Forsytes! What part did they play in this stage of Soames' subterranean tragedy?

Truth to say, little or none, for they were at the sea.

From hotels, hydropathics, or lodging-houses, they were bathing daily; laying in a stock of ozone to last them through the winter.

Each section, in the vineyard of its own choosing, grew and culled and pressed and bottled the grapes of a pet sea-air.

The end of September began to witness their several returns.

In rude health and small omnibuses, with considerable colour in their cheeks, they arrived daily from the various termini. The following morning saw them back at their vocations.

On the next Sunday Timothy's was thronged from lunch till dinner.

Amongst other gossip, too numerous and interesting to relate, Mrs. Septimus Small mentioned that Soames and Irene had not been away.

It remained for a comparative outsider to supply the next evidence of interest.

It chanced that one afternoon late in September, Mrs. MacAnder, Winifred Dartie's greatest friend, taking a constitutional, with young Augustus Flippard, on her bicycle in Richmond Park, passed Irene and Bosinney walking from the bracken towards the Sheen Gate.

Perhaps the poor little woman was thirsty, for she had ridden long on a hard, dry road, and, as all London knows, to ride a bicycle and talk to young Flippard will try the toughest constitution; or perhaps the sight of the cool bracken grove, whence 'those two' were coming down, excited her envy. The cool bracken grove on the top of the hill, with the oak boughs for roof, where the pigeons were raising an endless wedding hymn, and the autumn, humming, whispered to the ears of lovers in the fern, while the deer stole by. The bracken grove of irretrievable delights, of golden minutes in the long marriage of heaven and earth! The bracken grove, sacred to stags, to strange tree-stump fauns leaping around the silver whiteness of a birch-tree nymph at summer dusk.

This lady knew all the Forsytes, and having been at June's 'at home,' was not at a loss to see with whom she had to deal. Her own marriage, poor thing, had not been successful, but having had the good sense and ability to force her husband into pronounced error, she herself had passed through the necessary divorce proceedings without incurring censure.

She was therefore a judge of all that sort of thing, and lived in one of those large buildings, where in small sets of apartments, are gathered incredible quantities of Forsytes, whose chief recreation out of business hours is the discussion of each other's affairs.

Poor little woman, perhaps she was thirsty, certainly she was bored, for Flippard was a wit. To see 'those two' in so unlikely a spot was quite a merciful 'pick-me-up.'

At the MacAnder, like all London, Time pauses.

This small but remarkable woman merits attention; her all-seeing eye and shrewd tongue were inscrutably the means of furthering the ends of Providence.

With an air of being in at the death, she had an almost distressing power of taking care of herself. She had done more, perhaps, in her way than any woman about town to destroy the sense of chivalry which still clogs the wheel of civilization. So smart she was, and spoken of endearingly as 'the little MacAnder!'

Dressing tightly and well, she belonged to a Woman's Club, but was by no means the neurotic and dismal type of member who was always thinking of her rights. She took her rights unconsciously, they came natural to her, and she knew exactly how to make the most of them without exciting anything but admiration amongst that great class to whom she was affiliated, not precisely perhaps by manner, but by birth, breeding, and the true, the secret gauge, a sense of property.

The daughter of a Bedfordshire solicitor, by the daughter of a clergyman, she had never, through all the painful experience of being married to a very mild painter with a cranky love of Nature, who had deserted her for an actress, lost touch with the requirements, beliefs, and inner feeling of Society; and, on attaining her liberty, she placed herself without effort in the very van of Forsyteism.

Always in good spirits, and 'full of information,' she was universally welcomed. She excited neither surprise nor disapprobation when encountered on the Rhine or at Zermatt, either alone, or travelling with a lady and two gentlemen; it was felt that she was perfectly capable of taking care of herself; and the hearts of all Forsytes warmed to that wonderful instinct, which enabled her to enjoy everything without giving anything away. It was generally felt that to such women as Mrs. MacAnder should we look for the perpetuation and increase of our best type of woman. She had never had any children.

If there was one thing more than another that she could not stand it was one of those soft women with what men called 'charm' about them, and for Mrs. Soames she always had an especial dislike.

Obscurely, no doubt, she felt that if charm were once admitted as the criterion, smartness and capability must go to the wall; and she hated--with a hatred the deeper that at times this so-called charm seemed to disturb all calculations--the subtle seductiveness which she could not altogether overlook in Irene.

She said, however, that she could see nothing in the woman--there was no 'go' about her--she would never be able to stand up for herself--anyone could take advantage of her, that was plain--she could not see in fact what men found to admire!

She was not really ill-natured, but, in maintaining her position after the trying circumstances of her married life, she had found it so necessary to be 'full of information,' that the idea of holding her tongue about 'those two' in the Park never occurred to her.

And it so happened that she was dining that very evening at Timothy's, where she went sometimes to 'cheer the old things up,' as she was wont to put it. The same people were always asked to meet her: Winifred Dartie and her husband; Francie, because she belonged to the artistic circles, for Mrs. MacAnder was known to contribute articles on dress to 'The Ladies Kingdom Come'; and for her to flirt with, provided they could be obtained, two of the Hayman boys, who, though they never said anything, were believed to be fast and thoroughly intimate with all that was latest in smart Society.

At twenty-five minutes past seven she turned out the electric light in her little hall, and wrapped in her opera cloak with the chinchilla collar, came out into the corridor, pausing a moment to make sure she had her latch-key. These little self-contained flats were convenient; to be sure, she had no light and no air, but she could shut it up whenever she liked and go away. There was no bother with servants, and she never felt tied as she used to when poor, dear Fred was always about, in his mooney way. She retained no rancour against poor, dear Fred, he was such a fool; but the thought of that actress drew from her, even now, a little, bitter, derisive smile.

Firmly snapping the door to, she crossed the corridor, with its gloomy, yellow-ochre walls, and its infinite vista of brown, numbered doors. The lift was going down; and wrapped to the ears in the high cloak, with every one of her auburn hairs in its place, she waited motionless for it to stop at her floor. The iron gates clanked open; she entered. There were already three occupants, a man in a great white waistcoat, with a large, smooth face like a baby's, and two old ladies in black, with mittened hands.

Mrs. MacAnder smiled at them; she knew everybody; and all these three, who had been admirably silent before, began to talk at once. This was Mrs. MacAnder's successful secret. She provoked conversation.

Throughout a descent of five stories the conversation continued, the lift boy standing with his back turned, his cynical face protruding through the bars.

At the bottom they separated, the man in the white waistcoat sentimentally to the billiard room, the old ladies to dine and say to each other: "A dear little woman!" "Such a rattle!" and Mrs. MacAnder to her cab.

When Mrs. MacAnder dined at Timothy's, the conversation (although Timothy himself could never be induced to be present) took that wider, man-of-the-world tone current among Forsytes at large, and this, no doubt, was what put her at a premium there.

Mrs. Small and Aunt Hester found it an exhilarating change. "If only," they said, "Timothy would meet her!" It was felt that she would do him good. She could tell you, for instance, the latest story of Sir Charles Fiste's son at Monte Carlo; who was the real heroine of Tynemouth Eddy's fashionable novel that everyone was holding up their hands over, and what they were doing in Paris about wearing bloomers. She was so sensible, too, knowing all about that vexed question, whether to send young Nicholas' eldest into the navy as his mother wished, or make him an accountant as his father thought would be safer. She strongly deprecated the navy. If you were not exceptionally brilliant or exceptionally well connected, they passed you over so disgracefully, and what was it after all to look forward to, even if you became an admiral--a pittance! An accountant had many more chances, but let him be put with a good firm, where there was no risk at starting!

Sometimes she would give them a tip on the Stock Exchange; not that Mrs. Small or Aunt Hester ever took it. They had indeed no money to invest; but it seemed to bring them into such exciting touch with the realities of life. It was an event. They would ask Timothy, they said. But they never did, knowing in advance that it would upset him. Surreptitiously, however, for weeks after they would look in that paper, which they took with respect on account of its really fashionable proclivities, to see whether 'Bright's Rubies' or 'The Woollen Mackintosh Company' were up or down. Sometimes they could not find the name of the company at all; and they would wait until James or Roger or even Swithin came in, and ask them in voices trembling with curiosity how that 'Bolivia Lime and Speltrate' was doing--they could not find it in the paper.

And Roger would answer: "What do you want to know for? Some trash! You'll go burning your fingers--investing your money in lime, and things you know nothing about! Who told you?" and ascertaining what they had been told, he would go away, and, making inquiries in the City, would perhaps invest some of his own money in the concern.

It was about the middle of dinner, just in fact as the saddle of mutton had been brought in by Smither, that Mrs. MacAnder, looking airily round, said: "Oh! and whom do you think I passed to-day in Richmond Park? You'll never guess--Mrs. Soames and--Mr.

Bosinney. They must have been down to look at the house!"

Winifred Dartie coughed, and no one said a word. It was the piece of evidence they had all unconsciously been waiting for.

To do Mrs. MacAnder justice, she had been to Switzerland and the Italian lakes with a party of three, and had not heard of Soames' rupture with his architect. She could not tell, therefore, the profound impression her words would make.

Upright and a little flushed, she moved her small, shrewd eyes from face to face, trying to gauge the effect of her words. On either side of her a Hayman boy, his lean, taciturn, hungry face turned towards his plate, ate his mutton steadily.

These two, Giles and Jesse, were so alike and so inseparable that they were known as the Dromios. They never talked, and seemed always completely occupied in doing nothing. It was popularly supposed that they were cramming for an important examination. They walked without hats for long hours in the Gardens attached to their house, books in their hands, a fox-terrier at their heels, never saying a word, and smoking all the time. Every morning, about fifty yards apart, they trotted down Campden Hill on two lean hacks, with legs as long as their own, and every morning about an hour later, still fifty yards apart, they cantered up again. Every evening, wherever they had dined, they might be observed about half-past ten, leaning over the balustrade of the Alhambra promenade.

They were never seen otherwise than together; in this way passing their lives, apparently perfectly content.

Inspired by some dumb stirring within them of the feelings of gentlemen, they turned at this painful moment to Mrs. MacAnder, and said in precisely the same voice: "Have you seen the...?"

Such was her surprise at being thus addressed that she put down her fork; and Smither, who was passing, promptly removed her plate. Mrs. MacAnder, however, with presence of mind, said instantly: "I must have a little more of that nice mutton."

But afterwards in the drawing--room she sat down by Mrs. Small, determined to get to the bottom of the matter. And she began:

"What a charming woman, Mrs. Soames; such a sympathetic temperament! Soames is a really lucky man!"

Her anxiety for information had not made sufficient allowance for that inner Forsyte skin which refuses to share its troubles with outsiders.

Mrs. Septimus Small, drawing herself up with a creak and rustle of her whole person, said, shivering in her dignity:

"My dear, it is a subject we do not talk about!"

CHAPTER II

NIGHT IN THE PARK

Although with her infallible instinct Mrs. Small had said the very thing to make her guest 'more intriguee than ever,' it is difficult to see how else she could truthfully have spoken.

It was not a subject which the Forsytes could talk about even among themselves--to use the word Soames had invented to characterize to himself the situation, it was 'subterranean.'

Yet, within a week of Mrs. MacAnder's encounter in Richmond Park, to all of them--save Timothy, from whom it was carefully kept--to James on his domestic beat from the Poultry to Park Lane, to George the wild one, on his daily adventure from the bow window at the Haversnake to the billiard room at the 'Red Pottle,' was it known that 'those two' had gone to extremes.

George (it was he who invented many of those striking expressions still current in fashionable circles) voiced the sentiment more accurately than any one when he said to his brother Eustace that 'the Buccaneer' was 'going it'; he expected Soames was about 'fed up.'

It was felt that he must be, and yet, what could be done? He ought perhaps to take steps; but to take steps would be deplorable.

Without an open scandal which they could not see their way to recommending, it was difficult to see what steps could be taken. In this impasse, the only thing was to say nothing to Soames, and nothing to each other; in fact, to pass it over.

By displaying towards Irene a dignified coldness, some impression might be made upon her; but she was seldom now to be seen, and there seemed a slight difficulty in seeking her out on purpose to show her coldness. Sometimes in the privacy of his bedroom James would reveal to Emily the real suffering that his son's misfortune caused him.

"I can't tell," he would say; "it worries me out of my life. There'll be a scandal, and that'll do him no good. I shan't say anything to him. There might be nothing in it. What do you think? She's very artistic, they tell me. What? Oh, you're a 'regular Juley! Well, I don't know; I expect the worst. This is what comes of having no children. I knew how it would be from the first. They never told me they didn't mean to have any children--nobody tells me anything!"

On his knees by the side of the bed, his eyes open and fixed with worry, he would breathe into the counterpane. Clad in his nightshirt, his neck poked forward, his back rounded, he resembled some long white bird.

"Our Father-," he repeated, turning over and over again the thought of this possible scandal.

Like old Jolyon, he, too, at the bottom of his heart set the blame of the tragedy down to family interference. What business had that lot--he began to think of the Stanhope Gate branch, including young Jolyon and his daughter, as 'that lot'--to introduce a person like this Bosinney into the family? (He had heard George's soubriquet, 'The Buccaneer,' but he could make nothing of that--the young man was an architect.)

He began to feel that his brother Jolyon, to whom he had always looked up and on whose opinion he had relied, was not quite what he had expected.

Not having his eldest brother's force of character, he was more sad than angry. His great comfort was to go to Winifred's, and take the little Darties in his carriage over to Kensington Gardens, and there, by the Round Pond, he could often be seen walking with his eyes fixed anxiously on little Publius Dartie's sailing-boat, which he had himself freighted with a penny, as though convinced that it would never again come to shore; while little Publius--who, James delighted to say, was not a bit like his father skipping along under his lee, would try to get him to bet another that it never would, having found that it always did. And James would make the bet; he always paid--sometimes as many as three or four pennies in the afternoon, for the game seemed never to pall on little Publius--and always in paying he said: "Now, that's for your money-box. Why, you're getting quite a rich man!" The thought of his little grandson's growing wealth was a real pleasure to him. But little Publius knew a sweet-shop, and a trick worth two of that.

And they would walk home across the Park, James' figure, with high shoulders and absorbed and worried face, exercising its tall, lean protectorship, pathetically unregarded, over the robust child-figures of Imogen and little Publius.

But those Gardens and that Park were not sacred to James. Forsytes and tramps, children and lovers, rested and wandered day after day, night after night, seeking one and all some freedom from labour, from the reek and turmoil of the streets.

The leaves browned slowly, lingering with the sun and summer-like warmth of the nights.

On Saturday, October 5, the sky that had been blue all day deepened after sunset to the bloom of purple grapes. There was no moon, and a clear dark, like some velvety garment, was wrapped around the trees, whose thinned branches, resembling plumes, stirred not in the still, warm air. All London had poured into the Park, draining the cup of summer to its dregs.

Couple after couple, from every gate, they streamed along the paths and over the burnt grass, and one after another, silently out of the lighted spaces, stole into the shelter of the feathery trees, where, blotted against some trunk, or under the shadow of shrubs, they were lost to all but themselves in the heart of the soft darkness.

To fresh-comers along the paths, these forerunners formed but part of that passionate dusk, whence only a strange murmur, like the confused beating of hearts, came forth. But when that murmur reached each couple in the lamp-light their voices wavered, and ceased; their arms enlaced, their eyes began seeking, searching, probing the blackness. Suddenly, as though drawn by invisible hands, they, too, stepped over the railing, and, silent as shadows, were gone from the light.

The stillness, enclosed in the far, inexorable roar of the town, was alive with the myriad passions, hopes, and loves of multitudes of struggling human atoms; for in spite of the disapproval of that great body of Forsytes, the Municipal Council--to whom Love had long been considered, next to the Sewage Question, the gravest danger to the community--a process was going on that night in the Park, and in a hundred other parks, without which the thousand factories, churches, shops, taxes, and drains, of which they were custodians, were as arteries without blood, a man without a heart.

The instincts of self-forgetfulness, of passion, and of love, hiding under the trees, away from the trustees of their remorseless enemy, the 'sense of property,' were holding a stealthy revel, and Soames, returning from Bayswater for he had been alone to dine at Timothy's walking home along the water, with his mind upon that coming lawsuit, had the blood driven from his heart by a low laugh and the sound of kisses. He thought of writing to the Times the next morning, to draw the attention of the Editor to the condition of our parks. He did not, however, for he had a horror of seeing his name in print.

But starved as he was, the whispered sounds in the stillness, the half-seen forms in the dark, acted on him like some morbid stimulant. He left the path along the water and stole under the trees, along the deep shadow of little plantations, where the boughs of chestnut trees hung their great leaves low, and there was blacker refuge, shaping his course in circles which had for their object a stealthy inspection of chairs side by side, against tree-trunks, of enlaced lovers, who stirred at his approach.

Now he stood still on the rise overlooking the Serpentine, where, in full lamp-light, black against the silver water, sat a couple who never moved, the woman's face buried on the man's neck--a single form, like a carved emblem of passion, silent and unashamed.

And, stung by the sight, Soames hurried on deeper into the shadow of the trees.

In this search, who knows what he thought and what he sought? Bread for hunger--light in darkness? Who knows what he expected to find--impersonal knowledge of the human heart--the end of his private subterranean tragedy--for, again, who knew, but that each dark couple, unnamed, unnameable, might not be he and she?

But it could not be such knowledge as this that he was seeking--the wife of Soames Forsyte sitting in the Park like a common wench! Such thoughts were inconceivable; and from tree to tree, with his noiseless step, he passed.

Once he was sworn at; once the whisper, "If only it could always be like this!" sent the blood flying again from his heart, and he waited there, patient and dogged, for the two to move. But it was only a poor thin slip of a shop-girl in her draggled blouse who passed him, clinging to her lover's arm.

A hundred other lovers too whispered that hope in the stillness of the trees, a hundred other lovers clung to each other.

But shaking himself with sudden disgust, Soames returned to the path, and left that seeking for he knew not what.

CHAPTER III

MEETING AT THE BOTANICAL

Young Jolyon, whose circumstances were not those of a Forsyte, found at times a difficulty in sparing the money needful for those country jaunts and researches into Nature, without having prosecuted which no watercolour artist ever puts brush to paper.

He was frequently, in fact, obliged to take his colour-box into the Botanical Gardens, and there, on his stool, in the shade of a monkey-puzzler or in the lee of some India-rubber plant, he would spend long hours sketching.

An Art critic who had recently been looking at his work had delivered himself as follows:

"In a way your drawings are very good; tone and colour, in some of them certainly quite a feeling for Nature. But, you see, they're so scattered; you'll never get the public to look at them. Now, if you'd taken a definite subject, such as 'London by Night,' or 'The Crystal Palace in the Spring,' and made a regular series, the public would have known at once what they were looking at. I can't lay too much stress upon that. All the men who are making great names in Art, like Crum Stone or Bleeder, are making them by avoiding the unexpected; by specializing and putting their works all in the same pigeon-hole, so that the public know pat once where to go. And this stands to reason, for if a man's a collector he doesn't want people to smell at the canvas to find out whom his pictures are by; he wants them to be able to say at once, 'A capital Forsyte!' It is all the more important for you to be careful to choose a subject that they can lay hold of on the spot, since there's no very marked originality in your style."

Young Jolyon, standing by the little piano, where a bowl of dried rose leaves, the only produce of the garden, was deposited on a bit of faded damask, listened with his dim smile.

Turning to his wife, who was looking at the speaker with an angry expression on her thin face, he said:

"You see, dear?"

"I do not," she answered in her staccato voice, that still had a little foreign accent; "your style has originality."

The critic looked at her, smiled' deferentially, and said no more. Like everyone else, he knew their history.

The words bore good fruit with young Jolyon; they were contrary to all that he believed in, to all that he theoretically held good in his Art, but some strange, deep instinct moved him against his will to turn them to profit.

He discovered therefore one morning that an idea had come to him for making a series of watercolour drawings of London. How the idea had arisen he could not tell; and it was not till the following year, when he had completed and sold them at a very fair price, that in one of his impersonal moods, he found himself able to recollect the Art critic, and to discover in his own achievement another proof that he was a Forsyte.

He decided to commence with the Botanical Gardens, where he had already made so many studies, and chose the little artificial pond, sprinkled now with an autumn shower of red and yellow leaves, for though the gardeners longed to sweep them off, they could not reach them with their brooms. The rest of the gardens they swept bare enough, removing every morning Nature's rain of leaves; piling them in heaps, whence from slow fires rose the sweet, acrid smoke that, like the cuckoo's note for spring, the scent of lime trees for the summer, is the true emblem of the fall. The gardeners' tidy souls could not abide the gold and green and russet pattern on the grass. The gravel paths must lie unstained, ordered, methodical, without knowledge of the realities of life, nor of that slow and beautiful decay which flings crowns underfoot to star the earth with fallen glories, whence, as the cycle rolls, will leap again wild spring.

Thus each leaf that fell was marked from the moment when it fluttered a good-bye and dropped, slow turning, from its twig.

But on that little pond the leaves floated in peace, and praised Heaven with their hues, the sunlight haunting over them.

And so young Jolyon found them.

Coming there one morning in the middle of October, he was disconcerted to find a bench about twenty paces from his stand occupied, for he had a proper horror of anyone seeing him at work.

A lady in a velvet jacket was sitting there, with her eyes fixed on the ground. A flowering laurel, however, stood between, and, taking shelter behind this, young Jolyon prepared his easel.

His preparations were leisurely; he caught, as every true artist should, at anything that might delay for a moment the effort of his work, and he found himself looking furtively at this unknown dame.

Like his father before him, he had an eye for a face. This face was charming!

He saw a rounded chin nestling in a cream ruffle, a delicate face with large dark eyes and soft lips. A black 'picture' hat concealed the hair; her figure was lightly poised against the back of the bench, her knees were crossed; the tip of a patent-leather shoe emerged beneath her skirt. There was something, indeed, inexpressibly dainty about the person of this lady, but young Jolyon's attention was chiefly riveted by the look on her face, which reminded him of his wife. It was as though its owner had come into contact with forces too strong for her. It troubled him, arousing vague feelings of attraction and chivalry. Who was she? And what doing there, alone?

Two young gentlemen of that peculiar breed, at once forward and shy, found in the Regent's Park, came by on their way to lawn tennis, and he noted with disapproval their furtive stares of admiration. A loitering gardener halted to do something unnecessary to a clump of pampas grass; he, too, wanted an excuse for peeping. A gentleman, old, and, by his hat, a professor of horticulture, passed three times to scrutinize her long and stealthily, a queer expression about his lips.

With all these men young Jolyon felt the same vague irritation. She looked at none of them, yet was he certain that every man who passed would look at her like that.

Her face was not the face of a sorceress, who in every look holds out to men the offer of pleasure; it had none of the 'devil's beauty' so highly prized among the first Forsytes of the land; neither was it of that type, no less adorable, associated with the box of chocolate; it was not of the spiritually passionate, or passionately spiritual order, peculiar to house-decoration and modern poetry; nor did it seem to promise to the playwright material for the production of the interesting and neurasthenic figure, who commits suicide in the last act.

In shape and colouring, in its soft persuasive passivity, its sensuous purity, this woman's face reminded him of Titian's 'Heavenly Love,' a reproduction of which hung over the sideboard in his dining-room. And her attraction seemed to be in this soft passivity, in the feeling she gave that to pressure she must yield.

For what or whom was she waiting, in the silence, with the trees dropping here and there a leaf, and the thrushes strutting close on grass, touched with the sparkle of the autumn rime? Then her charming face grew eager, and, glancing round, with almost a lover's jealousy, young Jolyon saw Bosinney striding across the grass.

Curiously he watched the meeting, the look in their eyes, the long clasp of their hands. They sat down close together, linked for all their outward discretion. He heard the rapid murmur of their talk; but what they said he could not catch.

He had rowed in the galley himself! He knew the long hours of waiting and the lean minutes of a half-public meeting; the tortures of suspense that haunt the unhallowed lover.

It required, however, but a glance at their two faces to see that this was none of those affairs of a season that distract men and women about town; none of those sudden appetites that wake up ravening, and are surfeited and asleep again in six weeks. This was the real thing! This was what had happened to himself! Out of this anything might come!

Bosinney was pleading, and she so quiet, so soft, yet immovable in her passivity, sat looking over the grass.

Was he the man to carry her off, that tender, passive being, who would never stir a step for herself? Who had given him all herself, and would die for him, but perhaps would never run away with him!

It seemed to young Jolyon that he could hear her saying: "But, darling, it would ruin you!" For he himself had experienced to the full the gnawing fear at the bottom of each woman's heart that she is a drag on the man she loves.

And he peeped at them no more; but their soft, rapid talk came to his ears, with the stuttering song of some bird who seemed trying to remember the notes of spring: Joy--tragedy? Which--which?

And gradually their talk ceased; long silence followed.

'And where does Soames come in?' young Jolyon thought. 'People think she is concerned about the sin of deceiving her husband! Little they know of women! She's eating, after starvation--taking her revenge! And Heaven help her--for he'll take his.'

He heard the swish of silk, and, spying round the laurel, saw them walking away, their hands stealthily joined....

At the end of July old Jolyon had taken his grand-daughter to the mountains; and on that visit (the last they ever paid) June recovered to a great extent her health and spirits. In the hotels, filled with British Forsytes--for old Jolyon could not bear a 'set of Germans,' as he called all foreigners--she was looked upon with respect--the only grand-daughter of that fine-looking, and evidently wealthy, old Mr. Forsyte. She did not mix freely with people--to mix freely with people was not June's habit--but she formed some friendships, and notably one in the Rhone Valley, with a French girl who was dying of consumption.

Determining at once that her friend should not die, she forgot, in the institution of a campaign against Death, much of her own trouble.

Old Jolyon watched the new intimacy with relief and disapproval; for this additional proof that her life was to be passed amongst 'lame ducks' worried him. Would she never make a friendship or take an interest in something that would be of real benefit to her?

'Taking up with a parcel of foreigners,' he called it. He often, however, brought home grapes or roses, and presented them to 'Mam'zelle' with an ingratiating twinkle.

Towards the end of September, in spite of June's disapproval, Mademoiselle Vigor breathed her last in the little hotel at St. Luc, to which they had moved her; and June took her defeat so deeply to heart that old Jolyon carried her away to Paris. Here, in contemplation of the 'Venus de Milo' and the 'Madeleine,' she shook off her depression, and when, towards the middle of October, they returned to town, her grandfather believed that he had effected a cure.

No sooner, however, had they established themselves in Stanhope Gate than he perceived to his dismay a return of her old absorbed and brooding manner. She would sit, staring in front of her, her chin on her hand, like a little Norse spirit, grim and intent, while all around in the electric light, then just installed, shone the great, drawing-room brocaded up to the frieze, full of furniture

from Baple and Pullbred's. And in the huge gilt mirror were reflected those Dresden china groups of young men in tight knee breeches, at the feet of full-bosomed ladies nursing on their laps pet lambs, which old Jolyon had bought when he was a bachelor and thought so highly of in these days of degenerate taste. He was a man of most open mind, who, more than any Forsyte of them all, had moved with the times, but he could never forget that he had bought these groups at Jobson's, and given a lot of money for them. He often said to June, with a sort of disillusioned contempt:

"You don't care about them! They're not the gimcrack things you and your friends like, but they cost me seventy pounds!" He was not a man who allowed his taste to be warped when he knew for solid reasons that it was sound.

One of the first things that June did on getting home was to go round to Timothy's. She persuaded herself that it was her duty to call there, and cheer him with an account of all her travels; but in reality she went because she knew of no other place where, by some random speech, or roundabout question, she could glean news of Bosinney.

They received her most cordially: And how was her dear grandfather? He had not been to see them since May. Her Uncle Timothy was very poorly, he had had a lot of trouble with the chimney-sweep in his bedroom; the stupid man had let the soot down the chimney! It had quite upset her uncle.

June sat there a long time, dreading, yet passionately hoping, that they would speak of Bosinney.

But paralyzed by unaccountable discretion, Mrs. Septimus Small let fall no word, neither did she question June about him. In desperation the girl asked at last whether Soames and Irene were in town--she had not yet been to see anyone.

It was Aunt Hester who replied: Oh, yes, they were in town, they had not been away at all. There was some little difficulty about the house, she believed. June had heard, no doubt! She had better ask her Aunt Juley!

June turned to Mrs. Small, who sat upright in her chair, her hands clasped, her face covered with innumerable pouts. In answer to the girl's look she maintained a strange silence, and when she spoke it was to ask June whether she had worn night-socks up in those high hotels where it must be so cold of a night.

June answered that she had not, she hated the stuffy things; and rose to leave.

Mrs. Small's infallibly chosen silence was far more ominous to her than anything that could have been said.

Before half an hour was over she had dragged the truth from Mrs. Baynes in Lowndes Square, that Soames was bringing an action against Bosinney over the decoration of the house.

Instead of disturbing her, the news had a strangely calming effect; as though she saw in the prospect of this struggle new hope for herself. She learnt that the case was expected to come on in about a month, and there seemed little or no prospect of Bosinney's success.

"And whatever he'll do I can't think," said Mrs. Baynes; "it's very dreadful for him, you know--he's got no money--he's very hard up. And we can't help him, I'm sure. I'm told the money-lenders won't lend if you have no security, and he has none--none at all."

Her embonpoint had increased of late; she was in the full swing of autumn organization, her writing-table literally strewn with the menus of charity functions. She looked meaningly at June, with her round eyes of parrot-grey.

The sudden flush that rose on the girl's intent young face--she must have seen spring up before her a great hope--the sudden sweetness of her smile, often came back to Lady Baynes in after years (Baynes was knighted when he built that public Museum of Art which has given so much employment to officials, and so little pleasure to those working classes for whom it was designed).

The memory of that change, vivid and touching, like the breaking open of a flower, or the first sun after long winter, the memory, too, of all that came after, often intruded itself, unaccountably, inopportunely on Lady Baynes, when her mind was set upon the most important things.

This was the very afternoon of the day that young Jolyon witnessed the meeting in the Botanical Gardens, and on this day, too, old Jolyon paid a visit to his solicitors, Forsyte, Bustard, and Forsyte, in the Poultry. Soames was not in, he had gone down to Somerset House; Bustard was buried up to the hilt in papers and that inaccessible apartment, where he was judiciously placed, in order that he might do as much work as possible; but James was in the front office, biting a finger, and lugubriously turning over the pleadings in Forsyte v. Bosinney.

This sound lawyer had only a sort of luxurious dread of the 'nice point,' enough to set up a pleasurable feeling of fuss; for his good practical sense told him that if he himself were on the Bench he would not pay much attention to it. But he was afraid that this Bosinney would go bankrupt and Soames would have to find the money after all, and costs into the bargain. And behind this tangible dread there was always that intangible trouble, lurking in the background, intricate, dim, scandalous, like a bad dream, and of which this action was but an outward and visible sign.

He raised his head as old Jolyon came in, and muttered: "How are you, Jolyon? Haven't seen you for an age. You've been to Switzerland, they tell me. This young Bosinney, he's got himself into a mess. I knew how it would be!" He held out the papers, regarding his elder brother with nervous gloom.

Old Jolyon read them in silence, and while he read them James looked at the floor, biting his fingers the while.

Old Jolyon pitched them down at last, and they fell with a thump amongst a mass of affidavits in 're Buncombe, deceased,' one of the many branches of that parent and profitable tree, 'Fryer v. Forsyte.'

"I don't know what Soames is about," he said, "to make a fuss over a few hundred pounds. I thought he was a man of property."

James' long upper lip twitched angrily; he could not bear his son to be attacked in such a spot.

"It's not the money," he began, but meeting his brother's glance, direct, shrewd, judicial, he stopped.

There was a silence.

"I've come in for my Will," said old Jolyon at last, tugging at his moustache.

James' curiosity was roused at once. Perhaps nothing in this life was more stimulating to him than a Will; it was the supreme deal with property, the final inventory of a man's belongings, the last word on what he was worth. He sounded the bell.

"Bring in Mr. Jolyon's Will," he said to an anxious, dark-haired clerk.

"You going to make some alterations?" And through his mind there flashed the thought: 'Now, am I worth as much as he?'

Old Jolyon put the Will in his breast pocket, and James twisted his long legs regretfully.

"You've made some nice purchases lately, they tell me," he said.

"I don't know where you get your information from," answered old Jolyon sharply. "When's this action coming on? Next month? I can't tell what you've got in your minds. You must manage your own affairs; but if you take my advice, you'll settle it out of Court. Good-bye!" With a cold handshake he was gone.

James, his fixed grey-blue eye corkscrewing round some secret anxious image, began again to bite his finger.

Old Jolyon took his Will to the offices of the New Colliery Company, and sat down in the empty Board Room to read it through. He answered 'Down-by-the-starn' Hemmings so tartly when the latter, seeing his Chairman seated there, entered with the new Superintendent's first report, that the Secretary withdrew with regretful dignity; and sending for the transfer clerk, blew him up till the poor youth knew not where to look.

It was not--by George--as he (Down-by-the-starn) would have him know, for a whippersnapper of a young fellow like him, to come down to that office, and think that he was God Almighty. He (Down-by-the-starn) had been head of that office for more years than a boy like him could count, and if he thought that when he had finished all his work, he could sit there doing nothing, he did not know him, Hemmings (Down-by-the-starn), and so forth.

On the other side of the green baize door old Jolyon sat at the long, mahogany-and-leather board table, his thick, loose-jointed, tortoiseshell eye-glasses perched on the bridge of his nose, his gold pencil moving down the clauses of his Will.

It was a simple affair, for there were none of those vexatious little legacies and donations to charities, which fritter away a man's possessions, and damage the majestic effect of that little paragraph in the morning papers accorded to Forsytes who die with a hundred thousand pounds.

A simple affair. Just a bequest to his son of twenty thousand, and 'as to the residue of my property of whatsoever kind whether realty or personalty, or partaking of the nature of either--upon trust to pay the proceeds rents annual produce dividends or interest thereof and thereon to my said grand-daughter June Forsyte or her assigns during her life to be for her sole use and benefit and without, etc... and from and after her death or decease upon trust to convey assign transfer or make over the said last-mentioned lands hereditaments premises trust moneys stocks funds investments and securities or such as shall then stand for and represent the same unto such person or persons whether one or more for such intents purposes and uses and generally in such manner way and form in all respects as the said June Forsyte notwithstanding coverture shall by her last Will and Testament or any writing or writings in the nature of a Will testament or testamentary disposition to be by her duly made signed and published direct appoint or make over give and dispose of the same And in default etc.... Provided always...' and so on, in seven folios of brief and simple phraseology.

The Will had been drawn by James in his palmy days. He had foreseen almost every contingency.

Old Jolyon sat a long time reading this Will; at last he took half a sheet of paper from the rack, and made a prolonged pencil note; then buttoning up the Will, he caused a cab to be called and drove to the offices of Paramor and Herring, in Lincoln's Inn Fields. Jack Herring was dead, but his nephew was still in the firm, and old Jolyon was closeted with him for half an hour.

He had kept the hansom, and on coming out, gave the driver the address--3, Wistaria Avenue.

He felt a strange, slow satisfaction, as though he had scored a victory over James and the man of property. They should not poke their noses into his affairs any more; he had just cancelled their trusteeships of his Will; he would take the whole of his business out of their hands, and put it into the hands of young Herring, and he would move the business of his Companies too. If that young Soames were such a man of property, he would never miss a thousand a year or so; and under his great white moustache old Jolyon grimly smiled. He felt that what he was doing was in the nature of retributive justice, richly deserved.

Slowly, surely, with the secret inner process that works the destruction of an old tree, the poison of the wounds to his happiness, his will, his pride, had corroded the comely edifice of his philosophy. Life had worn him down on one side, till, like that family of which he was the head, he had lost balance.

To him, borne northwards towards his son's house, the thought of the new disposition of property, which he had just set in motion, appeared vaguely in the light of a stroke of punishment, levelled at that family and that Society, of which James and his son seemed to him the representatives. He had made a restitution to young Jolyon, and restitution to young Jolyon satisfied his secret craving for revenge-revenge against Time, sorrow, and interference, against all that incalculable sum of disapproval that had been bestowed by the world for fifteen years on his only son. It presented itself as the one possible way of asserting once more the domination of his will; of forcing James, and Soames, and the family, and all those hidden masses of Forsytes--a great stream rolling against the single dam of his obstinacy--to recognise once and for all that he would be master. It was sweet to think that at last he was going to make the boy a richer man by far than that son of James, that 'man of property.' And it was sweet to give to Jo, for he loved his son.

Neither young Jolyon nor his wife were in (young Jolyon indeed was not back from the Botanical), but the little maid told him that she expected the master at any moment:

"He's always at 'ome to tea, sir, to play with the children."

Old Jolyon said he would wait; and sat down patiently enough in the faded, shabby drawing room, where, now that the summer chintzes were removed, the old chairs and sofas revealed all their threadbare deficiencies. He longed to send for the children; to have them there beside him, their supple bodies against his knees; to hear Jolly's: "Hallo, Gran!" and see his rush; and feel Holly's soft little hand stealing up against his cheek. But he would not. There was solemnity in what he had come to do, and until it was over he would not play. He amused himself by thinking how with two strokes of his pen he was going to restore the look of caste so conspicuously absent from everything in that little house; how he could fill these rooms, or others in some larger mansion, with triumphs of art from Baple and Pullbred's; how he could send little Jolly to Harrow and Oxford (he no longer had faith in Eton and Cambridge, for his son had been there); how he could procure little Holly the best musical instruction, the child had a remarkable aptitude.

As these visions crowded before him, causing emotion to swell his heart, he rose, and stood at the window, looking down into the little walled strip of garden, where the pear-tree, bare of leaves before its time, stood with gaunt branches in the slow-gathering mist

of the autumn afternoon. The dog Balthasar, his tail curled tightly over a piebald, furry back, was walking at the farther end, sniffing at the plants, and at intervals placing his leg for support against the wall.

And old Jolyon mused.

What pleasure was there left but to give? It was pleasant to give, when you could find one who would be thankful for what you gave--one of your own flesh and blood! There was no such satisfaction to be had out of giving to those who did not belong to you, to those who had no claim on you! Such giving as that was a betrayal of the individualistic convictions and actions of his life, of all his enterprise, his labour, and his moderation, of the great and proud fact that, like tens of thousands of Forsytes before him, tens of thousands in the present, tens of thousands in the future, he had always made his own, and held his own, in the world.

And, while he stood there looking down on the smut-covered foliage of the laurels, the black-stained grass-plot, the progress of the dog Balthasar, all the suffering of the fifteen years during which he had been baulked of legitimate enjoyment mingled its gall with the sweetness of the approaching moment.

Young Jolyon came at last, pleased with his work, and fresh from long hours in the open air. On hearing that his father was in the drawing room, he inquired hurriedly whether Mrs. Forsyte was at home, and being informed that she was not, heaved a sigh of relief. Then putting his painting materials carefully in the little coat-closet out of sight, he went in.

With characteristic decision old Jolyon came at once to the point. "I've been altering my arrangements, Jo," he said. "You can cut your coat a bit longer in the future--I'm settling a thousand a year on you at once. June will have fifty thousand at my death; and you the rest. That dog of yours is spoiling the garden. I shouldn't keep a dog, if I were you!"

The dog Balthasar, seated in the centre of the lawn, was examining his tail.

Young Jolyon looked at the animal, but saw him dimly, for his eyes were misty.

"Yours won't come short of a hundred thousand, my boy," said old Jolyon; "I thought you'd better know. I haven't much longer to live at my age. I shan't allude to it again. How's your wife? And--give her my love."

Young Jolyon put his hand on his father's shoulder, and, as neither spoke, the episode closed.

Having seen his father into a hansom, young Jolyon came back to the drawing-room and stood, where old Jolyon had stood, looking down on the little garden. He tried to realize all that this meant to him, and, Forsyte that he was, vistas of property were opened out in his brain; the years of half rations through which he had passed had not sapped his natural instincts. In extremely practical form, he thought of travel, of his wife's costume, the children's education, a pony for Jolly, a thousand things; but in the midst of all he thought, too, of Bosinney and his mistress, and the broken song of the thrush. Joy--tragedy! Which? Which?

The old past--the poignant, suffering, passionate, wonderful past, that no money could buy, that nothing could restore in all its burning sweetness--had come back before him.

When his wife came in he went straight up to her and took her in his arms; and for a long time he stood without speaking, his eyes closed, pressing her to him, while she looked at him with a wondering, adoring, doubting look in her eyes.

CHAPTER IV

VOYAGE INTO THE INFERNO

The morning after a certain night on which Soames at last asserted his rights and acted like a man, he breakfasted alone.

He breakfasted by gaslight, the fog of late November wrapping the town as in some monstrous blanket till the trees of the Square even were barely visible from the dining-room window.

He ate steadily, but at times a sensation as though he could not swallow attacked him. Had he been right to yield to his overmastering hunger of the night before, and break down the resistance which he had suffered now too long from this woman who was his lawful and solemnly constituted helpmate?

He was strangely haunted by the recollection of her face, from before which, to soothe her, he had tried to pull her hands--of her terrible smothered sobbing, the like of which he had never heard, and still seemed to hear; and he was still haunted by the odd,

intolerable feeling of remorse and shame he had felt, as he stood looking at her by the flame of the single candle, before silently slinking away.

And somehow, now that he had acted like this, he was surprised at himself.

Two nights before, at Winifred Dartie's, he had taken Mrs. MacAnder into dinner. She had said to him, looking in his face with her sharp, greenish eyes: "And so your wife is a great friend of that Mr. Bosinney's?"

Not deigning to ask what she meant, he had brooded over her words.

They had roused in him a fierce jealousy, which, with the peculiar perversion of this instinct, had turned to fiercer desire.

Without the incentive of Mrs. MacAnder's words he might never have done what he had done. Without their incentive and the accident of finding his wife's door for once unlocked, which had enabled him to steal upon her asleep.

Slumber had removed his doubts, but the morning brought them again. One thought comforted him: No one would know--it was not the sort of thing that she would speak about.

And, indeed, when the vehicle of his daily business life, which needed so imperatively the grease of clear and practical thought, started rolling once more with the reading of his letters, those nightmare-like doubts began to assume less extravagant importance at the back of his mind. The incident was really not of great moment; women made a fuss about it in books; but in the cool judgment of right-thinking men, of men of the world, of such as he recollected often received praise in the Divorce Court, he had but done his best to sustain the sanctity of marriage, to prevent her from abandoning her duty, possibly, if she were still seeing Bosinney, from....

No, he did not regret it.

Now that the first step towards reconciliation had been taken, the rest would be comparatively--comparatively....

He, rose and walked to the window. His nerve had been shaken. The sound of smothered sobbing was in his ears again. He could not get rid of it.

He put on his fur coat, and went out into the fog; having to go into the City, he took the underground railway from Sloane Square station.

In his corner of the first-class compartment filled with City men the smothered sobbing still haunted him, so he opened the Times with the rich crackle that drowns all lesser sounds, and, barricaded behind it, set himself steadily to con the news.

He read that a Recorder had charged a grand jury on the previous day with a more than usually long list of offences. He read of three murders, five manslaughters, seven arsons, and as many as eleven rapes--a surprisingly high number--in addition to many less conspicuous crimes, to be tried during a coming Sessions; and from one piece of news he went on to another, keeping the paper well before his face.

And still, inseparable from his reading, was the memory of Irene's tear-stained face, and the sounds from her broken heart.

The day was a busy one, including, in addition to the ordinary affairs of his practice, a visit to his brokers, Messrs. Grin and Grinning, to give them instructions to sell his shares in the New Colliery Co., Ltd., whose business he suspected, rather than knew, was stagnating (this enterprise afterwards slowly declined, and was ultimately sold for a song to an American syndicate); and a long conference at Waterbuck, Q.C.'s chambers, attended by Boulter, by Fiske, the junior counsel, and Waterbuck, Q.C., himself.

The case of Forsyte v. Bosinney was expected to be reached on the morrow, before Mr. Justice Bentham.

Mr. Justice Bentham, a man of common-sense rather than too great legal knowledge, was considered to be about the best man they could have to try the action. He was a 'strong' Judge.

Waterbuck, Q.C., in pleasing conjunction with an almost rude neglect of Boulter and Fiske paid to Soames a good deal of attention, by instinct or the sounder evidence of rumour, feeling him to be a man of property.

He held with remarkable consistency to the opinion he had already expressed in writing, that the issue would depend to a great extent on the evidence given at the trial, and in a few well directed remarks he advised Soames not to be too careful in giving that evidence. "A little bluffness, Mr. Forsyte," he said, "a little bluffness," and after he had spoken he laughed firmly, closed his lips

tight, and scratched his head just below where he had pushed his wig back, for all the world like the gentleman-farmer for whom he loved to be taken. He was considered perhaps the leading man in breach of promise cases.

Soames used the underground again in going home.

The fog was worse than ever at Sloane Square station. Through the still, thick blur, men groped in and out; women, very few, grasped their reticules to their bosoms and handkerchiefs to their mouths; crowned with the weird excrescence of the driver, haloed by a vague glow of lamp-light that seemed to drown in vapour before it reached the pavement, cabs loomed dim-shaped ever and again, and discharged citizens, bolting like rabbits to their burrows.

And these shadowy figures, wrapped each in his own little shroud of fog, took no notice of each other. In the great warren, each rabbit for himself, especially those clothed in the more expensive fur, who, afraid of carriages on foggy days, are driven underground.

One figure, however, not far from Soames, waited at the station door.

Some buccaneer or lover, of whom each Forsyte thought: 'Poor devil! looks as if he were having a bad time!' Their kind hearts beat a stroke faster for that poor, waiting, anxious lover in the fog; but they hurried by, well knowing that they had neither time nor money to spare for any suffering but their own.

Only a policeman, patrolling slowly and at intervals, took an interest in that waiting figure, the brim of whose slouch hat half hid a face reddened by the cold, all thin, and haggard, over which a hand stole now and again to smooth away anxiety, or renew the resolution that kept him waiting there. But the waiting lover (if lover he were) was used to policemen's scrutiny, or too absorbed in his anxiety, for he never flinched. A hardened case, accustomed to long trysts, to anxiety, and fog, and cold, if only his mistress came at last. Foolish lover! Fogs last until the spring; there is also snow and rain, no comfort anywhere; gnawing fear if you bring her out, gnawing fear if you bid her stay at home!

"Serve him right; he should arrange his affairs better!"

So any respectable Forsyte. Yet, if that sounder citizen could have listened at the waiting lover's heart, out there in the fog and the cold, he would have said again: "Yes, poor devil he's having a bad time!"

Soames got into his cab, and, with the glass down, crept along Sloane Street, and so along the Brompton Road, and home. He reached his house at five.

His wife was not in. She had gone out a quarter of an hour before. Out at such a time of night, into this terrible fog! What was the meaning of that?

He sat by the dining-room fire, with the door open, disturbed to the soul, trying to read the evening paper. A book was no good--in daily papers alone was any narcotic to such worry as his. From the customary events recorded in the journal he drew some comfort. 'Suicide of an actress'--'Grave indisposition of a Statesman' (that chronic sufferer)--'Divorce of an army officer'--'Fire in a colliery'--he read them all. They helped him a little--prescribed by the greatest of all doctors, our natural taste.

It was nearly seven when he heard her come in.

The incident of the night before had long lost its importance under stress of anxiety at her strange sortie into the fog. But now that Irene was home, the memory of her broken-hearted sobbing came back to him, and he felt nervous at the thought of facing her.

She was already on the stairs; her grey fur coat hung to her knees, its high collar almost hid her face, she wore a thick veil.

She neither turned to look at him nor spoke. No ghost or stranger could have passed more silently.

Bilson came to lay dinner, and told him that Mrs. Forsyte was not coming down; she was having the soup in her room.

For once Soames did not 'change'; it was, perhaps, the first time in his life that he had sat down to dinner with soiled cuffs, and, not even noticing them, he brooded long over his wine. He sent Bilson to light a fire in his picture-room, and presently went up there himself.

Turning on the gas, he heaved a deep sigh, as though amongst these treasures, the backs of which confronted him in stacks, around the little room, he had found at length his peace of mind. He went straight up to the greatest treasure of them all, an

undoubted Turner, and, carrying it to the easel, turned its face to the light. There had been a movement in Turners, but he had not been able to make up his mind to part with it. He stood for a long time, his pale, clean-shaven face poked forward above his stand-up collar, looking at the picture as though he were adding it up; a wistful expression came into his eyes; he found, perhaps, that it came to too little. He took it down from the easel to put it back against the wall; but, in crossing the room, stopped, for he seemed to hear sobbing.

It was nothing--only the sort of thing that had been bothering him in the morning. And soon after, putting the high guard before the blazing fire, he stole downstairs.

Fresh for the morrow! was his thought. It was long before he went to sleep....

It is now to George Forsyte that the mind must turn for light on the events of that fog-engulfed afternoon.

The wittiest and most sportsmanlike of the Forsytes had passed the day reading a novel in the paternal mansion at Princes' Gardens. Since a recent crisis in his financial affairs he had been kept on parole by Roger, and compelled to reside 'at home.'

Towards five o'clock he went out, and took train at South Kensington Station (for everyone to-day went Underground). His intention was to dine, and pass the evening playing billiards at the Red Pottle--that unique hostel, neither club, hotel, nor good gilt restaurant.

He got out at Charing Cross, choosing it in preference to his more usual St. James's Park, that he might reach Jermyn Street by better lighted ways.

On the platform his eyes--for in combination with a composed and fashionable appearance, George had sharp eyes, and was always on the look-out for fillips to his sardonic humour--his eyes were attracted by a man, who, leaping from a first-class compartment, staggered rather than walked towards the exit.

'So ho, my bird!' said George to himself; 'why, it's "the Buccaneer!"' and he put his big figure on the trail. Nothing afforded him greater amusement than a drunken man.

Bosinney, who wore a slouch hat, stopped in front of him, spun around, and rushed back towards the carriage he had just left. He was too late. A porter caught him by the coat; the train was already moving on.

George's practised glance caught sight of the face of a lady clad in a grey fur coat at the carriage window. It was Mrs. Soames--and George felt that this was interesting!

And now he followed Bosinney more closely than ever--up the stairs, past the ticket collector into the street. In that progress, however, his feelings underwent a change; no longer merely curious and amused, he felt sorry for the poor fellow he was shadowing. 'The Buccaneer' was not drunk, but seemed to be acting under the stress of violent emotion; he was talking to himself, and all that George could catch were the words "Oh, God!" Nor did he appear to know what he was doing, or where going; but stared, hesitated, moved like a man out of his mind; and from being merely a joker in search of amusement, George felt that he must see the poor chap through.

He had 'taken the knock'--'taken the knock!' And he wondered what on earth Mrs. Soames had been saying, what on earth she had been telling him in the railway carriage. She had looked bad enough herself! It made George sorry to think of her travelling on with her trouble all alone.

He followed close behind Bosinney's elbow--tall, burly figure, saying nothing, dodging warily--and shadowed him out into the fog.

There was something here beyond a jest! He kept his head admirably, in spite of some excitement, for in addition to compassion, the instincts of the chase were roused within him.

Bosinney walked right out into the thoroughfare--a vast muffled blackness, where a man could not see six paces before him; where, all around, voices or whistles mocked the sense of direction; and sudden shapes came rolling slow upon them; and now and then a light showed like a dim island in an infinite dark sea.

And fast into this perilous gulf of night walked Bosinney, and fast after him walked George. If the fellow meant to put his 'twopenny' under a 'bus, he would stop it if he could! Across the street and back the hunted creature strode, not groping as other men were groping in that gloom, but driven forward as though the faithful George behind wielded a knout; and this chase after a haunted man began to have for George the strangest fascination.

But it was now that the affair developed in a way which ever afterwards caused it to remain green in his mind. Brought to a stand-still in the fog, he heard words which threw a sudden light on these proceedings. What Mrs. Soames had said to Bosinney in the train was now no longer dark. George understood from those mutterings that Soames had exercised his rights over an estranged and unwilling wife in the greatest--the supreme act of property.

His fancy wandered in the fields of this situation; it impressed him; he guessed something of the anguish, the sexual confusion and horror in Bosinney's heart. And he thought: 'Yes, it's a bit thick! I don't wonder the poor fellow is half-cracked!'

He had run his quarry to earth on a bench under one of the lions in Trafalgar Square, a monster sphynx astray like themselves in that gulf of darkness. Here, rigid and silent, sat Bosinney, and George, in whose patience was a touch of strange brotherliness, took his stand behind. He was not lacking in a certain delicacy--a sense of form--that did not permit him to intrude upon this tragedy, and he waited, quiet as the lion above, his fur collar hitched above his ears concealing the fleshy redness of his cheeks, concealing all but his eyes with their sardonic, compassionate stare. And men kept passing back from business on the way to their clubs--men whose figures shrouded in cocoons of fog came into view like spectres, and like spectres vanished. Then even in his compassion George's Quilpish humour broke forth in a sudden longing to pluck these spectres by the sleeve, and say:

"Hi, you Johnnies! You don't often see a show like this! Here's a poor devil whose mistress has just been telling him a pretty little story of her husband; walk up, walk up! He's taken the knock, you see."

In fancy he saw them gaping round the tortured lover; and grinned as he thought of some respectable, newly-married spectre enabled by the state of his own affections to catch an inkling of what was going on within Bosinney; he fancied he could see his mouth getting wider and wider, and the fog going down and down. For in George was all that contempt of the of the married middle-class--peculiar to the wild and sportsmanlike spirits in its ranks.

But he began to be bored. Waiting was not what he had bargained for.

'After all,' he thought, 'the poor chap will get over it; not the first time such a thing has happened in this little city!' But now his quarry again began muttering words of violent hate and anger. And following a sudden impulse George touched him on the shoulder.

Bosinney spun round.

"Who are you? What do you want?"

George could have stood it well enough in the light of the gas lamps, in the light of that everyday world of which he was so hardy a connoisseur; but in this fog, where all was gloomy and unreal, where nothing had that matter-of-fact value associated by Forsytes with earth, he was a victim to strange qualms, and as he tried to stare back into the eyes of this maniac, he thought:

'If I see a bobby, I'll hand him over; he's not fit to be at large.'

But waiting for no answer, Bosinney strode off into the fog, and George followed, keeping perhaps a little further off, yet more than ever set on tracking him down.

'He can't go on long like this,' he thought. 'It's God's own miracle he's not been run over already.' He brooded no more on policemen, a sportsman's sacred fire alive again within him.

Into a denser gloom than ever Bosinney held on at a furious pace; but his pursuer perceived more method in his madness--he was clearly making his way westwards.

'He's really going for Soames!' thought George. The idea was attractive. It would be a sporting end to such a chase. He had always disliked his cousin.

The shaft of a passing cab brushed against his shoulder and made him leap aside. He did not intend to be killed for the Buccaneer, or anyone. Yet, with hereditary tenacity, he stuck to the trail through vapour that blotted out everything but the shadow of the hunted man and the dim moon of the nearest lamp.

Then suddenly, with the instinct of a town-stroller, George knew himself to be in Piccadilly. Here he could find his way blindfold; and freed from the strain of geographical uncertainty, his mind returned to Bosinney's trouble.

Down the long avenue of his man-about-town experience, bursting, as it were, through a smirch of doubtful amours, there stalked to him a memory of his youth. A memory, poignant still, that brought the scent of hay, the gleam of moonlight, a summer magic, into the reek and blackness of this London fog--the memory of a night when in the darkest shadow of a lawn he had overheard from a woman's lips that he was not her sole possessor. And for a moment George walked no longer in black Piccadilly, but lay again, with hell in his heart, and his face to the sweet-smelling, dewy grass, in the long shadow of poplars that hid the moon.

A longing seized him to throw his arm round the Buccaneer, and say, "Come, old boy. Time cures all. Let's go and drink it off!"

But a voice yelled at him, and he started back. A cab rolled out of blackness, and into blackness disappeared. And suddenly George perceived that he had lost Bosinney. He ran forward and back, felt his heart clutched by a sickening fear, the dark fear which lives in the wings of the fog. Perspiration started out on his brow. He stood quite still, listening with all his might.

"And then," as he confided to Dartie the same evening in the course of a game of billiards at the Red Pottle, "I lost him."

Dartie twirled complacently at his dark moustache. He had just put together a neat break of twenty-three,--failing at a 'Jenny.' "And who was she?" he asked.

George looked slowly at the 'man of the world's' fattish, sallow face, and a little grim smile lurked about the curves of his cheeks and his heavy-lidded eyes.

'No, no, my fine fellow,' he thought, 'I'm not going to tell you.' For though he mixed with Dartie a good deal, he thought him a bit of a cad.

"Oh, some little love-lady or other," he said, and chalked his cue.

"A love-lady!" exclaimed Dartie--he used a more figurative expression. "I made sure it was our friend Soa...."

"Did you?" said George curtly. "Then damme you've made an error."

He missed his shot. He was careful not to allude to the subject again till, towards eleven o'clock, having, in his poetic phraseology, 'looked upon the drink when it was yellow,' he drew aside the blind, and gazed out into the street. The murky blackness of the fog was but faintly broken by the lamps of the 'Red Pottle,' and no shape of mortal man or thing was in sight.

"I can't help thinking of that poor Buccaneer," he said. "He may be wandering out there now in that fog. If he's not a corpse," he added with strange dejection.

"Corpse!" said Dartie, in whom the recollection of his defeat at Richmond flared up. "He's all right. Ten to one if he wasn't tight!"

George turned on him, looking really formidable, with a sort of savage gloom on his big face.

"Dry up!" he said. "Don't I tell you he's 'taken the knock!'"

CHAPTER V

THE TRIAL

In the morning of his case, which was second in the list, Soames was again obliged to start without seeing Irene, and it was just as well, for he had not as yet made up his mind what attitude to adopt towards her.

He had been requested to be in court by half-past ten, to provide against the event of the first action (a breach of promise) collapsing, which however it did not, both sides showing a courage that afforded Waterbuck, Q.C., an opportunity for improving his already great reputation in this class of case. He was opposed by Ram, the other celebrated breach of promise man. It was a battle of giants.

The court delivered judgment just before the luncheon interval. The jury left the box for good, and Soames went out to get something to eat. He met James standing at the little luncheon-bar, like a pelican in the wilderness of the galleries, bent over a sandwich with a glass of sherry before him. The spacious emptiness of the great central hall, over which father and son brooded as they stood together, was marred now and then for a fleeting moment by barristers in wig and gown hurriedly bolting across, by an occasional old lady or rusty-coated man, looking up in a frightened way, and by two persons, bolder than their generation, seated in an embrasure arguing. The sound of their voices arose, together with a scent as of neglected wells, which, mingling with the odour

of the galleries, combined to form the savour, like nothing but the emanation of a refined cheese, so indissolubly connected with the administration of British Justice.

It was not long before James addressed his son.

"When's your case coming on? I suppose it'll be on directly. I shouldn't wonder if this Bosinney'd say anything; I should think he'd have to. He'll go bankrupt if it goes against him." He took a large bite at his sandwich and a mouthful of sherry. "Your mother," he said, "wants you and Irene to come and dine to-night."

A chill smile played round Soames' lips; he looked back at his father. Anyone who had seen the look, cold and furtive, thus interchanged, might have been pardoned for not appreciating the real understanding between them. James finished his sherry at a draught.

"How much?" he asked.

On returning to the court Soames took at once his rightful seat on the front bench beside his solicitor. He ascertained where his father was seated with a glance so sidelong as to commit nobody.

James, sitting back with his hands clasped over the handle of his umbrella, was brooding on the end of the bench immediately behind counsel, whence he could get away at once when the case was over. He considered Bosinney's conduct in every way outrageous, but he did not wish to run up against him, feeling that the meeting would be awkward.

Next to the Divorce Court, this court was, perhaps, the favourite emporium of justice, libel, breach of promise, and other commercial actions being frequently decided there. Quite a sprinkling of persons unconnected with the law occupied the back benches, and the hat of a woman or two could be seen in the gallery.

The two rows of seats immediately in front of James were gradually filled by barristers in wigs, who sat down to make pencil notes, chat, and attend to their teeth; but his interest was soon diverted from these lesser lights of justice by the entrance of Waterbuck, Q.C., with the wings of his silk gown rustling, and his red, capable face supported by two short, brown whiskers. The famous Q.C. looked, as James freely admitted, the very picture of a man who could heckle a witness.

For all his experience, it so happened that he had never seen Waterbuck, Q.C., before, and, like many Forsytes in the lower branch of the profession, he had an extreme admiration for a good cross-examiner. The long, lugubrious folds in his cheeks relaxed somewhat after seeing him, especially as he now perceived that Soames alone was represented by silk.

Waterbuck, Q.C., had barely screwed round on his elbow to chat with his Junior before Mr. Justice Bentham himself appeared--a thin, rather hen-like man, with a little stoop, clean-shaven under his snowy wig. Like all the rest of the court, Waterbuck rose, and remained on his feet until the judge was seated. James rose but slightly; he was already comfortable, and had no opinion of Bentham, having sat next but one to him at dinner twice at the Bumley Tomms'. Bumley Tomm was rather a poor thing, though he had been so successful. James himself had given him his first brief. He was excited, too, for he had just found out that Bosinney was not in court.

'Now, what's he mean by that?' he kept on thinking.

The case having been called on, Waterbuck, Q.C., pushing back his papers, hitched his gown on his shoulder, and, with a semi-circular look around him, like a man who is going to bat, arose and addressed the Court.

The facts, he said, were not in dispute, and all that his Lordship would be asked was to interpret the correspondence which had taken place between his client and the defendant, an architect, with reference to the decoration of a house. He would, however, submit that this correspondence could only mean one very plain thing. After briefly reciting the history of the house at Robin Hill, which he described as a mansion, and the actual facts of expenditure, he went on as follows:

"My client, Mr. Soames Forsyte, is a gentleman, a man of property, who would be the last to dispute any legitimate claim that might be made against him, but he has met with such treatment from his architect in the matter of this house, over which he has, as your lordship has heard, already spent some twelve--some twelve thousand pounds, a sum considerably in advance of the amount he had originally contemplated, that as a matter of principle--and this I cannot too strongly emphasize--as a matter of principle, and in the interests of others, he has felt himself compelled to bring this action. The point put forward in defence by the architect I will suggest to your lordship is not worthy of a moment's serious consideration." He then read the correspondence.

His client, "a man of recognised position," was prepared to go into the box, and to swear that he never did authorize, that it was never in his mind to authorize, the expenditure of any money beyond the extreme limit of twelve thousand and fifty pounds, which he had clearly fixed; and not further to waste the time of the court, he would at once call Mr. Forsyte.

Soames then went into the box. His whole appearance was striking in its composure. His face, just supercilious enough, pale and clean-shaven, with a little line between the eyes, and compressed lips; his dress in unostentatious order, one hand neatly gloved, the other bare. He answered the questions put to him in a somewhat low, but distinct voice. His evidence under cross-examination savoured of taciturnity.

Had he not used the expression, "a free hand"? No.

"Come, come!"

The expression he had used was 'a free hand in the terms of this correspondence.'

"Would you tell the Court that that was English?"

"Yes!"

"What do you say it means?"

"What it says!"

"Are you prepared to deny that it is a contradiction in terms?"

"Yes."

"You are not an Irishman?"

"No."

"Are you a well-educated man?"

"Yes."

"And yet you persist in that statement?"

"Yes."

Throughout this and much more cross-examination, which turned again and again around the 'nice point,' James sat with his hand behind his ear, his eyes fixed upon his son.

He was proud of him! He could not but feel that in similar circumstances he himself would have been tempted to enlarge his replies, but his instinct told him that this taciturnity was the very thing. He sighed with relief, however, when Soames, slowly turning, and without any change of expression, descended from the box.

When it came to the turn of Bosinney's Counsel to address the Judge, James redoubled his attention, and he searched the Court again and again to see if Bosinney were not somewhere concealed.

Young Chankery began nervously; he was placed by Bosinney's absence in an awkward position. He therefore did his best to turn that absence to account.

He could not but fear--he said--that his client had met with an accident. He had fully expected him there to give evidence; they had sent round that morning both to Mr. Bosinney's office and to his rooms (though he knew they were one and the same, he thought it was as well not to say so), but it was not known where he was, and this he considered to be ominous, knowing how anxious Mr. Bosinney had been to give his evidence. He had not, however, been instructed to apply for an adjournment, and in default of such instruction he conceived it his duty to go on. The plea on which he somewhat confidently relied, and which his client, had he not unfortunately been prevented in some way from attending, would have supported by his evidence, was that such an expression as a 'free hand' could not be limited, fettered, and rendered unmeaning, by any verbiage which might follow it. He would go further and say that the correspondence showed that whatever he might have said in his evidence, Mr. Forsyte had in fact never contemplated repudiating liability on any of the work ordered or executed by his architect. The defendant had certainly never contemplated such a

contingency, or, as was demonstrated by his letters, he would never have proceeded with the work--a work of extreme delicacy, carried out with great care and efficiency, to meet and satisfy the fastidious taste of a connoisseur, a rich man, a man of property. He felt strongly on this point, and feeling strongly he used, perhaps, rather strong words when he said that this action was of a most unjustifiable, unexpected, indeed--unprecedented character. If his Lordship had had the opportunity that he himself had made it his duty to take, to go over this very fine house and see the great delicacy and beauty of the decorations executed by his client--an artist in his most honourable profession--he felt convinced that not for one moment would his Lordship tolerate this, he would use no stronger word than daring attempt to evade legitimate responsibility.

Taking the text of Soames' letters, he lightly touched on 'Boileau v. The Blasted Cement Company, Limited.' "It is doubtful," he said, "what that authority has decided; in any case I would submit that it is just as much in my favour as in my friend's." He then argued the 'nice point' closely. With all due deference he submitted that Mr. Forsyte's expression nullified itself. His client not being a rich man, the matter was a serious one for him; he was a very talented architect, whose professional reputation was undoubtedly somewhat at stake. He concluded with a perhaps too personal appeal to the Judge, as a lover of the arts, to show himself the protector of artists, from what was occasionally--he said occasionally--the too iron hand of capital. "What," he said, "will be the position of the artistic professions, if men of property like this Mr. Forsyte refuse, and are allowed to refuse, to carry out the obligations of the commissions which they have given." He would now call his client, in case he should at the last moment have found himself able to be present.

The name Philip Baynes Bosinney was called three times by the Ushers, and the sound of the calling echoed with strange melancholy throughout the Court and Galleries.

The crying of this name, to which no answer was returned, had upon James a curious effect: it was like calling for your lost dog about the streets. And the creepy feeling that it gave him, of a man missing, grated on his sense of comfort and security-on his cosiness. Though he could not have said why, it made him feel uneasy.

He looked now at the clock--a quarter to three! It would be all over in a quarter of an hour. Where could the young fellow be?

It was only when Mr. Justice Bentham delivered judgment that he got over the turn he had received.

Behind the wooden erection, by which he was fenced from more ordinary mortals, the learned Judge leaned forward. The electric light, just turned on above his head, fell on his face, and mellowed it to an orange hue beneath the snowy crown of his wig; the amplitude of his robes grew before the eye; his whole figure, facing the comparative dusk of the Court, radiated like some majestic and sacred body. He cleared his throat, took a sip of water, broke the nib of a quill against the desk, and, folding his bony hands before him, began.

To James he suddenly loomed much larger than he had ever thought Bentham would loom. It was the majesty of the law; and a person endowed with a nature far less matter-of-fact than that of James might have been excused for failing to pierce this halo, and disinter therefrom the somewhat ordinary Forsyte, who walked and talked in every-day life under the name of Sir Walter Bentham.

He delivered judgment in the following words:

"The facts in this case are not in dispute. On May 15 last the defendant wrote to the plaintiff, requesting to be allowed to withdraw from his professional position in regard to the decoration of the plaintiff's house, unless he were given 'a free hand.' The plaintiff, on May 17, wrote back as follows: 'In giving you, in accordance with your request, this free hand, I wish you to clearly understand that the total cost of the house as handed over to me completely decorated, inclusive of your fee (as arranged between us) must not exceed twelve thousand pounds.' To this letter the defendant replied on May 18: 'If you think that in such a delicate matter as decoration I can bind myself to the exact pound, I am afraid you are mistaken.' On May 19 the plaintiff wrote as follows: 'I did not mean to say that if you should exceed the sum named in my letter to you by ten or twenty or even fifty pounds there would be any difficulty between us. You have a free hand in the terms of this correspondence, and I hope you will see your way to completing the decorations.' On May 20 the defendant replied thus shortly: 'Very well.'

"In completing these decorations, the defendant incurred liabilities and expenses which brought the total cost of this house up to the sum of twelve thousand four hundred pounds, all of which expenditure has been defrayed by the plaintiff. This action has been brought by the plaintiff to recover from the defendant the sum of three hundred and fifty pounds expended by him in excess of a sum of twelve thousand and fifty pounds, alleged by the plaintiff to have been fixed by this correspondence as the maximum sum that the defendant had authority to expend.

"The question for me to decide is whether or no the defendant is liable to refund to the plaintiff this sum. In my judgment he is so liable.

"What in effect the plaintiff has said is this 'I give you a free hand to complete these decorations, provided that you keep within a total cost to me of twelve thousand pounds. If you exceed that sum by as much as fifty pounds, I will not hold you responsible; beyond that point you are no agent of mine, and I shall repudiate liability.' It is not quite clear to me whether, had the plaintiff in fact repudiated liability under his agent's contracts, he would, under all the circumstances, have been successful in so doing; but he has not adopted this course. He has accepted liability, and fallen back upon his rights against the defendant under the terms of the latter's engagement.

"In my judgment the plaintiff is entitled to recover this sum from the defendant.

"It has been sought, on behalf of the defendant, to show that no limit of expenditure was fixed or intended to be fixed by this correspondence. If this were so, I can find no reason for the plaintiff's importation into the correspondence of the figures of twelve thousand pounds and subsequently of fifty pounds. The defendant's contention would render these figures meaningless. It is manifest to me that by his letter of May 20 he assented to a very clear proposition, by the terms of which he must be held to be bound.

"For these reasons there will be judgment for the plaintiff for the amount claimed with costs."

James sighed, and stooping, picked up his umbrella which had fallen with a rattle at the words 'importation into this correspondence.'

Untangling his legs, he rapidly left the Court; without waiting for his son, he snapped up a hansom cab (it was a clear, grey afternoon) and drove straight to Timothy's where he found Swithin; and to him, Mrs. Septimus Small, and Aunt Hester, he recounted the whole proceedings, eating two muffins not altogether in the intervals of speech.

"Soames did very well," he ended; "he's got his head screwed on the right way. This won't please Jolyon. It's a bad business for that young Bosinney; he'll go bankrupt, I shouldn't wonder," and then after a long pause, during which he had stared disquietly into the fire, he added:

"He wasn't there--now why?"

There was a sound of footsteps. The figure of a thick-set man, with the ruddy brown face of robust health, was seen in the back drawing-room. The forefinger of his upraised hand was outlined against the black of his frock coat. He spoke in a grudging voice.

"Well, James," he said, "I can't--I can't stop," and turning round, he walked out.

It was Timothy.

James rose from his chair. "There!" he said, "there! I knew there was something wro...." He checked himself, and was silent, staring before him, as though he had seen a portent.

CHAPTER VI

SOAMES BREAKS THE NEWS

In leaving the Court Soames did not go straight home. He felt disinclined for the City, and drawn by need for sympathy in his triumph, he, too, made his way, but slowly and on foot, to Timothy's in the Bayswater Road.

His father had just left; Mrs. Small and Aunt Hester, in possession of the whole story, greeted him warmly. They were sure he was hungry after all that evidence. Smither should toast him some more muffins, his dear father had eaten them all. He must put his legs up on the sofa; and he must have a glass of prune brandy too. It was so strengthening.

Swithin was still present, having lingered later than his wont, for he felt in want of exercise. On hearing this suggestion, he 'pished.' A pretty pass young men were coming to! His own liver was out of order, and he could not bear the thought of anyone else drinking prune brandy.

He went away almost immediately, saying to Soames: "And how's your wife? You tell her from me that if she's dull, and likes to come and dine with me quietly, I'll give her such a bottle of champagne as she doesn't get every day." Staring down from his height on Soames he contracted his thick, puffy, yellow hand as though squeezing within it all this small fry, and throwing out his chest he waddled slowly away.

Mrs. Small and Aunt Hester were left horrified. Swithin was so droll!

They themselves were longing to ask Soames how Irene would take the result, yet knew that they must not; he would perhaps say something of his own accord, to throw some light on this, the present burning question in their lives, the question that from necessity of silence tortured them almost beyond bearing; for even Timothy had now been told, and the effect on his health was little short of alarming. And what, too, would June do? This, also, was a most exciting, if dangerous speculation!

They had never forgotten old Jolyon's visit, since when he had not once been to see them; they had never forgotten the feeling it gave all who were present, that the family was no longer what it had been--that the family was breaking up.

But Soames gave them no help, sitting with his knees crossed, talking of the Barbizon school of painters, whom he had just discovered. These were the coming men, he said; he should not wonder if a lot of money were made over them; he had his eye on two pictures by a man called Corot, charming things; if he could get them at a reasonable price he was going to buy them--they would, he thought, fetch a big price some day.

Interested as they could not but be, neither Mrs. Septimus Small nor Aunt Hester could entirely acquiesce in being thus put off.

It was interesting--most interesting--and then Soames was so clever that they were sure he would do something with those pictures if anybody could; but what was his plan now that he had won his case; was he going to leave London at once, and live in the country, or what was he going to do?

Soames answered that he did not know, he thought they should be moving soon. He rose and kissed his aunts.

No sooner had Aunt Juley received this emblem of departure than a change came over her, as though she were being visited by dreadful courage; every little roll of flesh on her face seemed trying to escape from an invisible, confining mask.

She rose to the full extent of her more than medium height, and said: "It has been on my mind a long time, dear, and if nobody else will tell you, I have made up my mind that...."

Aunt Hester interrupted her: "Mind, Julia, you do it...." she gasped--"on your own responsibility!"

Mrs. Small went on as though she had not heard: "I think you ought to know, dear, that Mrs. MacAnder saw Irene walking in Richmond Park with Mr. Bosinney."

Aunt Hester, who had also risen, sank back in her chair, and turned her face away. Really Juley was too--she should not do such things when she--Aunt Hester, was in the room; and, breathless with anticipation, she waited for what Soames would answer.

He had flushed the peculiar flush which always centred between his eyes; lifting his hand, and, as it were, selecting a finger, he bit a nail delicately; then, drawling it out between set lips, he said: "Mrs. MacAnder is a cat!"

Without waiting for any reply, he left the room.

When he went into Timothy's he had made up his mind what course to pursue on getting home. He would go up to Irene and say:

"Well, I've won my case, and there's an end of it! I don't want to be hard on Bosinney; I'll see if we can't come to some arrangement; he shan't be pressed. And now let's turn over a new leaf! We'll let the house, and get out of these fogs. We'll go down to Robin Hill at once. I--I never meant to be rough with you! Let's shake hands--and--" Perhaps she would let him kiss her, and forget!

When he came out of Timothy's his intentions were no longer so simple. The smouldering jealousy and suspicion of months blazed up within him. He would put an end to that sort of thing once and for all; he would not have her drag his name in the dirt! If she could not or would not love him, as was her duty and his right--she should not play him tricks with anyone else! He would tax her with it; threaten to divorce her! That would make her behave; she would never face that. But--but--what if she did? He was staggered; this had not occurred to him.

What if she did? What if she made him a confession? How would he stand then? He would have to bring a divorce!

A divorce! Thus close, the word was paralyzing, so utterly at variance with all the principles that had hitherto guided his life. Its lack of compromise appalled him; he felt--like the captain of a ship, going to the side of his vessel, and, with his own hands throwing over the most precious of his bales. This jettisoning of his property with his own hand seemed uncanny to Soames. It would injure him in his profession: He would have to get rid of the house at Robin Hill, on which he had spent so much money, so much anticipation--and at a sacrifice. And she! She would no longer belong to him, not even in name! She would pass out of his life, and he--he should never see her again!

He traversed in the cab the length of a street without getting beyond the thought that he should never see her again!

But perhaps there was nothing to confess, even now very likely there was nothing to confess. Was it wise to push things so far? Was it wise to put himself into a position where he might have to eat his words? The result of this case would ruin Bosinney; a ruined man was desperate, but--what could he do? He might go abroad, ruined men always went abroad. What could they do--if indeed it was 'they'--without money? It would be better to wait and see how things turned out. If necessary, he could have her watched. The agony of his jealousy (for all the world like the crisis of an aching tooth) came on again; and he almost cried out. But he must decide, fix on some course of action before he got home. When the cab drew up at the door, he had decided nothing.

He entered, pale, his hands moist with perspiration, dreading to meet her, burning to meet her, ignorant of what he was to say or do.

The maid Bilson was in the hall, and in answer to his question: "Where is your mistress?" told him that Mrs. Forsyte had left the house about noon, taking with her a trunk and bag.

Snatching the sleeve of his fur coat away from her grasp, he confronted her:

"What?" he exclaimed; "what's that you said?" Suddenly recollecting that he must not betray emotion, he added: "What message did she leave?" and noticed with secret terror the startled look of the maid's eyes.

"Mrs. Forsyte left no message, sir."

"No message; very well, thank you, that will do. I shall be dining out."

The maid went downstairs, leaving him still in his fur coat, idly turning over the visiting cards in the porcelain bowl that stood on the carved oak rug chest in the hall.

Mr. and Mrs. Bareham Culcher. Mrs. Septimus Small. Mrs. Baynes. Mr. Solomon Thornworthy. Lady Bellis. Miss Hermione Bellis. Miss Winifred Bellis. Miss Ella Bellis.

Who the devil were all these people? He seemed to have forgotten all familiar things. The words 'no message--a trunk, and a bag,' played a hide-and-seek in his brain. It was incredible that she had left no message, and, still in his fur coat, he ran upstairs two steps at a time, as a young married man when he comes home will run up to his wife's room.

Everything was dainty, fresh, sweet-smelling; everything in perfect order. On the great bed with its lilac silk quilt, was the bag she had made and embroidered with her own hands to hold her sleeping things; her slippers ready at the foot; the sheets even turned over at the head as though expecting her.

On the table stood the silver-mounted brushes and bottles from her dressing bag, his own present. There must, then, be some mistake. What bag had she taken? He went to the bell to summon Bilson, but remembered in time that he must assume knowledge of where Irene had gone, take it all as a matter of course, and grope out the meaning for himself.

He locked the doors, and tried to think, but felt his brain going round; and suddenly tears forced themselves into his eyes.

Hurriedly pulling off his coat, he looked at himself in the mirror.

He was too pale, a greyish tinge all over his face; he poured out water, and began feverishly washing.

Her silver-mounted brushes smelt faintly of the perfumed lotion she used for her hair; and at this scent the burning sickness of his jealousy seized him again.

Struggling into his fur, he ran downstairs and out into the street.

He had not lost all command of himself, however, and as he went down Sloane Street he framed a story for use, in case he should not find her at Bosinney's. But if he should? His power of decision again failed; he reached the house without knowing what he should do if he did find her there.

It was after office hours, and the street door was closed; the woman who opened it could not say whether Mr. Bosinney were in or no; she had not seen him that day, not for two or three days; she did not attend to him now, nobody attended to him, he....

Soames interrupted her, he would go up and see for himself. He went up with a dogged, white face.

The top floor was unlighted, the door closed, no one answered his ringing, he could hear no sound. He was obliged to descend, shivering under his fur, a chill at his heart. Hailing a cab, he told the man to drive to Park Lane.

On the way he tried to recollect when he had last given her a cheque; she could not have more than three or four pounds, but there were her jewels; and with exquisite torture he remembered how much money she could raise on these; enough to take them abroad; enough for them to live on for months! He tried to calculate; the cab stopped, and he got out with the calculation unmade.

The butler asked whether Mrs. Soames was in the cab, the master had told him they were both expected to dinner.

Soames answered: "No. Mrs. Forsyte has a cold."

The butler was sorry.

Soames thought he was looking at him inquisitively, and remembering that he was not in dress clothes, asked: "Anybody here to dinner, Warmson?"

"Nobody but Mr. and Mrs. Dartie, sir."

Again it seemed to Soames that the butler was looking curiously at him. His composure gave way.

"What are you looking at?" he said. "What's the matter with me, eh?"

The butler blushed, hung up the fur coat, murmured something that sounded like: "Nothing, sir, I'm sure, sir," and stealthily withdrew.

Soames walked upstairs. Passing the drawing-room without a look, he went straight up to his mother's and father's bedroom.

James, standing sideways, the concave lines of his tall, lean figure displayed to advantage in shirt-sleeves and evening waistcoat, his head bent, the end of his white tie peeping askew from underneath one white Dundreary whisker, his eyes peering with intense concentration, his lips pouting, was hooking the top hooks of his wife's bodice. Soames stopped; he felt half-choked, whether because he had come upstairs too fast, or for some other reason. He--he himself had never--never been asked to....

He heard his father's voice, as though there were a pin in his mouth, saying: "Who's that? Who's there? What d'you want?" His mother's: "Here, Felice, come and hook this; your master'll never get done."

He put his hand up to his throat, and said hoarsely:

"It's I--Soames!"

He noticed gratefully the affectionate surprise in Emily's: "Well, my dear boy?" and James', as he dropped the hook: "What, Soames! What's brought you up? Aren't you well?"

He answered mechanically: "I'm all right," and looked at them, and it seemed impossible to bring out his news.

James, quick to take alarm, began: "You don't look well. I expect you've taken a chill--it's liver, I shouldn't wonder. Your mother'll give you...."

But Emily broke in quietly: "Have you brought Irene?"

Soames shook his head.

"No," he stammered, "she--she's left me!"

Emily deserted the mirror before which she was standing. Her tall, full figure lost its majesty and became very human as she came running over to Soames.

"My dear boy! My dear boy!"

She put her lips to his forehead, and stroked his hand.

James, too, had turned full towards his son; his face looked older.

"Left you?" he said. "What d'you mean--left you? You never told me she was going to leave you."

Soames answered surlily: "How could I tell? What's to be done?"

James began walking up and down; he looked strange and stork-like without a coat. "What's to be done!" he muttered. "How should I know what's to be done? What's the good of asking me? Nobody tells me anything, and then they come and ask me what's to be done; and I should like to know how I'm to tell them! Here's your mother, there she stands; she doesn't say anything. What I should say you've got to do is to follow her.."

Soames smiled; his peculiar, supercilious smile had never before looked pitiable.

"I don't know where she's gone," he said.

"Don't know where she's gone!" said James. "How d'you mean, don't know where she's gone? Where d'you suppose she's gone? She's gone after that young Bosinney, that's where she's gone. I knew how it would be."

Soames, in the long silence that followed, felt his mother pressing his hand. And all that passed seemed to pass as though his own power of thinking or doing had gone to sleep.

His father's face, dusky red, twitching as if he were going to cry, and words breaking out that seemed rent from him by some spasm in his soul.

"There'll be a scandal; I always said so." Then, no one saying anything: "And there you stand, you and your mother!"

And Emily's voice, calm, rather contemptuous: "Come, now, James! Soames will do all that he can."

And James, staring at the floor, a little brokenly: "Well, I can't help you; I'm getting old. Don't you be in too great a hurry, my boy."

And his mother's voice again: "Soames will do all he can to get her back. We won't talk of it. It'll all come right, I dare say."

And James: "Well, I can't see how it can come right. And if she hasn't gone off with that young Bosinney, my advice to you is not to listen to her, but to follow her and get her back."

Once more Soames felt his mother stroking his hand, in token of her approval, and as though repeating some form of sacred oath, he muttered between his teeth: "I will!"

All three went down to the drawing-room together. There, were gathered the three girls and Dartie; had Irene been present, the family circle would have been complete.

James sank into his armchair, and except for a word of cold greeting to Dartie, whom he both despised and dreaded, as a man likely to be always in want of money, he said nothing till dinner was announced. Soames, too, was silent; Emily alone, a woman of cool courage, maintained a conversation with Winifred on trivial subjects. She was never more composed in her manner and conversation than that evening.

A decision having been come to not to speak of Irene's flight, no view was expressed by any other member of the family as to the right course to be pursued; there can be little doubt, from the general tone adopted in relation to events as they afterwards turned out, that James's advice: "Don't you listen to her, follow-her and get her back!" would, with here and there an exception, have been regarded as sound, not only in Park Lane, but amongst the Nicholases, the Rogers, and at Timothy's. Just as it would surely have been endorsed by that wider body of Forsytes all over London, who were merely excluded from judgment by ignorance of the story.

In spite then of Emily's efforts, the dinner was served by Warmson and the footman almost in silence. Dartie was sulky, and drank all he could get; the girls seldom talked to each other at any time. James asked once where June was, and what she was doing

with herself in these days. No one could tell him. He sank back into gloom. Only when Winifred recounted how little Publius had given his bad penny to a beggar, did he brighten up.

"Ah!" he said, "that's a clever little chap. I don't know what'll become of him, if he goes on like this. An intelligent little chap, I call him!" But it was only a flash.

The courses succeeded one another solemnly, under the electric light, which glared down onto the table, but barely reached the principal ornament of the walls, a so-called 'Sea Piece by Turner,' almost entirely composed of cordage and drowning men.

Champagne was handed, and then a bottle of James' prehistoric port, but as by the chill hand of some skeleton.

At ten o'clock Soames left; twice in reply to questions, he had said that Irene was not well; he felt he could no longer trust himself. His mother kissed him with her large soft kiss, and he pressed her hand, a flush of warmth in his cheeks. He walked away in the cold wind, which whistled desolately round the corners of the streets, under a sky of clear steel-blue, alive with stars; he noticed neither their frosty greeting, nor the crackle of the curled-up plane-leaves, nor the night-women hurrying in their shabby furs, nor the pinched faces of vagabonds at street corners. Winter was come! But Soames hastened home, oblivious; his hands trembled as he took the late letters from the gilt wire cage into which they had been thrust through the slit in the door.'

None from Irene!

He went into the dining-room; the fire was bright there, his chair drawn up to it, slippers ready, spirit case, and carven cigarette box on the table; but after staring at it all for a minute or two, he turned out the light and went upstairs. There was a fire too in his dressing-room, but her room was dark and cold. It was into this room that Soames went.

He made a great illumination with candles, and for a long time continued pacing up and down between the bed and the door. He could not get used to the thought that she had really left him, and as though still searching for some message, some reason, some reading of all the mystery of his married life, he began opening every recess and drawer.

There were her dresses; he had always liked, indeed insisted, that she should be well-dressed--she had taken very few; two or three at most, and drawer after drawer; full of linen and silk things, was untouched.

Perhaps after all it was only a freak, and she had gone to the seaside for a few days' change. If only that were so, and she were really coming back, he would never again do as he had done that fatal night before last, never again run that risk--though it was her duty, her duty as a wife; though she did belong to him--he would never again run that risk; she was evidently not quite right in her head!

He stooped over the drawer where she kept her jewels; it was not locked, and came open as he pulled; the jewel box had the key in it. This surprised him until he remembered that it was sure to be empty. He opened it.

It was far from empty. Divided, in little green velvet compartments, were all the things he had given her, even her watch, and stuck into the recess that contained--the watch was a three-cornered note addressed 'Soames Forsyte,' in Irene's handwriting:

'I think I have taken nothing that you or your people have given me.' And that was all.

He looked at the clasps and bracelets of diamonds and pearls, at the little flat gold watch with a great diamond set in sapphires, at the chains and rings, each in its nest, and the tears rushed up in his eyes and dropped upon them.

Nothing that she could have done, nothing that she had done, brought home to him like this the inner significance of her act. For the moment, perhaps, he understood nearly all there was to understand--understood that she loathed him, that she had loathed him for years, that for all intents and purposes they were like people living in different worlds, that there was no hope for him, never had been; even, that she had suffered--that she was to be pitied.

In that moment of emotion he betrayed the Forsyte in him--forgot himself, his interests, his property--was capable of almost anything; was lifted into the pure ether of the selfless and unpractical.

Such moments pass quickly.

And as though with the tears he had purged himself of weakness, he got up, locked the box, and slowly, almost trembling, carried it with him into the other room.

CHAPTER VII

JUNE'S VICTORY

June had waited for her chance, scanning the duller columns of the journals, morning and evening with an assiduity which at first puzzled old Jolyon; and when her chance came, she took it with all the promptitude and resolute tenacity of her character.

She will always remember best in her life that morning when at last she saw amongst the reliable Cause List of the Times newspaper, under the heading of Court XIII, Mr. Justice Bentham, the case of Forsyte v. Bosinney.

Like a gambler who stakes his last piece of money, she had prepared to hazard her all upon this throw; it was not her nature to contemplate defeat. How, unless with the instinct of a woman in love, she knew that Bosinney's discomfiture in this action was assured, cannot be told--on this assumption, however, she laid her plans, as upon a certainty.

Half past eleven found her at watch in the gallery of Court XIII., and there she remained till the case of Forsyte v. Bosinney was over. Bosinney's absence did not disquiet her; she had felt instinctively that he would not defend himself. At the end of the judgment she hastened down, and took a cab to his rooms.

She passed the open street-door and the offices on the three lower floors without attracting notice; not till she reached the top did her difficulties begin.

Her ring was not answered; she had now to make up her mind whether she would go down and ask the caretaker in the basement to let her in to await Mr. Bosinney's return, or remain patiently outside the door, trusting that no one would, come up. She decided on the latter course.

A quarter of an hour had passed in freezing vigil on the landing, before it occurred to her that Bosinney had been used to leave the key of his rooms under the door-mat. She looked and found it there. For some minutes she could not decide to make use of it; at last she let herself in and left the door open that anyone who came might see she was there on business.

This was not the same June who had paid the trembling visit five months ago; those months of suffering and restraint had made her less sensitive; she had dwelt on this visit so long, with such minuteness, that its terrors were discounted beforehand. She was not there to fail this time, for if she failed no one could help her.

Like some mother beast on the watch over her young, her little quick figure never stood still in that room, but wandered from wall to wall, from window to door, fingering now one thing, now another. There was dust everywhere, the room could not have been cleaned for weeks, and June, quick to catch at anything that should buoy up her hope, saw in it a sign that he had been obliged, for economy's sake, to give up his servant.

She looked into the bedroom; the bed was roughly made, as though by the hand of man. Listening intently, she darted in, and peered into his cupboards. A few shirts and collars, a pair of muddy boots--the room was bare even of garments.

She stole back to the sitting-room, and now she noticed the absence of all the little things he had set store by. The clock that had been his mother's, the field-glasses that had hung over the sofa; two really valuable old prints of Harrow, where his father had been at school, and last, not least, the piece of Japanese pottery she herself had given him. All were gone; and in spite of the rage roused within her championing soul at the thought that the world should treat him thus, their disappearance augured happily for the success of her plan.

It was while looking at the spot where the piece of Japanese pottery had stood that she felt a strange certainty of being watched, and, turning, saw Irene in the open doorway.

The two stood gazing at each other for a minute in silence; then June walked forward and held out her hand. Irene did not take it.

When her hand was refused, June put it behind her. Her eyes grew steady with anger; she waited for Irene to speak; and thus waiting, took in, with who-knows-what rage of jealousy, suspicion, and curiosity, every detail of her friend's face and dress and figure.

Irene was clothed in her long grey fur; the travelling cap on her head left a wave of gold hair visible above her forehead. The soft fullness of the coat made her face as small as a child's.

Unlike June's cheeks, her cheeks had no colour in them, but were ivory white and pinched as if with cold. Dark circles lay round her eyes. In one hand she held a bunch of violets.

She looked back at June, no smile on her lips; and with those great dark eyes fastened on her, the girl, for all her startled anger, felt something of the old spell.

She spoke first, after all.

"What have you come for?" But the feeling that she herself was being asked the same question, made her add: "This horrible case. I came to tell him--he has lost it."

Irene did not speak, her eyes never moved from June's face, and the girl cried:

"Don't stand there as if you were made of stone!"

Irene laughed: "I wish to God I were!"

But June turned away: "Stop!" she cried, "don't tell me! I don't want to hear! I don't want to hear what you've come for. I don't want to hear!" And like some uneasy spirit, she began swiftly walking to and fro. Suddenly she broke out:

"I was here first. We can't both stay here together!"

On Irene's face a smile wandered up, and died out like a flicker of firelight. She did not move. And then it was that June perceived under the softness and immobility of this figure something desperate and resolved; something not to be turned away, something dangerous. She tore off her hat, and, putting both hands to her brow, pressed back the bronze mass of her hair.

"You have no right here!" she cried defiantly.

Irene answered: "I have no right anywhere!

"What do you mean?"

"I have left Soames. You always wanted me to!"

June put her hands over her ears.

"Don't! I don't want to hear anything--I don't want to know anything. It's impossible to fight with you! What makes you stand like that? Why don't you go?"

Irene's lips moved; she seemed to be saying: "Where should I go?"

June turned to the window. She could see the face of a clock down in the street. It was nearly four. At any moment he might come! She looked back across her shoulder, and her face was distorted with anger.

But Irene had not moved; in her gloved hands she ceaselessly turned and twisted the little bunch of violets.

The tears of rage and disappointment rolled down June's cheeks.

"How could you come?" she said. "You have been a false friend to me!"

Again Irene laughed. June saw that she had played a wrong card, and broke down.

"Why have you come?" she sobbed. "You've ruined my life, and now you want to ruin his!"

Irene's mouth quivered; her eyes met June's with a look so mournful that the girl cried out in the midst of her sobbing, "No, no!"

But Irene's head bent till it touched her breast. She turned, and went quickly out, hiding her lips with the little bunch of violets.

June ran to the door. She heard the footsteps going down and down. She called out: "Come back, Irene! Come back!"

The footsteps died away....

Bewildered and torn, the girl stood at the top of the stairs. Why had Irene gone, leaving her mistress of the field? What did it mean? Had she really given him up to her? Or had she...? And she was the prey of a gnawing uncertainty.... Bosinney did not come....

About six o'clock that afternoon old Jolyon returned from Wistaria Avenue, where now almost every day he spent some hours, and asked if his grand-daughter were upstairs. On being told that she had just come in, he sent up to her room to request her to come down and speak to him.

He had made up his mind to tell her that he was reconciled with her father. In future bygones must be bygones. He would no longer live alone, or practically alone, in this great house; he was going to give it up, and take one in the country for his son, where they could all go and live together. If June did not like this, she could have an allowance and live by herself. It wouldn't make much difference to her, for it was a long time since she had shown him any affection.

But when June came down, her face was pinched and piteous; there was a strained, pathetic look in her eyes. She snuggled up in her old attitude on the arm of his chair, and what he said compared but poorly with the clear, authoritative, injured statement he had thought out with much care. His heart felt sore, as the great heart of a mother-bird feels sore when its youngling flies and bruises its wing. His words halted, as though he were apologizing for having at last deviated from the path of virtue, and succumbed, in defiance of sounder principles, to his more natural instincts.

He seemed nervous lest, in thus announcing his intentions, he should be setting his granddaughter a bad example; and now that he came to the point, his way of putting the suggestion that, if she didn't like it, she could live by herself and lump it, was delicate in the extreme.'

"And if, by any chance, my darling," he said, "you found you didn't get on--with them, why, I could make that all right. You could have what you liked. We could find a little flat in London where you could set up, and I could be running to continually. But the children," he added, "are dear little things!"

Then, in the midst of this grave, rather transparent, explanation of changed policy, his eyes twinkled. "This'll astonish Timothy's weak nerves. That precious young thing will have something to say about this, or I'm a Dutchman!"

June had not yet spoken. Perched thus on the arm of his chair, with her head above him, her face was invisible. But presently he felt her warm cheek against his own, and knew that, at all events, there was nothing very alarming in her attitude towards his news. He began to take courage.

"You'll like your father," he said--"an amiable chap. Never was much push about him, but easy to get on with. You'll find him artistic and all that."

And old Jolyon bethought him of the dozen or so water-colour drawings all carefully locked up in his bedroom; for now that his son was going to become a man of property he did not think them quite such poor things as heretofore.

"As to your--your stepmother," he said, using the word with some little difficulty, "I call her a refined woman--a bit of a Mrs. Gummidge, I shouldn't wonder--but very fond of Jo. And the children," he repeated--indeed, this sentence ran like music through all his solemn self-justification--"are sweet little things!"

If June had known, those words but reincarnated that tender love for little children, for the young and weak, which in the past had made him desert his son for her tiny self, and now, as the cycle rolled, was taking him from her.

But he began to get alarmed at her silence, and asked impatiently: "Well, what do you say?"

June slid down to his knee, and she in her turn began her tale. She thought it would all go splendidly; she did not see any difficulty, and she did not care a bit what people thought.

Old Jolyon wriggled. H'm! then people would think! He had thought that after all these years perhaps they wouldn't! Well, he couldn't help it! Nevertheless, he could not approve of his granddaughter's way of putting it--she ought to mind what people thought!

Yet he said nothing. His feelings were too mixed, too inconsistent for expression.

No--went on June he did not care; what business was it of theirs? There was only one thing--and with her cheek pressing against his knee, old Jolyon knew at once that this something was no trifle: As he was going to buy a house in the country, would he not--to please her--buy that splendid house of Soames' at Robin Hill? It was finished, it was perfectly beautiful, and no one would live in it now. They would all be so happy there.

Old Jolyon was on the alert at once. Wasn't the 'man of property' going to live in his new house, then? He never alluded to Soames now but under this title.

"No"--June said--"he was not; she knew that he was not!"

How did she know?

She could not tell him, but she knew. She knew nearly for certain! It was most unlikely; circumstances had changed! Irene's words still rang in her head: "I have left Soames. Where should I go?"

But she kept silence about that.

If her grandfather would only buy it and settle that wretched claim that ought never to have been made on Phil! It would be the very best thing for everybody, and everything--everything might come straight.

And June put her lips to his forehead, and pressed them close.

But old Jolyon freed himself from her caress, his face wore the judicial look which came upon it when he dealt with affairs. He asked: What did she mean? There was something behind all this--had she been seeing Bosinney?

June answered: "No; but I have been to his rooms."

"Been to his rooms? Who took you there?"

June faced him steadily. "I went alone. He has lost that case. I don't care whether it was right or wrong. I want to help him; and I will!"

Old Jolyon asked again: "Have you seen him?" His glance seemed to pierce right through the girl's eyes into her soul.

Again June answered: "No; he was not there. I waited, but he did not come."

Old Jolyon made a movement of relief. She had risen and looked down at him; so slight, and light, and young, but so fixed, and so determined; and disturbed, vexed, as he was, he could not frown away that fixed look. The feeling of being beaten, of the reins having slipped, of being old and tired, mastered him.

"Ah!" he said at last, "you'll get yourself into a mess one of these days, I can see. You want your own way in everything."

Visited by one of his strange bursts of philosophy, he added: "Like that you were born; and like that you'll stay until you die!"

And he, who in his dealings with men of business, with Boards, with Forsytes of all descriptions, with such as were not Forsytes, had always had his own way, looked at his indomitable grandchild sadly--for he felt in her that quality which above all others he unconsciously admired.

"Do you know what they say is going on?" he said slowly.

June crimsoned.

"Yes--no! I know--and I don't know--I don't care!" and she stamped her foot.

"I believe," said old Jolyon, dropping his eyes, "that you'd have him if he were dead!"

There was a long silence before he spoke again.

"But as to buying this house--you don't know what you're talking about!"

June said that she did. She knew that he could get it if he wanted. He would only have to give what it cost.

"What it cost! You know nothing about it. I won't go to Soames--I'll have nothing more to do with that young man."

"But you needn't; you can go to Uncle James. If you can't buy the house, will you pay his lawsuit claim? I know he is terribly hard up--I've seen it. You can stop it out of my money!"

A twinkle came into old Jolyon's eyes.

"Stop it out of your money! A pretty way. And what will you do, pray, without your money?"

But secretly, the idea of wresting the house from James and his son had begun to take hold of him. He had heard on Forsyte 'Change much comment, much rather doubtful praise of this house. It was 'too artistic,' but a fine place. To take from the 'man of property' that on which he had set his heart, would be a crowning triumph over James, practical proof that he was going to make a man of property of Jo, to put him back in his proper position, and there to keep him secure. Justice once for all on those who had chosen to regard his son as a poor, penniless outcast.

He would see, he would see! It might be out of the question; he was not going to pay a fancy price, but if it could be done, why, perhaps he would do it!

And still more secretly he knew that he could not refuse her.

But he did not commit himself. He would think it over--he said to June.

CHAPTER VIII

BOSINNEY'S DEPARTURE

Old Jolyon was not given to hasty decisions; it is probable that he would have continued to think over the purchase of the house at Robin Hill, had not June's face told him that he would have no peace until he acted.

At breakfast next morning she asked him what time she should order the carriage.

"Carriage!" he said, with some appearance of innocence; "what for? I'm not going out!"

She answered: "If you don't go early, you won't catch Uncle James before he goes into the City."

"James! what about your Uncle James?"

"The house," she replied, in such a voice that he no longer pretended ignorance.

"I've not made up my mind," he said.

"You must! You must! Oh! Gran--think of me!"

Old Jolyon grumbled out: "Think of you--I'm always thinking of you, but you don't think of yourself; you don't think what you're letting yourself in for. Well, order the carriage at ten!"

At a quarter past he was placing his umbrella in the stand at Park Lane--he did not choose to relinquish his hat and coat; telling Warmson that he wanted to see his master, he went, without being announced, into the study, and sat down.

James was still in the dining-room talking to Soames, who had come round again before breakfast. On hearing who his visitor was, he muttered nervously: "Now, what's he want, I wonder?"

He then got up.

"Well," he said to Soames, "don't you go doing anything in a hurry. The first thing is to find out where she is--I should go to Stainer's about it; they're the best men, if they can't find her, nobody can." And suddenly moved to strange softness, he muttered to himself, "Poor little thing, I can't tell what she was thinking about!" and went out blowing his nose.

Old Jolyon did not rise on seeing his brother, but held out his hand, and exchanged with him the clasp of a Forsyte.

James took another chair by the table, and leaned his head on his hand.

"Well," he said, "how are you? We don't see much of you nowadays!"

Old Jolyon paid no attention to the remark.

"How's Emily?" he asked; and waiting for no reply, went on "I've come to see you about this affair of young Bosinney's. I'm told that new house of his is a white elephant."

"I don't know anything about a white elephant," said James, "I know he's lost his case, and I should say he'll go bankrupt."

Old Jolyon was not slow to seize the opportunity this gave him.

"I shouldn't wonder a bit!" he agreed; "and if he goes bankrupt, the 'man of property'--that is, Soames'll be out of pocket. Now, what I was thinking was this: If he's not going to live there...."

Seeing both surprise and suspicion in James' eye, he quickly went on: "I don't want to know anything; I suppose Irene's put her foot down--it's not material to me. But I'm thinking of a house in the country myself, not too far from London, and if it suited me I don't say that I mightn't look at it, at a price."

James listened to this statement with a strange mixture of doubt, suspicion, and relief, merging into a dread of something behind, and tinged with the remains of his old undoubted reliance upon his elder brother's good faith and judgment. There was anxiety, too, as to what old Jolyon could have heard and how he had heard it; and a sort of hopefulness arising from the thought that if June's connection with Bosinney were completely at an end, her grandfather would hardly seem anxious to help the young fellow. Altogether he was puzzled; as he did not like either to show this, or to commit himself in any way, he said:

"They tell me you're altering your Will in favour of your son."

He had not been told this; he had merely added the fact of having seen old Jolyon with his son and grandchildren to the fact that he had taken his Will away from Forsyte, Bustard and Forsyte. The shot went home.

"Who told you that?" asked old Jolyon.

"I'm sure I don't know," said James; "I can't remember names--I know somebody told me Soames spent a lot of money on this house; he's not likely to part with it except at a good price."

"Well," said old Jolyon, "if, he thinks I'm going to pay a fancy price, he's mistaken. I've not got the money to throw away that he seems to have. Let him try and sell it at a forced sale, and see what he'll get. It's not every man's house, I hear!"

James, who was secretly also of this opinion, answered: "It's a gentleman's house. Soames is here now if you'd like to see him."

"No," said old Jolyon, "I haven't got as far as that; and I'm not likely to, I can see that very well if I'm met in this manner!"

James was a little cowed; when it came to the actual figures of a commercial transaction he was sure of himself, for then he was dealing with facts, not with men; but preliminary negotiations such as these made him nervous--he never knew quite how far he could go.

"Well," he said, "I know nothing about it. Soames, he tells me nothing; I should think he'd entertain it--it's a question of price."

"Oh!" said old Jolyon, "don't let him make a favour of it!" He placed his hat on his head in dudgeon.

The door was opened and Soames came in.

"There's a policeman out here," he said with his half smile, "for Uncle Jolyon."

Old Jolyon looked at him angrily, and James said: "A policeman? I don't know anything about a policeman. But I suppose you know something about him," he added to old Jolyon with a look of suspicion: "I suppose you'd better see him!"

In the hall an Inspector of Police stood stolidly regarding with heavy-lidded pale-blue eyes the fine old English furniture picked up by James at the famous Mavrojano sale in Portman Square. "You'll find my brother in there," said James.

The Inspector raised his fingers respectfully to his peaked cap, and entered the study.

James saw him go in with a strange sensation.

"Well," he said to Soames, "I suppose we must wait and see what he wants. Your uncle's been here about the house!"

He returned with Soames into the dining-room, but could not rest.

"Now what does he want?" he murmured again.

"Who?" replied Soames: "the Inspector? They sent him round from Stanhope Gate, that's all I know. That 'nonconformist' of Uncle Jolyon's has been pilfering, I shouldn't wonder!"

But in spite of his calmness, he too was ill at ease.

At the end of ten minutes old Jolyon came in. He walked up to the table, and stood there perfectly silent pulling at his long white moustaches. James gazed up at him with opening mouth; he had never seen his brother look like this.

Old Jolyon raised his hand, and said slowly:

"Young Bosinney has been run over in the fog and killed."

Then standing above his brother and his nephew, and looking down at him with his deep eyes:

"There's--some--talk--of--suicide," he said.

James' jaw dropped. "Suicide! What should he do that for?"

Old Jolyon answered sternly: "God knows, if you and your son don't!"

But James did not reply.

For all men of great age, even for all Forsytes, life has had bitter experiences. The passer-by, who sees them wrapped in cloaks of custom, wealth, and comfort, would never suspect that such black shadows had fallen on their roads. To every man of great age--to Sir Walter Bentham himself--the idea of suicide has once at least been present in the ante-room of his soul; on the threshold, waiting to enter, held out from the inmost chamber by some chance reality, some vague fear, some painful hope. To Forsytes that final renunciation of property is hard. Oh! it is hard! Seldom--perhaps never--can they achieve, it; and yet, how near have they not sometimes been!

So even with James! Then in the medley of his thoughts, he broke out: "Why I saw it in the paper yesterday: 'Run over in the fog!' They didn't know his name!" He turned from one face to the other in his confusion of soul; but instinctively all the time he was rejecting that rumour of suicide. He dared not entertain this thought, so against his interest, against the interest of his son, of every Forsyte. He strove against it; and as his nature ever unconsciously rejected that which it could not with safety accept, so gradually he overcame this fear. It was an accident! It must have been!

Old Jolyon broke in on his reverie.

"Death was instantaneous. He lay all day yesterday at the hospital. There was nothing to tell them who he was. I am going there now; you and your son had better come too."

No one opposing this command he led the way from the room.

The day was still and clear and bright, and driving over to Park Lane from Stanhope Gate, old Jolyon had had the carriage open. Sitting back on the padded cushions, finishing his cigar, he had noticed with pleasure the keen crispness of the air, the bustle of the cabs and people; the strange, almost Parisian, alacrity that the first fine day will bring into London streets after a spell of fog or rain. And he had felt so happy; he had not felt like it for months. His confession to June was off his mind; he had the prospect of his son's, above all, of his grandchildren's company in the future--(he had appointed to meet young Jolyon at the Hotch Potch that very manning to--discuss it again); and there was the pleasurable excitement of a coming encounter, a coming victory, over James and the 'man of property' in the matter of the house.

He had the carriage closed now; he had no heart to look on gaiety; nor was it right that Forsytes should be seen driving with an Inspector of Police.

In that carriage the Inspector spoke again of the death:

"It was not so very thick--Just there. The driver says the gentleman must have had time to see what he was about, he seemed to walk right into it. It appears that he was very hard up, we found several pawn tickets at his rooms, his account at the bank is overdrawn, and there's this case in to-day's papers;" his cold blue eyes travelled from one to another of the three Forsytes in the carriage.

Old Jolyon watching from his corner saw his brother's face change, and the brooding, worried, look deepen on it. At the Inspector's words, indeed, all James' doubts and fears revived. Hard-up--pawn-tickets--an overdrawn account! These words that had all his life been a far-off nightmare to him, seemed to make uncannily real that suspicion of suicide which must on no account be entertained. He sought his son's eye; but lynx-eyed, taciturn, immovable, Soames gave no answering look. And to old Jolyon watching, divining the league of mutual defence between them, there came an overmastering desire to have his own son at his side, as though this visit to the dead man's body was a battle in which otherwise he must single-handed meet those two. And the thought of how to keep June's name out of the business kept whirring in his brain. James had his son to support him! Why should he not send for Jo?

Taking out his card-case, he pencilled the following message:

'Come round at once. I've sent the carriage for you.'

On getting out he gave this card to his coachman, telling him to drive--as fast as possible to the Hotch Potch Club, and if Mr. Jolyon Forsyte were there to give him the card and bring him at once. If not there yet, he was to wait till he came.

He followed the others slowly up the steps, leaning on his umbrella, and stood a moment to get his breath. The Inspector said: "This is the mortuary, sir. But take your time."

In the bare, white-walled room, empty of all but a streak of sunshine smeared along the dustless floor, lay a form covered by a sheet. With a huge steady hand the Inspector took the hem and turned it back. A sightless face gazed up at them, and on either side of that sightless defiant face the three Forsytes gazed down; in each one of them the secret emotions, fears, and pity of his own nature rose and fell like the rising, falling waves of life, whose wish those white walls barred out now for ever from Bosinney. And in each one of them the trend of his nature, the odd essential spring, which moved him in fashions minutely, unalterably different from those of every other human being, forced him to a different attitude of thought. Far from the others, yet inscrutably close, each stood thus, alone with death, silent, his eyes lowered.

The Inspector asked softly:

"You identify the gentleman, sir?"

Old Jolyon raised his head and nodded. He looked at his brother opposite, at that long lean figure brooding over the dead man, with face dusky red, and strained grey eyes; and at the figure of Soames white and still by his father's side. And all that he had felt against those two was gone like smoke in the long white presence of Death. Whence comes it, how comes it--Death? Sudden reverse of all that goes before; blind setting forth on a path that leads to where? Dark quenching of the fire! The heavy, brutal crushing--out that all men must go through, keeping their eyes clear and brave unto the end! Small and of no import, insects though they are! And across old Jolyon's face there flitted a gleam, for Soames, murmuring to the Inspector, crept noiselessly away.

Then suddenly James raised his eyes. There was a queer appeal in that suspicious troubled look: "I know I'm no match for you," it seemed to say. And, hunting for handkerchief he wiped his brow; then, bending sorrowful and lank over the dead man, he too turned and hurried out.

Old Jolyon stood, still as death, his eyes fixed on the body. Who shall tell of what he was thinking? Of himself, when his hair was brown like the hair of that young fellow dead before him? Of himself, with his battle just beginning, the long, long battle he had loved; the battle that was over for this young man almost before it had begun? Of his grand-daughter, with her broken hopes? Of that other woman? Of the strangeness, and the pity of it? And the irony, inscrutable, and bitter of that end? Justice! There was no justice for men, for they were ever in the dark!

Or perhaps in his philosophy he thought: Better to be out of, it all! Better to have done with it, like this poor youth....

Some one touched him on the arm.

A tear started up and wetted his eyelash. "Well," he said, "I'm no good here. I'd better be going. You'll come to me as soon as you can, Jo," and with his head bowed he went away.

It was young Jolyon's turn to take his stand beside the dead man, round whose fallen body he seemed to see all the Forsytes breathless, and prostrated. The stroke had fallen too swiftly.

The forces underlying every tragedy--forces that take no denial, working through cross currents to their ironical end, had met and fused with a thunder-clap, flung out the victim, and flattened to the ground all those that stood around.

Or so at all events young Jolyon seemed to see them, lying around Bosinney's body.

He asked the Inspector to tell him what had happened, and the latter, like a man who does not every day get such a chance, again detailed such facts as were known.

"There's more here, sir, however," he said, "than meets the eye. I don't believe in suicide, nor in pure accident, myself. It's more likely I think that he was suffering under great stress of mind, and took no notice of things about him. Perhaps you can throw some light on these."

He took from his pocket a little packet and laid it on the table. Carefully undoing it, he revealed a lady's handkerchief, pinned through the folds with a pin of discoloured Venetian gold, the stone of which had fallen from the socket. A scent of dried violets rose to young Jolyon's nostrils.

"Found in his breast pocket," said the Inspector; "the name has been cut away!"

Young Jolyon with difficulty answered: "I'm afraid I cannot help you!" But vividly there rose before him the face he had seen light up, so tremulous and glad, at Bosinney's coming! Of her he thought more than of his own daughter, more than of them all--of her with the dark, soft glance, the delicate passive face, waiting for the dead man, waiting even at that moment, perhaps, still and patient in the sunlight.

He walked sorrowfully away from the hospital towards his father's house, reflecting that this death would break up the Forsyte family. The stroke had indeed slipped past their defences into the very wood of their tree. They might flourish to all appearance as before, preserving a brave show before the eyes of London, but the trunk was dead, withered by the same flash that had stricken down Bosinney. And now the saplings would take its place, each one a new custodian of the sense of property.

Good forest of Forsytes! thought young Jolyon--soundest timber of our land!

Concerning the cause of this death--his family would doubtless reject with vigour the suspicion of suicide, which was so compromising! They would take it as an accident, a stroke of fate. In their hearts they would even feel it an intervention of Providence, a retribution--had not Bosinney endangered their two most priceless possessions, the pocket and the hearth? And they would talk of 'that unfortunate accident of young Bosinney's,' but perhaps they would not talk--silence might be better!

As for himself, he regarded the bus-driver's account of the accident as of very little value. For no one so madly in love committed suicide for want of money; nor was Bosinney the sort of fellow to set much store by a financial crisis. And so he too rejected this theory of suicide, the dead man's face rose too clearly before him. Gone in the heyday of his summer--and to believe thus that an accident had cut Bosinney off in the full sweep of his passion was more than ever pitiful to young Jolyon.

Then came a vision of Soames' home as it now was, and must be hereafter. The streak of lightning had flashed its clear uncanny gleam on bare bones with grinning spaces between, the disguising flesh was gone....

In the dining-room at Stanhope Gate old Jolyon was sitting alone when his son came in. He looked very wan in his great armchair. And his eyes travelling round the walls with their pictures of still life, and the masterpiece 'Dutch fishing-boats at Sunset' seemed as though passing their gaze over his life with its hopes, its gains, its achievements.

"Ah! Jo!" he said, "is that you? I've told poor little June. But that's not all of it. Are you going to Soames'? She's brought it on herself, I suppose; but somehow I can't bear to think of her, shut up there--and all alone." And holding up his thin, veined hand, he clenched it.

CHAPTER IX

IRENE'S RETURN

After leaving James and old Jolyon in the mortuary of the hospital, Soames hurried aimlessly along the streets.

The tragic event of Bosinney's death altered the complexion of everything. There was no longer the same feeling that to lose a minute would be fatal, nor would he now risk communicating the fact of his wife's flight to anyone till the inquest was over.

That morning he had risen early, before the postman came, had taken the first-post letters from the box himself, and, though there had been none from Irene, he had made an opportunity of telling Bilson that her mistress was at the sea; he would probably, he said, be going down himself from Saturday to Monday. This had given him time to breathe, time to leave no stone unturned to find her.

But now, cut off from taking steps by Bosinney's death--that strange death, to think of which was like putting a hot iron to his heart, like lifting a great weight from it--he did not know how to pass his day; and he wandered here and there through the streets, looking at every face he met, devoured by a hundred anxieties.

And as he wandered, he thought of him who had finished his wandering, his prowling, and would never haunt his house again.

Already in the afternoon he passed posters announcing the identity of the dead man, and bought the papers to see what they said. He would stop their mouths if he could, and he went into the City, and was closeted with Boulter for a long time.

On his way home, passing the steps of Jobson's about half past four, he met George Forsyte, who held out an evening paper to Soames, saying:

"Here! Have you seen this about the poor Buccaneer?"

Soames answered stonily: "Yes."

George stared at him. He had never liked Soames; he now held him responsible for Bosinney's death. Soames had done for him--done for him by that act of property that had sent the Buccaneer to run amok that fatal afternoon.

'The poor fellow,' he was thinking, 'was so cracked with jealousy, so cracked for his vengeance, that he heard nothing of the omnibus in that infernal fog.'

Soames had done for him! And this judgment was in George's eyes.

"They talk of suicide here," he said at last. "That cat won't jump."

Soames shook his head. "An accident," he muttered.

Clenching his fist on the paper, George crammed it into his pocket. He could not resist a parting shot.

"H'mm! All flourishing at home? Any little Soameses yet?"

With a face as white as the steps of Jobson's, and a lip raised as if snarling, Soames brushed past him and was gone....

On reaching home, and entering the little lighted hall with his latchkey, the first thing that caught his eye was his wife's gold-mounted umbrella lying on the rug chest. Flinging off his fur coat, he hurried to the drawing-room.

The curtains were drawn for the night, a bright fire of cedar-logs burned in the grate, and by its light he saw Irene sitting in her usual corner on the sofa. He shut the door softly, and went towards her. She did not move, and did not seem to see him.

"So you've come back?" he said. "Why are you sitting here in the dark?"

Then he caught sight of her face, so white and motionless that it seemed as though the blood must have stopped flowing in her veins; and her eyes, that looked enormous, like the great, wide, startled brown eyes of an owl.

Huddled in her grey fur against the sofa cushions, she had a strange resemblance to a captive owl, bunched fir its soft feathers against the wires of a cage. The supple erectness of her figure was gone, as though she had been broken by cruel exercise; as though there were no longer any reason for being beautiful, and supple, and erect.

"So you've come back," he repeated.

She never looked up, and never spoke, the firelight playing over her motionless figure.

Suddenly she tried to rise, but he prevented her; it was then that he understood.

She had come back like an animal wounded to death, not knowing where to turn, not knowing what she was doing. The sight of her figure, huddled in the fur, was enough.

He knew then for certain that Bosinney had been her lover; knew that she had seen the report of his death--perhaps, like himself, had bought a paper at the draughty corner of a street, and read it.

She had come back then of her own accord, to the cage she had pined to be free of--and taking in all the tremendous significance of this, he longed to cry: "Take your hated body, that I love, out of my house! Take away that pitiful white face, so cruel and soft--before I crush it. Get out of my sight; never let me see you again!"

And, at those unspoken words, he seemed to see her rise and move away, like a woman in a terrible dream, from which she was fighting to awake--rise and go out into the dark and cold, without a thought of him, without so much as the knowledge of his presence.

Then he cried, contradicting what he had not yet spoken, "No; stay there!" And turning away from her, he sat down in his accustomed chair on the other side of the hearth.

They sat in silence.

And Soames thought: 'Why is all this? Why should I suffer so? What have I done? It is not my fault!'

Again he looked at her, huddled like a bird that is shot and dying, whose poor breast you see panting as the air is taken from it, whose poor eyes look at you who have shot it, with a slow, soft, unseeing look, taking farewell of all that is good--of the sun, and the air, and its mate.

So they sat, by the firelight, in the silence, one on each side of the hearth.

And the fume of the burning cedar logs, that he loved so well, seemed to grip Soames by the throat till he could bear it no longer. And going out into the hall he flung the door wide, to gulp down the cold air that came in; then without hat or overcoat went out into the Square.

Along the garden rails a half-starved cat came rubbing her way towards him, and Soames thought: 'Suffering! when will it cease, my suffering?'

At a front door across the way was a man of his acquaintance named Rutter, scraping his boots, with an air of 'I am master here.' And Soames walked on.

From far in the clear air the bells of the church where he and Irene had been married were pealing in 'practice' for the advent of Christ, the chimes ringing out above the sound of traffic. He felt a craving for strong drink, to lull him to indifference, or rouse him to fury. If only he could burst out of himself, out of this web that for the first time in his life he felt around him. If only he could surrender to the thought: 'Divorce her--turn her out! She has forgotten you. Forget her!'

If only he could surrender to the thought: 'Let her go--she has suffered enough!'

If only he could surrender to the desire: 'Make a slave of her--she is in your power!'

If only even he could surrender to the sudden vision: 'What does it all matter?' Forget himself for a minute, forget that it mattered what he did, forget that whatever he did he must sacrifice something.

If only he could act on an impulse!

He could forget nothing; surrender to no thought, vision, or desire; it was all too serious; too close around him, an unbreakable cage.

On the far side of the Square newspaper boys were calling their evening wares, and the ghoulish cries mingled and jangled with the sound of those church bells.

Soames covered his ears. The thought flashed across him that but for a chance, he himself, and not Bosinney, might be lying dead, and she, instead of crouching there like a shot bird with those dying eyes....

Something soft touched his legs, the cat was rubbing herself against them. And a sob that shook him from head to foot burst from Soames' chest. Then all was still again in the dark, where the houses seemed to stare at him, each with a master and mistress of its own, and a secret story of happiness or sorrow.

And suddenly he saw that his own door was open, and black against the light from the hall a man standing with his back turned. Something slid too in his breast, and he stole up close behind.

He could see his own fur coat flung across the carved oak chair; the Persian rugs; the silver bowls, the rows of porcelain plates arranged along the walls, and this unknown man who was standing there.

And sharply he asked: "What is it you want, sir?"

The visitor turned. It was young Jolyon.

"The door was open," he said. "Might I see your wife for a minute, I have a message for her?"

Soames gave him a strange, sidelong stare.

"My wife can see no one," he muttered doggedly.

Young Jolyon answered gently: "I shouldn't keep her a minute."

Soames brushed by him and barred the way.

"She can see no one," he said again.

Young Jolyon's glance shot past him into the hall, and Soames turned. There in the drawing-room doorway stood Irene, her eyes were wild and eager, her lips were parted, her hands outstretched. In the sight of both men that light vanished from her face; her hands dropped to her sides; she stood like stone.

Soames spun round, and met his visitor's eyes, and at the look he saw in them, a sound like a snarl escaped him. He drew his lips back in the ghost of a smile.

"This is my house," he said; "I manage my own affairs. I've told you once--I tell you again; we are not at home."

And in young Jolyon's face he slammed the door.

THE FORSYTE SAGA

By John Galsworthy

Part 2

Contents: Indian Summer of a Forsyte In Chancery

TO ANDRE CHEVRILLON

INDIAN SUMMER OF A FORSYTE

"And Summer's lease hath all too short a date." --Shakespeare I

In the last day of May in the early 'nineties, about six o'clock of the evening, old Jolyon Forsyte sat under the oak tree below the terrace of his house at Robin Hill. He was waiting for the midges to bite him, before abandoning the glory of the afternoon. His thin brown hand, where blue veins stood out, held the end of a cigar in its tapering, long-nailed fingers--a pointed polished nail had survived with him from those earlier Victorian days when to touch nothing, even with the tips of the fingers, had been so distinguished. His domed forehead, great white moustache, lean cheeks, and long lean jaw were covered from the westering sunshine by an old brown Panama hat. His legs were crossed; in all his attitude was serenity and a kind of elegance, as of an old man who every morning put eau de Cologne upon his silk handkerchief. At his feet lay a woolly brown-and-white dog trying to be a Pomeranian--the dog Balthasar between whom and old Jolyon primal aversion had changed into attachment with the years. Close to his chair was a swing, and on the swing was seated one of Holly's dolls--called 'Duffer Alice'--with her body fallen over her legs and her doleful nose buried in a black petticoat. She was never out of disgrace, so it did not matter to her how she sat. Below the oak tree the lawn dipped down a bank, stretched to the fernery, and, beyond that refinement, became fields, dropping to the pond, the coppice, and the prospect--'Fine, remarkable'--at which Swithin Forsyte, from under this very tree, had stared five years ago

when he drove down with Irene to look at the house. Old Jolyon had heard of his brother's exploit--that drive which had become quite celebrated on Forsyte 'Change. Swithin! And the fellow had gone and died, last November, at the age of only seventy-nine, renewing the doubt whether Forsytes could live for ever, which had first arisen when Aunt Ann passed away. Died! and left only Jolyon and James, Roger and Nicholas and Timothy, Julia, Hester, Susan! And old Jolyon thought: 'Eighty-five! I don't feel it--except when I get that pain.'

His memory went searching. He had not felt his age since he had bought his nephew Soames' ill-starred house and settled into it here at Robin Hill over three years ago. It was as if he had been getting younger every spring, living in the country with his son and his grandchildren--June, and the little ones of the second marriage, Jolly and Holly; living down here out of the racket of London and the cackle of Forsyte 'Change,' free of his boards, in a delicious atmosphere of no work and all play, with plenty of occupation in the perfecting and mellowing of the house and its twenty acres, and in ministering to the whims of Holly and Jolly. All the knots and crankiness, which had gathered in his heart during that long and tragic business of June, Soames, Irene his wife, and poor young Bosinney, had been smoothed out. Even June had thrown off her melancholy at last--witness this travel in Spain she was taking now with her father and her stepmother. Curiously perfect peace was left by their departure; blissful, yet blank, because his son was not there. Jo was never anything but a comfort and a pleasure to him nowadays--an amiable chap; but women, somehow--even the best--got a little on one's nerves, unless of course one admired them.

Far-off a cuckoo called; a wood-pigeon was cooing from the first elm-tree in the field, and how the daisies and buttercups had sprung up after the last mowing! The wind had got into the sou' west, too--a delicious air, sappy! He pushed his hat back and let the sun fall on his chin and cheek. Somehow, to-day, he wanted company--wanted a pretty face to look at. People treated the old as if they wanted nothing. And with the un-Forsytean philosophy which ever intruded on his soul, he thought: 'One's never had enough. With a foot in the grave one'll want something, I shouldn't be surprised!' Down here--away from the exigencies of affairs--his grandchildren, and the flowers, trees, birds of his little domain, to say nothing of sun and moon and stars above them, said, 'Open, sesame,' to him day and night. And sesame had opened--how much, perhaps, he did not know. He had always been responsive to what they had begun to call 'Nature,' genuinely, almost religiously responsive, though he had never lost his habit of calling a sunset a sunset and a view a view, however deeply they might move him. But nowadays Nature actually made him ache, he appreciated it so. Every one of these calm, bright, lengthening days, with Holly's hand in his, and the dog Balthasar in front looking studiously for what he never found, he would stroll, watching the roses open, fruit budding on the walls, sunlight brightening the oak leaves and saplings in the coppice, watching the water-lily leaves unfold and glisten, and the silvery young corn of the one wheat field; listening to the starlings and skylarks, and the Alderney cows chewing the cud, flicking slow their tufted tails; and every one of these fine days he ached a little from sheer love of it all, feeling perhaps, deep down, that he had not very much longer to enjoy it. The thought that some day--perhaps not ten years hence, perhaps not five--all this world would be taken away from him, before he had exhausted his powers of loving it, seemed to him in the nature of an injustice brooding over his horizon. If anything came after this life, it wouldn't be what he wanted; not Robin Hill, and flowers and birds and pretty faces--too few, even now, of those about him! With the years his dislike of humbug had increased; the orthodoxy he had worn in the 'sixties, as he had worn side-whiskers out of sheer exuberance, had long dropped off, leaving him reverent before three things alone--beauty, upright conduct, and the sense of property; and the greatest of these now was beauty. He had always had wide interests, and, indeed could still read The Times, but he was liable at any moment to put it down if he heard a blackbird sing. Upright conduct, property--somehow, they were tiring; the blackbirds and the sunsets never tired him, only gave him an uneasy feeling that he could not get enough of them. Staring into the stilly radiance of the early evening and at the little gold and white flowers on the lawn, a thought came to him: This weather was like the music of 'Orfeo,' which he had recently heard at Covent Garden. A beautiful opera, not like Meyerbeer, nor even quite Mozart, but, in its way, perhaps even more lovely; something classical and of the Golden Age about it, chaste and mellow, and the Ravogli 'almost worthy of the old days'--highest praise he could bestow. The yearning of Orpheus for the beauty he was losing, for his love going down to Hades, as in life love and beauty did go--the yearning which sang and throbbed through the golden music, stirred also in the lingering beauty of the world that evening. And with the tip of his cork-soled, elastic-sided boot he involuntarily stirred the ribs of the dog Balthasar, causing the animal to wake and attack his fleas; for though he was supposed to have none, nothing could persuade him of the fact. When he had finished he rubbed the place he had been scratching against his master's calf, and settled down again with his chin over the instep of the disturbing boot. And into old Jolyon's mind came a sudden recollection--a face he had seen at that opera three weeks ago--Irene, the wife of his precious nephew Soames, that man of property! Though he had not met her since the day of the 'At Home' in his old house at Stanhope Gate, which celebrated his granddaughter June's ill-starred engagement to young Bosinney, he had remembered her at once, for he had always admired her--a very pretty creature. After the death of young Bosinney, whose mistress she had so reprehensibly become, he had heard that she had left Soames at once.

Goodness only knew what she had been doing since. That sight of her face--a side view--in the row in front, had been literally the only reminder these three years that she was still alive. No one ever spoke of her. And yet Jo had told him something once--something which had upset him completely. The boy had got it from George Forsyte, he believed, who had seen Bosinney in the fog the day he was run over--something which explained the young fellow's distress--an act of Soames towards his wife--a shocking act. Jo had seen her, too, that afternoon, after the news was out, seen her for a moment, and his description had always lingered in old Jolyon's mind--'wild and lost' he had called her. And next day June had gone there--bottled up her feelings and gone there, and the maid had cried and told her how her mistress had slipped out in the night and vanished. A tragic business altogether! One thing was certain--Soames had never been able to lay hands on her again. And he was living at Brighton, and journeying up and down--a fitting fate, the man of property! For when he once took a dislike to anyone--as he had to his nephew--old Jolyon never got over it. He remembered still the sense of relief with which he had heard the news of Irene's disappearance. It had been shocking to think of her a prisoner in that house to which she must have wandered back, when Jo saw her, wandered back for a moment--like a wounded animal to its hole after seeing that news, 'Tragic death of an Architect,' in the street. Her face had struck him very much the other night--more beautiful than he had remembered, but like a mask, with something going on beneath it. A young woman still--twenty-eight perhaps. Ah, well! Very likely she had another lover by now. But at this subversive thought--for married women should never love: once, even, had been too much--his instep rose, and with it the dog Balthasar's head. The sagacious animal stood up and looked into old Jolyon's face. 'Walk?' he seemed to say; and old Jolyon answered: "Come on, old chap!"

Slowly, as was their wont, they crossed among the constellations of buttercups and daisies, and entered the fernery. This feature, where very little grew as yet, had been judiciously dropped below the level of the lawn so that it might come up again on the level of the other lawn and give the impression of irregularity, so important in horticulture. Its rocks and earth were beloved of the dog Balthasar, who sometimes found a mole there. Old Jolyon made a point of passing through it because, though it was not beautiful, he intended that it should be, some day, and he would think: 'I must get Varr to come down and look at it; he's better than Beech.' For plants, like houses and human complaints, required the best expert consideration. It was inhabited by snails, and if accompanied by his grandchildren, he would point to one and tell them the story of the little boy who said: 'Have plummers got leggers, Mother? 'No, sonny.' 'Then darned if I haven't been and swallowed a snileybob.' And when they skipped and clutched his hand, thinking of the snileybob going down the little boy's 'red lane,' his eyes would twinkle. Emerging from the fernery, he opened the wicket gate, which just there led into the first field, a large and park-like area, out of which, within brick walls, the vegetable garden had been carved. Old Jolyon avoided this, which did not suit his mood, and made down the hill towards the pond. Balthasar, who knew a water-rat or two, gambolled in front, at the gait which marks an oldish dog who takes the same walk every day. Arrived at the edge, old Jolyon stood, noting another water-lily opened since yesterday; he would show it to Holly to-morrow, when 'his little sweet' had got over the upset which had followed on her eating a tomato at lunch--her little arrangements were very delicate. Now that Jolly had gone to school--his first term--Holly was with him nearly all day long, and he missed her badly. He felt that pain too, which often bothered him now, a little dragging at his left side. He looked back up the hill. Really, poor young Bosinney had made an uncommonly good job of the house; he would have done very well for himself if he had lived! And where was he now? Perhaps, still haunting this, the site of his last work, of his tragic love affair. Or was Philip Bosinney's spirit diffused in the general? Who could say? That dog was getting his legs muddy! And he moved towards the coppice. There had been the most delightful lot of bluebells, and he knew where some still lingered like little patches of sky fallen in between the trees, away out of the sun. He passed the cow-houses and the hen-houses there installed, and pursued a path into the thick of the saplings, making for one of the bluebell plots. Balthasar, preceding him once more, uttered a low growl. Old Jolyon stirred him with his foot, but the dog remained motionless, just where there was no room to pass, and the hair rose slowly along the centre of his woolly back. Whether from the growl and the look of the dog's stivered hair, or from the sensation which a man feels in a wood, old Jolyon also felt something move along his spine. And then the path turned, and there was an old mossy log, and on it a woman sitting. Her face was turned away, and he had just time to think: 'She's trespassing--I must have a board put up!' before she turned. Powers above! The face he had seen at the opera--the very woman he had just been thinking of! In that confused moment he saw things blurred, as if a spirit--queer effect--the slant of sunlight perhaps on her violet-grey frock! And then she rose and stood smiling, her head a little to one side. Old Jolyon thought: 'How pretty she is!' She did not speak, neither did he; and he realized why with a certain admiration. She was here no doubt because of some memory, and did not mean to try and get out of it by vulgar explanation.

"Don't let that dog touch your frock," he said; "he's got wet feet. Come here, you!"

But the dog Balthasar went on towards the visitor, who put her hand down and stroked his head. Old Jolyon said quickly:

"I saw you at the opera the other night; you didn't notice me."

"Oh, yes! I did."

He felt a subtle flattery in that, as though she had added: 'Do you think one could miss seeing you?'

"They're all in Spain," he remarked abruptly. "I'm alone; I drove up for the opera. The Ravogli's good. Have you seen the cow-houses?"

In a situation so charged with mystery and something very like emotion he moved instinctively towards that bit of property, and she moved beside him. Her figure swayed faintly, like the best kind of French figures; her dress, too, was a sort of French grey. He noticed two or three silver threads in her amber-coloured hair, strange hair with those dark eyes of hers, and that creamy-pale face. A sudden sidelong look from the velvety brown eyes disturbed him. It seemed to come from deep and far, from another world almost, or at all events from some one not living very much in this. And he said mechanically:

"Where are you living now?"

"I have a little flat in Chelsea."

He did not want to hear what she was doing, did not want to hear anything; but the perverse word came out:

"Alone?"

She nodded. It was a relief to know that. And it came into his mind that, but for a twist of fate, she would have been mistress of this coppice, showing these cow-houses to him, a visitor.

"All Alderneys," he muttered; "they give the best milk. This one's a pretty creature. Woa, Myrtle!"

The fawn-coloured cow, with eyes as soft and brown as Irene's own, was standing absolutely still, not having long been milked. She looked round at them out of the corner of those lustrous, mild, cynical eyes, and from her grey lips a little dribble of saliva threaded its way towards the straw. The scent of hay and vanilla and ammonia rose in the dim light of the cool cow-house; and old Jolyon said:

"You must come up and have some dinner with me. I'll send you home in the carriage."

He perceived a struggle going on within her; natural, no doubt, with her memories. But he wanted her company; a pretty face, a charming figure, beauty! He had been alone all the afternoon. Perhaps his eyes were wistful, for she answered: "Thank you, Uncle Jolyon. I should like to."

He rubbed his hands, and said:

"Capital! Let's go up, then!" And, preceded by the dog Balthasar, they ascended through the field. The sun was almost level in their faces now, and he could see, not only those silver threads, but little lines, just deep enough to stamp her beauty with a coin-like fineness--the special look of life unshared with others. "I'll take her in by the terrace," he thought: "I won't make a common visitor of her."

"What do you do all day?" he said.

"Teach music; I have another interest, too."

"Work!" said old Jolyon, picking up the doll from off the swing, and smoothing its black petticoat. "Nothing like it, is there? I don't do any now. I'm getting on. What interest is that?"

"Trying to help women who've come to grief." Old Jolyon did not quite understand. "To grief?" he repeated; then realised with a shock that she meant exactly what he would have meant himself if he had used that expression. Assisting the Magdalenes of London! What a weird and terrifying interest! And, curiosity overcoming his natural shrinking, he asked:

"Why? What do you do for them?"

"Not much. I've no money to spare. I can only give sympathy and food sometimes."

Involuntarily old Jolyon's hand sought his purse. He said hastily: "How d'you get hold of them?"

"I go to a hospital."

"A hospital! Phew!"

"What hurts me most is that once they nearly all had some sort of beauty."

Old Jolyon straightened the doll. "Beauty!" he ejaculated: "Ha! Yes! A sad business!" and he moved towards the house. Through a French window, under sun-blinds not yet drawn up, he preceded her into the room where he was wont to study The Times and the sheets of an agricultural magazine, with huge illustrations of mangold wurzels, and the like, which provided Holly with material for her paint brush.

"Dinner's in half an hour. You'd like to wash your hands! I'll take you to June's room."

He saw her looking round eagerly; what changes since she had last visited this house with her husband, or her lover, or both perhaps--he did not know, could not say! All that was dark, and he wished to leave it so. But what changes! And in the hall he said:

"My boy Jo's a painter, you know. He's got a lot of taste. It isn't mine, of course, but I've let him have his way."

She was standing very still, her eyes roaming through the hall and music room, as it now was--all thrown into one, under the great skylight. Old Jolyon had an odd impression of her. Was she trying to conjure somebody from the shades of that space where the colouring was all pearl-grey and silver? He would have had gold himself; more lively and solid. But Jo had French tastes, and it had come out shadowy like that, with an effect as of the fume of cigarettes the chap was always smoking, broken here and there by a little blaze of blue or crimson colour. It was not his dream! Mentally he had hung this space with those gold-framed masterpieces of still and stiller life which he had bought in days when quantity was precious. And now where were they? Sold for a song! That something which made him, alone among Forsytes, move with the times had warned him against the struggle to retain them. But in his study he still had 'Dutch Fishing Boats at Sunset.'

He began to mount the stairs with her, slowly, for he felt his side.

"These are the bathrooms," he said, "and other arrangements. I've had them tiled. The nurseries are along there. And this is Jo's and his wife's. They all communicate. But you remember, I expect."

Irene nodded. They passed on, up the gallery and entered a large room with a small bed, and several windows.

"This is mine," he said. The walls were covered with the photographs of children and watercolour sketches, and he added doubtfully:

"These are Jo's. The view's first-rate. You can see the Grand Stand at Epsom in clear weather."

The sun was down now, behind the house, and over the 'prospect' a luminous haze had settled, emanation of the long and prosperous day. Few houses showed, but fields and trees faintly glistened, away to a loom of downs.

"The country's changing," he said abruptly, "but there it'll be when we're all gone. Look at those thrushes--the birds are sweet here in the mornings. I'm glad to have washed my hands of London."

Her face was close to the window pane, and he was struck by its mournful look. 'Wish I could make her look happy!' he thought. 'A pretty face, but sad!' And taking up his can of hot water he went out into the gallery.

"This is June's room," he said, opening the next door and putting the can down; "I think you'll find everything." And closing the door behind her he went back to his own room. Brushing his hair with his great ebony brushes, and dabbing his forehead with eau de Cologne, he mused. She had come so strangely--a sort of visitation; mysterious, even romantic, as if his desire for company, for beauty, had been fulfilled by whatever it was which fulfilled that sort of thing. And before the mirror he straightened his still upright figure, passed the brushes over his great white moustache, touched up his eyebrows with eau de Cologne, and rang the bell.

"I forgot to let them know that I have a lady to dinner with me. Let cook do something extra, and tell Beacon to have the landau and pair at half-past ten to drive her back to Town to-night. Is Miss Holly asleep?"

The maid thought not. And old Jolyon, passing down the gallery, stole on tiptoe towards the nursery, and opened the door whose hinges he kept specially oiled that he might slip in and out in the evenings without being heard.

But Holly was asleep, and lay like a miniature Madonna, of that type which the old painters could not tell from Venus, when they had completed her. Her long dark lashes clung to her cheeks; on her face was perfect peace--her little arrangements were evidently all right again. And old Jolyon, in the twilight of the room, stood adoring her! It was so charming, solemn, and loving--that little face. He had more than his share of the blessed capacity of living again in the young. They were to him his future life--all of a future life that his fundamental pagan sanity perhaps admitted. There she was with everything before her, and his blood--some of it--in her tiny veins. There she was, his little companion, to be made as happy as ever he could make her, so that she knew nothing but love. His heart swelled, and he went out, stilling the sound of his patent-leather boots. In the corridor an eccentric notion attacked him: To think that children should come to that which Irene had told him she was helping! Women who were all, once, little things like this one sleeping there! 'I must give her a cheque!' he mused; 'Can't bear to think of them!' They had never borne reflecting on, those poor outcasts; wounding too deeply the core of true refinement hidden under layers of conformity to the sense of property--wounding too grievously the deepest thing in him--a love of beauty which could give him, even now, a flutter of the heart, thinking of his evening in the society of a pretty woman. And he went downstairs, through the swinging doors, to the back regions. There, in the wine-cellar, was a hock worth at least two pounds a bottle, a Steinberg Cabinet, better than any Johannisberg that ever went down throat; a wine of perfect bouquet, sweet as a nectarine--nectar indeed! He got a bottle out, handling it like a baby, and holding it level to the light, to look. Enshrined in its coat of dust, that mellow coloured, slender-necked bottle gave him deep pleasure. Three years to settle down again since the move from Town--ought to be in prime condition! Thirty-five years ago he had bought it--thank God he had kept his palate, and earned the right to drink it. She would appreciate this; not a spice of acidity in a dozen. He wiped the bottle, drew the cork with his own hands, put his nose down, inhaled its perfume, and went back to the music room.

Irene was standing by the piano; she had taken off her hat and a lace scarf she had been wearing, so that her gold-coloured hair was visible, and the pallor of her neck. In her grey frock she made a pretty picture for old Jolyon, against the rosewood of the piano.

He gave her his arm, and solemnly they went. The room, which had been designed to enable twenty-four people to dine in comfort, held now but a little round table. In his present solitude the big dining-table oppressed old Jolyon; he had caused it to be removed till his son came back. Here in the company of two really good copies of Raphael Madonnas he was wont to dine alone. It was the only disconsolate hour of his day, this summer weather. He had never been a large eater, like that great chap Swithin, or Sylvanus Heythorp, or Anthony Thornworthy, those cronies of past times; and to dine alone, overlooked by the Madonnas, was to him but a sorrowful occupation, which he got through quickly, that he might come to the more spiritual enjoyment of his coffee and cigar. But this evening was a different matter! His eyes twinkled at her across the little table and he spoke of Italy and Switzerland, telling her stories of his travels there, and other experiences which he could no longer recount to his son and grand-daughter because they knew them. This fresh audience was precious to him; he had never become one of those old men who ramble round and round the fields of reminiscence. Himself quickly fatigued by the insensitive, he instinctively avoided fatiguing others, and his natural flirtatiousness towards beauty guarded him specially in his relations with a woman. He would have liked to draw her out, but though she murmured and smiled and seemed to be enjoying what he told her, he remained conscious of that mysterious remoteness which constituted half her fascination. He could not bear women who threw their shoulders and eyes at you, and chattered away; or hard-mouthed women who laid down the law and knew more than you did. There was only one quality in a woman that appealed to him--charm; and the quieter it was, the more he liked it. And this one had charm, shadowy as afternoon sunlight on those Italian hills and valleys he had loved. The feeling, too, that she was, as it were, apart, cloistered, made her seem nearer to himself, a strangely desirable companion. When a man is very old and quite out of the running, he loves to feel secure from the rivalries of youth, for he would still be first in the heart of beauty. And he drank his hock, and watched her lips, and felt nearly young. But the dog Balthasar lay watching her lips too, and despising in his heart the interruptions of their talk, and the tilting of those greenish glasses full of a golden fluid which was distasteful to him.

The light was just failing when they went back into the music-room. And, cigar in mouth, old Jolyon said:

"Play me some Chopin."

By the cigars they smoke, and the composers they love, ye shall know the texture of men's souls. Old Jolyon could not bear a strong cigar or Wagner's music. He loved Beethoven and Mozart, Handel and Gluck, and Schumann, and, for some occult reason, the operas of Meyerbeer; but of late years he had been seduced by Chopin, just as in painting he had succumbed to Botticelli. In

yielding to these tastes he had been conscious of divergence from the standard of the Golden Age. Their poetry was not that of Milton and Byron and Tennyson; of Raphael and Titian; Mozart and Beethoven. It was, as it were, behind a veil; their poetry hit no one in the face, but slipped its fingers under the ribs and turned and twisted, and melted up the heart. And, never certain that this was healthy, he did not care a rap so long as he could see the pictures of the one or hear the music of the other.

Irene sat down at the piano under the electric lamp festooned with pearl-grey, and old Jolyon, in an armchair, whence he could see her, crossed his legs and drew slowly at his cigar. She sat a few moments with her hands on the keys, evidently searching her mind for what to give him. Then she began and within old Jolyon there arose a sorrowful pleasure, not quite like anything else in the world. He fell slowly into a trance, interrupted only by the movements of taking the cigar out of his mouth at long intervals, and replacing it. She was there, and the hock within him, and the scent of tobacco; but there, too, was a world of sunshine lingering into moonlight, and pools with storks upon them, and bluish trees above, glowing with blurs of wine-red roses, and fields of lavender where milk-white cows were grazing, and a woman all shadowy, with dark eyes and a white neck, smiled, holding out her arms; and through air which was like music a star dropped and was caught on a cow's horn. He opened his eyes. Beautiful piece; she played well--the touch of an angel! And he closed them again. He felt miraculously sad and happy, as one does, standing under a lime-tree in full honey flower. Not live one's own life again, but just stand there and bask in the smile of a woman's eyes, and enjoy the bouquet! And he jerked his hand; the dog Balthasar had reached up and licked it.

"Beautiful!" He said: "Go on--more Chopin!"

She began to play again. This time the resemblance between her and 'Chopin' struck him. The swaying he had noticed in her walk was in her playing too, and the Nocturne she had chosen and the soft darkness of her eyes, the light on her hair, as of moonlight from a golden moon. Seductive, yes; but nothing of Delilah in her or in that music. A long blue spiral from his cigar ascended and dispersed. 'So we go out!' he thought. 'No more beauty! Nothing?'

Again Irene stopped.

"Would you like some Gluck? He used to write his music in a sunlit garden, with a bottle of Rhine wine beside him."

"Ah! yes. Let's have 'Orfeo.'" Round about him now were fields of gold and silver flowers, white forms swaying in the sunlight, bright birds flying to and fro. All was summer. Lingering waves of sweetness and regret flooded his soul. Some cigar ash dropped, and taking out a silk handkerchief to brush it off, he inhaled a mingled scent as of snuff and eau de Cologne. 'Ah!' he thought, 'Indian summer--that's all!' and he said: "You haven't played me 'Che faro.'"

She did not answer; did not move. He was conscious of something--some strange upset. Suddenly he saw her rise and turn away, and a pang of remorse shot through him. What a clumsy chap! Like Orpheus, she of course--she too was looking for her lost one in the hall of memory! And disturbed to the heart, he got up from his chair. She had gone to the great window at the far end. Gingerly he followed. Her hands were folded over her breast; he could just see her cheek, very white. And, quite emotionalized, he said:

"There, there, my love!" The words had escaped him mechanically, for they were those he used to Holly when she had a pain, but their effect was instantaneously distressing. She raised her arms, covered her face with them, and wept.

Old Jolyon stood gazing at her with eyes very deep from age. The passionate shame she seemed feeling at her abandonment, so unlike the control and quietude of her whole presence was as if she had never before broken down in the presence of another being.

"There, there--there, there!" he murmured, and putting his hand out reverently, touched her. She turned, and leaned the arms which covered her face against him. Old Jolyon stood very still, keeping one thin hand on her shoulder. Let her cry her heart out--it would do her good.

And the dog Balthasar, puzzled, sat down on his stern to examine them.

The window was still open, the curtains had not been drawn, the last of daylight from without mingled with faint intrusion from the lamp within; there was a scent of new-mown grass. With the wisdom of a long life old Jolyon did not speak. Even grief sobbed itself out in time; only Time was good for sorrow--Time who saw the passing of each mood, each emotion in turn; Time the layer-to-rest. There came into his mind the words: 'As panteth the hart after cooling streams'--but they were of no use to him. Then, conscious of a scent of violets, he knew she was drying her eyes. He put his chin forward, pressed his moustache against her forehead, and felt her shake with a quivering of her whole body, as of a tree which shakes itself free of raindrops. She put his hand to her lips, as if

saying: "All over now! Forgive me!"

The kiss filled him with a strange comfort; he led her back to where she had been so upset. And the dog Balthasar, following, laid the bone of one of the cutlets they had eaten at their feet.

Anxious to obliterate the memory of that emotion, he could think of nothing better than china; and moving with her slowly from cabinet to cabinet, he kept taking up bits of Dresden and Lowestoft and Chelsea, turning them round and round with his thin, veined hands, whose skin, faintly freckled, had such an aged look.

"I bought this at Jobson's," he would say; "cost me thirty pounds. It's very old. That dog leaves his bones all over the place. This old 'ship-bowl' I picked up at the sale when that precious rip, the Marquis, came to grief. But you don't remember. Here's a nice piece of Chelsea. Now, what would you say this was?" And he was comforted, feeling that, with her taste, she was taking a real interest in these things; for, after all, nothing better composes the nerves than a doubtful piece of china.

When the crunch of the carriage wheels was heard at last, he said:

"You must come again; you must come to lunch, then I can show you these by daylight, and my little sweet--she's a dear little thing. This dog seems to have taken a fancy to you."

For Balthasar, feeling that she was about to leave, was rubbing his side against her leg. Going out under the porch with her, he said:

"He'll get you up in an hour and a quarter. Take this for your protegees," and he slipped a cheque for fifty pounds into her hand. He saw her brightened eyes, and heard her murmur: "Oh! Uncle Jolyon!" and a real throb of pleasure went through him. That meant one or two poor creatures helped a little, and it meant that she would come again. He put his hand in at the window and grasped hers once more. The carriage rolled away. He stood looking at the moon and the shadows of the trees, and thought: 'A sweet night! She.....!'

II

Two days of rain, and summer set in bland and sunny. Old Jolyon walked and talked with Holly. At first he felt taller and full of a new vigour; then he felt restless. Almost every afternoon they would enter the coppice, and walk as far as the log. 'Well, she's not there!' he would think, 'of course not!' And he would feel a little shorter, and drag his feet walking up the hill home, with his hand clapped to his left side. Now and then the thought would move in him: 'Did she come--or did I dream it?' and he would stare at space, while the dog Balthasar stared at him. Of course she would not come again! He opened the letters from Spain with less excitement. They were not returning till July; he felt, oddly, that he could bear it. Every day at dinner he screwed up his eyes and looked at where she had sat. She was not there, so he unscrewed his eyes again.

On the seventh afternoon he thought: 'I must go up and get some boots.' He ordered Beacon, and set out. Passing from Putney towards Hyde Park he reflected: 'I might as well go to Chelsea and see her.' And he called out: "Just drive me to where you took that lady the other night." The coachman turned his broad red face, and his juicy lips answered: "The lady in grey, sir?"

"Yes, the lady in grey." What other ladies were there! Stodgy chap!

The carriage stopped before a small three-storied block of flats, standing a little back from the river. With a practised eye old Jolyon saw that they were cheap. 'I should think about sixty pound a year,' he mused; and entering, he looked at the name-board. The name 'Forsyte' was not on it, but against 'First Floor, Flat C' were the words: 'Mrs. Irene Heron.' Ah! She had taken her maiden name again! And somehow this pleased him. He went upstairs slowly, feeling his side a little. He stood a moment, before ringing, to lose the feeling of drag and fluttering there. She would not be in! And then--Boots! The thought was black. What did he want with boots at his age? He could not wear out all those he had.

"Your mistress at home?"

"Yes, sir."

"Say Mr. Jolyon Forsyte."

"Yes, sir, will you come this way?"

Old Jolyon followed a very little maid--not more than sixteen one would say--into a very small drawing-room where the sun-blinds were drawn. It held a cottage piano and little else save a vague fragrance and good taste. He stood in the middle, with his top hat in his hand, and thought: 'I expect she's very badly off!' There was a mirror above the fireplace, and he saw himself reflected. An old-looking chap! He heard a rustle, and turned round. She was so close that his moustache almost brushed her forehead, just under her hair.

"I was driving up," he said. "Thought I'd look in on you, and ask you how you got up the other night."

And, seeing her smile, he felt suddenly relieved. She was really glad to see him, perhaps.

"Would you like to put on your hat and come for a drive in the Park?"

But while she was gone to put her hat on, he frowned. The Park! James and Emily! Mrs. Nicholas, or some other member of his precious family would be there very likely, prancing up and down. And they would go and wag their tongues about having seen him with her, afterwards. Better not! He did not wish to revive the echoes of the past on Forsyte 'Change. He removed a white hair from the lapel of his closely-buttoned-up frock coat, and passed his hand over his cheeks, moustache, and square chin. It felt very hollow there under the cheekbones. He had not been eating much lately--he had better get that little whippersnapper who attended Holly to give him a tonic. But she had come back and when they were in the carriage, he said:

"Suppose we go and sit in Kensington Gardens instead?" and added with a twinkle: "No prancing up and down there," as if she had been in the secret of his thoughts.

Leaving the carriage, they entered those select precincts, and strolled towards the water.

"You've gone back to your maiden name, I see," he said: "I'm not sorry."

She slipped her hand under his arm: "Has June forgiven me, Uncle Jolyon?"

He answered gently: "Yes--yes; of course, why not?"

"And have you?"

"I? I forgave you as soon as I saw how the land really lay." And perhaps he had; his instinct had always been to forgive the beautiful.

She drew a deep breath. "I never regretted--I couldn't. Did you ever love very deeply, Uncle Jolyon?"

At that strange question old Jolyon stared before him. Had he? He did not seem to remember that he ever had. But he did not like to say this to the young woman whose hand was touching his arm, whose life was suspended, as it were, by memory of a tragic love. And he thought: 'If I had met you when I was young I--I might have made a fool of myself, perhaps.' And a longing to escape in generalities beset him.

"Love's a queer thing," he said, "fatal thing often. It was the Greeks--wasn't it?--made love into a goddess; they were right, I dare say, but then they lived in the Golden Age."

"Phil adored them."

Phil! The word jarred him, for suddenly--with his power to see all round a thing, he perceived why she was putting up with him like this. She wanted to talk about her lover! Well! If it was any pleasure to her! And he said: "Ah! There was a bit of the sculptor in him, I fancy."

"Yes. He loved balance and symmetry; he loved the whole-hearted way the Greeks gave themselves to art."

Balance! The chap had no balance at all, if he remembered; as for symmetry--clean-built enough he was, no doubt; but those queer eyes of his, and high cheek-bones--Symmetry?

"You're of the Golden Age, too, Uncle Jolyon."

Old Jolyon looked round at her. Was she chaffing him? No, her eyes were soft as velvet. Was she flattering him? But if so, why? There was nothing to be had out of an old chap like him.

"Phil thought so. He used to say: 'But I can never tell him that I admire him.'"

Ah! There it was again. Her dead lover; her desire to talk of him! And he pressed her arm, half resentful of those memories, half grateful, as if he recognised what a link they were between herself and him.

"He was a very talented young fellow," he murmured. "It's hot; I feel the heat nowadays. Let's sit down."

They took two chairs beneath a chestnut tree whose broad leaves covered them from the peaceful glory of the afternoon. A pleasure to sit there and watch her, and feel that she liked to be with him. And the wish to increase that liking, if he could, made him go on:

"I expect he showed you a side of him I never saw. He'd be at his best with you. His ideas of art were a little new--to me "--he had stiffed the word 'fangled.'

"Yes: but he used to say you had a real sense of beauty." Old Jolyon thought: 'The devil he did!' but answered with a twinkle: "Well, I have, or I shouldn't be sitting here with you." She was fascinating when she smiled with her eyes, like that!

"He thought you had one of those hearts that never grow old. Phil had real insight."

He was not taken in by this flattery spoken out of the past, out of a longing to talk of her dead lover--not a bit; and yet it was precious to hear, because she pleased his eyes and heart which--quite true!--had never grown old. Was that because--unlike her and her dead lover, he had never loved to desperation, had always kept his balance, his sense of symmetry. Well! It had left him power, at eighty-four, to admire beauty. And he thought, 'If I were a painter or a sculptor! But I'm an old chap. Make hay while the sun shines.'

A couple with arms entwined crossed on the grass before them, at the edge of the shadow from their tree. The sunlight fell cruelly on their pale, squashed, unkempt young faces. "We're an ugly lot!" said old Jolyon suddenly. "It amazes me to see how--love triumphs over that."

"Love triumphs over everything!"

"The young think so," he muttered.

"Love has no age, no limit, and no death."

With that glow in her pale face, her breast heaving, her eyes so large and dark and soft, she looked like Venus come to life! But this extravagance brought instant reaction, and, twinkling, he said: "Well, if it had limits, we shouldn't be born; for by George! it's got a lot to put up with."

Then, removing his top hat, he brushed it round with a cuff. The great clumsy thing heated his forehead; in these days he often got a rush of blood to the head--his circulation was not what it had been.

She still sat gazing straight before her, and suddenly she murmured:

"It's strange enough that I'm alive."

Those words of Jo's 'Wild and lost' came back to him.

"Ah!" he said: "my son saw you for a moment--that day."

"Was it your son? I heard a voice in the hall; I thought for a second it was--Phil."

Old Jolyon saw her lips tremble. She put her hand over them, took it away again, and went on calmly: "That night I went to the Embankment; a woman caught me by the dress. She told me about herself. When one knows that others suffer, one's ashamed."

"One of those?"

She nodded, and horror stirred within old Jolyon, the horror of one who has never known a struggle with desperation. Almost against his will he muttered: "Tell me, won't you?"

"I didn't care whether I lived or died. When you're like that, Fate ceases to want to kill you. She took care of me three days--she never left me. I had no money. That's why I do what I can for them, now."

But old Jolyon was thinking: 'No money!' What fate could compare with that? Every other was involved in it.

"I wish you had come to me," he said. "Why didn't you?" But Irene did not answer.

"Because my name was Forsyte, I suppose? Or was it June who kept you away? How are you getting on now?" His eyes involuntarily swept her body. Perhaps even now she was--! And yet she wasn't thin--not really!

"Oh! with my fifty pounds a year, I make just enough." The answer did not reassure him; he had lost confidence. And that fellow Soames! But his sense of justice stifled condemnation. No, she would certainly have died rather than take another penny from him. Soft as she looked, there must be strength in her somewhere--strength and fidelity. But what business had young Bosinney to have got run over and left her stranded like this!

"Well, you must come to me now," he said, "for anything you want, or I shall be quite cut up." And putting on his hat, he rose. "Let's go and get some tea. I told that lazy chap to put the horses up for an hour, and come for me at your place. We'll take a cab presently; I can't walk as I used to."

He enjoyed that stroll to the Kensington end of the gardens--the sound of her voice, the glancing of her eyes, the subtle beauty of a charming form moving beside him. He enjoyed their tea at Ruffel's in the High Street, and came out thence with a great box of chocolates swung on his little finger. He enjoyed the drive back to Chelsea in a hansom, smoking his cigar. She had promised to come down next Sunday and play to him again, and already in thought he was plucking carnations and early roses for her to carry back to town. It was a pleasure to give her a little pleasure, if it WERE pleasure from an old chap like him! The carriage was already there when they arrived. Just like that fellow, who was always late when he was wanted! Old Jolyon went in for a minute to say good-bye. The little dark hall of the flat was impregnated with a disagreeable odour of patchouli, and on a bench against the wall--its only furniture--he saw a figure sitting. He heard Irene say softly: "Just one minute." In the little drawing-room when the door was shut, he asked gravely: "One of your protegees?"

"Yes. Now thanks to you, I can do something for her."

He stood, staring, and stroking that chin whose strength had frightened so many in its time. The idea of her thus actually in contact with this outcast grieved and frightened him. What could she do for them? Nothing. Only soil and make trouble for herself, perhaps. And he said: "Take care, my dear! The world puts the worst construction on everything."

"I know that."

He was abashed by her quiet smile. "Well then--Sunday," he murmured: "Good-bye."

She put her cheek forward for him to kiss.

"Good-bye," he said again; "take care of yourself." And he went out, not looking towards the figure on the bench. He drove home by way of Hammersmith; that he might stop at a place he knew of and tell them to send her in two dozen of their best Burgundy. She must want picking-up sometimes! Only in Richmond Park did he remember that he had gone up to order himself some boots, and was surprised that he could have had so paltry an idea.

III

The little spirits of the past which throng an old man's days had never pushed their faces up to his so seldom as in the seventy hours elapsing before Sunday came. The spirit of the future, with the charm of the unknown, put up her lips instead. Old Jolyon was not restless now, and paid no visits to the log, because she was coming to lunch. There is wonderful finality about a meal; it removes a world of doubts, for no one misses meals except for reasons beyond control. He played many games with Holly on the lawn, pitching them up to her who was batting so as to be ready to bowl to Jolly in the holidays. For she was not a Forsyte, but Jolly was--and Forsytes always bat, until they have resigned and reached the age of eighty-five. The dog Balthasar, in attendance, lay on the ball as often as he could, and the page-boy fielded, till his face was like the harvest moon. And because the time was getting shorter, each day was longer and more golden than the last. On Friday night he took a liver pill, his side hurt him rather, and though it was not the liver side, there is no remedy like that. Anyone telling him that he had found a new excitement in life and that excitement was not good for him, would have been met by one of those steady and rather defiant looks of his deep-set iron-grey eyes, which seemed to say: 'I know my own business best.' He always had and always would.

On Sunday morning, when Holly had gone with her governess to church, he visited the strawberry beds. There, accompanied by the dog Balthasar, he examined the plants narrowly and succeeded in finding at least two dozen berries which were really ripe. Stooping was not good for him, and he became very dizzy and red in the forehead. Having placed the strawberries in a dish on the dining-table, he washed his hands and bathed his forehead with eau de Cologne. There, before the mirror, it occurred to him that he was thinner. What a 'threadpaper' he had been when he was young! It was nice to be slim--he could not bear a fat chap; and yet perhaps his cheeks were too thin! She was to arrive by train at half-past twelve and walk up, entering from the road past Drage's farm at the far end of the coppice. And, having looked into June's room to see that there was hot water ready, he set forth to meet her, leisurely, for his heart was beating. The air smelled sweet, larks sang, and the Grand Stand at Epsom was visible. A perfect day! On just such a one, no doubt, six years ago, Soames had brought young Bosinney down with him to look at the site before they began to build. It was Bosinney who had pitched on the exact spot for the house--as June had often told him. In these days he was thinking much about that young fellow, as if his spirit were really haunting the field of his last work, on the chance of seeing--her. Bosinney--the one man who had possessed her heart, to whom she had given her whole self with rapture! At his age one could not, of course, imagine such things, but there stirred in him a queer vague aching--as it were the ghost of an impersonal jealousy; and a feeling, too, more generous, of pity for that love so early lost. All over in a few poor months! Well, well! He looked at his watch before entering the coppice--only a quarter past, twenty-five minutes to wait! And then, turning the corner of the path, he saw her exactly where he had seen her the first time, on the log; and realised that she must have come by the earlier train to sit there alone for a couple of hours at least. Two hours of her society missed! What memory could make that log so dear to her? His face showed what he was thinking, for she said at once:

"Forgive me, Uncle Jolyon; it was here that I first knew."

"Yes, yes; there it is for you whenever you like. You're looking a little Londony; you're giving too many lessons."

That she should have to give lessons worried him. Lessons to a parcel of young girls thumping out scales with their thick fingers.

"Where do you go to give them?" he asked.

"They're mostly Jewish families, luckily."

Old Jolyon stared; to all Forsytes Jews seem strange and doubtful.

"They love music, and they're very kind."

"They had better be, by George!" He took her arm--his side always hurt him a little going uphill--and said:

"Did you ever see anything like those buttercups? They came like that in a night."

Her eyes seemed really to fly over the field, like bees after the flowers and the honey. "I wanted you to see them--wouldn't let them turn the cows in yet." Then, remembering that she had come to talk about Bosinney, he pointed to the clock-tower over the stables:

"I expect he wouldn't have let me put that there--had no notion of time, if I remember."

But, pressing his arm to her, she talked of flowers instead, and he knew it was done that he might not feel she came because of her dead lover.

"The best flower I can show you," he said, with a sort of triumph, "is my little sweet. She'll be back from Church directly. There's something about her which reminds me a little of you," and it did not seem to him peculiar that he had put it thus, instead of saying: "There's something about you which reminds me a little of her." Ah! And here she was!

Holly, followed closely by her elderly French governess, whose digestion had been ruined twenty-two years ago in the siege of Strasbourg, came rushing towards them from under the oak tree. She stopped about a dozen yards away, to pat Balthasar and pretend that this was all she had in her mind. Old Jolyon, who knew better, said:

"Well, my darling, here's the lady in grey I promised you."

Holly raised herself and looked up. He watched the two of them with a twinkle, Irene smiling, Holly beginning with grave inquiry, passing into a shy smile too, and then to something deeper. She had a sense of beauty, that child--knew what was what! He enjoyed the sight of the kiss between them.

"Mrs. Heron, Mam'zelle Beauce. Well, Mam'zelle--good sermon?"

For, now that he had not much more time before him, the only part of the service connected with this world absorbed what interest in church remained to him. Mam'zelle Beauce stretched out a spidery hand clad in a black kid glove--she had been in the best families--and the rather sad eyes of her lean yellowish face seemed to ask: "Are you well-brrred?" Whenever Holly or Jolly did anything unpleasing to her--a not uncommon occurrence--she would say to them: "The little Tayleurs never did that--they were such well-brrred little children." Jolly hated the little Tayleurs; Holly wondered dreadfully how it was she fell so short of them. 'A thin rum little soul,' old Jolyon thought her--Mam'zelle Beauce.

Luncheon was a successful meal, the mushrooms which he himself had picked in the mushroom house, his chosen strawberries, and another bottle of the Steinberg cabinet filled him with a certain aromatic spirituality, and a conviction that he would have a touch of eczema to-morrow.

After lunch they sat under the oak tree drinking Turkish coffee. It was no matter of grief to him when Mademoiselle Beauce withdrew to write her Sunday letter to her sister, whose future had been endangered in the past by swallowing a pin--an event held up daily in warning to the children to eat slowly and digest what they had eaten. At the foot of the bank, on a carriage rug, Holly and the dog Balthasar teased and loved each other, and in the shade old Jolyon with his legs crossed and his cigar luxuriously savoured, gazed at Irene sitting in the swing. A light, vaguely swaying, grey figure with a fleck of sunlight here and there upon it, lips just opened, eyes dark and soft under lids a little drooped. She looked content; surely it did her good to come and see him! The selfishness of age had not set its proper grip on him, for he could still feel pleasure in the pleasure of others, realising that what he wanted, though much, was not quite all that mattered.

"It's quiet here," he said; "you mustn't come down if you find it dull. But it's a pleasure to see you. My little sweet is the only face which gives me any pleasure, except yours."

From her smile he knew that she was not beyond liking to be appreciated, and this reassured him. "That's not humbug," he said. "I never told a woman I admired her when I didn't. In fact I don't know when I've told a woman I admired her, except my wife in the old days; and wives are funny." He was silent, but resumed abruptly:

"She used to expect me to say it more often than I felt it, and there we were." Her face looked mysteriously troubled, and, afraid that he had said something painful, he hurried on: "When my little sweet marries, I hope she'll find someone who knows what women feel. I shan't be here to see it, but there's too much topsy-turvydom in marriage; I don't want her to pitch up against that." And, aware that he had made bad worse, he added: "That dog will scratch."

A silence followed. Of what was she thinking, this pretty creature whose life was spoiled; who had done with love, and yet was made for love? Some day when he was gone, perhaps, she would find another mate--not so disorderly as that young fellow who had got himself run over. Ah! but her husband?

"Does Soames never trouble you?" he asked.

She shook her head. Her face had closed up suddenly. For all her softness there was something irreconcilable about her. And a glimpse of light on the inexorable nature of sex antipathies strayed into a brain which, belonging to early Victorian civilisation--so much older than this of his old age--had never thought about such primitive things.

"That's a comfort," he said. "You can see the Grand Stand to-day. Shall we take a turn round?"

Through the flower and fruit garden, against whose high outer walls peach trees and nectarines were trained to the sun, through the stables, the vinery, the mushroom house, the asparagus beds, the rosery, the summer-house, he conducted her--even into the kitchen garden to see the tiny green peas which Holly loved to scoop out of their pods with her finger, and lick up from the palm of her little brown hand. Many delightful things he showed her, while Holly and the dog Balthasar danced ahead, or came to them at intervals for attention. It was one of the happiest afternoons he had ever spent, but it tired him and he was glad to sit down in the music room and let her give him tea. A special little friend of Holly's had come in--a fair child with short hair like a boy's. And the two sported in the distance, under the stairs, on the stairs, and up in the gallery. Old Jolyon begged for Chopin. She played studies, mazurkas, waltzes, till the two children, creeping near, stood at the foot of the piano their dark and golden heads bent forward, listening. Old Jolyon watched.

"Let's see you dance, you two!"

Shyly, with a false start, they began. Bobbing and circling, earnest, not very adroit, they went past and past his chair to the strains of that waltz. He watched them and the face of her who was playing turned smiling towards those little dancers thinking:

'Sweetest picture I've seen for ages.'

A voice said:

"Hollee! Mais enfin--qu'est-ce que tu fais la--danser, le dimanche! Viens, donc!"

But the children came close to old Jolyon, knowing that he would save them, and gazed into a face which was decidedly 'caught out.'

"Better the day, better the deed, Mam'zelle. It's all my doing. Trot along, chicks, and have your tea."

And, when they were gone, followed by the dog Balthasar, who took every meal, he looked at Irene with a twinkle and said:

"Well, there we are! Aren't they sweet? Have you any little ones among your pupils?"

"Yes, three--two of them darlings."

"Pretty?"

"Lovely!"

Old Jolyon sighed; he had an insatiable appetite for the very young. "My little sweet," he said, "is devoted to music; she'll be a musician some day. You wouldn't give me your opinion of her playing, I suppose?"

"Of course I will."

"You wouldn't like--" but he stifled the words "to give her lessons." The idea that she gave lessons was unpleasant to him; yet it would mean that he would see her regularly. She left the piano and came over to his chair.

"I would like, very much; but there is--June. When are they coming back?"

Old Jolyon frowned. "Not till the middle of next month. What does that matter?"

"You said June had forgiven me; but she could never forget, Uncle Jolyon."

Forget! She must forget, if he wanted her to.

But as if answering, Irene shook her head. "You know she couldn't; one doesn't forget."

Always that wretched past! And he said with a sort of vexed finality:

"Well, we shall see."

He talked to her an hour or more, of the children, and a hundred little things, till the carriage came round to take her home. And when she had gone he went back to his chair, and sat there smoothing his face and chin, dreaming over the day.

That evening after dinner he went to his study and took a sheet of paper. He stayed for some minutes without writing, then rose and stood under the masterpiece 'Dutch Fishing Boats at Sunset.' He was not thinking of that picture, but of his life. He was going to leave her something in his Will; nothing could so have stirred the stilly deeps of thought and memory. He was going to leave her a portion of his wealth, of his aspirations, deeds, qualities, work--all that had made that wealth; going to leave her, too, a part of all he had missed in life, by his sane and steady pursuit of wealth. All! What had he missed? 'Dutch Fishing Boats' responded blankly; he crossed to the French window, and drawing the curtain aside, opened it. A wind had got up, and one of last year's oak leaves which had somehow survived the gardener's brooms, was dragging itself with a tiny clicking rustle along the stone terrace in the twilight. Except for that it was very quiet out there, and he could smell the heliotrope watered not long since. A bat went by. A bird uttered its last 'cheep.' And right above the oak tree the first star shone. Faust in the opera had bartered his soul for some fresh years of youth. Morbid notion! No such bargain was possible, that was real tragedy! No making oneself new again for love or life or anything. Nothing left to do but enjoy beauty from afar off while you could, and leave it something in your Will. But how much? And, as if he could not make that calculation looking out into the mild freedom of the country night, he turned back and went up to the chimney-piece. There were his pet bronzes--a Cleopatra with the asp at her breast; a Socrates; a greyhound playing with her puppy; a strong man reining in some horses. 'They last!' he thought, and a pang went through his heart. They had a thousand years of life before them!

'How much?' Well! enough at all events to save her getting old before her time, to keep the lines out of her face as long as possible, and grey from soiling that bright hair. He might live another five years. She would be well over thirty by then. 'How much?' She had none of his blood in her! In loyalty to the tenor of his life for forty years and more, ever since he married and founded that mysterious thing, a family, came this warning thought--None of his blood, no right to anything! It was a luxury then, this notion. An extravagance, a petting of an old man's whim, one of those things done in dotage. His real future was vested in those who had his blood, in whom he would live on when he was gone. He turned away from the bronzes and stood looking at the old leather chair in which he had sat and smoked so many hundreds of cigars. And suddenly he seemed to see her sitting there in her grey dress, fragrant, soft, dark-eyed, graceful, looking up at him. Why! She cared nothing for him, really; all she cared for was that lost lover of hers. But she was there, whether she would or no, giving him pleasure with her beauty and grace. One had no right to inflict an old man's company, no right to ask her down to play to him and let him look at her--for no reward! Pleasure must be paid for in this world. 'How much?' After all, there was plenty; his son and his three grandchildren would never miss that little lump. He had made it himself, nearly every penny; he could leave it where he liked, allow himself this little pleasure. He went back to the bureau. 'Well, I'm going to,' he thought, 'let them think what they like. I'm going to!' And he sat down.

'How much?' Ten thousand, twenty thousand--how much? If only with his money he could buy one year, one month of youth. And startled by that thought, he wrote quickly:

'DEAR HERRING,--Draw me a codicil to this effect: "I leave to my niece Irene Forsyte, born Irene Heron, by which name she now goes, fifteen thousand pounds free of legacy duty." 'Yours faithfully, 'JOLYON FORSYTE.'

When he had sealed and stamped the envelope, he went back to the window and drew in a long breath. It was dark, but many stars shone now.

IV

He woke at half-past two, an hour which long experience had taught him brings panic intensity to all awkward thoughts. Experience had also taught him that a further waking at the proper hour of eight showed the folly of such panic. On this particular morning the thought which gathered rapid momentum was that if he became ill, at his age not improbable, he would not see her. From this it was but a step to realisation that he would be cut off, too, when his son and June returned from Spain. How could he justify desire for the company of one who had stolen--early morning does not mince words--June's lover? That lover was dead; but June was a stubborn little thing; warm-hearted, but stubborn as wood, and--quite true--not one who forgot! By the middle of next month they would be back. He had barely five weeks left to enjoy the new interest which had come into what remained of his life. Darkness showed up to him absurdly clear the nature of his feeling. Admiration for beauty--a craving to see that which delighted his eyes.

Preposterous, at his age! And yet--what other reason was there for asking June to undergo such painful reminder, and how prevent his son and his son's wife from thinking him very queer? He would be reduced to sneaking up to London, which tired him; and the least indisposition would cut him off even from that. He lay with eyes open, setting his jaw against the prospect, and calling himself an old fool, while his heart beat loudly, and then seemed to stop beating altogether. He had seen the dawn lighting the window chinks, heard the birds chirp and twitter, and the cocks crow, before he fell asleep again, and awoke tired but sane. Five weeks before he need bother, at his age an eternity! But that early morning panic had left its mark, had slightly fevered the will of one who had always had his own way. He would see her as often as he wished! Why not go up to town and make that codicil at his solicitor's instead of writing about it; she might like to go to the opera! But, by train, for he would not have that fat chap Beacon grinning behind his back. Servants were such fools; and, as likely as not, they had known all the past history of Irene and young Bosinney--servants knew everything, and suspected the rest. He wrote to her that morning:

"MY DEAR IRENE,--I have to be up in town to-morrow. If you would like to have a look in at the opera, come and dine with me quietly ...."

But where? It was decades since he had dined anywhere in London save at his Club or at a private house. Ah! that new-fangled place close to Covent Garden....

"Let me have a line to-morrow morning to the Piedmont Hotel whether to expect you there at 7 o'clock." "Yours affectionately, "JOLYON FORSYTE."

She would understand that he just wanted to give her a little pleasure; for the idea that she should guess he had this itch to see her was instinctively unpleasant to him; it was not seemly that one so old should go out of his way to see beauty, especially in a woman.

The journey next day, short though it was, and the visit to his lawyer's, tired him. It was hot too, and after dressing for dinner he lay down on the sofa in his bedroom to rest a little. He must have had a sort of fainting fit, for he came to himself feeling very queer; and with some difficulty rose and rang the bell. Why! it was past seven! And there he was and she would be waiting. But suddenly the dizziness came on again, and he was obliged to relapse on the sofa. He heard the maid's voice say:

"Did you ring, sir?"

"Yes, come here"; he could not see her clearly, for the cloud in front of his eyes. "I'm not well, I want some sal volatile."

"Yes, sir." Her voice sounded frightened.

Old Jolyon made an effort.

"Don't go. Take this message to my niece--a lady waiting in the hall--a lady in grey. Say Mr. Forsyte is not well--the heat. He is very sorry; if he is not down directly, she is not to wait dinner."

When she was gone, he thought feebly: 'Why did I say a lady in grey--she may be in anything. Sal volatile!' He did not go off again, yet was not conscious of how Irene came to be standing beside him, holding smelling salts to his nose, and pushing a pillow up behind his head. He heard her say anxiously: "Dear Uncle Jolyon, what is it?" was dimly conscious of the soft pressure of her lips

on his hand; then drew a long breath of smelling salts, suddenly discovered strength in them, and sneezed.

"Ha!" he said, "it's nothing. How did you get here? Go down and dine--the tickets are on the dressing-table. I shall be all right in a minute."

He felt her cool hand on his forehead, smelled violets, and sat divided between a sort of pleasure and a determination to be all right.

"Why! You are in grey!" he said. "Help me up." Once on his feet he gave himself a shake.

"What business had I to go off like that!" And he moved very slowly to the glass. What a cadaverous chap! Her voice, behind him, murmured:

"You mustn't come down, Uncle; you must rest."

"Fiddlesticks! A glass of champagne'll soon set me to rights. I can't have you missing the opera."

But the journey down the corridor was troublesome. What carpets they had in these newfangled places, so thick that you tripped up in them at every step! In the lift he noticed how concerned she looked, and said with the ghost of a twinkle:

"I'm a pretty host."

When the lift stopped he had to hold firmly to the seat to prevent its slipping under him; but after soup and a glass of champagne he felt much better, and began to enjoy an infirmity which had brought such solicitude into her manner towards him.

"I should have liked you for a daughter," he said suddenly; and watching the smile in her eyes, went on:

"You mustn't get wrapped up in the past at your time of life; plenty of that when you get to my age. That's a nice dress--I like the style."

"I made it myself."

Ah! A woman who could make herself a pretty frock had not lost her interest in life.

"Make hay while the sun shines," he said; "and drink that up. I want to see some colour in your cheeks. We mustn't waste life; it doesn't do. There's a new Marguerite to-night; let's hope she won't be fat. And Mephisto--anything more dreadful than a fat chap playing the Devil I can't imagine."

But they did not go to the opera after all, for in getting up from dinner the dizziness came over him again, and she insisted on his staying quiet and going to bed early. When he parted from her at the door of the hotel, having paid the cabman to drive her to Chelsea, he sat down again for a moment to enjoy the memory of her words: "You are such a darling to me, Uncle Jolyon!" Why! Who wouldn't be! He would have liked to stay up another day and take her to the Zoo, but two days running of him would bore her to death. No, he must wait till next Sunday; she had promised to come then. They would settle those lessons for Holly, if only for a month. It would be something. That little Mam'zelle Beauce wouldn't like it, but she would have to lump it. And crushing his old opera hat against his chest he sought the lift.

He drove to Waterloo next morning, struggling with a desire to say: 'Drive me to Chelsea.' But his sense of proportion was too strong. Besides, he still felt shaky, and did not want to risk another aberration like that of last night, away from home. Holly, too, was expecting him, and what he had in his bag for her. Not that there was any cupboard love in his little sweet--she was a bundle of affection. Then, with the rather bitter cynicism of the old, he wondered for a second whether it was not cupboard love which made Irene put up with him. No, she was not that sort either. She had, if anything, too little notion of how to butter her bread, no sense of property, poor thing! Besides, he had not breathed a word about that codicil, nor should he--sufficient unto the day was the good thereof.

In the victoria which met him at the station Holly was restraining the dog Balthasar, and their caresses made 'jubey' his drive home. All the rest of that fine hot day and most of the next he was content and peaceful, reposing in the shade, while the long lingering sunshine showered gold on the lawns and the flowers. But on Thursday evening at his lonely dinner he began to count the hours; sixty-five till he would go down to meet her again in the little coppice, and walk up through the fields at her side. He had intended to consult the doctor about his fainting fit, but the fellow would be sure to insist on quiet, no excitement and all that; and he did not

mean to be tied by the leg, did not want to be told of an infirmity--if there were one, could not afford to hear of it at his time of life, now that this new interest had come. And he carefully avoided making any mention of it in a letter to his son. It would only bring them back with a run! How far this silence was due to consideration for their pleasure, how far to regard for his own, he did not pause to consider.

That night in his study he had just finished his cigar and was dozing off, when he heard the rustle of a gown, and was conscious of a scent of violets. Opening his eyes he saw her, dressed in grey, standing by the fireplace, holding out her arms. The odd thing was that, though those arms seemed to hold nothing, they were curved as if round someone's neck, and her own neck was bent back, her lips open, her eyes closed. She vanished at once, and there were the mantelpiece and his bronzes. But those bronzes and the mantelpiece had not been there when she was, only the fireplace and the wall! Shaken and troubled, he got up. 'I must take medicine,' he thought; 'I can't be well.' His heart beat too fast, he had an asthmatic feeling in the chest; and going to the window, he opened it to get some air. A dog was barking far away, one of the dogs at Gage's farm no doubt, beyond the coppice. A beautiful still night, but dark. 'I dropped off,' he mused, 'that's it! And yet I'll swear my eyes were open!' A sound like a sigh seemed to answer.

"What's that?" he said sharply, "who's there?"

Putting his hand to his side to still the beating of his heart, he stepped out on the terrace. Something soft scurried by in the dark. "Shoo!" It was that great grey cat. 'Young Bosinney was like a great cat!' he thought. 'It was him in there, that she--that she was--He's got her still!' He walked to the edge of the terrace, and looked down into the darkness; he could just see the powdering of the daisies on the unmown lawn. Here to-day and gone to-morrow! And there came the moon, who saw all, young and old, alive and dead, and didn't care a dump! His own turn soon. For a single day of youth he would give what was left! And he turned again towards the house. He could see the windows of the night nursery up there. His little sweet would be asleep. 'Hope that dog won't wake her!' he thought. 'What is it makes us love, and makes us die! I must go to bed.'

And across the terrace stones, growing grey in the moonlight, he passed back within.

How should an old man live his days if not in dreaming of his well-spent past? In that, at all events, there is no agitating warmth, only pale winter sunshine. The shell can withstand the gentle beating of the dynamos of memory. The present he should distrust; the future shun. From beneath thick shade he should watch the sunlight creeping at his toes. If there be sun of summer, let him not go out into it, mistaking it for the Indian-summer sun! Thus peradventure he shall decline softly, slowly, imperceptibly, until impatient Nature clutches his wind-pipe and he gasps away to death some early morning before the world is aired, and they put on his tombstone: 'In the fulness of years!' yea! If he preserve his principles in perfect order, a Forsyte may live on long after he is dead.

Old Jolyon was conscious of all this, and yet there was in him that which transcended Forsyteism. For it is written that a Forsyte shall not love beauty more than reason; nor his own way more than his own health. And something beat within him in these days that with each throb fretted at the thinning shell. His sagacity knew this, but it knew too that he could not stop that beating, nor would if he could. And yet, if you had told him he was living on his capital, he would have stared you down. No, no; a man did not live on his capital; it was not done! The shibboleths of the past are ever more real than the actualities of the present. And he, to whom living on one's capital had always been anathema, could not have borne to have applied so gross a phrase to his own case. Pleasure is healthful; beauty good to see; to live again in the youth of the young--and what else on earth was he doing!

Methodically, as had been the way of his whole life, he now arranged his time. On Tuesdays he journeyed up to town by train; Irene came and dined with him. And they went to the opera. On Thursdays he drove to town, and, putting that fat chap and his horses up, met her in Kensington Gardens, picking up the carriage after he had left her, and driving home again in time for dinner. He threw out the casual formula that he had business in London on those two days. On Wednesdays and Saturdays she came down to give Holly music lessons. The greater the pleasure he took in her society, the more scrupulously fastidious he became, just a matter-of-fact and friendly uncle. Not even in feeling, really, was he more--for, after all, there was his age. And yet, if she were late he fidgeted himself to death. If she missed coming, which happened twice, his eyes grew sad as an old dog's, and he failed to sleep.

And so a month went by--a month of summer in the fields, and in his heart, with summer's heat and the fatigue thereof. Who could have believed a few weeks back that he would have looked forward to his son's and his grand-daughter's return with something like dread! There was such a delicious freedom, such recovery of that independence a man enjoys before he founds a family, about these weeks of lovely weather, and this new companionship with one who demanded nothing, and remained always a little

unknown, retaining the fascination of mystery. It was like a draught of wine to him who has been drinking water for so long that he has almost forgotten the stir wine brings to his blood, the narcotic to his brain. The flowers were coloured brighter, scents and music and the sunlight had a living value--were no longer mere reminders of past enjoyment. There was something now to live for which stirred him continually to anticipation. He lived in that, not in retrospection; the difference is considerable to any so old as he. The pleasures of the table, never of much consequence to one naturally abstemious, had lost all value. He ate little, without knowing what he ate; and every day grew thinner and more worn to look at. He was again a 'threadpaper'; and to this thinned form his massive forehead, with hollows at the temples, gave more dignity than ever. He was very well aware that he ought to see the doctor, but liberty was too sweet. He could not afford to pet his frequent shortness of breath and the pain in his side at the expense of liberty. Return to the vegetable existence he had led among the agricultural journals with the life-size mangold wurzels, before this new attraction came into his life--no! He exceeded his allowance of cigars. Two a day had always been his rule. Now he smoked three and sometimes four--a man will when he is filled with the creative spirit. But very often he thought: 'I must give up smoking, and coffee; I must give up rattling up to town.' But he did not; there was no one in any sort of authority to notice him, and this was a priceless boon.

The servants perhaps wondered, but they were, naturally, dumb. Mam'zelle Beauce was too concerned with her own digestion, and too 'wellbrrred' to make personal allusions. Holly had not as yet an eye for the relative appearance of him who was her plaything and her god. It was left for Irene herself to beg him to eat more, to rest in the hot part of the day, to take a tonic, and so forth. But she did not tell him that she was the a cause of his thinness--for one cannot see the havoc oneself is working. A man of eighty-five has no passions, but the Beauty which produces passion works on in the old way, till death closes the eyes which crave the sight of Her.

On the first day of the second week in July he received a letter from his son in Paris to say that they would all be back on Friday. This had always been more sure than Fate; but, with the pathetic improvidence given to the old, that they may endure to the end, he had never quite admitted it. Now he did, and something would have to be done. He had ceased to be able to imagine life without this new interest, but that which is not imagined sometimes exists, as Forsytes are perpetually finding to their cost. He sat in his old leather chair, doubling up the letter, and mumbling with his lips the end of an unlighted cigar. After to-morrow his Tuesday expeditions to town would have to be abandoned. He could still drive up, perhaps, once a week, on the pretext of seeing his man of business. But even that would be dependent on his health, for now they would begin to fuss about him. The lessons! The lessons must go on! She must swallow down her scruples, and June must put her feelings in her pocket. She had done so once, on the day after the news of Bosinney's death; what she had done then, she could surely do again now. Four years since that injury was inflicted on her--not Christian to keep the memory of old sores alive. June's will was strong, but his was stronger, for his sands were running out. Irene was soft, surely she would do this for him, subdue her natural shrinking, sooner than give him pain! The lessons must continue; for if they did, he was secure. And lighting his cigar at last, he began trying to shape out how to put it to them all, and explain this strange intimacy; how to veil and wrap it away from the naked truth--that he could not bear to be deprived of the sight of beauty. Ah! Holly! Holly was fond of her, Holly liked her lessons. She would save him--his little sweet! And with that happy thought he became serene, and wondered what he had been worrying about so fearfully. He must not worry, it left him always curiously weak, and as if but half present in his own body.

That evening after dinner he had a return of the dizziness, though he did not faint. He would not ring the bell, because he knew it would mean a fuss, and make his going up on the morrow more conspicuous. When one grew old, the whole world was in conspiracy to limit freedom, and for what reason?--just to keep the breath in him a little longer. He did not want it at such cost. Only the dog Balthasar saw his lonely recovery from that weakness; anxiously watched his master go to the sideboard and drink some brandy, instead of giving him a biscuit. When at last old Jolyon felt able to tackle the stairs he went up to bed. And, though still shaky next morning, the thought of the evening sustained and strengthened him. It was always such a pleasure to give her a good dinner--he suspected her of undereating when she was alone; and, at the opera to watch her eyes glow and brighten, the unconscious smiling of her lips. She hadn't much pleasure, and this was the last time he would be able to give her that treat. But when he was packing his bag he caught himself wishing that he had not the fatigue of dressing for dinner before him, and the exertion, too, of telling her about June's return.

The opera that evening was 'Carmen,' and he chose the last entr'acte to break the news, instinctively putting it off till the latest moment.

She took it quietly, queerly; in fact, he did not know how she had taken it before the wayward music lifted up again and silence became necessary. The mask was down over her face, that mask behind which so much went on that he could not see. She

wanted time to think it over, no doubt! He would not press her, for she would be coming to give her lesson to-morrow afternoon, and he should see her then when she had got used to the idea. In the cab he talked only of the Carmen; he had seen better in the old days, but this one was not bad at all. When he took her hand to say good-night, she bent quickly forward and kissed his forehead.

"Good-bye, dear Uncle Jolyon, you have been so sweet to me."

"To-morrow then," he said. "Good-night. Sleep well." She echoed softly: "Sleep well" and from the cab window, already moving away, he saw her face screwed round towards him, and her hand put out in a gesture which seemed to linger.

He sought his room slowly. They never gave him the same, and he could not get used to these 'spick-and-spandy' bedrooms with new furniture and grey-green carpets sprinkled all over with pink roses. He was wakeful and that wretched Habanera kept throbbing in his head.

His French had never been equal to its words, but its sense he knew, if it had any sense, a gipsy thing--wild and unaccountable. Well, there was in life something which upset all your care and plans--something which made men and women dance to its pipes. And he lay staring from deep-sunk eyes into the darkness where the unaccountable held sway. You thought you had hold of life, but it slipped away behind you, took you by the scruff of the neck, forced you here and forced you there, and then, likely as not, squeezed life out of you! It took the very stars like that, he shouldn't wonder, rubbed their noses together and flung them apart; it had never done playing its pranks. Five million people in this great blunderbuss of a town, and all of them at the mercy of that Life-Force, like a lot of little dried peas hopping about on a board when you struck your fist on it. Ah, well! Himself would not hop much longer--a good long sleep would do him good!

How hot it was up here!--how noisy! His forehead burned; she had kissed it just where he always worried; just there--as if she had known the very place and wanted to kiss it all away for him. But, instead, her lips left a patch of grievous uneasiness. She had never spoken in quite that voice, had never before made that lingering gesture or looked back at him as she drove away.

He got out of bed and pulled the curtains aside; his room faced down over the river. There was little air, but the sight of that breadth of water flowing by, calm, eternal, soothed him. 'The great thing,' he thought 'is not to make myself a nuisance. I'll think of my little sweet, and go to sleep.' But it was long before the heat and throbbing of the London night died out into the short slumber of the summer morning. And old Jolyon had but forty winks.

When he reached home next day he went out to the flower garden, and with the help of Holly, who was very delicate with flowers, gathered a great bunch of carnations. They were, he told her, for 'the lady in grey'--a name still bandied between them; and he put them in a bowl in his study where he meant to tackle Irene the moment she came, on the subject of June and future lessons. Their fragrance and colour would help. After lunch he lay down, for he felt very tired, and the carriage would not bring her from the station till four o'clock. But as the hour approached he grew restless, and sought the schoolroom, which overlooked the drive. The sun-blinds were down, and Holly was there with Mademoiselle Beauce, sheltered from the heat of a stifling July day, attending to their silkworms. Old Jolyon had a natural antipathy to these methodical creatures, whose heads and colour reminded him of elephants; who nibbled such quantities of holes in nice green leaves; and smelled, as he thought, horrid. He sat down on a chintz-covered windowseat whence he could see the drive, and get what air there was; and the dog Balthasar who appreciated chintz on hot days, jumped up beside him. Over the cottage piano a violet dust-sheet, faded almost to grey, was spread, and on it the first lavender, whose scent filled the room. In spite of the coolness here, perhaps because of that coolness the beat of life vehemently impressed his ebbed-down senses. Each sunbeam which came through the chinks had annoying brilliance; that dog smelled very strong; the lavender perfume was overpowering; those silkworms heaving up their grey-green backs seemed horribly alive; and Holly's dark head bent over them had a wonderfully silky sheen. A marvellous cruelly strong thing was life when you were old and weak; it seemed to mock you with its multitude of forms and its beating vitality. He had never, till those last few weeks, had this curious feeling of being with one half of him eagerly borne along in the stream of life, and with the other half left on the bank, watching that helpless progress. Only when Irene was with him did he lose this double consciousness.

Holly turned her head, pointed with her little brown fist to the piano--for to point with a finger was not 'well-brrred'--and said slyly:

"Look at the 'lady in grey,' Gran; isn't she pretty to-day?"

Old Jolyon's heart gave a flutter, and for a second the room was clouded; then it cleared, and he said with a twinkle:

"Who's been dressing her up?"

"Mam'zelle."

"Hollee! Don't be foolish!"

That prim little Frenchwoman! She hadn't yet got over the music lessons being taken away from her. That wouldn't help. His little sweet was the only friend they had. Well, they were her lessons. And he shouldn't budge shouldn't budge for anything. He stroked the warm wool on Balthasar's head, and heard Holly say: "When mother's home, there won't be any changes, will there? She doesn't like strangers, you know."

The child's words seemed to bring the chilly atmosphere of opposition about old Jolyon, and disclose all the menace to his new-found freedom. Ah! He would have to resign himself to being an old man at the mercy of care and love, or fight to keep this new and prized companionship; and to fight tired him to death. But his thin, worn face hardened into resolution till it appeared all Jaw. This was his house, and his affair; he should not budge! He looked at his watch, old and thin like himself; he had owned it fifty years. Past four already! And kissing the top of Holly's head in passing, he went down to the hall. He wanted to get hold of her before she went up to give her lesson. At the first sound of wheels he stepped out into the porch, and saw at once that the victoria was empty.

"The train's in, sir; but the lady 'asn't come."

Old Jolyon gave him a sharp upward look, his eyes seemed to push away that fat chap's curiosity, and defy him to see the bitter disappointment he was feeling.

"Very well," he said, and turned back into the house. He went to his study and sat down, quivering like a leaf. What did this mean? She might have lost her train, but he knew well enough she hadn't. 'Good-bye, dear Uncle Jolyon.' Why 'Good-bye' and not 'Good-night'? And that hand of hers lingering in the air. And her kiss. What did it mean? Vehement alarm and irritation took possession of him. He got up and began to pace the Turkey carpet, between window and wall. She was going to give him up! He felt it for certain--and he defenceless. An old man wanting to look on beauty! It was ridiculous! Age closed his mouth, paralysed his power to fight. He had no right to what was warm and living, no right to anything but memories and sorrow. He could not plead with her; even an old man has his dignity. Defenceless! For an hour, lost to bodily fatigue, he paced up and down, past the bowl of carnations he had plucked, which mocked him with its scent. Of all things hard to bear, the prostration of will-power is hardest, for one who has always had his way. Nature had got him in its net, and like an unhappy fish he turned and swam at the meshes, here and there, found no hole, no breaking point. They brought him tea at five o'clock, and a letter. For a moment hope beat up in him. He cut the envelope with the butter knife, and read:

"DEAREST UNCLE JOLYON,--I can't bear to write anything that may disappoint you, but I was too cowardly to tell you last night. I feel I can't come down and give Holly any more lessons, now that June is coming back. Some things go too deep to be forgotten. It has been such a joy to see you and Holly. Perhaps I shall still see you sometimes when you come up, though I'm sure it's not good for you; I can see you are tiring yourself too much. I believe you ought to rest quite quietly all this hot weather, and now you have your son and June coming back you will be so happy. Thank you a million times for all your sweetness to me.

"Lovingly your IRENE."

So, there it was! Not good for him to have pleasure and what he chiefly cared about; to try and put off feeling the inevitable end of all things, the approach of death with its stealthy, rustling footsteps. Not good for him! Not even she could see how she was his new lease of interest in life, the incarnation of all the beauty he felt slipping from him.

His tea grew cold, his cigar remained unlit; and up and down he paced, torn between his dignity and his hold on life. Intolerable to be squeezed out slowly, without a say of your own, to live on when your will was in the hands of others bent on weighing you to the ground with care and love. Intolerable! He would see what telling her the truth would do--the truth that he wanted the sight of her more than just a lingering on. He sat down at his old bureau and took a pen. But he could not write. There was something revolting in having to plead like this; plead that she should warm his eyes with her beauty. It was tantamount to confessing dotage. He simply could not. And instead, he wrote:

"I had hoped that the memory of old sores would not be allowed to stand in the way of what is a pleasure and a profit to me and my little grand-daughter. But old men learn to forego their whims; they are obliged to, even the whim to live must be foregone sooner or later; and perhaps the sooner the better. "My love to you, "JOLYON FORSYTE."

'Bitter,' he thought, 'but I can't help it. I'm tired.' He sealed and dropped it into the box for the evening post, and hearing it fall to the bottom, thought: 'There goes all I've looked forward to!'

That evening after dinner which he scarcely touched, after his cigar which he left half-smoked for it made him feel faint, he went very slowly upstairs and stole into the night-nursery. He sat down on the window-seat. A night-light was burning, and he could just see Holly's face, with one hand underneath the cheek. An early cockchafer buzzed in the Japanese paper with which they had filled the grate, and one of the horses in the stable stamped restlessly. To sleep like that child! He pressed apart two rungs of the venetian blind and looked out. The moon was rising, blood-red. He had never seen so red a moon. The woods and fields out there were dropping to sleep too, in the last glimmer of the summer light. And beauty, like a spirit, walked. 'I've had a long life,' he thought, 'the best of nearly everything. I'm an ungrateful chap; I've seen a lot of beauty in my time. Poor young Bosinney said I had a sense of beauty. There's a man in the moon to-night!' A moth went by, another, another. 'Ladies in grey!' He closed his eyes. A feeling that he would never open them again beset him; he let it grow, let himself sink; then, with a shiver, dragged the lids up. There was something wrong with him, no doubt, deeply wrong; he would have to have the doctor after all. It didn't much matter now! Into that coppice the moon-light would have crept; there would be shadows, and those shadows would be the only things awake. No birds, beasts, flowers, insects; Just the shadows --moving; 'Ladies in grey!' Over that log they would climb; would whisper together. She and Bosinney! Funny thought! And the frogs and little things would whisper too! How the clock ticked, in here! It was all eerie--out there in the light of that red moon; in here with the little steady night-light and, the ticking clock and the nurse's dressing-gown hanging from the edge of the screen, tall, like a woman's figure. 'Lady in grey!' And a very odd thought beset him: Did she exist? Had she ever come at all? Or was she but the emanation of all the beauty he had loved and must leave so soon? The violet-grey spirit with the dark eyes and the crown of amber hair, who walks the dawn and the moonlight, and at blue-bell time? What was she, who was she, did she exist? He rose and stood a moment clutching the window-sill, to give him a sense of reality again; then began tiptoeing towards the door. He stopped at the foot of the bed; and Holly, as if conscious of his eyes fixed on her, stirred, sighed, and curled up closer in defence. He tiptoed on and passed out into the dark passage; reached his room, undressed at once, and stood before a mirror in his night-shirt. What a scarecrow--with temples fallen in, and thin legs! His eyes resisted his own image, and a look of pride came on his face. All was in league to pull him down, even his reflection in the glass, but he was not down--yet! He got into bed, and lay a long time without sleeping, trying to reach resignation, only too well aware that fretting and disappointment were very bad for him.

He woke in the morning so unrefreshed and strengthless that he sent for the doctor. After sounding him, the fellow pulled a face as long as your arm, and ordered him to stay in bed and give up smoking. That was no hardship; there was nothing to get up for, and when he felt ill, tobacco always lost its savour. He spent the morning languidly with the sun-blinds down, turning and re-turning The Times, not reading much, the dog Balthasar lying beside his bed. With his lunch they brought him a telegram, running thus:

'Your letter received coming down this afternoon will be with you at four-thirty. Irene.'

Coming down! After all! Then she did exist--and he was not deserted. Coming down! A glow ran through his limbs; his cheeks and forehead felt hot. He drank his soup, and pushed the tray-table away, lying very quiet until they had removed lunch and left him alone; but every now and then his eyes twinkled. Coming down! His heart beat fast, and then did not seem to beat at all. At three o'clock he got up and dressed deliberately, noiselessly. Holly and Mam'zelle would be in the schoolroom, and the servants asleep after their dinner, he shouldn't wonder. He opened his door cautiously, and went downstairs. In the hall the dog Balthasar lay solitary, and, followed by him, old Jolyon passed into his study and out into the burning afternoon. He meant to go down and meet her in the coppice, but felt at once he could not manage that in this heat. He sat down instead under the oak tree by the swing, and the dog Balthasar, who also felt the heat, lay down beside him. He sat there smiling. What a revel of bright minutes! What a hum of insects, and cooing of pigeons! It was the quintessence of a summer day. Lovely! And he was happy--happy as a sand-boy, whatever that might be. She was coming; she had not given him up! He had everything in life he wanted--except a little more breath, and less weight--just here! He would see her when she emerged from the fernery, come swaying just a little, a violet-grey figure passing over the daisies and dandelions and 'soldiers' on the lawn--the soldiers with their flowery crowns. He would not move, but she would come up to him and say: 'Dear Uncle Jolyon, I am sorry!' and sit in the swing and let him look at her and tell her that he had not been very well but was all right now; and that dog would lick her hand. That dog knew his master was fond of her; that dog was a good dog.

It was quite shady under the tree; the sun could not get at him, only make the rest of the world bright so that he could see the Grand Stand at Epsom away out there, very far, and the cows cropping the clover in the field and swishing at the flies with their tails. He smelled the scent of limes, and lavender. Ah! that was why there was such a racket of bees. They were excited--busy, as his heart

was busy and excited. Drowsy, too, drowsy and drugged on honey and happiness; as his heart was drugged and drowsy. Summer--summer--they seemed saying; great bees and little bees, and the flies too!

The stable clock struck four; in half an hour she would be here. He would have just one tiny nap, because he had had so little sleep of late; and then he would be fresh for her, fresh for youth and beauty, coming towards him across the sunlit lawn--lady in grey! And settling back in his chair he closed his eyes. Some thistle-down came on what little air there was, and pitched on his moustache more white than itself. He did not know; but his breathing stirred it, caught there. A ray of sunlight struck through and lodged on his boot. A bumble-bee alighted and strolled on the crown of his Panama hat. And the delicious surge of slumber reached the brain beneath that hat, and the head swayed forward and rested on his breast. Summer--summer! So went the hum.

The stable clock struck the quarter past. The dog Balthasar stretched and looked up at his master. The thistledown no longer moved. The dog placed his chin over the sunlit foot. It did not stir. The dog withdrew his chin quickly, rose, and leaped on old Jolyon's lap, looked in his face, whined; then, leaping down, sat on his haunches, gazing up. And suddenly he uttered a long, long howl.

But the thistledown was still as death, and the face of his old master.

Summer--summer--summer! The soundless footsteps on the grass! 1917

IN CHANCERY

Two households both alike in dignity, From ancient grudge, break into new mutiny.

--Romeo and Juliet TO JESSIE AND JOSEPH CONRAD

PART 1

CHAPTER I

AT TIMOTHY'S

The possessive instinct never stands still. Through florescence and feud, frosts and fires, it followed the laws of progression even in the Forsyte family which had believed it fixed for ever. Nor can it be dissociated from environment any more than the quality of potato from the soil.

The historian of the English eighties and nineties will, in his good time, depict the somewhat rapid progression from self-contented and contained provincialism to still more self-contented if less contained imperialism--in other words, the 'possessive' instinct of the nation on the move. And so, as if in conformity, was it with the Forsyte family. They were spreading not merely on the surface, but within.

When, in 1895, Susan Hayman, the married Forsyte sister, followed her husband at the ludicrously low age of seventy-four, and was cremated, it made strangely little stir among the six old Forsytes left. For this apathy there were three causes. First: the almost surreptitious burial of old Jolyon in 1892 down at Robin Hill--first of the Forsytes to desert the family grave at Highgate. That burial, coming a year after Swithin's entirely proper funeral, had occasioned a great deal of talk on Forsyte 'Change, the abode of Timothy Forsyte on the Bayswater Road, London, which still collected and radiated family gossip. Opinions ranged from the lamentation of Aunt Juley to the outspoken assertion of Francie that it was 'a jolly good thing to stop all that stuffy Highgate business.' Uncle Jolyon in his later years--indeed, ever since the strange and lamentable affair between his granddaughter June's lover, young Bosinney, and Irene, his nephew Soames Forsyte's wife--had noticeably rapped the family's knuckles; and that way of his own which he had always taken had begun to seem to them a little wayward. The philosophic vein in him, of course, had always been too liable to crop out of the strata of pure Forsyteism, so they were in a way prepared for his interment in a strange spot. But the whole thing was an odd business, and when the contents of his Will became current coin on Forsyte 'Change, a shiver had gone round the clan. Out of his estate (L145,304 gross, with liabilities L35 7s. 4d.) he had actually left L15,000 to "whomever do you think, my dear? To Irene!" that runaway wife of his nephew Soames; Irene, a woman who had almost disgraced the family, and--still more amazing was to him no blood relation. Not out and out, of course; only a life interest--only the income from it! Still, there it was; and old Jolyon's claim to be the perfect Forsyte was ended once for all. That, then, was the first reason why the burial of Susan Hayman--at Woking--made little stir.

The second reason was altogether more expansive and imperial. Besides the house on Campden Hill, Susan had a place (left her by Hayman when he died) just over the border in Hants, where the Hayman boys had learned to be such good shots and riders, as it was believed, which was of course nice for them, and creditable to everybody; and the fact of owning something really countrified seemed somehow to excuse the dispersion of her remains--though what could have put cremation into her head they could not think! The usual invitations, however, had been issued, and Soames had gone down and young Nicholas, and the Will had been quite satisfactory so far as it went, for she had only had a life interest; and everything had gone quite smoothly to the children in equal shares.

The third reason why Susan's burial made little stir was the most expansive of all. It was summed up daringly by Euphemia, the pale, the thin: "Well, I think people have a right to their own bodies, even when they're dead." Coming from a daughter of Nicholas, a Liberal of the old school and most tyrannical, it was a startling remark--showing in a flash what a lot of water had run under bridges since the death of Aunt Ann in '86, just when the proprietorship of Soames over his wife's body was acquiring the uncertainty which had led to such disaster. Euphemia, of course, spoke like a child, and had no experience; for though well over thirty by now, her name was still Forsyte. But, making all allowances, her remark did undoubtedly show expansion of the principle of liberty, decentralisation and shift in the central point of possession from others to oneself. When Nicholas heard his daughter's remark from Aunt Hester he had rapped out: "Wives and daughters! There's no end to their liberty in these days. I knew that 'Jackson' case would lead to things--lugging in Habeas Corpus like that!" He had, of course, never really forgiven the Married Woman's Property Act, which would so have interfered with him if he had not mercifully married before it was passed. But, in truth, there was no denying the revolt among the younger Forsytes against being owned by others; that, as it were, Colonial disposition to own oneself, which is the paradoxical forerunner of Imperialism, was making progress all the time. They were all now married, except George, confirmed to the Turf and the Iseeum Club; Francie, pursuing her musical career in a studio off the King's Road, Chelsea, and still taking 'lovers' to dances; Euphemia, living at home and complaining of Nicholas; and those two Dromios, Giles and Jesse Hayman. Of the third generation there were not very many--young Jolyon had three, Winifred Dartie four, young Nicholas six already, young Roger had one, Marian Tweetyman one; St. John Hayman two. But the rest of the sixteen married--Soames, Rachel and Cicely of James' family; Eustace and Thomas of Roger's; Ernest, Archibald and Florence of Nicholas'; Augustus and Annabel Spender of the Hayman's--were going down the years unreproduced.

Thus, of the ten old Forsytes twenty-one young Forsytes had been born; but of the twenty-one young Forsytes there were as yet only seventeen descendants; and it already seemed unlikely that there would be more than a further unconsidered trifle or so. A student of statistics must have noticed that the birth rate had varied in accordance with the rate of interest for your money. Grandfather 'Superior Dosset' Forsyte in the early nineteenth century had been getting ten per cent. for his, hence ten children. Those ten, leaving out the four who had not married, and Juley, whose husband Septimus Small had, of course, died almost at once, had averaged from four to five per cent. for theirs, and produced accordingly. The twenty-one whom they produced were now getting barely three per cent. in the Consols to which their father had mostly tied the Settlements they made to avoid death duties, and the six of them who had been reproduced had seventeen children, or just the proper two and five-sixths per stem.

There were other reasons, too, for this mild reproduction. A distrust of their earning powers, natural where a sufficiency is guaranteed, together with the knowledge that their fathers did not die, kept them cautious. If one had children and not much income, the standard of taste and comfort must of necessity go down; what was enough for two was not enough for four, and so on--it would be better to wait and see what Father did. Besides, it was nice to be able to take holidays unhampered. Sooner in fact than own children, they preferred to concentrate on the ownership of themselves, conforming to the growing tendency fin de siecle, as it was called. In this way, little risk was run, and one would be able to have a motor-car. Indeed, Eustace already had one, but it had shaken him horribly, and broken one of his eye teeth; so that it would be better to wait till they were a little safer. In the meantime, no more children! Even young Nicholas was drawing in his horns, and had made no addition to his six for quite three years.

The corporate decay, however, of the Forsytes, their dispersion rather, of which all this was symptomatic, had not advanced so far as to prevent a rally when Roger Forsyte died in 1899. It had been a glorious summer, and after holidays abroad and at the sea they were practically all back in London, when Roger with a touch of his old originality had suddenly breathed his last at his own house in Princes Gardens. At Timothy's it was whispered sadly that poor Roger had always been eccentric about his digestion--had he not, for instance, preferred German mutton to all the other brands?

Be that as it may, his funeral at Highgate had been perfect, and coming away from it Soames Forsyte made almost mechanically for his Uncle Timothy's in the Bayswater Road. The 'Old Things'--Aunt Juley and Aunt Hester--would like to hear about it. His father--James--at eighty-eight had not felt up to the fatigue of the funeral; and Timothy himself, of course, had not gone; so that Nicholas had been the only brother present. Still, there had been a fair gathering; and it would cheer Aunts Juley and Hester up to know. The kindly thought was not unmixed with the inevitable longing to get something out of everything you do, which is the chief characteristic of Forsytes, and indeed of the saner elements in every nation. In this practice of taking family matters to Timothy's in the Bayswater Road, Soames was but following in the footsteps of his father, who had been in the habit of going at least once a week to see his sisters at Timothy's, and had only given it up when he lost his nerve at eighty-six, and could not go out without Emily. To go with Emily was of no use, for who could really talk to anyone in the presence of his own wife? Like James in the old days, Soames found time to go there nearly every Sunday, and sit in the little drawing-room into which, with his undoubted taste, he had introduced a good deal of change and china not quite up to his own fastidious mark, and at least two rather doubtful Barbizon pictures, at Christmastides. He himself, who had done extremely well with the Barbizons, had for some years past moved towards the Marises, Israels, and Mauve, and was hoping to do better. In the riverside house which he now inhabited near Mapledurham he had a gallery, beautifully hung and lighted, to which few London dealers were strangers. It served, too, as a Sunday afternoon attraction in those week-end parties which his sisters, Winifred or Rachel, occasionally organised for him. For though he was but a taciturn showman, his quiet collected determinism seldom failed to influence his guests, who knew that his reputation was grounded not on mere aesthetic fancy, but on his power of gauging the future of market values. When he went to Timothy's he almost always had some little tale of triumph over a dealer to unfold, and dearly he loved that coo of pride with which his aunts would greet it. This afternoon, however, he was differently animated, coming from Roger's funeral in his neat dark clothes--not quite black, for after all an uncle was but an uncle, and his soul abhorred excessive display of feeling. Leaning back in a marqueterie chair and gazing down his uplifted nose at the sky-blue walls plastered with gold frames, he was noticeably silent. Whether because he had been to a funeral or not, the peculiar Forsyte build of his face was seen to the best advantage this afternoon--a face concave and long, with a jaw which divested of flesh would have seemed extravagant: altogether a chinny face though not at all ill-looking. He was feeling more strongly than ever that Timothy's was hopelessly 'rum-ti-too' and the souls of his aunts dismally mid-Victorian. The subject on which alone he wanted to talk--his own undivorced position--was unspeakable. And yet it occupied his mind to the exclusion of all else. It was only since the Spring that this had been so and a new feeling grown up which was egging him on towards what he knew might well be folly in a Forsyte of forty-five. More and more of late he had been conscious that he was 'getting on.' The fortune already considerable when he conceived the house at Robin Hill which had finally wrecked his marriage with Irene, had mounted with surprising vigour in the twelve lonely years during which he had devoted himself to little else. He was worth to-day well over a hundred thousand pounds, and had no one to leave it to--no real object for going on with what was his religion. Even if he were to relax his efforts, money made money, and he felt that he would have a hundred and fifty thousand before he knew where he was. There had always been a strongly domestic, philoprogenitive side to Soames; baulked and frustrated, it had hidden itself away, but now had crept out again in this his 'prime of life.' Concreted and focussed of late by the attraction of a girl's undoubted beauty, it had become a veritable prepossession.

And this girl was French, not likely to lose her head, or accept any unlegalised position. Moreover, Soames himself disliked the thought of that. He had tasted of the sordid side of sex during those long years of forced celibacy, secretively, and always with disgust, for he was fastidious, and his sense of law and order innate. He wanted no hole and corner liaison. A marriage at the Embassy in Paris, a few months' travel, and he could bring Annette back quite separated from a past which in truth was not too distinguished, for she only kept the accounts in her mother's Soho Restaurant; he could bring her back as something very new and chic with her French taste and self-possession, to reign at 'The Shelter' near Mapledurham. On Forsyte 'Change and among his riverside friends it would be current that he had met a charming French girl on his travels and married her. There would be the flavour of romance, and a certain cachet about a French wife. No! He was not at all afraid of that. It was only this cursed undivorced condition of his, and--and the question whether Annette would take him, which he dared not put to the touch until he had a clear and even dazzling future to offer her.

In his aunts' drawing-room he heard with but muffled ears those usual questions: How was his dear father? Not going out, of course, now that the weather was turning chilly? Would Soames be sure to tell him that Hester had found boiled holly leaves most comforting for that pain in her side; a poultice every three hours, with red flannel afterwards. And could he relish just a little pot of their very best prune preserve--it was so delicious this year, and had such a wonderful effect. Oh! and about the Darties--had Soames heard that dear Winifred was having a most distressing time with Montague? Timothy thought she really ought to have protection It was said--but Soames mustn't take this for certain--that he had given some of Winifred's jewellery to a dreadful dancer.

It was such a bad example for dear Val just as he was going to college. Soames had not heard? Oh, but he must go and see his sister and look into it at once! And did he think these Boers were really going to resist? Timothy was in quite a stew about it. The price of Consols was so high, and he had such a lot of money in them. Did Soames think they must go down if there was a war? Soames nodded. But it would be over very quickly. It would be so bad for Timothy if it wasn't. And of course Soames' dear father would feel it very much at his age. Luckily poor dear Roger had been spared this dreadful anxiety. And Aunt Juley with a little handkerchief wiped away the large tear trying to climb the permanent pout on her now quite withered left cheek; she was remembering dear Roger, and all his originality, and how he used to stick pins into her when they were little together. Aunt Hester, with her instinct for avoiding the unpleasant, here chimed in: Did Soames think they would make Mr. Chamberlain Prime Minister at once? He would settle it all so quickly. She would like to see that old Kruger sent to St. Helena. She could remember so well the news of Napoleon's death, and what a, relief it had been to his grandfather. Of course she and Juley--"We were in pantalettes then, my dear"--had not felt it much at the time.

Soames took a cup of tea from her, drank it quickly, and ate three of those macaroons for which Timothy's was famous. His faint, pale, supercilious smile had deepened just a little. Really, his family remained hopelessly provincial, however much of London they might possess between them. In these go-ahead days their provincialism stared out even more than it used to. Why, old Nicholas was still a Free Trader, and a member of that antediluvian home of Liberalism, the Remove Club--though, to be sure, the members were pretty well all Conservatives now, or he himself could not have joined; and Timothy, they said, still wore a nightcap. Aunt Juley spoke again. Dear Soames was looking so well, hardly a day older than he did when dear Ann died, and they were all there together, dear Jolyon, and dear Swithin, and dear Roger. She paused and caught the tear which had climbed the pout on her right cheek. Did he--did he ever hear anything of Irene nowadays? Aunt Hester visibly interposed her shoulder. Really, Juley was always saying something! The smile left Soames' face, and he put his cup down. Here was his subject broached for him, and for all his desire to expand, he could not take advantage.

Aunt Juley went on rather hastily:

"They say dear Jolyon first left her that fifteen thousand out and out; then of course he saw it would not be right, and made it for her life only."

Had Soames heard that?

Soames nodded.

"Your cousin Jolyon is a widower now. He is her trustee; you knew that, of course?"

Soames shook his head. He did know, but wished to show no interest. Young Jolyon and he had not met since the day of Bosinney's death.

"He must be quite middle-aged by now," went on Aunt Juley dreamily. "Let me see, he was born when your dear uncle lived in Mount Street; long before they went to Stanhope Gate in December. Just before that dreadful Commune. Over fifty! Fancy that! Such a pretty baby, and we were all so proud of him; the very first of you all." Aunt Juley sighed, and a lock of not quite her own hair came loose and straggled, so that Aunt Hester gave a little shiver. Soames rose, he was experiencing a curious piece of self-discovery. That old wound to his pride and self-esteem was not yet closed. He had come thinking he could talk of it, even wanting to talk of his fettered condition, and--behold! he was shrinking away from this reminder by Aunt Juley, renowned for her Malapropisms.

Oh, Soames was not going already!

Soames smiled a little vindictively, and said:

"Yes. Good-bye. Remember me to Uncle Timothy!" And, leaving a cold kiss on each forehead, whose wrinkles seemed to try and cling to his lips as if longing to be kissed away, he left them looking brightly after him--dear Soames, it had been so good of him to come to-day, when they were not feeling very....!

With compunction tweaking at his chest Soames descended the stairs, where was always that rather pleasant smell of camphor and port wine, and house where draughts are not permitted. The poor old things--he had not meant to be unkind! And in the street he instantly forgot them, repossessed by the image of Annette and the thought of the cursed coil around him. Why had he not pushed the thing through and obtained divorce when that wretched Bosinney was run over, and there was evidence galore for the

asking! And he turned towards his sister Winifred Dartie's residence in Green Street, Mayfair.

CHAPTER II

EXIT A MAN OF THE WORLD

That a man of the world so subject to the vicissitudes of fortunes as Montague Dartie should still be living in a house he had inhabited twenty years at least would have been more noticeable if the rent, rates, taxes, and repairs of that house had not been defrayed by his father-in-law. By that simple if wholesale device James Forsyte had secured a certain stability in the lives of his daughter and his grandchildren. After all, there is something invaluable about a safe roof over the head of a sportsman so dashing as Dartie. Until the events of the last few days he had been almost-supernaturally steady all this year. The fact was he had acquired a half share in a filly of George Forsyte's, who had gone irreparably on the turf, to the horror of Roger, now stilled by the grave. Sleeve-links, by Martyr, out of Shirt-on-fire, by Suspender, was a bay filly, three years old, who for a variety of reasons had never shown her true form. With half ownership of this hopeful animal, all the idealism latent somewhere in Dartie, as in every other man, had put up its head, and kept him quietly ardent for months past. When a man has some thing good to live for it is astonishing how sober he becomes; and what Dartie had was really good--a three to one chance for an autumn handicap, publicly assessed at twenty-five to one. The old-fashioned heaven was a poor thing beside it, and his shirt was on the daughter of Shirt-on-fire. But how much more than his shirt depended on this granddaughter of Suspender! At that roving age of forty-five, trying to Forsytes--and, though perhaps less distinguishable from any other age, trying even to Darties--Montague had fixed his current fancy on a dancer. It was no mean passion, but without money, and a good deal of it, likely to remain a love as airy as her skirts; and Dartie never had any money, subsisting miserably on what he could beg or borrow from Winifred--a woman of character, who kept him because he was the father of her children, and from a lingering admiration for those now-dying Wardour Street good looks which in their youth had fascinated her. She, together with anyone else who would lend him anything, and his losses at cards and on the turf (extraordinary how some men make a good thing out of losses!) were his whole means of subsistence; for James was now too old and nervous to approach, and Soames too formidably adamant. It is not too much to say that Dartie had been living on hope for months. He had never been fond of money for itself, had always despised the Forsytes with their investing habits, though careful to make such use of them as he could. What he liked about money was what it bought--personal sensation.

"No real sportsman cares for money," he would say, borrowing a 'pony' if it was no use trying for a 'monkey.' There was something delicious about Montague Dartie. He was, as George Forsyte said, a 'daisy.'

The morning of the Handicap dawned clear and bright, the last day of September, and Dartie who had travelled to Newmarket the night before, arrayed himself in spotless checks and walked to an eminence to see his half of the filly take her final canter: If she won he would be a cool three thou. in pocket--a poor enough recompense for the sobriety and patience of these weeks of hope, while they had been nursing her for this race. But he had not been able to afford more. Should he 'lay it off' at the eight to one to which she had advanced? This was his single thought while the larks sang above him, and the grassy downs smelled sweet, and the pretty filly passed, tossing her head and glowing like satin.

After all, if he lost it would not be he who paid, and to 'lay it off' would reduce his winnings to some fifteen hundred--hardly enough to purchase a dancer out and out. Even more potent was the itch in the blood of all the Darties for a real flutter. And turning to George he said: "She's a clipper. She'll win hands down; I shall go the whole hog." George, who had laid off every penny, and a few besides, and stood to win, however it came out, grinned down on him from his bulky height, with the words: "So ho, my wild one!" for after a chequered apprenticeship weathered with the money of a deeply complaining Roger, his Forsyte blood was beginning to stand him in good stead in the profession of owner.

There are moments of disillusionment in the lives of men from which the sensitive recorder shrinks. Suffice it to say that the good thing fell down. Sleeve-links finished in the ruck. Dartie's shirt was lost.

Between the passing of these things and the day when Soames turned his face towards Green Street, what had not happened!

When a man with the constitution of Montague Dartie has exercised self-control for months from religious motives, and remains unrewarded, he does not curse God and die, he curses God and lives, to the distress of his family.

Winifred--a plucky woman, if a little too fashionable--who had borne the brunt of him for exactly twenty-one years, had never really believed that he would do what he now did. Like so many wives, she thought she knew the worst, but she had not yet known him in

his forty-fifth year, when he, like other men, felt that it was now or never. Paying on the 2nd of October a visit of inspection to her jewel case, she was horrified to observe that her woman's crown and glory was gone--the pearls which Montague had given her in '86, when Benedict was born, and which James had been compelled to pay for in the spring of '87, to save scandal. She consulted her husband at once. He 'pooh-poohed' the matter. They would turn up! Nor till she said sharply: "Very well, then, Monty, I shall go down to Scotland Yard myself," did he consent to take the matter in hand. Alas! that the steady and resolved continuity of design necessary to the accomplishment of sweeping operations should be liable to interruption by drink. That night Dartie returned home without a care in the world or a particle of reticence. Under normal conditions Winifred would merely have locked her door and let him sleep it off, but torturing suspense about her pearls had caused her to wait up for him. Taking a small revolver from his pocket and holding on to the dining table, he told her at once that he did not care a cursh whether she lived s'long as she was quiet; but he himself wash tired o' life. Winifred, holding onto the other side of the dining table, answered:

"Don't be a clown, Monty. Have you been to Scotland Yard?"

Placing the revolver against his chest, Dartie had pulled the trigger several times. It was not loaded. Dropping it with an imprecation, he had muttered: "For shake o' the children," and sank into a chair. Winifred, having picked up the revolver, gave him some soda water. The liquor had a magical effect. Life had illused him; Winifred had never 'unshtood'm.' If he hadn't the right to take the pearls he had given her himself, who had? That Spanish filly had got'm. If Winifred had any 'jection he w'd cut--her--throat. What was the matter with that? (Probably the first use of that celebrated phrase--so obscure are the origins of even the most classical language!)

Winifred, who had learned self-containment in a hard school, looked up at him, and said: "Spanish filly! Do you mean that girl we saw dancing in the Pandemonium Ballet? Well, you are a thief and a blackguard." It had been the last straw on a sorely loaded consciousness; reaching up from his chair Dartie seized his wife's arm, and recalling the achievements of his boyhood, twisted it. Winifred endured the agony with tears in her eyes, but no murmur. Watching for a moment of weakness, she wrenched it free; then placing the dining table between them, said between her teeth: "You are the limit, Monty." (Undoubtedly the inception of that phrase --so is English formed under the stress of circumstances.) Leaving Dartie with foam on his dark moustache she went upstairs, and, after locking her door and bathing her arm in hot water, lay awake all night, thinking of her pearls adorning the neck of another, and of the consideration her husband had presumably received therefor.

The man of the world awoke with a sense of being lost to that world, and a dim recollection of having been called a 'limit.' He sat for half an hour in the dawn and the armchair where he had slept--perhaps the unhappiest half-hour he had ever spent, for even to a Dartie there is something tragic about an end. And he knew that he had reached it. Never again would he sleep in his dining-room and wake with the light filtering through those curtains bought by Winifred at Nickens and Jarveys with the money of James. Never again eat a devilled kidney at that rose-wood table, after a roll in the sheets and a hot bath. He took his note case from his dress coat pocket. Four hundred pounds, in fives and tens--the remainder of the proceeds of his half of Sleeve-links, sold last night, cash down, to George Forsyte, who, having won over the race, had not conceived the sudden dislike to the animal which he himself now felt. The ballet was going to Buenos Aires the day after to-morrow, and he was going too. Full value for the pearls had not yet been received; he was only at the soup.

He stole upstairs. Not daring to have a bath, or shave (besides, the water would be cold), he changed his clothes and packed stealthily all he could. It was hard to leave so many shining boots, but one must sacrifice something. Then, carrying a valise in either hand, he stepped out onto the landing. The house was very quiet--that house where he had begotten his four children. It was a curious moment, this, outside the room of his wife, once admired, if not perhaps loved, who had called him 'the limit.' He steeled himself with that phrase, and tiptoed on; but the next door was harder to pass. It was the room his daughters slept in. Maud was at school, but Imogen would be lying there; and moisture came into Dartie's early morning eyes. She was the most like him of the four, with her dark hair, and her luscious brown glance. Just coming out, a pretty thing! He set down the two valises. This almost formal abdication of fatherhood hurt him. The morning light fell on a face which worked with real emotion. Nothing so false as penitence moved him; but genuine paternal feeling, and that melancholy of 'never again.' He moistened his lips; and complete irresolution for a moment paralysed his legs in their check trousers. It was hard--hard to be thus compelled to leave his home! "D---nit!" he muttered, "I never thought it would come to this." Noises above warned him that the maids were beginning to get up. And grasping the two valises, he tiptoed on downstairs. His cheeks were wet, and the knowledge of that was comforting, as though it guaranteed the genuineness of his sacrifice. He lingered a little in the rooms below, to pack all the cigars he had, some papers, a crush hat, a silver cigarette box, a Ruff's Guide. Then, mixing himself a stiff whisky and soda, and lighting a cigarette, he stood hesitating before a photograph of his two girls, in a silver frame. It belonged to Winifred. 'Never mind,' he thought; 'she can get another taken, and I

can't!' He slipped it into the valise. Then, putting on his hat and overcoat, he took two others, his best malacca cane, an umbrella, and opened the front door. Closing it softly behind him, he walked out, burdened as he had never been in all his life, and made his way round the corner to wait there for an early cab to come by.

Thus had passed Montague Dartie in the forty-fifth year of his age from the house which he had called his own.

When Winifred came down, and realised that he was not in the house, her first feeling was one of dull anger that he should thus elude the reproaches she had carefully prepared in those long wakeful hours. He had gone off to Newmarket or Brighton, with that woman as likely as not. Disgusting! Forced to a complete reticence before Imogen and the servants, and aware that her father's nerves would never stand the disclosure, she had been unable to refrain from going to Timothy's that afternoon, and pouring out the story of the pearls to Aunts Juley and Hester in utter confidence. It was only on the following morning that she noticed the disappearance of that photograph. What did it mean? Careful examination of her husband's relics prompted the thought that he had gone for good. As that conclusion hardened she stood quite still in the middle of his dressing-room, with all the drawers pulled out, to try and realise what she was feeling. By no means easy! Though he was 'the limit' he was yet her property, and for the life of her she could not but feel the poorer. To be widowed yet not widowed at forty-two; with four children; made conspicuous, an object of commiseration! Gone to the arms of a Spanish Jade! Memories, feelings, which she had thought quite dead, revived within her, painful, sullen, tenacious. Mechanically she closed drawer after drawer, went to her bed, lay on it, and buried her face in the pillows. She did not cry. What was the use of that? When she got off her bed to go down to lunch she felt as if only one thing could do her good, and that was to have Val home. He--her eldest boy--who was to go to Oxford next month at James' expense, was at Littlehampton taking his final gallops with his trainer for Smalls, as he would have phrased it following his father's diction. She caused a telegram to be sent to him.

"I must see about his clothes," she said to Imogen; "I can't have him going up to Oxford all anyhow. Those boys are so particular."

"Val's got heaps of things," Imogen answered.

"I know; but they want overhauling. I hope he'll come."

"He'll come like a shot, Mother. But he'll probably skew his Exam."

"I can't help that," said Winifred. "I want him."

With an innocent shrewd look at her mother's face, Imogen kept silence. It was father, of course! Val did come 'like a shot' at six o'clock.

Imagine a cross between a pickle and a Forsyte and you have young Publius Valerius Dartie. A youth so named could hardly turn out otherwise. When he was born, Winifred, in the heyday of spirits, and the craving for distinction, had determined that her children should have names such as no others had ever had. (It was a mercy--she felt now--that she had just not named Imogen Thisbe.) But it was to George Forsyte, always a wag, that Val's christening was due. It so happened that Dartie, dining with him a week after the birth of his son and heir, had mentioned this aspiration of Winifred's.

"Call him Cato," said George, "it'll be damned piquant!" He had just won a tenner on a horse of that name.

"Cato!" Dartie had replied--they were a little 'on' as the phrase was even in those days--"it's not a Christian name."

"Halo you!" George called to a waiter in knee breeches. "Bring me the Encyc'pedia Brit. from the Library, letter C."

The waiter brought it.

"Here you are!" said George, pointing with his cigar: "Cato Publius Valerius by Virgil out of Lydia. That's what you want. Publius Valerius is Christian enough."

Dartie, on arriving home, had informed Winifred. She had been charmed. It was so 'chic.' And Publius Valerius became the baby's name, though it afterwards transpired that they had got hold of the inferior Cato. In 1890, however, when little Publius was nearly ten, the word 'chic' went out of fashion, and sobriety came in; Winifred began to have doubts. They were confirmed by little Publius himself who returned from his first term at school complaining that life was a burden to him--they called him Pubby. Winifred--a woman of real decision--promptly changed his school and his name to Val, the Publius being dropped even as an initial.

At nineteen he was a limber, freckled youth with a wide mouth, light eyes, long dark lashes; a rather charming smile, considerable knowledge of what he should not know, and no experience of what he ought to do. Few boys had more narrowly escaped being expelled--the engaging rascal. After kissing his mother and pinching Imogen, he ran upstairs three at a time, and came down four, dressed for dinner. He was awfully sorry, but his 'trainer,' who had come up too, had asked him to dine at the Oxford and Cambridge; it wouldn't do to miss--the old chap would be hurt. Winifred let him go with an unhappy pride. She had wanted him at home, but it was very nice to know that his tutor was so fond of him. He went out with a wink at Imogen, saying: "I say, Mother, could I have two plover's eggs when I come in?--cook's got some. They top up so jolly well. Oh! and look here--have you any money?--I had to borrow a fiver from old Snobby."

Winifred, looking at him with fond shrewdness, answered:

"My dear, you are naughty about money. But you shouldn't pay him to-night, anyway; you're his guest. How nice and slim he looked in his white waistcoat, and his dark thick lashes!"

"Oh, but we may go to the theatre, you see, Mother; and I think I ought to stand the tickets; he's always hard up, you know."

Winifred produced a five-pound note, saying:

"Well, perhaps you'd better pay him, but you mustn't stand the tickets too."

Val pocketed the fiver.

"If I do, I can't," he said. "Good-night, Mum!"

He went out with his head up and his hat cocked joyously, sniffing the air of Piccadilly like a young hound loosed into covert. Jolly good biz! After that mouldy old slow hole down there!

He found his 'tutor,' not indeed at the Oxford and Cambridge, but at the Goat's Club. This 'tutor' was a year older than himself, a good-looking youth, with fine brown eyes, and smooth dark hair, a small mouth, an oval face, languid, immaculate, cool to a degree, one of those young men who without effort establish moral ascendancy over their companions. He had missed being expelled from school a year before Val, had spent that year at Oxford, and Val could almost see a halo round his head. His name was Crum, and no one could get through money quicker. It seemed to be his only aim in life--dazzling to young Val, in whom, however, the Forsyte would stand apart, now and then, wondering where the value for that money was.

They dined quietly, in style and taste; left the Club smoking cigars, with just two bottles inside them, and dropped into stalls at the Liberty. For Val the sound of comic songs, the sight of lovely legs were fogged and interrupted by haunting fears that he would never equal Crum's quiet dandyism. His idealism was roused; and when that is so, one is never quite at ease. Surely he had too wide a mouth, not the best cut of waistcoat, no braid on his trousers, and his lavender gloves had no thin black stitchings down the back. Besides, he laughed too much--Crum never laughed, he only smiled, with his regular dark brows raised a little so that they formed a gable over his just drooped lids. No! he would never be Crum's equal. All the same it was a jolly good show, and Cynthia Dark simply ripping. Between the acts Crum regaled him with particulars of Cynthia's private life, and the awful knowledge became Val's that, if he liked, Crum could go behind. He simply longed to say: "I say, take me!" but dared not, because of his deficiencies; and this made the last act or two almost miserable. On coming out Crum said: "It's half an hour before they close; let's go on to the Pandemonium." They took a hansom to travel the hundred yards, and seats costing seven-and-six apiece because they were going to stand, and walked into the Promenade. It was in these little things, this utter negligence of money that Crum had such engaging polish. The ballet was on its last legs and night, and the traffic of the Promenade was suffering for the moment. Men and women were crowded in three rows against the barrier. The whirl and dazzle on the stage, the half dark, the mingled tobacco fumes and women's scent, all that curious lure to promiscuity which belongs to Promenades, began to free young Val from his idealism. He looked admiringly in a young woman's face, saw she was not young, and quickly looked away. Shades of Cynthia Dark! The young woman's arm touched his unconsciously; there was a scent of musk and mignonette. Val looked round the corner of his lashes. Perhaps she was young, after all. Her foot trod on his; she begged his pardon. He said:

"Not at all; jolly good ballet, isn't it?"

"Oh, I'm tired of it; aren't you?"

Young Val smiled--his wide, rather charming smile. Beyond that he did not go--not yet convinced. The Forsyte in him stood out for greater certainty. And on the stage the ballet whirled its kaleidoscope of snow-white, salmon-pink, and emerald-green and violet and seemed suddenly to freeze into a stilly spangled pyramid. Applause broke out, and it was over! Maroon curtains had cut it off. The semi-circle of men and women round the barrier broke up, the young woman's arm pressed his. A little way off disturbance seemed centring round a man with a pink carnation; Val stole another glance at the young woman, who was looking towards it. Three men, unsteady, emerged, walking arm in arm. The one in the centre wore the pink carnation, a white waistcoat, a dark moustache; he reeled a little as he walked. Crum's voice said slow and level: "Look at that bounder, he's screwed!" Val turned to look. The 'bounder' had disengaged his arm, and was pointing straight at them. Crum's voice, level as ever, said:

"He seems to know you!" The 'bounder' spoke:

"H'llo!" he said. "You f'llows, look! There's my young rascal of a son!"

Val saw. It was his father! He could have sunk into the crimson carpet. It was not the meeting in this place, not even that his father was 'screwed'; it was Crum's word 'bounder,' which, as by heavenly revelation, he perceived at that moment to be true. Yes, his father looked a bounder with his dark good looks, and his pink carnation, and his square, self-assertive walk. And without a word he ducked behind the young woman and slipped out of the Promenade. He heard the word, "Val!" behind him, and ran down deep-carpeted steps past the 'chuckersout,' into the Square.

To be ashamed of his own father is perhaps the bitterest experience a young man can go through. It seemed to Val, hurrying away, that his career had ended before it had begun. How could he go up to Oxford now amongst all those chaps, those splendid friends of Crum's, who would know that his father was a 'bounder'! And suddenly he hated Crum. Who the devil was Crum, to say that? If Crum had been beside him at that moment, he would certainly have been jostled off the pavement. His own father--his own! A choke came up in his throat, and he dashed his hands down deep into his overcoat pockets. Damn Crum! He conceived the wild idea of running back and fending his father, taking him by the arm and walking about with him in front of Crum; but gave it up at once and pursued his way down Piccadilly. A young woman planted herself before him. "Not so angry, darling!" He shied, dodged her, and suddenly became quite cool. If Crum ever said a word, he would jolly well punch his head, and there would be an end of it. He walked a hundred yards or more, contented with that thought, then lost its comfort utterly. It wasn't simple like that! He remembered how, at school, when some parent came down who did not pass the standard, it just clung to the fellow afterwards. It was one of those things nothing could remove. Why had his mother married his father, if he was a 'bounder'? It was bitterly unfair--jolly low-down on a fellow to give him a 'bounder' for father. The worst of it was that now Crum had spoken the word, he realised that he had long known subconsciously that his father was not 'the clean potato.' It was the beastliest thing that had ever happened to him--beastliest thing that had ever happened to any fellow! And, down-hearted as he had never yet been, he came to Green Street, and let himself in with a smuggled latch-key. In the dining-room his plover's eggs were set invitingly, with some cut bread and butter, and a little whisky at the bottom of a decanter--just enough, as Winifred had thought, for him to feel himself a man. It made him sick to look at them, and he went upstairs.

Winifred heard him pass, and thought: 'The dear boy's in. Thank goodness! If he takes after his father I don't know what I shall do! But he won't he's like me. Dear Val!'

CHAPTER III

SOAMES PREPARES TO TAKE STEPS

When Soames entered his sister's little Louis Quinze drawing-room, with its small balcony, always flowered with hanging geraniums in the summer, and now with pots of Lilium Auratum, he was struck by the immutability of human affairs. It looked just the same as on his first visit to the newly married Darties twenty-one years ago. He had chosen the furniture himself, and so completely that no subsequent purchase had ever been able to change the room's atmosphere. Yes, he had founded his sister well, and she had wanted it. Indeed, it said a great deal for Winifred that after all this time with Dartie she remained well-founded. From the first Soames had nosed out Dartie's nature from underneath the plausibility, savoir faire, and good looks which had dazzled Winifred, her mother, and even James, to the extent of permitting the fellow to marry his daughter without bringing anything but shares of no value into settlement.

Winifred, whom he noticed next to the furniture, was sitting at her Buhl bureau with a letter in her hand. She rose and came towards him. Tall as himself, strong in the cheekbones, well tailored, something in her face disturbed Soames. She crumpled the letter in

her hand, but seemed to change her mind and held it out to him. He was her lawyer as well as her brother.

Soames read, on Iseeum Club paper, these words:

'You will not get chance to insult in my own again. I am leaving country to-morrow. It's played out. I'm tired of being insulted by you. You've brought on yourself. No self-respecting man can stand it. I shall not ask you for anything again. Good-bye. I took the photograph of the two girls. Give them my love. I don't care what your family say. It's all their doing. I'm going to live new life. 'M.D.'

This after-dinner note had a splotch on it not yet quite dry. He looked at Winifred--the splotch had clearly come from her; and he checked the words: 'Good riddance!' Then it occurred to him that with this letter she was entering that very state which he himself so earnestly desired to quit--the state of a Forsyte who was not divorced.

Winifred had turned away, and was taking a long sniff from a little gold-topped bottle. A dull commiseration, together with a vague sense of injury, crept about Soames' heart. He had come to her to talk of his own position, and get sympathy, and here was she in the same position, wanting of course to talk of it, and get sympathy from him. It was always like that! Nobody ever seemed to think that he had troubles and interests of his own. He folded up the letter with the splotch inside, and said:

"What's it all about, now?"

Winifred recited the story of the pearls calmly.

"Do you think he's really gone, Soames? You see the state he was in when he wrote that."

Soames who, when he desired a thing, placated Providence by pretending that he did not think it likely to happen, answered:

"I shouldn't think so. I might find out at his Club."

"If George is there," said Winifred, "he would know."

"George?" said Soames; "I saw him at his father's funeral."

"Then he's sure to be there."

Soames, whose good sense applauded his sister's acumen, said grudgingly: "Well, I'll go round. Have you said anything in Park Lane?"

"I've told Emily," returned Winifred, who retained that 'chic' way of describing her mother. "Father would have a fit."

Indeed, anything untoward was now sedulously kept from James. With another look round at the furniture, as if to gauge his sister's exact position, Soames went out towards Piccadilly. The evening was drawing in--a touch of chill in the October haze. He walked quickly, with his close and concentrated air. He must get through, for he wished to dine in Soho. On hearing from the hall porter at the Iseeum that Mr. Dartie had not been in to-day, he looked at the trusty fellow and decided only to ask if Mr. George Forsyte was in the Club. He was. Soames, who always looked askance at his cousin George, as one inclined to jest at his expense, followed the pageboy, slightly reassured by the thought that George had just lost his father. He must have come in for about thirty thousand, besides what he had under that settlement of Roger's, which had avoided death duty. He found George in a bow-window, staring out across a half-eaten plate of muffins. His tall, bulky, black-clothed figure loomed almost threatening, though preserving still the supernatural neatness of the racing man. With a faint grin on his fleshy face, he said:

"Hallo, Soames! Have a muffin?"

"No, thanks," murmured Soames; and, nursing his hat, with the desire to say something suitable and sympathetic, added:

"How's your mother?"

"Thanks," said George; "so-so. Haven't seen you for ages. You never go racing. How's the City?"

Soames, scenting the approach of a jest, closed up, and answered:

"I wanted to ask you about Dartie. I hear he's...."

"Flitted, made a bolt to Buenos Aires with the fair Lola. Good for Winifred and the little Darties. He's a treat."

Soames nodded. Naturally inimical as these cousins were, Dartie made them kin.

"Uncle James'll sleep in his bed now," resumed George; "I suppose he's had a lot off you, too."

Soames smiled.

"Ah! You saw him further," said George amicably. "He's a real rouser. Young Val will want a bit of looking after. I was always sorry for Winifred. She's a plucky woman."

Again Soames nodded. "I must be getting back to her," he said; "she just wanted to know for certain. We may have to take steps. I suppose there's no mistake?"

"It's quite O.K.," said George--it was he who invented so many of those quaint sayings which have been assigned to other sources. "He was drunk as a lord last night; but he went off all right this morning. His ship's the Tuscarora;" and, fishing out a card, he read mockingly:

"'Mr. Montague Dartie, Poste Restante, Buenos Aires.' I should hurry up with the steps, if I were you. He fairly fed me up last night."

"Yes," said Soames; "but it's not always easy." Then, conscious from George's eyes that he had roused reminiscence of his own affair, he got up, and held out his hand. George rose too.

"Remember me to Winifred.... You'll enter her for the Divorce Stakes straight off if you ask me."

Soames took a sidelong look back at him from the doorway. George had seated himself again and was staring before him; he looked big and lonely in those black clothes. Soames had never known him so subdued. 'I suppose he feels it in a way,' he thought. 'They must have about fifty thousand each, all told. They ought to keep the estate together. If there's a war, house property will go down. Uncle Roger was a good judge, though.' And the face of Annette rose before him in the darkening street; her brown hair and her blue eyes with their dark lashes, her fresh lips and cheeks, dewy and blooming in spite of London, her perfect French figure. 'Take steps!' he thought. Re-entering Winifred's house he encountered Val, and they went in together. An idea had occurred to Soames. His cousin Jolyon was Irene's trustee, the first step would be to go down and see him at Robin Hill. Robin Hill! The odd--the very odd feeling those words brought back! Robin Hill--the house Bosinney had built for him and Irene--the house they had never lived in--the fatal house! And Jolyon lived there now! H'm! And suddenly he thought: 'They say he's got a boy at Oxford! Why not take young Val down and introduce them! It's an excuse! Less bald--very much less bald!' So, as they went upstairs, he said to Val:

"You've got a cousin at Oxford; you've never met him. I should like to take you down with me to-morrow to where he lives and introduce you. You'll find it useful."

Val, receiving the idea with but moderate transports, Soames clinched it.

"I'll call for you after lunch. It's in the country--not far; you'll enjoy it."

On the threshold of the drawing-room he recalled with an effort that the steps he contemplated concerned Winifred at the moment, not himself.

Winifred was still sitting at her Buhl bureau.

"It's quite true," he said; "he's gone to Buenos Aires, started this morning--we'd better have him shadowed when he lands. I'll cable at once. Otherwise we may have a lot of expense. The sooner these things are done the better. I'm always regretting that I didn't..." he stopped, and looked sidelong at the silent Winifred. "By the way," he went on, "can you prove cruelty?"

Winifred said in a dull voice:

"I don't know. What is cruelty?"

"Well, has he struck you, or anything?"

Winifred shook herself, and her jaw grew square.

"He twisted my arm. Or would pointing a pistol count? Or being too drunk to undress himself, or--No--I can't bring in the children."

"No," said Soames; "no! I wonder! Of course, there's legal separation--we can get that. But separation! Um!"

"What does it mean?" asked Winifred desolately.

"That he can't touch you, or you him; you're both of you married and unmarried." And again he grunted. What was it, in fact, but his own accursed position, legalised! No, he would not put her into that!

"It must be divorce," he said decisively; "failing cruelty, there's desertion. There's a way of shortening the two years, now. We get the Court to give us restitution of conjugal rights. Then if he doesn't obey, we can bring a suit for divorce in six months' time. Of course you don't want him back. But they won't know that. Still, there's the risk that he might come. I'd rather try cruelty."

Winifred shook her head. "It's so beastly."

"Well," Soames murmured, "perhaps there isn't much risk so long as he's infatuated and got money. Don't say anything to anybody, and don't pay any of his debts."

Winifred sighed. In spite of all she had been through, the sense of loss was heavy on her. And this idea of not paying his debts any more brought it home to her as nothing else yet had. Some richness seemed to have gone out of life. Without her husband, without her pearls, without that intimate sense that she made a brave show above the domestic whirlpool, she would now have to face the world. She felt bereaved indeed.

And into the chilly kiss he placed on her forehead, Soames put more than his usual warmth.

"I have to go down to Robin Hill to-morrow," he said, "to see young Jolyon on business. He's got a boy at Oxford. I'd like to take Val with me and introduce him. Come down to 'The Shelter' for the week-end and bring the children. Oh! by the way, no, that won't do; I've got some other people coming." So saying, he left her and turned towards Soho.

CHAPTER IV

SOHO

Of all quarters in the queer adventurous amalgam called London, Soho is perhaps least suited to the Forsyte spirit. 'So-ho, my wild one!' George would have said if he had seen his cousin going there. Untidy, full of Greeks, Ishmaelites, cats, Italians, tomatoes, restaurants, organs, coloured stuffs, queer names, people looking out of upper windows, it dwells remote from the British Body Politic. Yet has it haphazard proprietary instincts of its own, and a certain possessive prosperity which keeps its rents up when those of other quarters go down. For long years Soames' acquaintanceship with Soho had been confined to its Western bastion, Wardour Street. Many bargains had he picked up there. Even during those seven years at Brighton after Bosinney's death and Irene's flight, he had bought treasures there sometimes, though he had no place to put them; for when the conviction that his wife had gone for good at last became firm within him, he had caused a board to be put up in Montpellier Square:

FOR SALE THE LEASE OF THIS DESIRABLE RESIDENCE

Enquire of Messrs. Lesson and Tukes, Court Street, Belgravia.

It had sold within a week--that desirable residence, in the shadow of whose perfection a man and a woman had eaten their hearts out.

Of a misty January evening, just before the board was taken down, Soames had gone there once more, and stood against the Square railings, looking at its unlighted windows, chewing the cud of possessive memories which had turned so bitter in the mouth. Why had she never loved him? Why? She had been given all she had wanted, and in return had given him, for three long years, all he had wanted--except, indeed, her heart. He had uttered a little involuntary groan, and a passing policeman had glanced suspiciously at him who no longer possessed the right to enter that green door with the carved brass knocker beneath the board 'For Sale!' A choking sensation had attacked his throat, and he had hurried away into the mist. That evening he had gone to Brighton to live....

Approaching Malta Street, Soho, and the Restaurant Bretagne, where Annette would be drooping her pretty shoulders over her accounts, Soames thought with wonder of those seven years at Brighton. How had he managed to go on so long in that town devoid of the scent of sweetpeas, where he had not even space to put his treasures? True, those had been years with no time at all

for looking at them--years of almost passionate money-making, during which Forsyte, Bustard and Forsyte had become solicitors to more limited Companies than they could properly attend to. Up to the City of a morning in a Pullman car, down from the City of an evening in a Pullman car. Law papers again after dinner, then the sleep of the tired, and up again next morning. Saturday to Monday was spent at his Club in town--curious reversal of customary procedure, based on the deep and careful instinct that while working so hard he needed sea air to and from the station twice a day, and while resting must indulge his domestic affections. The Sunday visit to his family in Park Lane, to Timothy's, and to Green Street; the occasional visits elsewhere had seemed to him as necessary to health as sea air on weekdays. Even since his migration to Mapledurham he had maintained those habits until--he had known Annette.

Whether Annette had produced the revolution in his outlook, or that outlook had produced Annette, he knew no more than we know where a circle begins. It was intricate and deeply involved with the growing consciousness that property without anyone to leave it to is the negation of true Forsyteism. To have an heir, some continuance of self, who would begin where he left off--ensure, in fact, that he would not leave off--had quite obsessed him for the last year and more. After buying a bit of Wedgwood one evening in April, he had dropped into Malta Street to look at a house of his father's which had been turned into a restaurant--a risky proceeding, and one not quite in accordance with the terms of the lease. He had stared for a little at the outside painted a good cream colour, with two peacock-blue tubs containing little bay-trees in a recessed doorway--and at the words 'Restaurant Bretagne' above them in gold letters, rather favourably impressed. Entering, he had noticed that several people were already seated at little round green tables with little pots of fresh flowers on them and Brittany-ware plates, and had asked of a trim waitress to see the proprietor. They had shown him into a back room, where a girl was sitting at a simple bureau covered with papers, and a small round, table was laid for two. The impression of cleanliness, order, and good taste was confirmed when the girl got up, saying, "You wish to see Maman, Monsieur?" in a broken accent.

"Yes," Soames had answered, "I represent your landlord; in fact, I'm his son."

"Won't you sit down, sir, please? Tell Maman to come to this gentleman."

He was pleased that the girl seemed impressed, because it showed business instinct; and suddenly he noticed that she was remarkably pretty--so remarkably pretty that his eyes found a difficulty in leaving her face. When she moved to put a chair for him, she swayed in a curious subtle way, as if she had been put together by someone with a special secret skill; and her face and neck, which was a little bared, looked as fresh as if they had been sprayed with dew. Probably at this moment Soames decided that the lease had not been violated; though to himself and his father he based the decision on the efficiency of those illicit adaptations in the building, on the signs of prosperity, and the obvious business capacity of Madame Lamotte. He did not, however, neglect to leave certain matters to future consideration, which had necessitated further visits, so that the little back room had become quite accustomed to his spare, not unsolid, but unobtrusive figure, and his pale, chinny face with clipped moustache and dark hair not yet grizzling at the sides.

"Un Monsieur tres distingue," Madame Lamotte found him; and presently, "Tres amical, tres gentil," watching his eyes upon her daughter.

She was one of those generously built, fine-faced, dark-haired Frenchwomen, whose every action and tone of voice inspire perfect confidence in the thoroughness of their domestic tastes, their knowledge of cooking, and the careful increase of their bank balances.

After those visits to the Restaurant Bretagne began, other visits ceased--without, indeed, any definite decision, for Soames, like all Forsytes, and the great majority of their countrymen, was a born empiricist. But it was this change in his mode of life which had gradually made him so definitely conscious that he desired to alter his condition from that of the unmarried married man to that of the married man remarried.

Turning into Malta Street on this evening of early October, 1899, he bought a paper to see if there were any after-development of the Dreyfus case--a question which he had always found useful in making closer acquaintanceship with Madame Lamotte and her daughter, who were Catholic and anti-Dreyfusard.

Scanning those columns, Soames found nothing French, but noticed a general fall on the Stock Exchange and an ominous leader about the Transvaal. He entered, thinking: 'War's a certainty. I shall sell my consols.' Not that he had many, personally, the rate of interest was too wretched; but he should advise his Companies--consols would assuredly go down. A look, as he passed the

doorways of the restaurant, assured him that business was good as ever, and this, which in April would have pleased him, now gave him a certain uneasiness. If the steps which he had to take ended in his marrying Annette, he would rather see her mother safely back in France, a move to which the prosperity of the Restaurant Bretagne might become an obstacle. He would have to buy them out, of course, for French people only came to England to make money; and it would mean a higher price. And then that peculiar sweet sensation at the back of his throat, and a slight thumping about the heart, which he always experienced at the door of the little room, prevented his thinking how much it would cost.

Going in, he was conscious of an abundant black skirt vanishing through the door into the restaurant, and of Annette with her hands up to her hair. It was the attitude in which of all others he admired her--so beautifully straight and rounded and supple. And he said:

"I just came in to talk to your mother about pulling down that partition. No, don't call her."

"Monsieur will have supper with us? It will be ready in ten minutes." Soames, who still held her hand, was overcome by an impulse which surprised him.

"You look so pretty to-night," he said, "so very pretty. Do you know how pretty you look, Annette?"

Annette withdrew her hand, and blushed. "Monsieur is very good."

"Not a bit good," said Soames, and sat down gloomily.

Annette made a little expressive gesture with her hands; a smile was crinkling her red lips untouched by salve.

And, looking at those lips, Soames said:

"Are you happy over here, or do you want to go back to France?"

"Oh, I like London. Paris, of course. But London is better than Orleans, and the English country is so beautiful. I have been to Richmond last Sunday."

Soames went through a moment of calculating struggle. Mapledurham! Dared he? After all, dared he go so far as that, and show her what there was to look forward to! Still! Down there one could say things. In this room it was impossible.

"I want you and your mother," he said suddenly, "to come for the afternoon next Sunday. My house is on the river, it's not too late in this weather; and I can show you some good pictures. What do you say?"

Annette clasped her hands.

"It will be lovelee. The river is so beautiful"

"That's understood, then. I'll ask Madame."

He need say no more to her this evening, and risk giving himself away. But had he not already said too much? Did one ask restaurant proprietors with pretty daughters down to one's country house without design? Madame Lamotte would see, if Annette didn't. Well! there was not much that Madame did not see. Besides, this was the second time he had stayed to supper with them; he owed them hospitality.

Walking home towards Park Lane--for he was staying at his father's--with the impression of Annette's soft clever hand within his own, his thoughts were pleasant, slightly sensual, rather puzzled. Take steps! What steps? How? Dirty linen washed in public? Pah! With his reputation for sagacity, for far-sightedness and the clever extrication of others, he, who stood for proprietary interests, to become the plaything of that Law of which he was a pillar! There was something revolting in the thought! Winifred's affair was bad enough! To have a double dose of publicity in the family! Would not a liaison be better than that--a liaison, and a son he could adopt? But dark, solid, watchful, Madame Lamotte blocked the avenue of that vision. No! that would not work. It was not as if Annette could have a real passion for him; one could not expect that at his age. If her mother wished, if the worldly advantage were manifestly great--perhaps! If not, refusal would be certain. Besides, he thought: 'I'm not a villain. I don't want to hurt her; and I don't want anything underhand. But I do want her, and I want a son! There's nothing for it but divorce--somehow--anyhow--divorce!' Under the shadow of the plane-trees, in the lamplight, he passed slowly along the railings of the Green Park. Mist clung there among the bluish tree shapes, beyond range of the lamps. How many hundred times he had walked past those trees from his father's house in Park Lane, when he was quite a young man; or from his own house in Montpellier Square in those four years of

married life! And, to-night, making up his mind to free himself if he could of that long useless marriage tie, he took a fancy to walk on, in at Hyde Park Corner, out at Knightsbridge Gate, just as he used to when going home to Irene in the old days. What could she be like now?--how had she passed the years since he last saw her, twelve years in all, seven already since Uncle Jolyon left her that money? Was she still beautiful? Would he know her if he saw her? 'I've not changed much,' he thought; 'I expect she has. She made me suffer.' He remembered suddenly one night, the first on which he went out to dinner alone--an old Malburian dinner--the first year of their marriage. With what eagerness he had hurried back; and, entering softly as a cat, had heard her playing. Opening the drawing-room door noiselessly, he had stood watching the expression on her face, different from any he knew, so much more open, so confiding, as though to her music she was giving a heart he had never seen. And he remembered how she stopped and looked round, how her face changed back to that which he did know, and what an icy shiver had gone through him, for all that the next moment he was fondling her shoulders. Yes, she had made him suffer! Divorce! It seemed ridiculous, after all these years of utter separation! But it would have to be. No other way! 'The question,' he thought with sudden realism, 'is--which of us? She or me? She deserted me. She ought to pay for it. There'll be someone, I suppose.' Involuntarily he uttered a little snarling sound, and, turning, made his way back to Park Lane.

CHAPTER V

JAMES SEES VISIONS

The butler himself opened the door, and closing it softly, detained Soames on the inner mat.

"The master's poorly, sir," he murmured. "He wouldn't go to bed till you came in. He's still in the diningroom."

Soames responded in the hushed tone to which the house was now accustomed.

"What's the matter with him, Warmson?"

"Nervous, sir, I think. Might be the funeral; might be Mrs. Dartie's comin' round this afternoon. I think he overheard something. I've took him in a negus. The mistress has just gone up."

Soames hung his hat on a mahogany stag's-horn.

"All right, Warmson, you can go to bed; I'll take him up myself." And he passed into the dining-room.

James was sitting before the fire, in a big armchair, with a camel-hair shawl, very light and warm, over his frock-coated shoulders, on to which his long white whiskers drooped. His white hair, still fairly thick, glistened in the lamplight; a little moisture from his fixed, light-grey eyes stained the cheeks, still quite well coloured, and the long deep furrows running to the corners of the clean-shaven lips, which moved as if mumbling thoughts. His long legs, thin as a crow's, in shepherd's plaid trousers, were bent at less than a right angle, and on one knee a spindly hand moved continually, with fingers wide apart and glistening tapered nails. Beside him, on a low stool, stood a half-finished glass of negus, bedewed with beads of heat. There he had been sitting, with intervals for meals, all day. At eighty-eight he was still organically sound, but suffering terribly from the thought that no one ever told him anything. It is, indeed, doubtful how he had become aware that Roger was being buried that day, for Emily had kept it from him. She was always keeping things from him. Emily was only seventy! James had a grudge against his wife's youth. He felt sometimes that he would never have married her if he had known that she would have so many years before her, when he had so few. It was not natural. She would live fifteen or twenty years after he was gone, and might spend a lot of money; she had always had extravagant tastes. For all he knew she might want to buy one of these motor-cars. Cicely and Rachel and Imogen and all the young people--they all rode those bicycles now and went off Goodness knew where. And now Roger was gone. He didn't know--couldn't tell! The family was breaking up. Soames would know how much his uncle had left. Curiously he thought of Roger as Soames' uncle not as his own brother. Soames! It was more and more the one solid spot in a vanishing world. Soames was careful; he was a warm man; but he had no one to leave his money to. There it was! He didn't know! And there was that fellow Chamberlain! For James' political principles had been fixed between '70 and '85 when 'that rascally Radical' had been the chief thorn in the side of property and he distrusted him to this day in spite of his conversion; he would get the country into a mess and make money go down before he had done with it. A stormy petrel of a chap! Where was Soames? He had gone to the funeral of course which they had tried to keep from him. He knew that perfectly well; he had seen his son's trousers. Roger! Roger in his coffin! He remembered how, when they came up from school together from the West, on the box seat of the old Slowflyer in 1824, Roger had got into the 'boot' and gone to sleep. James uttered a thin cackle. A funny fellow--Roger--an original! He didn't know! Younger than himself, and in his coffin! The

family was breaking up. There was Val going to the university; he never came to see him now. He would cost a pretty penny up there. It was an extravagant age. And all the pretty pennies that his four grandchildren would cost him danced before James' eyes. He did not grudge them the money, but he grudged terribly the risk which the spending of that money might bring on them; he grudged the diminution of security. And now that Cicely had married, she might be having children too. He didn't

A TREATISE ON GOVERNMENT

By Aristotle

Translated From The Greek Of Aristotle By William Ellis, A.M.

London & Toronto Published By J M Dent & Sons Ltd. & In New York By E. P. Dutton &. Co

First Issue Of This Edition 1912 Reprinted 1919, 1923, 1928

INTRODUCTION

The Politics of Aristotle is the second part of a treatise of which the Ethics is the first part. It looks back to the Ethics as the Ethics looks forward to the Politics. For Aristotle did not separate, as we are inclined to do, the spheres of the statesman and the moralist. In the Ethics he has described the character necessary for the good life, but that life is for him essentially to be lived in society, and when in the last chapters of the Ethics he comes to the practical application of his inquiries, that finds expression not in moral exhortations addressed to the individual but in a description of the legislative opportunities of the statesman. It is the legislator's task to frame a society which shall make the good life possible. Politics for Aristotle is not a struggle between individuals or classes for power, nor a device for getting done such elementary tasks as the maintenance of order and security without too great encroachments on individual liberty. The state is "a community of well-being in families and aggregations of families for the sake of a perfect and self-sufficing life." The legislator is a craftsman whose material is society and whose aim is the good life.

In an early dialogue of Plato's, the Protagoras, Socrates asks Protagoras why it is not as easy to find teachers of virtue as it is to find teachers of swordsmanship, riding, or any other art. Protagoras' answer is that there are no special teachers of virtue, because virtue is taught by the whole community. Plato and Aristotle both accept the view of moral education implied in this answer. In a passage of the Republic (492 b) Plato repudiates the notion that the sophists have a corrupting moral influence upon young men. The public themselves, he says, are the real sophists and the most complete and thorough educators. No private education can hold out against the irresistible force of public opinion and the ordinary moral standards of society. But that makes it all the more essential that public opinion and social environment should not be left to grow up at haphazard as they ordinarily do, but should be made by the wise legislator the expression of the good and be informed in all their details by his knowledge. The legislator is the only possible teacher of virtue.

Such a programme for a treatise on government might lead us to expect in the Politics mainly a description of a Utopia or ideal state which might inspire poets or philosophers but have little direct effect upon political institutions. Plato's Republic is obviously impracticable, for its author had turned away in despair from existing politics. He has no proposals, in that dialogue at least, for making the best of things as they are. The first lesson his philosopher has to learn is to turn away from this world of becoming and decay, and to look upon the unchanging eternal world of ideas. Thus his ideal city is, as he says, a pattern laid up in heaven by which the just man may rule his life, a pattern therefore in the meantime for the individual and not for the statesman. It is a city, he admits in the Laws, for gods or the children of gods, not for men as they are.

Aristotle has none of the high enthusiasm or poetic imagination of Plato. He is even unduly impatient of Plato's idealism, as is shown by the criticisms in the second book. But he has a power to see the possibilities of good in things that are imperfect, and the patience of the true politician who has learned that if he would make men what they ought to be, he must take them as he finds them. His ideal is constructed not of pure reason or poetry, but from careful and sympathetic study of a wide range of facts. His criticism of Plato in the light of history, in Book II. chap, v., though as a criticism it is curiously inept, reveals his own attitude admirably: "Let us remember that we should not disregard the experience of ages; in the multitude of years, these things, if they

were good, would certainly not have been unknown; for almost everything has been found out, although sometimes they are not put together; in other cases men do not use the knowledge which they have." Aristotle in his Constitutions had made a study of one hundred and fifty-eight constitutions of the states of his day, and the fruits of that study are seen in the continual reference to concrete political experience, which makes the Politics in some respects a critical history of the workings of the institutions of the Greek city state. In Books IV., V., and VI. the ideal state seems far away, and we find a dispassionate survey of imperfect states, the best ways of preserving them, and an analysis of the causes of their instability. It is as though Aristotle were saying: "I have shown you the proper and normal type of constitution, but if you will not have it and insist on living under a perverted form, you may as well know how to make the best of it." In this way the Politics, though it defines the state in the light of its ideal, discusses states and institutions as they are. Ostensibly it is merely a continuation of the Ethics, but it comes to treat political questions from a purely political standpoint.

This combination of idealism and respect for the teachings of experience constitutes in some ways the strength and value of the Politics, but it also makes it harder to follow. The large nation states to which we are accustomed make it difficult for us to think that the state could be constructed and modelled to express the good life. We can appreciate Aristotle's critical analysis of constitutions, but find it hard to take seriously his advice to the legislator. Moreover, the idealism and the empiricism of the Politics are never really reconciled by Aristotle himself.

It may help to an understanding of the Politics if something is said on those two points.

We are accustomed since the growth of the historical method to the belief that states are "not made but grow," and are apt to be impatient with the belief which Aristotle and Plato show in the powers of the lawgiver. But however true the maxim may be of the modern nation state, it was not true of the much smaller and more self-conscious Greek city. When Aristotle talks of the legislator, he is not talking in the air. Students of the Academy had been actually called on to give new constitutions to Greek states. For the Greeks the constitution was not merely as it is so often with us, a matter of political machinery. It was regarded as a way of life. Further, the constitution within the framework of which the ordinary process of administration and passing of decrees went on, was always regarded as the work of a special man or body of men, the lawgivers. If we study Greek history, we find that the position of the legislator corresponds to that assigned to him by Plato and Aristotle. All Greek states, except those perversions which Aristotle criticises as being "above law," worked under rigid constitutions, and the constitution was only changed when the whole people gave a commission to a lawgiver to draw up a new one. Such was the position of the AEsumnetes, whom Aristotle describes in Book III. chap, xiv., in earlier times, and of the pupils of the Academy in the fourth century. The lawgiver was not an ordinary politician. He was a state doctor, called in to prescribe for an ailing constitution. So Herodotus recounts that when the people of Cyrene asked the oracle of Delphi to help them in their dissensions, the oracle told them to go to Mantinea, and the Mantineans lent them Demonax, who acted as a "setter straight" and drew up a new constitution for Cyrene. So again the Milesians, Herodotus tells us, were long troubled by civil discord, till they asked help from Paros, and the Parians sent ten commissioners who gave Miletus a new constitution. So the Athenians, when they were founding their model new colony at Thurii, employed Hippodamus of Miletus, whom Aristotle mentions in Book II, as the best expert in town-planning, to plan the streets of the city, and Protagoras as the best expert in law-making, to give the city its laws. In the Laws Plato represents one of the persons of the dialogue as having been asked by the people of Gortyna to draw up laws for a colony which they were founding. The situation described must have occurred frequently in actual life. The Greeks thought administration should be democratic and law-making the work of experts. We think more naturally of law-making as the special right of the people and administration as necessarily confined to experts.

Aristotle's Politics, then, is a handbook for the legislator, the expert who is to be called in when a state wants help. We have called him a state doctor. It is one of the most marked characteristics of Greek political theory that Plato and Aristotle think of the statesman as one who has knowledge of what ought to be done, and can help those who call him in to prescribe for them, rather than one who has power to control the forces of society. The desire of society for the statesman's advice is taken for granted, Plato in the Republic says that a good constitution is only possible when the ruler does not want to rule; where men contend for power, where they have not learnt to distinguish between the art of getting hold of the helm of state and the art of steering, which alone is statesmanship, true politics is impossible.

With this position much that Aristotle has to say about government is in agreement. He assumes the characteristic Platonic view that all men seek the good, and go wrong through ignorance, not through evil will, and so he naturally regards the state as a community which exists for the sake of the good life. It is in the state that that common seeking after the good which is the profoundest truth about men and nature becomes explicit and knows itself. The state is for Aristotle prior to the family and the village, although it succeeds them in time, for only when the state with its conscious organisation is reached can man understand

the secret of his past struggles after something he knew not what. If primitive society is understood in the light of the state, the state is understood in the light of its most perfect form, when the good after which all societies are seeking is realised in its perfection. Hence for Aristotle as for Plato, the natural state or the state as such is the ideal state, and the ideal state is the starting-point of political inquiry.

In accordance with the same line of thought, imperfect states, although called perversions, are regarded by Aristotle as the result rather of misconception and ignorance than of perverse will. They all represent, he says, some kind of justice. Oligarchs and democrats go wrong in their conception of the good. They have come short of the perfect state through misunderstanding of the end or through ignorance of the proper means to the end. But if they are states at all, they embody some common conception of the good, some common aspirations of all their members.

The Greek doctrine that the essence of the state consists in community of purpose is the counterpart of the notion often held in modern times that the essence of the state is force. The existence of force is for Plato and Aristotle a sign not of the state but of the state's failure. It comes from the struggle between conflicting misconceptions of the good. In so far as men conceive the good rightly they are united. The state represents their common agreement, force their failure to make that agreement complete. The cure, therefore, of political ills is knowledge of the good life, and the statesman is he who has such knowledge, for that alone can give men what they are always seeking.

If the state is the organisation of men seeking a common good, power and political position must be given to those who can forward this end. This is the principle expressed in Aristotle's account of political justice, the principle of "tools to those who can use them." As the aim of the state is differently conceived, the qualifications for government will vary. In the ideal state power will be given to the man with most knowledge of the good; in other states to the men who are most truly capable of achieving that end which the citizens have set themselves to pursue. The justest distribution of political power is that in which there is least waste of political ability.

Further, the belief that the constitution of a state is only the outward expression of the common aspirations and beliefs of its members, explains the paramount political importance which Aristotle assigns to education. It is the great instrument by which the legislator can ensure that the future citizens of his state will share those common beliefs which make the state possible. The Greeks with their small states had a far clearer apprehension than we can have of the dependence of a constitution upon the people who have to work it.

Such is in brief the attitude in which Aristotle approaches political problems, but in working out its application to men and institutions as they are, Aristotle admits certain compromises which are not really consistent with it.

1. Aristotle thinks of membership of a state as community in pursuit of the good. He wishes to confine membership in it to those who are capable of that pursuit in the highest and most explicit manner. His citizens, therefore, must be men of leisure, capable of rational thought upon the end of life. He does not recognise the significance of that less conscious but deep-seated membership of the state which finds its expression in loyalty and patriotism. His definition of citizen includes only a small part of the population of any Greek city. He is forced to admit that the state is not possible without the co-operation of men whom he will not admit to membership in it, either because they are not capable of sufficient rational appreciation of political ends, like the barbarians whom he thought were natural slaves, or because the leisure necessary for citizenship can only be gained by the work of the artisans who by that very work make themselves incapable of the life which they make possible for others. "The artisan only attains excellence in proportion as he becomes a slave," and the slave is only a living instrument of the good life. He exists for the state, but the state does not exist for him.

2. Aristotle in his account of the ideal state seems to waver between two ideals. There is the ideal of an aristocracy and the ideal of what he calls constitutional government, a mixed constitution. The principle of "tools to those who can use them" ought to lead him, as it does Plato, to an aristocracy. Those who have complete knowledge of the good must be few, and therefore Plato gave entire power in his state into the hands of the small minority of philosopher guardians. It is in accordance with this principle that Aristotle holds that kingship is the proper form of government when there is in the state one man of transcendent virtue. At the same time, Aristotle always holds that absolute government is not properly political, that government is not like the rule of a shepherd over his sheep, but the rule of equals over equals. He admits that the democrats are right in insisting that equality is a necessary element in the state, though he thinks they do not admit the importance of other equally necessary elements. Hence he comes to say that ruling and being ruled over by turns is an essential feature of constitutional government, which he admits as an alternative to

aristocracy. The end of the state, which is to be the standard of the distribution of political power, is conceived sometimes as a good for the apprehension and attainment of which "virtue" is necessary and sufficient (this is the principle of aristocracy), and sometimes as a more complex good, which needs for its attainment not only "virtue" but wealth and equality. This latter conception is the principle on which the mixed constitution is based. This in its distribution of political power gives some weight to "virtue," some to wealth, and some to mere number. But the principle of "ruling and being ruled by turns" is not really compatible with an unmodified principle of "tools to those who can use them." Aristotle is right in seeing that political government demands equality, not in the sense that all members of the state should be equal in ability or should have equal power, but in the sense that none of them can properly be regarded simply as tools with which the legislator works, that each has a right to say what will be made of his own life. The analogy between the legislator and the craftsman on which Plato insists, breaks down because the legislator is dealing with men like himself, men who can to some extent conceive their own end in life and cannot be treated merely as means to the end of the legislator. The sense of the value of "ruling and being ruled in turn" is derived from the experience that the ruler may use his power to subordinate the lives of the citizens of the state not to the common good but to his own private purposes. In modern terms, it is a simple, rough-and-ready attempt to solve that constant problem of politics, how efficient government is to be combined with popular control. This problem arises from the imperfection of human nature, apparent in rulers as well as in ruled, and if the principle which attempts to solve it be admitted as a principle of importance in the formation of the best constitution, then the starting-point of politics will be man's actual imperfection, not his ideal nature. Instead, then, of beginning with a state which would express man's ideal nature, and adapting it as well as may be to man's actual shortcomings from that ideal, we must recognise that the state and all political machinery are as much the expression of man's weakness as of his ideal possibilities. The state is possible only because men have common aspirations, but government, and political power, the existence of officials who are given authority to act in the name of the whole state, are necessary because men's community is imperfect, because man's social nature expresses itself in conflicting ways, in the clash of interests, the rivalry of parties, and the struggle of classes, instead of in the united seeking after a common good. Plato and Aristotle were familiar with the legislator who was called in by the whole people, and they tended therefore to take the general will or common consent of the people for granted. Most political questions are concerned with the construction and expression of the general will, and with attempts to ensure that the political machinery made to express the general will shall not be exploited for private or sectional ends.

Aristotle's mixed constitution springs from a recognition of sectional interests in the state. For the proper relation between the claims of "virtue," wealth, and numbers is to be based not upon their relative importance in the good life, but upon the strength of the parties which they represent. The mixed constitution is practicable in a state where the middle class is strong, as only the middle class can mediate between the rich and the poor. The mixed constitution will be stable if it represents the actual balance of power between different classes in the state. When we come to Aristotle's analysis of existing constitutions, we find that while he regards them as imperfect approximations to the ideal, he also thinks of them as the result of the struggle between classes. Democracy, he explains, is the government not of the many but of the poor; oligarchy a government not of the few but of the rich. And each class is thought of, not as trying to express an ideal, but as struggling to acquire power or maintain its position. If ever the class existed in unredeemed nakedness, it was in the Greek cities of the fourth century, and its existence is abundantly recognised by Aristotle. His account of the causes of revolutions in Book V. shows how far were the existing states of Greece from the ideal with which he starts. His analysis of the facts forces him to look upon them as the scene of struggling factions. The causes of revolutions are not described as primarily changes in the conception of the common good, but changes in the military or economic power of the several classes in the state. The aim which he sets before oligarchs or democracies is not the good life, but simple stability or permanence of the existing constitution.

With this spirit of realism which pervades Books IV., V., and VI. the idealism of Books I., II., VII., and VIII. is never reconciled. Aristotle is content to call existing constitutions perversions of the true form. But we cannot read the Politics without recognising and profiting from the insight into the nature of the state which is revealed throughout. Aristotle's failure does not lie in this, that he is both idealist and realist, but that he keeps these two tendencies too far apart. He thinks too much of his ideal state, as something to be reached once for all by knowledge, as a fixed type to which actual states approximate or from which they are perversions. But if we are to think of actual politics as intelligible in the light of the ideal, we must think of that ideal as progressively revealed in history, not as something to be discovered by turning our back on experience and having recourse to abstract reasoning. If we stretch forward from what exists to an ideal, it is to a better which may be in its turn transcended, not to a single immutable best. Aristotle found in the society of his time men who were not capable of political reflection, and who, as he thought, did their best work under superintendence. He therefore called them natural slaves. For, according to Aristotle, that is a man's natural condition in which he does his best work. But Aristotle also thinks of nature as something fixed and immutable; and therefore sanctions the institution of

slavery, which assumes that what men are that they will always be, and sets up an artificial barrier to their ever becoming anything else. We see in Aristotle's defence of slavery how the conception of nature as the ideal can have a debasing influence upon views of practical politics. His high ideal of citizenship offers to those who can satisfy its claims the prospect of a fair life; those who fall short are deemed to be different in nature and shut out entirely from approach to the ideal.

Davidson, Aristotle and Ancient Educational Ideals (Great Educators), 1892.

A TREATISE ON GOVERNMENT

BOOK I

CHAPTER I

As we see that every city is a society, and every society Ed. is established for some good purpose; for an apparent [Bekker 1252a] good is the spring of all human actions; it is evident that this is the principle upon which they are every one founded, and this is more especially true of that which has for its object the best possible, and is itself the most excellent, and comprehends all the rest. Now this is called a city, and the society thereof a political society; for those who think that the principles of a political, a regal, a family, and a herile government are the same are mistaken, while they suppose that each of these differ in the numbers to whom their power extends, but not in their constitution: so that with them a herile government is one composed of a very few, a domestic of more, a civil and a regal of still more, as if there was no difference between a large family and a small city, or that a regal government and a political one are the same, only that in the one a single person is continually at the head of public affairs; in the other, that each member of the state has in his turn a share in the government, and is at one time a magistrate, at another a private person, according to the rules of political science. But now this is not true, as will be evident to any one who will consider this question in the most approved method. As, in an inquiry into every other subject, it is necessary to separate the different parts of which it is compounded, till we arrive at their first elements, which are the most minute parts thereof; so by the same proceeding we shall acquire a knowledge of the primary parts of a city and see wherein they differ from each other, and whether the rules of art will give us any assistance in examining into each of these things which are mentioned.

CHAPTER II

Now if in this particular science any one would attend to its original seeds, and their first shoot, he would then as in others have the subject perfectly before him; and perceive, in the first place, that it is requisite that those should be joined together whose species cannot exist without each other, as the male and the female, for the business of propagation; and this not through choice, but by that natural impulse which acts both upon plants and animals also, for the purpose of their leaving behind them others like themselves. It is also from natural causes that some beings command and others obey, that each may obtain their mutual safety; for a being who is endowed with a mind capable of reflection and forethought is by nature the superior and governor, whereas he whose excellence is merely corporeal is formect to be a slave; whence it follows that the different state of master [1252b] and slave is equally advantageous to both. But there is a natural difference between a female and a slave: for nature is not like the artists who make the Delphic swords for the use of the poor, but for every particular purpose she has her separate instruments, and thus her ends are most complete, for whatsoever is employed on one subject only, brings that one to much greater perfection than when employed on many; and yet among the barbarians, a female and a slave are upon a level in the community, the reason for which is, that amongst them there are none qualified by nature to govern, therefore their society can be nothing but between slaves of

different sexes. For which reason the poets say, it is proper for the Greeks to govern the barbarians, as if a barbarian and a slave were by nature one. Now of these two societies the domestic is the first, and Hesiod is right when he says, "First a house, then a wife, then an ox for the plough," for the poor man has always an ox before a household slave. That society then which nature has established for daily support is the domestic, and those who compose it are called by Charondas _homosipuoi_, and by Epimenides the Cretan _homokapnoi_; but the society of many families, which was first instituted for their lasting, mutual advantage, is called a village, and a village is most naturally composed of the descendants of one family, whom some persons call homogalaktes, the children and the children's children thereof: for which reason cities were originally governed by kings, as the barbarian states now are, which are composed of those who had before submitted to kingly government; for every family is governed by the elder, as are the branches thereof, on account of their relationship thereunto, which is what Homer says, "Each one ruled his wife and child;" and in this scattered manner they formerly lived. And the opinion which universally prevails, that the gods themselves are subject to kingly government, arises from hence, that all men formerly were, and many are so now; and as they imagined themselves to be made in the likeness of the gods, so they supposed their manner of life must needs be the same. And when many villages so entirely join themselves together as in every respect to form but one society, that society is a city, and contains in itself, if I may so speak, the end and perfection of government: first founded that we might live, but continued that we may live happily. For which reason every city must be allowed to be the work of nature, if we admit that the original society between male and female is; for to this as their end all subordinate societies tend, and the end of everything is the nature of it. For what every being is in its most perfect state, that certainly is the nature of that being, whether it be a man, a horse, or a house: besides, whatsoever produces the final cause and the end which we [1253a] desire, must be best; but a government complete in itself is that final cause and what is best. Hence it is evident that a city is a natural production, and that man is naturally a political animal, and that whosoever is naturally and not accidentally unfit for society, must be either inferior or superior to man: thus the man in Homer, who is reviled for being "without society, without law, without family." Such a one must naturally be of a quarrelsome disposition, and as solitary as the birds. The gift of speech also evidently proves that man is a more social animal than the bees, or any of the herding cattle: for nature, as we say, does nothing in vain, and man is the only animal who enjoys it. Voice indeed, as being the token of pleasure and pain, is imparted to others also, and thus much their nature is capable of, to perceive pleasure and pain, and to impart these sensations to others; but it is by speech that we are enabled to express what is useful for us, and what is hurtful, and of course what is just and what is unjust: for in this particular man differs from other animals, that he alone has a perception of good and evil, of just and unjust, and it is a participation of these common sentiments which forms a family and a city. Besides, the notion of a city naturally precedes that of a family or an individual, for the whole must necessarily be prior to the parts, for if you take away the whole man, you cannot say a foot or a hand remains, unless by equivocation, as supposing a hand of stone to be made, but that would only be a dead one; but everything is understood to be this or that by its energic qualities and powers, so that when these no longer remain, neither can that be said to be the same, but something of the same name. That a city then precedes an individual is plain, for if an individual is not in himself sufficient to compose a perfect government, he is to a city as other parts are to a whole; but he that is incapable of society, or so complete in himself as not to want it, makes no part of a city, as a beast or a god. There is then in all persons a natural impetus to associate with each other in this manner, and he who first founded civil society was the cause of the greatest good; for as by the completion of it man is the most excellent of all living beings, so without law and justice he would be the worst of all, for nothing is so difficult to subdue as injustice in arms: but these arms man is born with, namely, prudence and valour, which he may apply to the most opposite purposes, for he who abuses them will be the most wicked, the most cruel, the most lustful, and most gluttonous being imaginable; for justice is a political virtue, by the rules of it the state is regulated, and these rules are the criterion of what is right.

CHAPTER III

SINCE it is now evident of what parts a city is composed, it will be necessary to treat first of family government, for every city is made up of families, and every family [1253b] has again its separate parts of which it is composed. When a family is complete, it consists of freemen and slaves; but as in every subject we should begin with examining into the smallest parts of which it consists, and as the first and smallest parts of a family are the master and slave, the husband and wife, the father and child, let us first inquire into these three, what each of them may be, and what they ought to be; that is to say, the herile, the nuptial, and the paternal. Let these then be considered as the three distinct parts of a family: some think that the providing what is necessary for the family is something different from the government of it, others that this is the greatest part of it; it shall be considered separately; but we will first speak of a master and a slave, that we may both understand the nature of those things which are absolutely necessary, and also try if we can learn anything better on this subject than what is already known. Some persons have thought that the power

of the master over his slave originates from his superior knowledge, and that this knowledge is the same in the master, the magistrate, and the king, as we have already said; but others think that herile government is contrary to nature, and that it is the law which makes one man a slave and another free, but that in nature there is no difference; for which reason that power cannot be founded in justice, but in force.

CHAPTER IV

Since then a subsistence is necessary in every family, the means of procuring it certainly makes up part of the management of a family, for without necessaries it is impossible to live, and to live well. As in all arts which are brought to perfection it is necessary that they should have their proper instruments if they would complete their works, so is it in the art of managing a family: now of instruments some of them are alive, others inanimate; thus with respect to the pilot of the ship, the tiller is without life, the sailor is alive; for a servant is as an instrument in many arts. Thus property is as an instrument to living; an estate is a multitude of instruments; so a slave is an animated instrument, but every one that can minister of himself is more valuable than any other instrument; for if every instrument, at command, or from a preconception of its master's will, could accomplish its work (as the story goes of the statues of Daedalus; or what the poet tells us of the tripods of Vulcan, "that they moved of their own accord into the assembly of the gods "), the shuttle would then weave, and the lyre play of itself; nor would the architect want servants, or the [1254a] master slaves. Now what are generally called instruments are the efficients of something else, but possessions are what we simply use: thus with a shuttle we make something else for our use; but we only use a coat, or a bed: since then making and using differ from each other in species, and they both require their instruments, it is necessary that these should be different from each other. Now life is itself what we use, and not what we employ as the efficient of something else; for which reason the services of a slave are for use. A possession may be considered in the same nature as a part of anything; now a part is not only a part of something, but also is nothing else; so is a possession; therefore a master is only the master of the slave, but no part of him; but the slave is not only the slave of the master, but nothing else but that. This fully explains what is the nature of a slave, and what are his capacities; for that being who by nature is nothing of himself, but totally another's, and is a man, is a slave by nature; and that man who is the property of another, is his mere chattel, though he continues a man; but a chattel is an instrument for use, separate from the body.

CHAPTER V

But whether any person is such by nature, and whether it is advantageous and just for any one to be a slave or no, or whether all slavery is contrary to nature, shall be considered hereafter; not that it is difficult to determine it upon general principles, or to understand it from matters of fact; for that some should govern, and others be governed, is not only necessary but useful, and from the hour of their birth some are marked out for those purposes, and others for the other, and there are many species of both sorts. And the better those are who are governed the better also is the government, as for instance of man, rather than the brute creation: for the more excellent the materials are with which the work is finished, the more excellent certainly is the work; and wherever there is a governor and a governed, there certainly is some work produced; for whatsoever is composed of many parts, which jointly become one, whether conjunct or separate, evidently show the marks of governing and governed; and this is true of every living thing in all nature; nay, even in some things which partake not of life, as in music; but this probably would be a disquisition too foreign to our present purpose. Every living thing in the first place is composed of soul and body, of these the one is by nature the governor, the other the governed; now if we would know what is natural, we ought to search for it in those subjects in which nature appears most perfect, and not in those which are corrupted; we should therefore examine into a man who is most perfectly formed both in soul and body, in whom this is evident, for in the depraved and vicious the body seems [1254b] to rule rather than the soul, on account of their being corrupt and contrary to nature. We may then, as we affirm, perceive in an animal the first principles of herile and political government; for the soul governs the body as the master governs his slave; the mind governs the appetite with a political or a kingly power, which shows that it is both natural and advantageous that the body should be governed by the soul, and the pathetic part by the mind, and that part which is possessed of reason; but to have no ruling power, or an improper one, is hurtful to all; and this holds true not only of man, but of other animals also, for tame animals are naturally better than wild ones, and it is advantageous that both should be under subjection to man; for this is productive of their common safety: so is it naturally with the male and the female; the one is superior, the other inferior; the one governs, the other is governed; and the same rule must necessarily hold good with respect to all mankind. Those men therefore who are as much inferior to others as the body is to the soul, are to be thus disposed of, as the proper use of them is their bodies, in which their excellence consists; and if what I have said be true, they are slaves by nature, and it is advantageous to them to be always under government. He then is by nature formed a

slave who is qualified to become the chattel of another person, and on that account is so, and who has just reason enough to know that there is such a faculty, without being indued with the use of it; for other animals have no perception of reason, but are entirely guided by appetite, and indeed they vary very little in their use from each other; for the advantage which we receive, both from slaves and tame animals, arises from their bodily strength administering to our necessities; for it is the intention of nature to make the bodies of slaves and freemen different from each other, that the one should be robust for their necessary purposes, the others erect, useless indeed for what slaves are employed in, but fit for civil life, which is divided into the duties of war and peace; though these rules do not always take place, for slaves have sometimes the bodies of freemen, sometimes the souls; if then it is evident that if some bodies are as much more excellent than others as the statues of the gods excel the human form, every one will allow that the inferior ought to be slaves to the superior; and if this is true with respect to the body, it is still juster to determine in the same manner, when we consider the soul; though it is not so easy to perceive the beauty of [1255a] the soul as it is of the body. Since then some men are slaves by nature, and others are freemen, it is clear that where slavery is advantageous to any one, then it is just to make him a slave.

CHAPTER VI

But it is not difficult to perceive that those who maintain the contrary opinion have some reason on their side; for a man may become a slave two different ways; for he may be so by law also, and this law is a certain compact, by which whatsoever is taken in battle is adjudged to be the property of the conquerors: but many persons who are conversant in law call in question this pretended right, and say that it would be hard that a man should be compelled by violence to be the slave and subject of another who had the power to compel him, and was his superior in strength; and upon this subject, even of those who are wise, some think one way and some another; but the cause of this doubt and variety of opinions arises from hence, that great abilities, when accompanied with proper means, are generally able to succeed by force: for victory is always owing to a superiority in some advantageous circumstances; so that it seems that force never prevails but in consequence of great abilities. But still the dispute concerning the justice of it remains; for some persons think, that justice consists in benevolence, others think it just that the powerful should govern: in the midst of these contrary opinions, there are no reasons sufficient to convince us, that the right of being master and governor ought not to be placed with those who have the greatest abilities. Some persons, entirely resting upon the right which the law gives (for that which is legal is in some respects just), insist upon it that slavery occasioned by war is just, not that they say it is wholly so, for it may happen that the principle upon which the wars were commenced is unjust; moreover no one will say that a man who is unworthily in slavery is therefore a slave; for if so, men of the noblest families might happen to be slaves, and the descendants of slaves, if they should chance to be taken prisoners in war and sold: to avoid this difficulty they say that such persons should not be called slaves, but barbarians only should; but when they say this, they do nothing more than inquire who is a slave by nature, which was what we at first said; for we must acknowledge that there are some persons who, wherever they are, must necessarily be slaves, but others in no situation; thus also it is with those of noble descent: it is not only in their own country that they are Esteemed as such, but everywhere, but the barbarians are respected on this account at home only; as if nobility and freedom were of two sorts, the one universal, the other not so. Thus says the Helen of Theodectes:

"Who dares reproach me with the name of slave? When from the immortal gods, on either side, I draw my lineage."

Those who express sentiments like these, shew only that they distinguish the slave and the freeman, the noble and the ignoble from each other by their virtues and their [1255b] vices; for they think it reasonable, that as a man begets a man, and a beast a beast, so from a good man, a good man should be descended; and this is what nature desires to do, but frequently cannot accomplish it. It is evident then that this doubt has some reason in it, and that these persons are not slaves, and those freemen, by the appointment of nature; and also that in some instances it is sufficiently clear, that it is advantageous to both parties for this man to be a slave, and that to be a master, and that it is right and just, that some should be governed, and others govern, in the manner that nature intended; of which sort of government is that which a master exercises over a slave. But to govern ill is disadvantageous to both; for the same thing is useful to the part and to the whole, to the body and to the soul; but the slave is as it were a part of the master, as if he were an animated part of his body, though separate. For which reason a mutual utility and friendship may subsist between the master and the slave, I mean when they are placed by nature in that relation to each other, for the contrary takes place amongst those who are reduced to slavery by the law, or by conquest.

CHAPTER VII

It is evident from what has been said, that a herile and a political government are not the same, or that all governments are alike to each other, as some affirm; for one is adapted to the nature of freemen, the other to that of slaves. Domestic government is a monarchy, for that is what prevails in every house; but a political state is the government of free men and equals. The master is not so called from his knowing how to manage his slave, but because he is so; for the same reason a slave and a freeman have their respective appellations. There is also one sort of knowledge proper for a master, another for a slave; the slave's is of the nature of that which was taught by a slave at Syracuse; for he for a stipulated sum instructed the boys in all the business of a household slave, of which there are various sorts to be learnt, as the art of cookery, and other such-like services, of which some are allotted to some, and others to others; some employments being more honourable, others more necessary; according to the proverb, "One slave excels another, one master excels another:" in such-like things the knowledge of a slave consists. The knowledge of the master is to be able properly to employ his slaves, for the mastership of slaves is the employment, not the mere possession of them; not that this knowledge contains anything great or respectable; for what a slave ought to know how to do, that a master ought to know how to order; for which reason, those who have it in their power to be free from these low attentions, employ a steward for this business, and apply themselves either to public affairs or philosophy: the knowledge of procuring what is necessary for a family is different from that which belongs either to the master or the slave: and to do this justly must be either by war or hunting. And thus much of the difference between a master and a slave.

CHAPTER VIII

[1256a] As a slave is a particular species of property, let us by all means inquire into the nature of property in general, and the acquisition of money, according to the manner we have proposed. In the first place then, some one may doubt whether the getting of money is the same thing as economy, or whether it is a part of it, or something subservient to it; and if so, whether it is as the art of making shuttles is to the art of weaving, or the art of making brass to that of statue founding, for they are not of the same service; for the one supplies the tools, the other the matter: by the matter I mean the subject out of which the work is finished, as wool for the cloth and brass for the statue. It is evident then that the getting of money is not the same thing as economy, for the business of the one is to furnish the means of the other to use them; and what art is there employed in the management of a family but economy, but whether this is a part of it, or something of a different species, is a doubt; for if it is the business of him who is to get money to find out how riches and possessions may be procured, and both these arise from various causes, we must first inquire whether the art of husbandry is part of money-getting or something different, and in general, whether the same is not true of every acquisition and every attention which relates to provision. But as there are many sorts of provision, so are the methods of living both of man and the brute creation very various; and as it is impossible to live without food, the difference in that particular makes the lives of animals so different from each other. Of beasts, some live in herds, others separate, as is most convenient for procuring themselves food; as some of them live upon flesh, others on fruit, and others on whatsoever they light on, nature having so distinguished their course of life, that they can very easily procure themselves subsistence; and as the same things are not agreeable to all, but one animal likes one thing and another another, it follows that the lives of those beasts who live upon flesh must be different from the lives of those who live on fruits; so is it with men, their lives differ greatly from each other; and of all these the shepherd's is the idlest, for they live upon the flesh of tame animals, without any trouble, while they are obliged to change their habitations on account of their flocks, which they are compelled to follow, cultivating, as it were, a living farm. Others live exercising violence over living creatures, one pursuing this thing, another that, these preying upon men; those who live near lakes and marshes and rivers, or the sea itself, on fishing, while others are fowlers, or hunters of wild beasts; but the greater part of mankind live upon the produce of the earth and its cultivated fruits; and the manner in which all those live who follow the direction of nature, and labour for their own subsistence, is nearly the same, without ever thinking to procure any provision by way of exchange or merchandise, such are shepherds, husband-men, [1256b] robbers, fishermen, and hunters: some join different employments together, and thus live very agreeably; supplying those deficiencies which were wanting to make their subsistence depend upon themselves only: thus, for instance, the same person shall be a shepherd and a robber, or a husbandman and a hunter; and so with respect to the rest, they pursue that mode of life which necessity points out. This provision then nature herself seems to have furnished all animals with, as well immediately upon their first origin as also when they are arrived at a state of maturity; for at the first of these periods some of them are provided in the womb with proper nourishment, which continues till that which is born can get food for itself, as is the case with worms and birds; and as to those which bring forth their young alive, they have the means for their subsistence for a certain time within themselves, namely milk. It is evident then that we may conclude of those things that are, that plants are created for the sake of animals, and animals for the sake of men; the tame for our use and provision; the wild, at least the greater part, for our provision also, or for some other advantageous purpose, as furnishing us with clothes, and the like. As

nature therefore makes nothing either imperfect or in vain, it necessarily follows that she has made all these things for men: for which reason what we gain in war is in a certain degree a natural acquisition; for hunting is a part of it, which it is necessary for us to employ against wild beasts; and those men who being intended by nature for slavery are unwilling to submit to it, on which occasion such a. war is by nature just: that species of acquisition then only which is according to nature is part of economy; and this ought to be at hand, or if not, immediately procured, namely, what is necessary to be kept in store to live upon, and which are useful as well for the state as the family. And true riches seem to consist in these; and the acquisition of those possessions which are necessary for a happy life is not infinite; though Solon says otherwise in this verse:

"No bounds to riches can be fixed for man;"

for they may be fixed as in other arts; for the instruments of no art whatsoever are infinite, either in their number or their magnitude; but riches are a number of instruments in domestic and civil economy; it is therefore evident that the acquisition of certain things according to nature is a part both of domestic and civil economy, and for what reason.

CHAPTER IX

There is also another species of acquisition which they [1257a] particularly call pecuniary, and with great propriety; and by this indeed it seems that there are no bounds to riches and wealth. Now many persons suppose, from their near relation to each other, that this is one and the same with that we have just mentioned, but it is not the same as that, though not very different; one of these is natural, the other is not, but rather owing to some art and skill; we will enter into a particular examination of this subject. The uses of every possession are two, both dependent upon the thing itself, but not in the same manner, the one supposing an inseparable connection with it, the other not; as a shoe, for instance, which may be either worn, or exchanged for something else, both these are the uses of the shoe; for he who exchanges a shoe with some man who wants one, for money or provisions, uses the shoe as a shoe, but not according to the original intention, for shoes were not at first made to be exchanged. The same thing holds true of all other possessions; for barter, in general, had its original beginning in nature, some men having a surplus, others too little of what was necessary for them: hence it is evident, that the selling provisions for money is not according to the natural use of things; for they were obliged to use barter for those things which they wanted; but it is plain that barter could have no place in the first, that is to say, in family society; but must have begun when the number of those who composed the community was enlarged: for the first of these had all things in common; but when they came to be separated they were obliged to exchange with each other many different things which both parties wanted. Which custom of barter is still preserved amongst many barbarous nations, who procure one necessary with another, but never sell anything; as giving and receiving wine for corn and the like. This sort of barter is not contradictory to nature, nor is it any species of money-getting; but is necessary in procuring that subsistence which is so consonant thereunto. But this barter introduced the use of money, as might be expected; for a convenient place from whence to import what you wanted, or to export what you had a surplus of, being often at a great distance, money necessarily made its way into commerce; for it is not everything which is naturally most useful that is easiest of carriage; for which reason they invented something to exchange with each other which they should mutually give and take, that being really valuable itself, should have the additional advantage of being of easy conveyance, for the purposes of life, as iron and silver, or anything else of the same nature: and this at first passed in value simply according to its weight or size; but in process of time it had a certain stamp, to save the trouble of weighing, which stamp expressed its value. [1257b]

Money then being established as the necessary medium of exchange, another species of money-getting soon took place, namely, by buying and selling, at probably first in a simple manner, afterwards with more skill and experience, where and how the greatest profits might be made. For which reason the art of money-getting seems to be chiefly conversant about trade, and the business of it to be able to tell where the greatest profits can be made, being the means of procuring abundance of wealth and possessions: and thus wealth is very often supposed to consist in the quantity of money which any one possesses, as this is the medium by which all trade is conducted and a fortune made, others again regard it as of no value, as being of none by nature, but arbitrarily made so by compact; so that if those who use it should alter their sentiments, it would be worth nothing, as being of no service for any necessary purpose. Besides, he who abounds in money often wants necessary food; and it is impossible to say that any person is in good circumstances when with all his possessions he may perish with hunger.

Like Midas in the fable, who from his insatiable wish had everything he touched turned into gold. For which reason others endeavour to procure other riches and other property, and rightly, for there are other riches and property in nature; and these are the proper objects of economy: while trade only procures money, not by all means, but by the exchange of it, and for that purpose it

is this which it is chiefly employed about, for money is the first principle and the end of trade; nor are there any bounds to be set to what is thereby acquired. Thus also there are no limits to the art of medicine, with respect to the health which it attempts to procure; the same also is true of all other arts; no line can be drawn to terminate their bounds, the several professors of them being desirous to extend them as far as possible. (But still the means to be employed for that purpose are limited; and these are the limits beyond which the art cannot proceed.) Thus in the art of acquiring riches there are no limits, for the object of that is money and possessions; but economy has a boundary, though this has not: for acquiring riches is not the business of that, for which reason it should seem that some boundary should be set to riches, though we see the contrary to this is what is practised; for all those who get riches add to their money without end; the cause of which is the near connection of these two arts with each other, which sometimes occasions the one to change employments with the other, as getting of money is their common object: for economy requires the possession of wealth, but not on its own account but with another view, to purchase things necessary therewith; but the other procures it merely to increase it: so that some persons are confirmed in their belief, that this is the proper object of economy, and think that for this purpose money should be saved and hoarded up without end; the reason for which disposition is, that they are intent upon living, but not upon living well; and this desire being boundless in its extent, the means which they aim at for that purpose are boundless also; and those who propose to live well, often confine that to the enjoyment of the pleasures of sense; so that as this also seems to depend upon what a man has, all their care is to get money, and hence arises the other cause for this art; for as this enjoyment is excessive in its degree, they endeavour to procure means proportionate to supply it; and if they cannot do this merely by the art of dealing in money, they will endeavour to do it by other ways, and apply all their powers to a purpose they were not by nature intended for. Thus, for instance, courage was intended to inspire fortitude, not to get money by; neither is this the end of the soldier's or the physician's art, but victory and health. But such persons make everything subservient to money-getting, as if this was the only end; and to the end everything ought to refer.

We have now considered that art of money-getting which is not necessary, and have seen in what manner we became in want of it; and also that which is necessary, which is different from it; for that economy which is natural, and whose object is to provide food, is not like this unlimited in its extent, but has its bounds.

CHAPTER X

We have now determined what was before doubtful, whether or no the art of getting money is his business who is at the head of a family or a state, and though not strictly so, it is however very necessary; for as a politician does not make men, but receiving them from the hand of nature employs them to proper purposes; thus the earth, or the sea, or something else ought to supply them with provisions, and this it is the business of the master of the family to manage properly; for it is not the weaver's business to make yarn, but to use it, and to distinguish what is good and useful from what is bad and of no service; and indeed some one may inquire why getting money should be a part of economy when the art of healing is not, as it is as requisite that the family should be in health as that they should eat, or have anything else which is necessary; and as it is indeed in some particulars the business both of the master of the family, and he to whom the government of the state is entrusted, to see after the health of those under their care, but in others not, but the physician's; so also as to money; in some respects it is the business of the master of the family, in others not, but of the servant; but as we have already said, it is chiefly nature's, for it is her part to supply her offspring with food; for everything finds nourishment left for it in what produced it; for which reason the natural riches of all men arise from fruits and animals. Now money-making, as we say, being twofold, it may be applied to two purposes, the service of the house or retail trade; of which the first is necessary and commendable, the other justly censurable; for it has not its origin in [1258b] nature, but by it men gain from each other; for usury is most reasonably detested, as it is increasing our fortune by money itself, and not employing it for the purpose it was originally intended, namely exchange.

And this is the explanation of the name (TOKOS), which means the breeding of money. For as offspring resemble their parents, so usury is money bred of money. Whence of all forms of money-making it is most against nature.

CHAPTER XI

Having already sufficiently considered the general principles of this subject, let us now go into the practical part thereof; the one is a liberal employment for the mind, the other necessary. These things are useful in the management of one's affairs; to be skilful in the nature of cattle, which are most profitable, and where, and how; as for instance, what advantage will arise from keeping horses, or oxen, or sheep, or any other live stock; it is also necessary to be acquainted with the comparative value of these things, and which of them in particular places are worth most; for some do better in one place, some in another. Agriculture also should be

understood, and the management of arable grounds and orchards; and also the care of bees, and fish, and birds, from whence any profit may arise; these are the first and most proper parts of domestic management.

With respect to gaining money by exchange, the principal method of doing this is by merchandise, which is carried on in three different ways, either by sending the commodity for sale by sea or by land, or else selling it on the place where it grows; and these differ from each other in this, that the one is more profitable, the other safer. The second method is by usury. The third by receiving wages for work done, and this either by being employed in some mean art, or else in mere bodily labour. There is also a third species of improving a fortune, that is something between this and the first; for it partly depends upon nature, partly upon exchange; the subject of which is, things that are immediately from the earth, or their produce, which, though they bear no fruit, are yet useful, such as selling of timber and the whole art of metallurgy, which includes many different species, for there are various sorts of things dug out of the earth.

These we have now mentioned in general, but to enter into particulars concerning each of them, though it might be useful to the artist, would be tiresome to dwell on. Now of all the works of art, those are the most excellent wherein chance has the least to do, and those are the meanest which deprave the body, those the most servile in which bodily strength alone is chiefly wanted, those most illiberal which require least skill; but as there are books written on these subjects by some persons, as by Chares the Panian, and Apollodorus the Lemnian, upon husbandry and planting; and by others on other matters, [1259b] let those who have occasion consult them thereon; besides, every person should collect together whatsoever he hears occasionally mentioned, by means of which many of those who aimed at making a fortune have succeeded in their intentions; for all these are useful to those who make a point of getting money, as in the contrivance of Thales the Milesian (which was certainly a gainful one, but as it was his it was attributed to his wisdom, though the method he used was a general one, and would universally succeed), when they reviled him for his poverty, as if the study of philosophy was useless: for they say that he, perceiving by his skill in astrology that there would be great plenty of olives that year, while it was yet winter, having got a little money, he gave earnest for all the oil works that were in Miletus and Chios, which he hired at a low price, there being no one to bid against him; but when the season came for making oil, many persons wanting them, he all at once let them upon what terms he pleased; and raising a large sum of money by that means, convinced them that it was easy for philosophers to be rich if they chose it, but that that was not what they aimed at; in this manner is Thales said to have shown his wisdom. It indeed is, as we have said, generally gainful for a person to contrive to make a monopoly of anything; for which reason some cities also take this method when they want money, and monopolise their commodities. There was a certain person in Sicily who laid out a sum of money which was deposited in his hand in buying up all the iron from the iron merchants; so that when the dealers came from the markets to purchase, there was no one had any to sell but himself; and though he put no great advance upon it, yet by laying out fifty talents he made an hundred. When Dionysius heard this he permitted him to take his money with him, but forbid him to continue any longer in Sicily, as being one who contrived means for getting money inconsistent with his affairs. This man's view and Thales's was exactly the same; both of them contrived to procure a monopoly for themselves: it is useful also for politicians to understand these things, for many states want to raise money and by such means, as well as private families, nay more so; for which reason some persons who are employed in the management of public affairs confine themselves to this province only.

CHAPTER XII

There are then three parts of domestic government, the masters, of which we have already treated, the fathers, and the husbands; now the government of the wife and children should both be that of free persons, but not the [I259b] same; for the wife should be treated as a citizen of a free state, the children should be under kingly power; for the male is by nature superior to the female, except when something happens contrary to the usual course of nature, as is the elder and perfect to the younger and imperfect. Now in the generality of free states, the governors and the governed alternately change place; for an equality without any preference is what nature chooses; however, when one governs and another is governed, she endeavours that there should be a distinction between them in forms, expressions, and honours; according to what Amasis said of his laver. This then should be the established rule between the man and the woman. The government of children should be kingly; for the power of the father over the child is founded in affection and seniority, which is a species of kingly government; for which reason Homer very properly calls Jupiter "the father of gods and men," who was king of both these; for nature requires that a king should be of the same species with those whom he governs, though superior in some particulars, as is the case between the elder and the younger, the father and the son.

CHAPTER XIII

It is evident then that in the due government of a family, greater attention should be paid to the several members of it and their virtues than to the possessions or riches of it; and greater to the freemen than the slaves: but here some one may doubt whether there is any other virtue in a slave than his organic services, and of higher estimation than these, as temperance, fortitude, justice, and such-like habits, or whether they possess only bodily qualities: each side of the question has its difficulties; for if they possess these virtues, wherein do they differ from freemen? and that they do not, since they are men, and partakers of reason, is absurd. Nearly the same inquiry may be made concerning a woman and a child, whether these also have their proper virtues; whether a woman ought to be temperate, brave, and just, and whether a child is temperate or no; and indeed this inquiry ought to be general, whether the virtues of those who, by nature, either govern or are governed, are the same or different; for if it is necessary that both of them should partake of the fair and good, why is it also necessary that, without exception, the one should govern, the other always be governed? for this cannot arise from their possessing these qualities in different degrees; for to govern, and to be governed, are things different in species, but more or less are not. And yet it is wonderful that one party ought to have them, and the other not; for if he who is to govern should not be temperate and just, how can he govern well? or if he is to be governed, how can he be governed well? for he who is intemperate [1260a] and a coward will never do what he ought: it is evident then that both parties ought to be virtuous; but there is a difference between them, as there is between those who by nature command and who by nature obey, and this originates in the soul; for in this nature has planted the governing and submitting principle, the virtues of which we say are different, as are those of a rational and an irrational being. It is plain then that the same principle may be extended farther, and that there are in nature a variety of things which govern and are governed; for a freeman is governed in a different manner from a slave, a male from a female, and a man from a child: and all these have parts of mind within them, but in a different manner. Thus a slave can have no power of determination, a woman but a weak one, a child an imperfect one. Thus also must it necessarily be with respect to moral virtues; all must be supposed to possess them, but not in the same manner, but as is best suited to every one's employment; on which account he who is to govern ought to be perfect in moral virtue, for his business is entirely that of an architect, and reason is the architect; while others want only that portion of it which may be sufficient for their station; from whence it is evident, that although moral virtue is common to all those we have spoken of, yet the temperance of a man and a woman are not the same, nor their courage, nor their justice, though Socrates thought otherwise; for the courage of the man consists in commanding, the woman's in obeying; and the same is true in other particulars: and this will be evident to those who will examine different virtues separately; for those who use general terms deceive themselves when they say, that virtue consists in a good disposition of mind, or doing what is right, or something of this sort. They do much better who enumerate the different virtues as Georgias did, than those who thus define them; and as Sophocles speaks of a woman, we think of all persons, that their 'virtues should be applicable to their characters, for says he,

"Silence is a woman's ornament,"

but it is not a man's; and as a child is incomplete, it is evident that his virtue is not to be referred to himself in his present situation, but to that in which he will be complete, and his preceptor. In like manner the virtue of a slave is to be referred to his master; for we laid it down as a maxim, that the use of a slave was to employ him in what you wanted; so that it is clear enough that few virtues are wanted in his station, only that he may not neglect his work through idleness or fear: some person may question if what I have said is true, whether virtue is not necessary for artificers in their calling, for they often through idleness neglect their work, but the difference between them is very great; for a slave is connected with you for life, but the artificer not so nearly: as near therefore as the artificer approaches to the situation of a slave, just so much ought he to have of the virtues of one; for a mean artificer is to a certain point a slave; but then a slave is one of those things which are by nature what they are, but this is not true [1260b] of a shoemaker, or any other artist. It is evident then that a slave ought to be trained to those virtues which are proper for his situation by his master; and not by him who has the power of a master, to teach him any particular art. Those therefore are in the wrong who would deprive slaves of reason, and say that they have only to follow their orders; for slaves want more instruction than children, and thus we determine this matter. It is necessary, I am sensible, for every one who treats upon government, to enter particularly into the relations of husband and wife, and of parent and child, and to show what are the virtues of each and their respective connections with each other; what is right and what is wrong; and how the one ought to be followed, and the other avoided. Since then every family is part of a city, and each of those individuals is part of a family, and the virtue of the parts ought to correspond to the virtue of the whole; it is necessary, that both the wives and children of the community should be instructed correspondent to the nature thereof, if it is of consequence to the virtue of the state, that the wives and children therein should be virtuous, and of consequence it certainly is, for the wives are one half of the free persons; and of the children the succeeding citizens are to be

formed. As then we have determined these points, we will leave the rest to be spoken to in another place, as if the subject was now finished; and beginning again anew, first consider the sentiments of those who have treated of the most perfect forms of government.

BOOK II

CHAPTER I

Since then we propose to inquire what civil society is of all others best for those who have it in their power to live entirely as they wish, it is necessary to examine into the polity of those states which are allowed to be well governed; and if there should be any others which some persons have described, and which appear properly regulated, to note what is right and useful in them; and when we point out wherein they have failed, let not this be imputed to an affectation of wisdom, for it is because there are great defects in all those which are already established, that I have been induced to undertake this work. We will begin with that part of the subject which naturally presents itself first to our consideration. The members of every state must of necessity have all things in common, or some things common, and not others, or nothing at all common. To have nothing in common is evidently impossible, for society itself is one species of [1261a] community; and the first thing necessary thereunto is a common place of habitation, namely the city, which must be one, and this every citizen must have a share in. But in a government which is to be well founded, will it be best to admit of a community in everything which is capable thereof, or only in some particulars, but in others not? for it is possible that the citizens may have their wives, and children, and goods in common, as in Plato's Commonwealth; for in that Socrates affirms that all these particulars ought to be so. Which then shall we prefer? the custom which is already established, or the laws which are proposed in that treatise?

CHAPTER II

Now as a community of wives is attended with many other difficulties, so neither does the cause for which he would frame his government in this manner seem agreeable to reason, nor is it capable of producing that end which he has proposed, and for which he says it ought to take place; nor has he given any particular directions for putting it in practice. Now I also am willing to agree with Socrates in the principle which he proceeds upon, and admit that the city ought to be one as much as possible; and yet it is evident that if it is contracted too much, it will be no longer a city, for that necessarily supposes a multitude; so that if we proceed in this manner, we shall reduce a city to a family, and a family to a single person: for we admit that a family is one in a greater degree than a city, and a single person than a family; so that if this end could be obtained, it should never be put in practice, as it would annihilate the city; for a city does not only consist of a large number of inhabitants, but there must also be different sorts; for were they all alike, there could be no city; for a confederacy and a city are two different things; for a confederacy is valuable from its numbers, although all those who compose it are men of the same calling; for this is entered into for the sake of mutual defence, as we add an additional weight to make the scale go down. The same distinction prevails between a city and a nation when the people are not collected into separate villages, but live as the Arcadians. Now those things in which a city should be one are of different sorts, and in preserving an alternate reciprocation of power between these, the safety thereof consists (as I have already mentioned in my treatise on Morals), for amongst freemen and equals this is absolutely necessary; for all cannot govern at the same time, but either by the year, or according to some other regulation or time, by which means every one in his turn will be in office; as if the shoemakers and carpenters should exchange occupations, and not always be employed in the same calling. But as it is evidently better, that these should continue to exercise their respective trades; so also in civil society, where it is possible, it would be better that the government should continue in the same hands; but where it [1261b] is not (as nature has made all men equal, and therefore it is just, be the administration good or bad, that all should partake of it), there it is best to observe a rotation, and let those who are their equals by turns submit to those who are at that time magistrates, as they will, in their turns, alternately be governors and governed, as if they were different men: by the same method different persons will execute different offices. From hence it is evident, that a city cannot be one in the manner that some persons propose; and that what has been said to be the greatest good which it could enjoy, is absolutely its destruction, which cannot be: for the good of anything is that which preserves it. For another reason also it is clear, that it is not for the best to endeavour to make a city too much one, because a family is more sufficient in itself than a single person, a city than a family; and indeed Plato supposes that a city owes its existence to that sufficiency in themselves which the members of it enjoy. If then this sufficiency is so desirable, the less the city is one the better.

CHAPTER III

But admitting that it is most advantageous for a city to be one as much as possible, it does not seem to follow that this will take place by permitting all at once to say this is mine, and this is not mine (though this is what Socrates regards as a proof that a city is entirely one), for the word All is used in two senses; if it means each individual, what Socrates proposes will nearly take place; for each person will say, this is his own son, and his own wife, and his own property, and of everything else that may happen to belong to him, that it is his own. But those who have their wives and children in common will not say so, but all will say so, though not as individuals; therefore, to use the word all is evidently a fallacious mode of speech; for this word is sometimes used distributively, and sometimes collectively, on account of its double meaning, and is the cause of inconclusive syllogisms in reasoning. Therefore for all persons to say the same thing was their own, using the word all in its distributive sense, would be well, but is impossible: in its collective sense it would by no means contribute to the concord of the state. Besides, there would be another inconvenience attending this proposal, for what is common to many is taken least care of; for all men regard more what is their own than what others share with them in, to which they pay less attention than is incumbent on every one: let me add also, that every one is more negligent of what another is to see to, as well as himself, than of his own private business; as in a family one is often worse served by many servants than by a few. Let each citizen then in the state have a thousand children, but let none of them be considered as the children of that individual, but let the relation of father and child be common to them all, and they will all be neglected. Besides, in consequence of this, [1262a] whenever any citizen behaved well or ill, every person, be the number what it would, might say, this is my son, or this man's or that; and in this manner would they speak, and thus would they doubt of the whole thousand, or of whatever number the city consisted; and it would be uncertain to whom each child belonged, and when it was born, who was to take care of it: and which do you think is better, for every one to say this is mine, while they may apply it equally to two thousand or ten thousand; or as we say, this is mine in our present forms of government, where one man calls another his son, another calls that same person his brother, another nephew, or some other relation, either by blood or marriage, and first extends his care to him and his, while another regards him as one of the same parish and the same tribe; and it is better for any one to be a nephew in his private capacity than a son after that manner. Besides, it will be impossible to prevent some persons from suspecting that they are brothers and sisters, fathers and mothers to each other; for, from the mutual likeness there is between the sire and the offspring, they will necessarily conclude in what relation they stand to each other, which circumstance, we are informed by those writers who describe different parts of the world, does sometimes happen; for in Upper Africa there are wives in common who yet deliver their children to their respective fathers, being guided by their likeness to them. There are also some mares and cows which naturally bring forth their young so like the male, that we can easily distinguish by which of them they were impregnated: such was the mare called Just, in Pharsalia.

CHAPTER IV

Besides, those who contrive this plan of community cannot easily avoid the following evils; namely, blows, murders involuntary or voluntary, quarrels, and reproaches, all which it would be impious indeed to be guilty of towards our fathers and mothers, or those who are nearly related to us; though not to those who are not connected to us by any tie of affinity: and certainly these mischiefs must necessarily happen oftener amongst those who do not know how they are connected to each other than those who do; and when they do happen, if it is among the first of these, they admit of a legal expiation, but amongst the latter that cannot be done. It is also absurd for those who promote a community of children to forbid those who love each other from indulging themselves in the last excesses of that passion, while they do not restrain them from the passion itself, or those intercourses which are of all things most improper, between a Father and a son, a brother and a brother, and indeed the thing itself is most absurd. It is also ridiculous to prevent this intercourse between the nearest relations, for no other reason than the violence of the pleasure, while they think that the relation of father and daughter, the brother and sister, is of no consequence at all. It seems also more advantageous for the state, that the husbandmen should have their wives and children in common than the military, for there will be less affection [1262b] among them in that case than when otherwise; for such persons ought to be under subjection, that they may obey the laws, and not seek after innovations. Upon the whole, the consequences of such a law as this would be directly contrary to those things which good laws ought to establish, and which Socrates endeavoured to establish by his regulations concerning women and children: for we think that friendship is the greatest good which can happen to any city, as nothing so much prevents seditions: and amity in a city is what Socrates commends above all things, which appears to be, as indeed he says, the effect of friendship; as we learn from Aristophanes in the Erotics, who says, that those who love one another from the excess of that passion, desire to breathe the same soul, and from being two to be blended into one: from whence it would necessarily follow, that both or one of them must be destroyed. But now in a city which admits of this community, the tie of friendship must, from that very cause, be extremely weak, when no father can say, this is my son; or son, this is my father; for as a very little of what is sweet, being mixed with a great deal of

water is imperceptible after the mixture, so must all family connections, and the names they go by, be necessarily disregarded in such a community, it being then by no means necessary that the father should have any regard for him he called a son, or the brothers for those they call brothers. There are two things which principally inspire mankind with care and love of their offspring, knowing it is their own, and what ought to be the object of their affection, neither of which can take place in this sort of community. As for exchanging the children of the artificers and husbandmen with those of the military, and theirs reciprocally with these, it will occasion great confusion in whatever manner it shall be done; for of necessity, those who carry the children must know from whom they took and to whom they gave them; and by this means those evils which I have already mentioned will necessarily be the more likely to happen, as blows, incestuous love, murders, and the like; for those who are given from their own parents to other citizens, the military, for instance, will not call them brothers, sons, fathers, or mothers. The same thing would happen to those of the military who were placed among the other citizens; so that by this means every one would be in fear how to act in consequence of consanguinity. And thus let us determine concerning a community of wives and children.

CHAPTER V

We proceed next to consider in what manner property should be regulated in a state which is formed after the most perfect mode of government, whether it should be common or not; for this may be considered as a separate question from what had been determined concerning [1263a] wives and children; I mean, whether it is better that these should be held separate, as they now everywhere are, or that not only possessions but also the usufruct of them should be in common; or that the soil should have a particular owner, but that the produce should be brought together and used as one common stock, as some nations at present do; or on the contrary, should the soil be common, and should it also be cultivated in common, while the produce is divided amongst the individuals for their particular use, which is said to be practised by some barbarians; or shall both the soil and the fruit be common? When the business of the husbandman devolves not on the citizen, the matter is much easier settled; but when those labour together who have a common right of possession, this may occasion several difficulties; for there may not be an equal proportion between their labour and what they consume; and those who labour hard and have but a small proportion of the produce, will certainly complain of those who take a large share of it and do but little for that. Upon the whole, as a community between man and man so entire as to include everything possible, and thus to have all things that man can possess in common, is very difficult, so is it particularly so with respect to property; and this is evident from that community which takes place between those who go out to settle a colony; for they frequently have disputes with each other upon the most common occasions, and come to blows upon trifles: we find, too, that we oftenest correct those slaves who are generally employed in the common offices of the family: a community of property then has these and other inconveniences attending it.

But the manner of life which is now established, more particularly when embellished with good morals and a system of equal laws, is far superior to it, for it will have the advantage of both; by both I mean properties being common, and divided also; for in some respects it ought to be in a manner common, but upon the whole private: for every man's attention being employed on his own particular concerns, will prevent mutual complaints against each other; nay, by this means industry will be increased, as each person will labour to improve his own private property; and it will then be, that from a principle of virtue they will mutually perform good offices to each other, according to the proverb, "All things are common amongst friends;" and in some cities there are traces of this custom to be seen, so that it is not impracticable, and particularly in those which are best governed; some things are by this means in a manner common, and others might be so; for there, every person enjoying his own private property, some things he assists his friend with, others are considered as in common; as in Lacedaemon, where they use each other's slaves, as if they were, so to speak, their own, as they do their horses and dogs, or even any provision they may want in a journey.

It is evident then that it is best to have property private, but to make the use of it common; but how the citizens are to be brought to it is the particular [1263b] business of the legislator. And also with respect to pleasure, it is unspeakable how advantageous it is, that a man should think he has something which he may call his own; for it is by no means to no purpose, that each person should have an affection for himself, for that is natural, and yet to be a self-lover is justly censured; for we mean by that, not one that simply loves himself, but one that loves himself more than he ought; in like manner we blame a money-lover, and yet both money and self is what all men love. Besides, it is very pleasing to us to oblige and assist our friends and companions, as well as those whom we are connected with by the rights of hospitality; and this cannot be done without the establishment of private property, which cannot take place with those who make a city too much one; besides, they prevent every opportunity of exercising two principal virtues, modesty and liberality. Modesty with respect to the female sex, for this virtue requires you to abstain from her who is another's; liberality, which depends upon private property, for without that no one can appear liberal, or do any generous action;

for liberality consists in imparting to others what is our own.

This system of polity does indeed recommend itself by its good appearance and specious pretences to humanity; and when first proposed to any one, must give him great pleasure, as he will conclude it to be a wonderful bond of friendship, connecting all to all; particularly when any one censures the evils which are now to be found in society, as arising from properties not being common, I mean the disputes which happen between man and man, upon their different contracts with each other; those judgments which are passed in court in consequence of fraud, and perjury, and flattering the rich, none of which arise from properties being private, but from the vices of mankind. Besides, those who live in one general community, and have all things in common, oftener dispute with each other than those who have their property separate; from the very small number indeed of those who have their property in common, compared with those where it is appropriated, the instances of their quarrels are but few. It is also but right to mention, not only the inconveniences they are preserved from who live in a communion of goods, but also the advantages they are deprived of; for when the whole comes to be considered, this manner of life will be found impracticable.

We must suppose, then, that Socrates's mistake arose from the principle he set out with being false; we admit, indeed, that both a family and a city ought to be one in some particulars, but not entirely; for there is a point beyond which if a city proceeds in reducing itself to one, it will be no longer a city.

There is also another point at which it will still continue to be a city, but it will approach so near to not being one, that it will be worse than none; as if any one should reduce the voices of those who sing in concert to one, or a verse to a foot. But the people ought to be made one, and a community, as I have already said, by education; as property at Lacedaemon, and their public tables at Crete, were made common by their legislators. But yet, whosoever shall introduce any education, and think thereby to make his city excellent and respectable, will be absurd, while he expects to form it by such regulations, and not by manners, philosophy, and laws. And whoever [1264a] would establish a government upon a community of goods, ought to know that he should consult the experience of many years, which would plainly enough inform him whether such a scheme is useful; for almost all things have already been found out, but some have been neglected, and others which have been known have not been put in practice. But this would be most evident, if any one could see such a government really established: for it would be impossible to frame such a city without dividing and separating it into its distinct parts, as public tables, wards, and tribes; so that here the laws will do nothing more than forbid the military to engage in agriculture, which is what the Lacedaemonians are at present endeavouring to do.

Nor has Socrates told us (nor is it easy to say) what plan of government should be pursued with respect to the individuals in the state where there is a community of goods established; for though the majority of his citizens will in general consist of a multitude of persons of different occupations, of those he has determined nothing; whether the property of the husbandman ought to be in common, or whether each person should have his share to himself; and also, whether their wives and children ought to be in common: for if all things are to be alike common to all, where will be the difference between them and the military, or what would they get by submitting to their government? and upon what principles would they do it, unless they should establish the wise practice of the Cretans? for they, allowing everything else to their slaves, forbid them only gymnastic exercises and the use of arms. And if they are not, but these should be in the same situation with respect to their property which they are in other cities, what sort of a community will there be? in one city there must of necessity be two, and those contrary to each other; for he makes the military the guardians of the state, and the husbandman, artisans, and others, citizens; and all those quarrels, accusations, and things of the like sort, which he says are the bane of other cities, will be found in his also: notwithstanding Socrates says they will not want many laws in consequence of their education, but such only as may be necessary for regulating the streets, the markets, and the like, while at the same time it is the education of the military only that he has taken any care of. Besides, he makes the husbandmen masters of property upon paying a tribute; but this would be likely to make them far more troublesome and high-spirited than the Helots, the Penestise, or the slaves which others employ; nor has he ever determined whether it is necessary to give any attention to them in these particulars, nor thought of what is connected therewith, their polity, their education, their laws; besides, it is of no little consequence, nor is it easy to determine, how these should be framed so as to preserve the community of the military.

Besides, if he makes the wives common, while the property [1264b] continues separate, who shall manage the domestic concerns with the same care which the man bestows upon his fields? nor will the inconvenience be remedied by making property as well as wives common; and it is absurd to draw a comparison from the brute creation, and say, that the same principle should regulate the connection of a man and a woman which regulates theirs amongst whom there is no family association.

It is also very hazardous to settle the magistracy as Socrates has done; for he would have persons of the same rank always in office, which becomes the cause of sedition even amongst those who are of no account, but more particularly amongst those who are of a courageous and warlike disposition; it is indeed evidently necessary that he should frame his community in this manner; for that golden particle which God has mixed up in the soul of man flies not from one to the other, but always continues with the same; for he says, that some of our species have gold, and others silver, blended in their composition from the moment of their birth: but those who are to be husbandmen and artists, brass and iron; besides, though he deprives the military of happiness, he says, that the legislator ought to make all the citizens happy; but it is impossible that the whole city can be happy, without all, or the greater, or some part of it be happy. For happiness is not like that numerical equality which arises from certain numbers when added together, although neither of them may separately contain it; for happiness cannot be thus added together, but must exist in every individual, as some properties belong to every integral; and if the military are not happy, who else are so? for the artisans are not, nor the multitude of those who are employed in inferior offices. The state which Socrates has described has all these defects, and others which are not of less consequence.

CHAPTER VI

It is also nearly the same in the treatise upon Laws which was writ afterwards, for which reason it will be proper in this place to consider briefly what he has there said upon government, for Socrates has thoroughly settled but very few parts of it; as for instance, in what manner the community of wives and children ought to be regulated, how property should be established, and government conducted.

Now he divides the inhabitants into two parts, husbandmen and soldiers, and from these he select a third part who are to be senators and govern the city; but he has not said whether or no the husbandman and artificer shall have any or what share in the government, or whether they shall have arms, and join with the others in war, or not. He thinks also that the women ought to go to war, and have the same education as the soldiers; as to other particulars, he has filled his treatise with matter foreign to the purpose; and with respect to education, he has only said what that of the guards ought to be.

[1265a] As to his book of Laws, laws are the principal thing which that contains, for he has there said but little concerning government; and this government, which he was so desirous of framing in such a manner as to impart to its members a more entire community of goods than is to be found in other cities, he almost brings round again to be the same as that other government which he had first proposed; for except the community of wives and goods, he has framed both his governments alike, for the education of the citizens is to be the same in both; they are in both to live without any servile employ, and their common tables are to be the same, excepting that in that he says the women should have common tables, and that there should be a thousand men-at-arms, in this, that there should be five thousand.

All the discourses of Socrates are masterly, noble, new, and inquisitive; but that they are all true it may probably be too much to say. For now with respect to the number just spoken of, it must be acknowledged that he would want the country of Babylonia for them, or some one like it, of an immeasurable extent, to support five thousand idle persons, besides a much greater number of women and servants. Every one, it is true, may frame an hypothesis as he pleases, but yet it ought to be possible. It has been said, that a legislator should have two things in view when he frames his laws, the country and the people. He will also do well, if he has some regard to the neighbouring states, if he intends that his community should maintain any political intercourse with them, for it is not only necessary that they should understand that practice of war which is adapted to their own country, but to others also; for admitting that any one chooses not this life either in public or private, yet there is not the less occasion for their being formidable to their enemies, not only when they invade their country, but also when they retire out of it.

It may also be considered whether the quantity of each person's property may not be settled in a different manner from what he has done it in, by making it more determinate; for he says, that every one ought to have enough whereon to live moderately, as if any one had said to live well, which is the most comprehensive expression. Besides, a man may live moderately and miserably at the same time; he had therefore better have proposed, that they should live both moderately and liberally; for unless these two conspire, luxury will come in on the one hand, or wretchedness on the other, since these two modes of living are the only ones applicable to the employment of our substance; for we cannot say with respect to a man's fortune, that he is mild or courageous, but we may say that he is prudent and liberal, which are the only qualities connected therewith.

It is also absurd to render property equal, and not to provide for the increasing number of the citizens; but to leave that circumstance uncertain, as if it would regulate itself according to the number of women who [1265b] should happen to be childless,

let that be what it would because this seems to take place in other cities; but the case would not be the same in such a state which he proposes and those which now actually unite; for in these no one actually wants, as the property is divided amongst the whole community, be their numbers what they will; but as it could not then be divided, the supernumeraries, whether they were many or few, would have nothing at all. But it is more necessary than even to regulate property, to take care that the increase of the people should not exceed a certain number; and in determining that, to take into consideration those children who will die, and also those women who will be barren; and to neglect this, as is done in several cities, is to bring certain poverty on the citizens; and poverty is the cause of sedition and evil. Now Phidon the Corinthian, one of the oldest legislators, thought the families and the number of the citizens should continue the same; although it should happen that all should have allotments at the first, disproportionate to their numbers.

In Plato's Laws it is however different; we shall mention hereafter what we think would be best in these particulars. He has also neglected in that treatise to point out how the governors are to be distinguished from the governed; for he says, that as of one sort of wool the warp ought to be made, and of another the woof, so ought some to govern, and others to be governed. But since he admits, that all their property may be increased fivefold, why should he not allow the same increase to the country? he ought also to consider whether his allotment of the houses will be useful to the community, for he appoints two houses to each person, separate from each other; but it is inconvenient for a person to inhabit two houses. Now he is desirous to have his whole plan of government neither a democracy nor an oligarchy, but something between both, which he calls a polity, for it is to be composed of men-at-arms. If Plato intended to frame a state in which more than in any other everything should be common, he has certainly given it a right name; but if he intended it to be the next in perfection to that which he had already framed, it is not so; for perhaps some persons will give the preference to the Lacedaemonian form of government, or some other which may more completely have attained to the aristocratic form.

Some persons say, that the most perfect government should be composed of all others blended together, for which reason they commend that of Lacedaemon; for they say, that this is composed of an oligarchy, a monarchy, and a democracy, their kings representing the monarchical part, the senate the oligarchical; and, that in the ephori may be found the democratical, as these are taken from the people. But some say, that in the ephori is absolute power, and that it is their common meal and daily course of life, in which the democratical form is represented. It is also said in this treatise of [1266a] Laws, that the best form of government must, be one composed of a democracy and a tyranny; though such a mixture no one else would ever allow to be any government at all, or if it is, the worst possible; those propose what is much better who blend many governments together; for the most perfect is that which is formed of many parts. But now in this government of Plato's there are no traces of a monarchy, only of an oligarchy and democracy; though he seems to choose that it should rather incline to an oligarchy, as is evident from the appointment of the magistrates; for to choose them by lot is common to both; but that a man of fortune must necessarily be a member of the assembly, or to elect the magistrates, or take part in the management of public affairs, while others are passed over, makes the state incline to an oligarchy; as does the endeavouring that the greater part of the rich may be in office, and that the rank of their appointments may correspond with their fortunes.

The same principle prevails also in the choice of their senate; the manner of electing which is favourable also to an oligarchy; for all are obliged to vote for those who are senators of the first class, afterwards they vote for the same number out of the second, and then out of the third; but this compulsion to vote at the election of senators does not extend to the third and fourth classes and the first and second class only are obliged to vote for the fourth. By this means he says he shall necessarily have an equal number of each rank, but he is mistaken--for the majority will always consist of those of the first rank, and the most considerable people; and for this reason, that many of the commonalty not being obliged to it, will not attend the elections. From hence it is evident, that such a state will not consist of a democracy and a monarchy, and this will be further proved by what we shall say when we come particularly to consider this form of government.

There will also great danger arise from the manner of electing the senate, when those who are elected themselves are afterwards to elect others; for by this means, if a certain number choose to combine together, though not very considerable, the election will always fall according to their pleasure. Such are the things which Plato proposes concerning government in his book of Laws.

CHAPTER VII

There are also some other forms of government, which have been proposed either by private persons, or philosophers, or politicians, all of which come much nearer to those which have been really established, or now exist, than these two of Plato's; for

neither have they introduced the innovation of a community of wives and children, and public tables for the women, but have been contented to set out with establishing such rules as are absolutely necessary.

There are some persons who think, that the first object of government should be to regulate well everything relating to private property; for they say, that a neglect herein is the source of all seditions whatsoever. For this reason, Phaleas the Chalcedonian first proposed, that the fortunes of the citizens should be equal, which he thought was not difficult to accomplish when a community was first settled, but that it was a work of greater difficulty in one that had been long established; but yet that it might be effected, and an equality of circumstances introduced by these means, that the rich should give marriage portions, but never receive any, while the poor should always receive, but never give.

But Plato, in his treatise of Laws, thinks that a difference in circumstances should be permitted to a certain degree; but that no citizen should be allowed to possess more than five times as much as the lowest census, as we have already mentioned. But legislators who would establish this principle are apt to overlook what they ought to consider; that while they regulate the quantity of provisions which each individual shall possess, they ought also to regulate the number of his children; for if these exceed the allotted quantity of provision, the law must necessarily be repealed; and yet, in spite of the repeal, it will have the bad effect of reducing many from wealth to poverty, so difficult is it for innovators not to fall into such mistakes. That an equality of goods was in some degree serviceable to strengthen the bands of society, seems to have been known to some of the ancients; for Solon made a law, as did some others also, to restrain persons from possessing as much land as they pleased. And upon the same principle there are laws which forbid men to sell their property, as among the Locrians, unless they can prove that some notorious misfortune has befallen them. They were also to preserve their ancient patrimony, which custom being broken through by the Leucadians, made their government too democratic; for by that means it was no longer necessary to be possessed of a certain fortune to be qualified to be a magistrate. But if an equality of goods is established, this may be either too much, when it enables the people to live luxuriously, or too little, when it obliges them to live hard. Hence it is evident, that it is not proper for the legislator to establish an equality of circumstances, but to fix a proper medium. Besides, if any one should regulate the division of property in such a manner that there should be a moderate sufficiency for all, it would be of no use; for it is of more consequence that the citizen should entertain a similarity of sentiments than an equality of circumstances; but this can never be attained unless they are properly educated under the direction of the law. But probably Phaleas may say, that this in what he himself mentions; for he both proposes a equality of property and one plan of education in his city. But he should have said particularly what education he intended, nor is it of any service to have this to much one; for this education may be one, and yet such as will make the citizens over-greedy, to grasp after honours, or riches, or both. Besides, not only an inequality of possessions, but also of honours, will occasion [1267a] seditions, but this upon contrary grounds; for the vulgar will be seditious if there be an inequality of goods, by those of more elevated sentiments, if there is an equality of honours.

"When good and bad do equal honours share."

For men are not guilty of crimes for necessaries only (for which he thinks an equality of goods would be a sufficient remedy, as they would then have no occasion to steal cold or hunger), but that they may enjoy what they desire, and not wish for it in vain; for if their desire extend beyond the common necessaries of life, they were be wicked to gratify them; and not only so, but if their wishes point that way, they will do the same to enjoy those pleasures which are free from the alloy of pain. What remedy then shall we find for these three disorders? And first, to prevent stealing from necessity, let every one be supplied with a moderate subsistence, which may make the addition of his own industry necessary; second to prevent stealing to procure the luxuries of life, temperance be enjoined; and thirdly, let those who wish for pleasure in itself seek for it only in philosophy, all others want the assistance of men.

Since then men are guilty of the greatest crimes from ambition, and not from necessity, no one, for instance aims at being a tyrant to keep him from the cold, hence great honour is due to him who kills not a thief, but tyrant; so that polity which Phaleas establishes would only be salutary to prevent little crimes. He has also been very desirous to establish such rules as will conduce to perfect the internal policy of his state, and he ought also to have done the same with respect to its neighbours and all foreign nations; for the considerations of the military establishment should take place in planning every government, that it may not be unprovided in case of a war, of which he has said nothing; so also with respect to property, it ought not only to be adapted to the exigencies of the state, but also to such dangers as may arise from without.

Thus it should not be so much as to tempt those who are near, and more powerful to invade it, while those who possess it are not able to drive out the invaders, nor so little as that the state should not be able to go to war with those who are quite equal to itself, and of this he has determined nothing; it must indeed be allowed that it is advantageous to a community to be rather rich than poor;

probably the proper boundary is this, not to possess enough to make it worth while for a more powerful neighbour to attack you, any more than he would those who had not so much as yourself; thus when Autophradatus proposed to besiege Atarneus, Eubulus advised him to consider what time it would require to take the city, and then would have him determine whether it would answer, for that he should choose, if it would even take less than he proposed, to quit the place; his saying this made Autophradatus reflect upon the business and give over the siege. There is, indeed, some advantage in an equality of goods amongst the citizens to prevent seditions; and yet, to say truth, no very great one; for men of great abilities will stomach their being put upon a level with the rest of the community. For which reason they will very often appear ready for every commotion and sedition; for the wickedness of mankind is insatiable. For though at first two oboli might be sufficient, yet when once it is become customary, they continually want something more, until they set no limits to their expectations; for it is the nature of our desires to be boundless, and many live only to gratify them. But for this purpose the first object is, not so much to establish an equality of fortune, as to prevent those who are of a good disposition from desiring more than their own, and those who are of a bad one from being able to acquire it; and this may be done if they are kept in an inferior station, and not exposed to injustice. Nor has he treated well the equality of goods, for he has extended his regulation only to land; whereas a man's substance consists not only in this, but also in slaves, cattle, money, and all that variety of things which fall under the name of chattels; now there must be either an equality established in all these, or some certain rule, or they must be left entirely at large. It appears too by his laws, that he intends to establish only a small state, as all the artificers are to belong to the public, and add nothing to the complement of citizens; but if all those who are to be employed in public works are to be the slaves of the public, it should be done in the same manner as it is at Epidamnum, and as Diophantus formerly regulated it at Athens. From these particulars any one may nearly judge whether Phaleas's community is well or ill established.

CHAPTER VIII

Hippodamus, the son of Euruphon a Milesian, contrived the art of laying out towns, and separated the Pireus. This man was in other respects too eager after notice, and seemed to many to live in a very affected manner, with his flowing locks and his expensive ornaments, and a coarse warm vest which he wore, not only in the winter, but also in the hot weather. As he was very desirous of the character of a universal scholar, he was the first who, not being actually engaged in the management of public affairs, sat himself to inquire what sort of government was best; and he planned a state, consisting of ten thousand persons, divided into three parts, one consisting of artisans, another of husbandmen, and the third of soldiers; he also divided the lands into three parts, and allotted one to sacred purposes, another to the public, and the third to individuals. The first of these was to supply what was necessary for the established worship of the gods; the second was to be allotted to the support of the soldiery; and the third was to be the property of the husbandman. He thought also that there need only be three sorts of laws, corresponding to the three sorts of actions which can be brought, namely, for assault, trespasses, or death. He ordered also that there should be a particular court of appeal, into which all causes might be removed which were supposed to have been unjustly determined elsewhere; which court should be composed of old men chosen for that purpose. He thought also [1268a] that they should not pass sentence by votes; but that every one should bring with him a tablet, on which he should write, that he found the party guilty, if it was so, but if not, he should bring a plain tablet; but if he acquitted him of one part of the indictment but not of the other, he should express that also on the tablet; for he disapproved of that general custom already established, as it obliges the judges to be guilty of perjury if they determined positively either on the one side or the other. He also made a law, that those should be rewarded who found out anything for the good of the city, and that the children of those who fell in battle should be educated at the public expense; which law had never been proposed by any other legislator, though it is at present in use at Athens as well as in other cities, he would have the magistrates chosen out of the people in general, by whom he meant the three parts before spoken of; and that those who were so elected should be the particular guardians of what belonged to the public, to strangers, and to orphans.

These are the principal parts and most worthy of notice in Hippodamus's plan. But some persons might doubt the propriety of his division of the citizens into three parts; for the artisans, the husbandmen, and the soldiers are to compose one community, where the husbandmen are to have no arms, and the artisans neither arms nor land, which would in a manner render them slaves to the soldiery. It is also impossible that the whole community should partake of all the honourable employments in it--for the generals and the guardians of the state must necessarily be appointed out of the soldiery, and indeed the most honourable magistrates; but as the two other parts will not have their share in the government, how can they be expected to have any affection for it? But it is necessary that the soldiery should be superior to the other two parts, and this superiority will not be easily gained without they are very numerous; and if they are so, why should the community consist of any other members? why should any others have a right to elect the magistrates? Besides, of what use are the husbandmen to this community? Artisans, 'tis true, are necessary, for these every city wants, and they can live upon their business. If the husbandmen indeed furnished the soldiers with provisions, they

would be properly part of the community; but these are supposed to have their private property, and to cultivate it for their own use. Moreover, if the soldiers themselves are to cultivate that common land which is appropriated for their support, there will be no distinction between the soldier and the husbandman, which the legislator intended there should be; and if there should be any others who are to cultivate the private property of the husbandman and the common lands of the military, there will be a fourth order in the state which will have no share in it, and always entertain hostile sentiments towards it. If any one should propose that the same persons should cultivate their own lands and the public ones also, then there would be a deficiency [1268b] of provisions to supply two families, as the lands would not immediately yield enough for themselves and the soldiers also; and all these things would occasion great confusion.

Nor do I approve of his method of determining causes, when he would have the judge split the case which comes simply before him; and thus, instead of being a judge, become an arbitrator. Now when any matter is brought to arbitration, it is customary for many persons to confer together upon the business that is before them; but when a cause is brought before judges it is not so; and many legislators take care that the judges shall not have it in their power to communicate their sentiments to each other. Besides, what can prevent confusion on the bench when one judge thinks a fine should be different from what another has set it at; one proposing twenty minae, another ten, or be it more or less, another four, and another five; and it is evident, that in this manner they will differ from each other, while some will give the whole damages sued for, and others nothing; in this situation, how shall their determinations be settled? Besides, a judge cannot be obliged to perjure himself who simply acquits or condemns, if the action is fairly and justly brought; for he who acquits the party does not say that he ought not to pay any fine at all, but that he ought not to pay a fine of twenty minae. But he that condemns him is guilty of perjury if he sentences him to pay twenty minae while he believes the damages ought not to be so much.

Now with respect to these honours which he proposes to bestow on those who can give any information useful to the community, this, though very pleasing in speculation, is what the legislator should not settle, for it would encourage informers, and probably occasion commotions in the state. And this proposal of his gives rise also to further conjectures and inquiries; for some persons have doubted whether it is useful or hurtful to alter the established law of any country, if even for the better; for which reason one cannot immediately determine upon what he here says, whether it is advantageous to alter the law or not. We know, indeed, that it is possible to propose to new model both the laws and government as a common good; and since we have mentioned this subject, it may be very proper to enter into a few particulars concerning it, for it contains some difficulties, as I have already said, and it may appear better to alter them, since it has been found useful in other sciences.

Thus the science of physic is extended beyond its ancient bounds; so is the gymnastic, and indeed all other arts and powers; so that one may lay it down for certain that the same thing will necessarily hold good in the art of government. And it may also be affirmed, that experience itself gives a proof of this; for the ancient laws are too simple and barbarous; which allowed the Greeks to wear swords in the city, and to buy their wives of each [1269a]. other. And indeed all the remains of old laws which we have are very simple; for instance, a law in Cuma relative to murder. If any person who prosecutes another for murder can produce a certain number of witnesses to it of his own relations, the accused person shall be held guilty. Upon the whole, all persons ought to endeavour to follow what is right, and not what is established; and it is probable that the first men, whether they sprung out of the earth, or were saved from some general calamity, had very little understanding or knowledge, as is affirmed of these aborigines; so that it would be absurd to continue in the practice of their rules. Nor is it, moreover, right to permit written laws always to remain without alteration; for as in all other sciences, so in politics, it is impossible to express everything in writing with perfect exactness; for when we commit anything to writing we must use general terms, but in every action there is something particular to itself, which these may not comprehend; from whence it is evident, that certain laws will at certain times admit of alterations. But if we consider this matter in another point of view, it will appear to require great caution; for when the advantage proposed is trifling, as the accustoming the people easily to abolish their laws is of bad consequence, it is evidently better to pass over some faults which either the legislator or the magistrates may have committed; for the alterations will not be of so much service as a habit of disobeying the magistrates will be of disservice. Besides, the instance brought from the arts is fallacious; for it is not the same thing to alter the one as the other. For a law derives all its strength from custom, and this requires long time to establish; so that, to make it an easy matter to pass from the established laws to other new ones, is to weaken the power of laws. Besides, here is another question; if the laws are to be altered, are they all to be altered, and in every government or not, and whether at the pleasure of one person or many? all which particulars will make a great difference; for which reason we will at present drop the inquiry, to pursue it at some other time.

CHAPTER IX

There are two considerations which offer themselves with respect to the government established at Lacedaemon and Crete, and indeed in almost all other states whatsoever; one is whether their laws do or do not promote the best establishment possible? the other is whether there is anything, if we consider either the principles upon which it is founded or the executive part of it, which prevents the form of government that they had proposed to follow from being observed; now it is allowed that in every well-regulated state the members of it should be free from servile labour; but in what manner this shall be effected is not so easy to determine; for the Penestse have very often attacked the Thessalians, and the Helots the Lacedaemonians, for they in a manner continually watch an opportunity for some misfortune befalling them. But no such thing has ever happened to the Cretans; the [1269b] reason for which probably is, that although they are engaged in frequent wars with the neighbouring cities, yet none of these would enter into an alliance with the revolters, as it would be disadvantageous for them, who themselves also have their villains. But now there is perpetual enmity between the Lacedaemonians and all their neighbours, the Argives, the Messenians, and the Arcadians. Their slaves also first revolted from the Thessalians while they were engaged in wars with their neighbours the Acheans, the Perrabeans, and the Magnesians. It seems to me indeed, if nothing else, yet something very troublesome to keep upon proper terms with them; for if you are remiss in your discipline they grow insolent, and think themselves upon an equality with their masters; and if they are hardly used they are continually plotting against you and hate you. It is evident, then, that those who employ slaves have not as yet hit upon the right way of managing them.

As to the indulging of women in any particular liberties, it is hurtful to the end of government and the prosperity of the city; for as a man and his wife are the two parts of a family, if we suppose a city to be divided into two parts, we must allow that the number of men and women will be equal.

In whatever city then the women are not under good regulations, we must look upon one half of it as not under the restraint of law, as it there happened; for the legislator, desiring to make his whole city a collection of warriors with respect to the men, he most evidently accomplished his design; but in the meantime the women were quite neglected, for they live without restraint in every improper indulgence and luxury. So that in such a state riches will necessarily be in general esteem, particularly if the men are governed by their wives, which has been the case with many a brave and warlike people except the Celts, and those other nations, if there are any such, who openly practise pederasty. And the first mythologists seem not improperly to have joined Mars and Venus together; for all nations of this character are greatly addicted either to the love of women or of boys, for which reason it was thus at Lacedaemon; and many things in their state were done by the authority of the women. For what is the difference, if the power is in the hands of the women, or in the hands of those whom they themselves govern? it must turn to the same account. As this boldness of the women can be of no use in any common occurrences, if it was ever so, it must be in war; but even here we find that the Lacedaemonian women were of the greatest disservice, as was proved at the time of the Theban invasion, when they were of no use at all, as they are in other cities, but made more disturbance than even the enemy.

The origin of this indulgence which the Lacedaemonian women enjoy is easily accounted for, from the long time the men were absent from home upon foreign expeditions [1270a] against the Argives, and afterwards the Arcadians and Messenians, so that, when these wars were at an end, their military life, in which there is no little virtue, prepared them to obey the precepts of their law-giver; but we are told, that when Lycurgus endeavoured also to reduce the women to an obedience to his laws, upon their refusal he declined it. It may indeed be said that the women were the causes of these things, and of course all the fault was theirs. But we are not now considering where the fault lies, or where it does not lie, but what is right and what is wrong; and when the manners of the women are not well regulated, as I have already said, it must not only occasion faults which are disgraceful to the state, but also increase the love of money. In the next place, fault may be found with his unequal division of property, for some will have far too much, others too little; by which means the land will come into few hands, which business is badly regulated by his laws. For he made it infamous for any one either to buy or sell their possessions, in which he did right; but he permitted any one that chose it to give them away, or bequeath them, although nearly the same consequences will arise from one practice as from the other. It is supposed that near two parts in five of the whole country is the property of women, owing to their being so often sole heirs, and having such large fortunes in marriage; though it would be better to allow them none, or a little, or a certain regulated proportion. Now every one is permitted to make a woman his heir if he pleases; and if he dies intestate, he who succeeds as heir at law gives it to whom he pleases. From whence it happens that although the country is able to support fifteen hundred horse and thirty thousand foot, the number does not amount to one thousand.

And from these facts it is evident, that this particular is badly regulated; for the city could not support one shock, but was ruined for want of men. They say, that during the reigns of their ancient kings they used to present foreigners with the freedom of their city, to prevent there being a want of men while they carried on long wars; it is also affirmed that the number of Spartans was formerly ten

thousand; but be that as it will, an equality of property conduces much to increase the number of the people. The law, too, which he made to encourage population was by no means calculated to correct this inequality; for being willing that the Spartans should be as numerous as [1270b] possible, to make them desirous of having large families he ordered that he who had three children should be excused the night-watch, and that he who had four should pay no taxes: though it is very evident, that while the land was divided in this manner, that if the people increased there must many of them be very poor.

Nor was he less blamable for the manner in which he constituted the ephori; for these magistrates take cognisance of things of the last importance, and yet they are chosen out of the people in general; so that it often happens that a very poor person is elected to that office, who, from that circumstance, is easily bought. There have been many instances of this formerly, as well as in the late affair at Andros. And these men, being corrupted with money, went as far as they could to ruin the city: and, because their power was too great and nearly tyrannical, their kings were obliged to natter them, which contributed greatly to hurt the state; so that it altered from an aristocracy to a democracy. This magistracy is indeed the great support of the state; for the people are easy, knowing that they are eligible to the first office in it; so that, whether it took place by the intention of the legislator, or whether it happened by chance, this is of great service to their affairs; for it is necessary that every member of the state should endeavour that each part of the government should be preserved, and continue the same. And upon this principle their kings have always acted, out of regard to their honour; the wise and good from their attachment to the senate, a seat wherein they consider as the reward of virtue; and the common people, that they may support the ephori, of whom they consist. And it is proper that these magistrates should be chosen out of the whole community, not as the custom is at present, which is very ridiculous. The ephori are the supreme judges in causes of the last consequence; but as it is quite accidental what sort of persons they may be, it is not right that they should determine according to their own opinion, but by a written law or established custom. Their way of life also is not consistent with the manners of the city, for it is too indulgent; whereas that of others is too severe; so that they cannot support it, but are obliged privately to act contrary to law, that they may enjoy some of the pleasures of sense. There are also great defects in the institution of their senators. If indeed they were fitly trained to the practice of every human virtue, every one would readily admit that they would be useful to the government; but still it might be debated whether they should be continued judges for life, to determine points of the greatest moment, since the mind has its old age as well as the body; but as they are so brought up, [1271a] that even the legislator could not depend upon them as good men, their power must be inconsistent with the safety of the state: for it is known that the members of that body have been guilty both of bribery and partiality in many public affairs; for which reason it had been much better if they had been made answerable for their conduct, which they are not. But it may be said the ephori seem to have a check upon all the magistrates. They have indeed in this particular very great power; but I affirm that they should not be entrusted with this control in the manner they are. Moreover, the mode of choice which they make use of at the election of their senators is very childish. Nor is it right for any one to solicit for a place he is desirous of; for every person, whether he chooses it or not, ought to execute any office he is fit for. But his intention was evidently the same in this as in the other parts of his government. For making his citizens ambitious after honours, with men of that disposition he has filled his senate, since no others will solicit for that office; and yet the principal part of those crimes which men are deliberately guilty of arise from ambition and avarice.

We will inquire at another time whether the office of a king is useful to the state: thus much is certain, that they should be chosen from a consideration of their conduct and not as they are now. But that the legislator himself did not expect to make all his citizens honourable and completely virtuous is evident from this, that he distrusts them as not being good men; for he sent those upon the same embassy that were at variance with each other; and thought, that in the dispute of the kings the safety of the state consisted. Neither were their common meals at first well established: for these should rather have been provided at the public expense, as at Crete, where, as at Lacedaemon, every one was obliged to buy his portion, although he might be very poor, and could by no means bear the expense, by which means the contrary happened to what the legislator desired: for he intended that those public meals should strengthen the democratic part of his government: but this regulation had quite the contrary effect, for those who were very poor could not take part in them; and it was an observation of their forefathers, that the not allowing those who could not contribute their proportion to the common tables to partake of them, would be the ruin of the state. Other persons have censured his laws concerning naval affairs, and not without reason, as it gave rise to disputes. For the commander of the fleet is in a manner set up in opposition to the kings, who are generals of the army for life.

[1271b] There is also another defect in his laws worthy of censure, which Plato has given in his book of Laws; that the whole constitution was calculated only for the business of war: it is indeed excellent to make them conquerors; for which reason the preservation of the state depended thereon. The destruction of it commenced with their victories: for they knew not how to be idle, or engage in any other employment than war. In this particular also they were mistaken, that though they rightly thought, that those things which are the objects of contention amongst mankind are better procured by virtue than vice, yet they wrongfully preferred

the things themselves to virtue. Nor was the public revenue well managed at Sparta, for the state was worth nothing while they were obliged to carry on the most extensive wars, and the subsidies were very badly raised; for as the Spartans possessed a large extent of country, they were not exact upon each other as to what they paid in. And thus an event contrary to the legislator's intention took place; for the state was poor, the individuals avaricious. Enough of the Lacedaemonian government; for these seem the chief defects in it.

CHAPTER X

The government of Crete bears a near resemblance to this, in some few particulars it is not worse, but in general it is far inferior in its contrivance. For it appears and is allowed in many particulars the constitution of Lacedaemon was formed in imitation of that of Crete; and in general most new things are an improvement upon the old. For they say, that when Lycurgus ceased to be guardian to King Charilles he went abroad and spent a long time with his relations in Crete, for the Lycians are a colony of the Lacedaemonians; and those who first settled there adopted that body of laws which they found already established by the inhabitants; in like manner also those who now live near them have the very laws which Minos first drew up.

This island seems formed by nature to be the mistress of Greece, for it is entirely surrounded by a navigable ocean which washes almost all the maritime parts of that country, and is not far distant on the one side from Peloponnesus, on the other, which looks towards Asia, from Triopium and Rhodes. By means of this situation Minos acquired the empire of the sea and the islands; some of which he subdued, in others planted colonies: at last he died at Camicus while he was attacking Sicily. There is this analogy between the customs of the Lacedaemonians and the Cretans, the Helots cultivate the grounds [1272a] for the one, the domestic slaves for the other. Both states have their common meals, and the Lacedaemonians called these formerly not _psiditia_ but _andpia_, as the Cretans do; which proves from whence the custom arose. In this particular their governments are also alike: the ephori have the same power with those of Crete, who are called _kosmoi_; with this difference only, that the number of the one is five, of the other ten. The senators are the same as those whom the Cretans call the council. There was formerly also a kingly power in Crete; but it was afterwards dissolved, and the command of their armies was given to the _kosmoi_. Every one also has a vote in their public assembly; but this has only the power of confirming what has already passed the council and the _kosmoi_.

The Cretans conducted their public meals better than the Lacedaemonians, for at Lacedaemon each individual was obliged to furnish what was assessed upon him; which if he could not do, there was a law which deprived him of the rights of a citizen, as has been already mentioned: but in Crete they were furnished by the community; for all the corn and cattle, taxes and contributions, which the domestic slaves were obliged to furnish, were divided into parts and allotted to the gods, the exigencies of the state, and these public meals; so that all the men, women, and children were maintained from a common stock. The legislator gave great attention to encourage a habit of eating sparingly, as very useful to the citizens. He also endeavoured, that his community might not be too populous, to lessen the connection with women, by introducing the love of boys: whether in this he did well or ill we shall have some other opportunity of considering. But that the public meals were better ordered at Crete than at Lacedaemon is very evident.

The institution of the _kosmoi_, was still worse than that of the ephori: for it contained all the faults incident to that magistracy and some peculiar to itself; for in both cases it is uncertain who will be elected: but the Lacedaemonians have this advantage which the others have not, that as all are eligible, the whole community have a share in the highest honours, and therefore all desire to preserve the state: whereas among the Cretans the _kosmoi_ are not chosen out of the people in general, but out of some certain families, and the senate out of the _kosmoi_. And the same observations which may be made on the senate at Lacedaemon may be applied to these; for their being under no control, and their continuing for life, is an honour greater than they merit; and to have their proceedings not regulated by a written law, but left to their own discretion, is dangerous. (As to there being no insurrections, although the people share not in the management of public affairs, this is no proof of a well-constituted government, as the _kosmoi_ have no opportunity of being bribed like the ephori, as they live in an [1272b] island far from those who would corrupt them.) But the method they take to correct that fault is absurd, impolitic, and tyrannical: for very often either their fellow-magistrates or some private persons conspire together and turn out the _kosmoi_. They are also permitted to resign their office before their time is elapsed, and if all this was done by law it would be well, and not at the pleasure of the individuals, which is a bad rule to follow. But what is worst of all is, that general confusion which those who are in power introduce to impede the ordinary course of justice; which sufficiently shows what is the nature of the government, or rather lawless force: for it is usual with the principal persons amongst them to collect together some of the common people and their friends, and then revolt and set up for themselves, and come to blows with each other. And what is the difference, if a state is dissolved at once by such violent means, or if it gradually so

alters in process of time as to be no longer the same constitution? A state like this would ever be exposed to the invasions of those who were powerful and inclined to attack it; but, as has been already mentioned, its situation preserves it, as it is free from the inroads of foreigners; and for this reason the family slaves still remain quiet at Crete, while the Helots are perpetually revolting: for the Cretans take no part in foreign affairs, and it is but lately that any foreign troops have made an attack upon the island; and their ravages soon proved the ineffectualness of their laws. And thus much for the government of Crete.

CHAPTER XI

The government of Carthage seems well established, and in many respects superior to others; in some particulars it bears a near resemblance to the Lacedaemonians; and indeed these three states, the Cretans, the Lacedaemonians and the Carthaginians are in some things very like each other, in others they differ greatly. Amongst many excellent constitutions this may show how well their government is framed, that although the people are admitted to a share in the administration, the form of it remains unaltered, without any popular insurrections, worth notice, on the one hand, or degenerating into a tyranny on the other. Now the Carthaginians have these things in common with the Lacedaemonians: public tables for those who are connected together by the tie of mutual friendship, after the manner of their Phiditia; they have also a magistracy, consisting of an hundred and four persons, similar to the ephori, or rather selected with more judgment; for amongst the Lacedaemonians, all the citizens are eligible, but amongst the Carthaginians, they are chosen out of those of the better sort: there is also some analogy between the king and the senate in both these governments, though the Carthaginian method of appointing their kings is best, for they do not confine themselves to one family; nor do they permit the election to be at large, nor have they any regard to seniority; for if amongst the candidates there are any of greater merit than the rest, these they prefer to those who may be older; for as their power is very extensive, if they are [1273a] persons of no account, they may be very hurtful to the state, as they have always been to the Lacedaemonians; also the greater part of those things which become reprehensible by their excess are common to all those governments which we have described.

Now of those principles on which the Carthaginians have established their mixed form of government, composed of an aristocracy and democracy, some incline to produce a democracy, others an oligarchy: for instance, if the kings and the senate are unanimous upon any point in debate, they can choose whether they will bring it before the people or no; but if they disagree, it is to these they must appeal, who are not only to hear what has been approved of by the senate, but are finally to determine upon it; and whosoever chooses it, has a right to speak against any matter whatsoever that may be proposed, which is not permitted in other cases. The five, who elect each other, have very great and extensive powers; and these choose the hundred, who are magistrates of the highest rank: their power also continues longer than any other magistrates, for it commences before they come into office, and is prolonged after they are out of it; and in this particular the state inclines to an oligarchy: but as they are not elected by lot, but by suffrage, and are not permitted to take money, they are the greatest supporters imaginable of an aristocracy.

The determining all causes by the same magistrates, and not orae in one court and another in another, as at Lacedaemon, has the same influence. The constitution of Carthage is now shifting from an aristocracy to an oligarchy, in consequence of an opinion which is favourably entertained by many, who think that the magistrates in the community ought not to be persons of family only, but of fortune also; as it is impossible for those who are in bad circumstances to support the dignity of their office, or to be at leisure to apply to public business. As choosing men of fortune to be magistrates make a state incline to an oligarchy, and men of abilities to an aristocracy, so is there a third method of proceeding which took place in the polity of Carthage; for they have an eye to these two particulars when they elect their officers, particularly those of the highest rank, their kings and their generals. It must be admitted, that it was a great fault in their legislator not to guard against the constitution's degenerating from an aristocracy; for this is a most necessary thing to provide for at first, that those citizens who have the best abilities should never be obliged to do anything unworthy their character, but be always at leisure to serve the public, not only when in office, but also when private persons; for if once you are obliged to look among the wealthy, that you may have men at leisure to serve you, your greatest offices, of king and general, will soon become venal; in consequence of which, riches will be more honourable than virtue and a love of money be the ruling principle in the city-for what those who have the chief power regard as honourable will necessarily be the object which the [1273b] citizens in general will aim at; and where the first honours are not paid to virtue, there the aristocratic form of government cannot flourish: for it is reasonable to conclude, that those who bought their places should generally make an advantage of what they laid out their money for; as it is absurd to suppose, that if a man of probity who is poor should be desirous of gaining something, a bad man should not endeavour to do the same, especially to reimburse himself; for which reason the magistracy should be formed of those who are most able to support an aristocracy. It would have been better for the legislature to

have passed over the poverty of men of merit, and only to have taken care to have ensured them sufficient leisure, when in office, to attend to public affairs.

It seems also improper, that one person should execute several offices, which was approved of at Carthage; for one business is best done by one person; and it is the duty of the legislator to look to this, and not make the same person a musician and a shoemaker: so that where the state is not small it is more politic and more popular to admit many persons to have a share in the government; for, as I just now said, it is not only more usual, but everything is better and sooner done, when one thing only is allotted to one person: and this is evident both in the army and navy, where almost every one, in his turn, both commands and is under command. But as their government inclines to an oligarchy, they avoid the ill effects of it by always appointing some of the popular party to the government of cities to make their fortunes. Thus they consult this fault in their constitution and render it stable; but this is depending on chance; whereas the legislator ought to frame his government, that there the no room for insurrections. But now, if there should be any general calamity, and the people should revolt from their rulers, there is no remedy for reducing them to obedience by the laws. And these are the particulars of the Lacedaemonian, the Cretan, and the Carthaginian governments which seem worthy of commendation.

CHAPTER XII

Some of those persons who have written upon government had never any share in public affairs, but always led a private life. Everything worthy of notice in their works we have already spoke to. Others were legislators, some in their own cities, others were employed in regulating the governments of foreign states. Some of them only composed a body of laws; others formed the constitution also, as Lycurgus; and Solon, who did both. The Lacedaemonians have been already mentioned. Some persons think that Solon was an excellent legislator, who could dissolve a pure oligarchy, and save the people from that slavery which hung over them, and establish the ancient democratic form of government in his country; wherein every part of it was so framed as to be well adapted to the whole. In the senate of Areopagus an oligarchy was preserved; by the manner of electing their [1274a] magistrates, an aristocracy; and in their courts of justice, a democracy.

Solon seems not to have altered the established form of government, either with respect to the senate or the mode of electing their magistrates; but to have raised the people to great consideration in the state by allotting the supreme judicial department to them; and for this some persons blame him, as having done what would soon overturn that balance of power he intended to establish; for by trying all causes whatsoever before the people, who were chosen by lot to determine them, it was necessary to flatter a tyrannical populace who had got this power; which contributed to bring the government to that pure democracy it now is.

Both Ephialtes and Pericles abridged the power of the Areopagites, the latter of whom introduced the method of paying those who attended the courts of justice: and thus every one who aimed at being popular proceeded increasing the power of the people to what we now see it. But it is evident that this was not Solon's intention, but that it arose from accident; for the people being the cause of the naval victory over the Medes, assumed greatly upon it, and enlisted themselves under factious demagogues, although opposed by the better part of the citizens. He thought it indeed most necessary to entrust the people with the choice of their magistrates and the power of calling them to account; for without that they must have been slaves and enemies to the other citizens: but he ordered them to elect those only who were persons of good account and property, either out of those who were worth five hundred medimns, or those who were called xeugitai, or those of the third census, who were called horsemen.

As for those of the fourth, which consisted of mechanics, they were incapable of any office. Zaleucus was the legislator of the Western Locrians, as was Charondas, the Catanean, of his own cities, and those also in Italy and Sicily which belonged to the Calcidians. Some persons endeavour to prove that Onomacritus, the Locrian, was the first person of note who drew up laws; and that he employed himself in that business while he was at Crete, where he continued some time to learn the prophetic art: and they say, that Thales was his companion; and that Lycurgus and Zaleucus were the scholars of Thales, and Charondas of Zaleucus; but those who advance this, advance what is repugnant to chronology. Philolaus also, of the family of the Bacchiades, was a Theban legislator. This man was very fond of Diocles, a victor in the Olympic games, and when he left his country from a disgust at an improper passion which his mother Alithoe had entertained for him, and settled at Thebes, Philolaus followed him, where they both died, and where they still show their tombs placed in view of each other, but so disposed, that one of them looks towards Corinth, the other does not; the reason they give for this is, that Diodes, from his detestation of his mother's passion, would have his tomb so placed that no one could see Corinth from it; but Philolaus chose that it might be seen from his: and this was the cause of their living at Thebes. [1274b]

As Philolaus gave them laws concerning many other things, so did he upon adoption, which they call adoptive laws; and this he in particular did to preserve the number of families. Charondas did nothing new, except in actions for perjury, which he was the first person who took into particular consideration. He also drew up his laws with greater elegance and accuracy than even any of our present legislators. Philolaus introduced the law for the equal distribution of goods; Plato that for the community of women, children, and goods, and also for public tables for the women; and one concerning drunkenness, that they might observe sobriety in their symposiums. He also made a law concerning their warlike exercises; that they should acquire a habit of using both hands alike, as it was necessary that one hand should be as useful as the other.

As for Draco's laws, they were published when the government was already established, and they have nothing particular in them worth mentioning, except their severity on account of the enormity of their punishments. Pittacus was the author of some laws, but never drew up any form of government; one of which was this, that if a drunken man beat any person he should be punished more than if he did it when sober; for as people are more apt to be abusive when drunk than sober, he paid no consideration to the excuse which drunkenness might claim, but regarded only the common benefit. Andromadas Regmus was also a lawgiver to the Thracian talcidians. There are some laws of his concerning murders and heiresses extant, but these contain nothing that any one can say is new and his own. And thus much for different sorts of governments, as well those which really exist as those which different persons have proposed.

BOOK III

CHAPTER I

Every one who inquires into the nature of government, and what are its different forms, should make this almost his first question, What is a city? For upon this there is a dispute: for some persons say the city did this or that, while others say, not the city, but the oligarchy, or the tyranny. We see that the city is the only object which both the politician and legislator have in view in all they do: but government is a certain ordering of those who inhabit a city. As a city is a collective body, and, like other wholes, composed of many parts, it is evident our first inquiry must be, what a citizen is: for a city is a certain number of citizens. So that we must consider whom we ought to call citizen, and who is one; for this is often doubtful: for every one will not allow that this character is applicable to the same person; for that man who would be a citizen in a republic would very often not be one in an oligarchy. We do not include in this inquiry many of those who acquire this appellation out of the ordinary way, as honorary persons, for instance, but those only who have a natural right to it.

Now it is not residence which constitutes a man a citizen; for in this sojourners and slaves are upon an equality with him; nor will it be sufficient for this purpose, that you have the privilege of the laws, and may plead or be impleaded, for this all those of different nations, between whom there is a mutual agreement for that purpose, are allowed; although it very often happens, that sojourners have not a perfect right therein without the protection of a patron, to whom they are obliged to apply, which shows that their share in the community is incomplete. In like manner, with respect to boys who are not yet enrolled, or old men who are past war, we admit that they are in some respects citizens, but not completely so, but with some exceptions, for these are not yet arrived to years of maturity, and those are past service; nor is there any difference between them. But what we mean is sufficiently intelligible and clear, we want a complete citizen, one in whom there is no deficiency to be corrected to make him so. As to those who are banished, or infamous, there may be the same objections made and the same answer given. There is nothing that more characterises a complete citizen than having a share in the judicial and executive part of the government.

With respect to offices, some are fixed to a particular time, so that no person is, on any account, permitted to fill them twice; or else not till some certain period has intervened; others are not fixed, as a juryman's, and a member of the general assembly: but probably some one may say these are not offices, nor have the citizens in these capacities any share in the government; though surely it is ridiculous to say that those who have the principal power in the state bear no office in it. But this objection is of no weight, for it is only a dispute about words; as there is no general term which can be applied both to the office of a juryman and a member of the assembly. For the sake of distinction, suppose we call it an indeterminate office: but I lay it down as a maxim, that those are citizens who could exercise it. Such then is the description of a citizen who comes nearest to what all those who are called citizens are. Every one also should know, that of the component parts of those things which differ from each other in species, after the first or second remove, those which follow have either nothing at all or very little common to each.

Now we see that governments differ from each other in their form, and that some of them are defective, others [1275b] as excellent as possible: for it is evident, that those which have many deficiencies and degeneracies in them must be far inferior to those which are without such faults. What I mean by degeneracies will be hereafter explained. Hence it is clear that the office of a citizen must differ as governments do from each other: for which reason he who is called a citizen has, in a democracy, every privilege which that station supposes. In other forms of government he may enjoy them; but not necessarily: for in some states the people have no power; nor have they any general assembly, but a few select men.

The trial also of different causes is allotted to different persons; as at Lacedaemon all disputes concerning contracts are brought before some of the ephori: the senate are the judges in cases of murder, and so on; some being to be heard by one magistrate, others by another: and thus at Carthage certain magistrates determine all causes. But our former description of a citizen will admit of correction; for in some governments the office of a juryman and a member of the general assembly is not an indeterminate one; but there are particular persons appointed for these purposes, some or all of the citizens being appointed jurymen or members of the general assembly, and this either for all causes and all public business whatsoever, or else for some particular one: and this may be sufficient to show what a citizen is; for he who has a right to a share in the judicial and executive part of government in any city, him we call a citizen of that place; and a city, in one word, is a collective body of such persons sufficient in themselves to all the purposes of life.

CHAPTER II

In common use they define a citizen to be one who is sprung from citizens on both sides, not on the father's or the mother's only. Others carry the matter still further, and inquire how many of his ancestors have been citizens, as his grandfather, great-grandfather, etc., but some persons have questioned how the first of the family could prove themselves citizens, according to this popular and careless definition. Gorgias of Leontium, partly entertaining the same doubt, and partly in jest, says, that as a mortar is made by a mortar-maker, so a citizen is made by a citizen-maker, and a Larisssean by a Larisssean-maker. This is indeed a very simple account of the matter; for if citizens are so, according to this definition, it will be impossible to apply it to the first founders or first inhabitants of states, who cannot possibly claim in right either of their father or mother. It is probably a matter of still more difficulty to determine their rights as citizens who are admitted to their freedom after any revolution in the state. As, for instance, at Athens, after the expulsion of the tyrants, when Clisthenes enrolled many foreigners and city-slaves amongst the tribes; and the doubt with respect to them was, not whether they were citizens or no, but whether they were legally so or not. Though indeed some persons may have this further [1276a] doubt, whether a citizen can be a citizen when he is illegally made; as if an illegal citizen, and one who is no citizen at all, were in the same predicament: but since we see some persons govern unjustly, whom yet we admit to govern, though not justly, and the definition of a citizen is one who exercises certain offices, for such a one we have defined a citizen to be, it is evident, that a citizen illegally created yet continues to be a citizen, but whether justly or unjustly so belongs to the former inquiry.

CHAPTER III

It has also been doubted what was and what was not the act of the city; as, for instance, when a democracy arises out of an aristocracy or a tyranny; for some persons then refuse to fulfil their contracts; as if the right to receive the money was in the tyrant and not in the state, and many other things of the same nature; as if any covenant was founded for violence and not for the common good. So in like manner, if anything is done by those who have the management of public affairs where a democracy is established, their actions are to be considered as the actions of the state, as well as in the oligarchy or tyranny.

And here it seems very proper to consider this question, When shall we say that a city is the same, and when shall we say that it is different?

It is but a superficial mode of examining into this question to begin with the place and the people; for it may happen that these may be divided from that, or that some one of them may live in one place, and some in another (but this question may be regarded as no very knotty one; for, as a city may acquire that appellation on many accounts, it may be solved many ways); and in like manner, when men inhabit one common place, when shall we say that they inhabit the same city, or that the city is the same? for it does not depend upon the walls; for I can suppose Peloponnesus itself surrounded with a wall, as Babylon was, and every other place, which rather encircles many nations than one city, and that they say was taken three days when some of the inhabitants knew nothing of it: but we shall find a proper time to determine this question; for the extent of a city, how large it should be, and whether it

should consist of more than one people, these are particulars that the politician should by no means be unacquainted with. This, too, is a matter of inquiry, whether we shall say that a city is the same while it is inhabited by the same race of men, though some of them are perpetually dying, others coming into the world, as we say that a river or a fountain is the same, though the waters are continually changing; or when a revolution takes place shall we [1276b] say the men are the same, but the city is different: for if a city is a community, it is a community of citizens; but if the mode of government should alter, and become of another sort, it would seem a necessary consequence that the city is not the same; as we regard the tragic chorus as different from the comic, though it may probably consist of the same performers: thus every other community or composition is said to be different if the species of composition is different; as in music the same hands produce different harmony, as the Doric and Phrygian. If this is true, it is evident, that when we speak of a city as being the same we refer to the government there established; and this, whether it is called by the same name or any other, or inhabited by the same men or different. But whether or no it is right to dissolve the community when the constitution is altered is another question.

CHAPTER IV

What has been said, it follows that we should consider whether the same virtues which constitute a good man make a valuable citizen, or different; and if a particular inquiry is necessary for this matter we must first give a general description of the virtues of a good citizen; for as a sailor is one of those who make up a community, so is a citizen, although the province of one sailor may be different from another's (for one is a rower, another a steersman, a third a boatswain, and so on, each having their several appointments), it is evident that the most accurate description of any one good sailor must refer to his peculiar abilities, yet there are some things in which the same description may be applied to the whole crew, as the safety of the ship is the common business of all of them, for this is the general centre of all their cares: so also with respect to citizens, although they may in a few particulars be very different, yet there is one care common to them all, the safety of the community, for the community of the citizens composes the state; for which reason the virtue of a citizen has necessarily a reference to the state. But if there are different sorts of governments, it is evident that those actions which constitute the virtue of an excellent citizen in one community will not constitute it in another; wherefore the virtue of such a one cannot be perfect: but we say, a man is good when his virtues are perfect; from whence it follows, that an excellent citizen does not possess that virtue which constitutes a good man. Those who are any ways doubtful concerning this question may be convinced of the truth of it by examining into the best formed states: for, if it is impossible that a city should consist entirely of excellent citizens (while it is necessary that every one should do well in his calling, in which consists his excellence, as it is impossible that all the citizens should have the same [1277a] qualifications) it is impossible that the virtue of a citizen and a good man should be the same; for all should possess the virtue of an excellent citizen: for from hence necessarily arise the perfection of the city: but that every one should possess the virtue of a good man is impossible without all the citizens in a well-regulated state were necessarily virtuous. Besides, as a city is composed of dissimilar parts, as an animal is of life and body; the soul of reason and appetite; a family of a man and his wife--property of a master and a slave; in the same manner, as a city is composed of all these and many other very different parts, it necessarily follows that the virtue of all the citizens cannot be the same; as the business of him who leads the band is different from the other dancers. From all which proofs it is evident that the virtues of a citizen cannot be one and the same. But do we never find those virtues united which constitute a good man and excellent citizen? for we say, such a one is an excellent magistrate and a prudent and good man; but prudence is a necessary qualification for all those who engage in public affairs. Nay, some persons affirm that the education of those who are intended to command should, from the beginning, be different from other citizens, as the children of kings are generally instructed in riding and warlike exercises; and thus Euripides says:

"... No showy arts Be mine, but teach me what the state requires."

As if those who are to rule were to have an education peculiar to themselves. But if we allow, that the virtues of a good man and a good magistrate may be the same, and a citizen is one who obeys the magistrate, it follows that the virtue of the one cannot in general be the same as the virtue of the other, although it may be true of some particular citizen; for the virtue of the magistrate must be different from the virtue of the citizen. For which reason Jason declared that was he deprived of his kingdom he should pine away with regret, as not knowing how to live a private man. But it is a great recommendation to know how to command as well as to obey; and to do both these things well is the virtue of an accomplished citizen. If then the virtue of a good man consists only in being able to command, but the virtue of a good citizen renders him equally fit for the one as well as the other, the commendation of both of them is not the same. It appears, then, that both he who commands and he who obeys should each of them learn their separate business: but that the citizen should be master of and take part in both these, as any one may easily perceive; in a family

government there is no occasion for the master to know how to perform the necessary offices, but rather to enjoy the labour of others; for to do the other is a servile part. I mean by the other, the common family business of the slave.

There are many sorts of slaves; for their employments are various: of these the handicraftsmen are one, who, as their name imports, get their living by the labour of their hands, and amongst these all mechanics are included; [1277b] for which reasons such workmen, in some states, were not formerly admitted into any share in the government; till at length democracies were established: it is not therefore proper for any man of honour, or any citizen, or any one who engages in public affairs, to learn these servile employments without they have occasion for them for their own use; for without this was observed the distinction between a master and a slave would be lost. But there is a government of another sort, in which men govern those who are their equals in rank, and freemen, which we call a political government, in which men learn to command by first submitting to obey, as a good general of horse, or a commander-in-chief, must acquire a knowledge of their duty by having been long under the command of another, and the like in every appointment in the army: for well is it said, no one knows how to command who has not himself been under command of another. The virtues of those are indeed different, but a good citizen must necessarily be endowed with them; he ought also to know in what manner freemen ought to govern, as well as be governed: and this, too, is the duty of a good man. And if the temperance and justice of him who commands is different from his who, though a freeman, is under command, it is evident that the virtues of a good citizen cannot be the same as justice, for instance but must be of a different species in these two different situations, as the temperance and courage of a man and a woman are different from each other; for a man would appear a coward who had only that courage which would be graceful in a woman, and a woman would be thought a talker who should take as large a part in the conversation as would become a man of consequence.

The domestic employments of each of them are also different; it is the man's business to acquire subsistence, the woman's to take care of it. But direction and knowledge of public affairs is a virtue peculiar to those who govern, while all others seem to be equally requisite for both parties; but with this the governed have no concern, it is theirs to entertain just notions: they indeed are like flute-makers, while those who govern are the musicians who play on them. And thus much to show whether the virtue of a good man and an excellent citizen is the same, or if it is different, and also how far it is the same, and how far different.

CHAPTER V

But with respect to citizens there is a doubt remaining, whether those only are truly so who are allowed to share in the government, or whether the mechanics also are to be considered as such? for if those who are not permitted to rule are to be reckoned among them, it is impossible that the virtue of all the citizens should be the same, for these also are citizens; and if none of them are admitted to be citizens, where shall they be ranked? for they are neither [1278a] sojourners nor foreigners? or shall we say that there will no inconvenience arise from their not being citizens, as they are neither slaves nor freedmen: for this is certainly true, that all those are not citizens who are necessary to the existence of a city, as boys are not citizens in the same manner that men are, for those are perfectly so, the others under some conditions; for they are citizens, though imperfect ones: for in former times among some people the mechanics were either slaves or foreigners, for which reason many of them are so now: and indeed the best regulated states will not permit a mechanic to be a citizen; but if it be allowed them, we cannot then attribute the virtue we have described to every citizen or freeman, but to those only who are disengaged from servile offices. Now those who are employed by one person in them are slaves; those who do them for money are mechanics and hired servants: hence it is evident on the least reflection what is their situation, for what I have said is fully explained by appearances. Since the number of communities is very great, it follows necessarily that there will be many different sorts of citizens, particularly of those who are governed by others, so that in one state it may be necessary to admit mechanics and hired servants to be citizens, but in others it may be impossible; as particularly in an aristocracy, where honours are bestowed on virtue and dignity: for it is impossible for one who lives the life of a mechanic or hired servant to acquire the practice of virtue. In an oligarchy also hired servants are not admitted to be citizens; because there a man's right to bear any office is regulated by his fortune; but mechanics are, for many citizens are very rich.

There was a law at Thebes that no one could have a share in the government till he had been ten years out of trade. In many states the law invites strangers to accept the freedom of the city; and in some democracies the son of a free-woman is himself free. The same is also observed in many others with respect to natural children; but it is through want of citizens regularly born that they admit such: for these laws are always made in consequence of a scarcity of inhabitants; so, as their numbers increase, they first deprive the children of a male or female slave of this privilege, next the child of a free-woman, and last of all they will admit none but those whose fathers and mothers were both free.

That there are many sorts of citizens, and that he may be said to be as completely who shares the honours of the state, is evident from what has been already said. Thus Achilles, in Homer, complains of Agamemnon's treating him like an unhonoured stranger; for a stranger or sojourner is one who does not partake of the honours of the state: and whenever the right to the freedom of the city is kept obscure, it is for the sake of the inhabitants. [1278b] From what has been said it is plain whether the virtue of a good man and an excellent citizen is the same or different: and we find that in some states it is the same, in others not; and also that this is not true of each citizen, but of those only who take the lead, or are capable of taking the lead, in public affairs, either alone or in conjunction with others.

CHAPTER VI

Having established these points, we proceed next to consider whether one form of government only should be established, or more than one; and if more, how many, and of what sort, and what are the differences between them. The form of government is the ordering and regulating of the city, and all the offices in it, particularly those wherein the supreme power is lodged; and this power is always possessed by the administration; but the administration itself is that particular form of government which is established in any state: thus in a democracy the supreme power is lodged in the whole people; on the contrary, in an oligarchy it is in the hands of a few. We say then, that the form of government in these states is different, and we shall find the same thing hold good in others. Let us first determine for whose sake a city is established; and point out the different species of rule which man may submit to in social life.

I have already mentioned in my treatise on the management of a family, and the power of the master, that man is an animal naturally formed for society, and that therefore, when he does not want any foreign assistance, he will of his own accord desire to live with others; not but that mutual advantage induces them to it, as far as it enables each person to live more agreeably; and this is indeed the great object not only to all in general, but also to each individual: but it is not merely matter of choice, but they join in society also, even that they may be able to live, which probably is not without some share of merit, and they also support civil society, even for the sake of preserving life, without they are grievously overwhelmed with the miseries of it: for it is very evident that men will endure many calamities for the sake of living, as being something naturally sweet and desirable. It is easy to point out the different modes of government, and we have already settled them in our exoteric discourses. The power of the master, though by nature equally serviceable, both to the master and to the slave, yet nevertheless has for its object the benefit of the master, while the benefit of the slave arises accidentally; for if the slave is destroyed, the power of the master is at an end: but the authority which a man has over his wife, and children, and his family, which we call domestic government, is either for the benefit of those who are under subjection, or else for the common benefit of the whole: but its particular object is the benefit of the governed, as we see in other arts; in physic, for instance, and the gymnastic exercises, wherein, if any benefit [1279a] arise to the master, it is accidental; for nothing forbids the master of the exercises from sometimes being himself one of those who exercises, as the steersman is always one of the sailors; but both the master of the exercises and the steersman consider the good of those who are under their government. Whatever good may happen to the steersman when he is a sailor, or to the master of the exercises when he himself makes one at the games, is not intentional, or the object of their power; thus in all political governments which are established to preserve and defend the equality of the citizens it is held right to rule by turns. Formerly, as was natural, every one expected that each of his fellow-citizens should in his turn serve the public, and thus administer to his private good, as he himself when in office had done for others; but now every one is desirous of being continually in power, that he may enjoy the advantage which he makes of public business and being in office; as if places were a never-failing remedy for every complaint, and were on that account so eagerly sought after.

It is evident, then, that all those governments which have a common good in view are rightly established and strictly just, but those who have in view only the good of the rulers are all founded on wrong principles, and are widely different from what a government ought to be, for they are tyranny over slaves, whereas a city is a community of freemen.

CHAPTER VII

Having established these particulars, we come to consider next the different number of governments which there are, and what they are; and first, what are their excellencies: for when we have determined this, their defects will be evident enough.

It is evident that every form of government or administration, for the words are of the same import, must contain a supreme power over the whole state, and this supreme power must necessarily be in the hands of one person, or a few, or many; and when either

of these apply their power for the common good, such states are well governed; but when the interest of the one, the few, or the many who enjoy this power is alone consulted, then ill; for you must either affirm that those who make up the community are not citizens, or else let these share in the advantages of government. We usually call a state which is governed by one person for the common good, a kingdom; one that is governed by more than one, but by a few only, an aristocracy; either because the government is in the hands of the most worthy citizens, or because it is the best form for the city and its inhabitants. When the citizens at large govern for the public good, it is called a state; which is also a common name for all other governments, and these distinctions are consonant to reason; for it will not be difficult to find one person, or a very few, of very distinguished abilities, but almost impossible to meet with the majority [1279b] of a people eminent for every virtue; but if there is one common to a whole nation it is valour; for this is created and supported by numbers: for which reason in such a state the profession of arms will always have the greatest share in the government.

Now the corruptions attending each of these governments are these; a kingdom may degenerate into a tyranny, an aristocracy into an oligarchy, and a state into a democracy. Now a tyranny is a monarchy where the good of one man only is the object of government, an oligarchy considers only the rich, and a democracy only the poor; but neither of them have a common good in view.

CHAPTER VIII

It will be necessary to enlarge a little more upon the nature of each of these states, which is not without some difficulty, for he who would enter into a philosophical inquiry into the principles of them, and not content himself with a superficial view of their outward conduct, must pass over and omit nothing, but explain the true spirit of each of them. A tyranny then is, as has been said, a monarchy, where one person has an absolute and despotic power over the whole community and every member therein: an oligarchy, where the supreme power of the state is lodged with the rich: a democracy, on the contrary, is where those have it who are worth little or nothing. But the first difficulty that arises from the distinctions which we have laid down is this, should it happen that the majority of the inhabitants who possess the power of the state (for this is a democracy) should be rich, the question is, how does this agree with what we have said? The same difficulty occurs, should it ever happen that the poor compose a smaller part of the people than the rich, but from their superior abilities acquire the supreme power; for this is what they call an oligarchy; it should seem then that our definition of the different states was not correct: nay, moreover, could any one suppose that the majority of the people were poor, and the minority rich, and then describe the state in this manner, that an oligarchy was a government in which the rich, being few in number, possessed the supreme power, and that a democracy was a state in which the poor, being many in number, possessed it, still there will be another difficulty; for what name shall we give to those states we have been describing? I mean, that in which the greater number are rich, and that in which the lesser number are poor (where each of these possess the supreme power), if there are no other states than those we have described. It seems therefore evident to reason, that whether the supreme power is vested in the hands of many or few may be a matter of accident; but that it is clear enough, that when it is in the hands of the few, it will be a government of the rich; when in the hands of the many, it will be a government of the poor; since in all countries there are many poor and few rich: it is not therefore the cause that has been already assigned (namely, the number of people in power) that makes the difference between the two governments; but an oligarchy and democracy differ in this from each other, in the poverty of those who govern in the one, and the riches I28oa of those who govern in the other; for when the government is in the hands of the rich, be they few or be they more, it is an oligarchy; when it is in the hands of the poor, it is a democracy: but, as we have already said, the one will be always few, the other numerous, but both will enjoy liberty; and from the claims of wealth and liberty will arise continual disputes with each other for the lead in public affairs.

CHAPTER IX

Let us first determine what are the proper limits of an oligarchy and a democracy, and what is just in each of these states; for all men have some natural inclination to justice; but they proceed therein only to a certain degree; nor can they universally point out what is absolutely just; as, for instance, what is equal appears just, and is so; but not to all; only among those who are equals: and what is unequal appears just, and is so; but not to all, only amongst those who are unequals; which circumstance some people neglect, and therefore judge ill; the reason for which is, they judge for themselves, and every one almost is the worst judge in his own cause. Since then justice has reference to persons, the same distinctions must be made with respect to persons which are made with respect to things, in the manner that I have already described in my Ethics.

As to the equality of the things, these they agree in; but their dispute is concerning the equality of the persons, and chiefly for the reason above assigned; because they judge ill in their own cause; and also because each party thinks, that if they admit what is

right in some particulars, they have done justice on the whole: thus, for instance, if some persons are unequal in riches, they suppose them unequal in the whole; or, on the contrary, if they are equal in liberty, they suppose them equal in the whole: but what is absolutely just they omit; for if civil society was founded for the sake of preserving and increasing property, every one's right in the city would be equal to his fortune; and then the reasoning of those who insist upon an oligarchy would be valid; for it would not be right that he who contributed one mina should have an equal share in the hundred along with him who brought in all the rest, either of the original money or what was afterwards acquired.

Nor was civil society founded merely to preserve the lives of its members; but that they might live well: for otherwise a state might be composed of slaves, or the animal creation: but this is not so; for these have no share in the happiness of it; nor do they live after their own choice; nor is it an alliance mutually to defend each other from injuries, or for a commercial intercourse: for then the Tyrrhenians and Carthaginians, and all other nations between whom treaties of commerce subsist, would be citizens of one city; for they have articles to regulate their exports and imports, and engagements for mutual protection, and alliances for mutual defence; but [1280b] yet they have not all the same magistrates established among them, but they are different among the different people; nor does the one take any care, that the morals of the other should be as they ought, or that none of those who have entered into the common agreements should be unjust, or in any degree vicious, only that they do not injure any member of the confederacy. But whosoever endeavours to establish wholesome laws in a state, attends to the virtues and the vices of each individual who composes it; from whence it is evident, that the first care of him who would found a city, truly deserving that name, and not nominally so, must be to have his citizens virtuous; for otherwise it is merely an alliance for self-defence; differing from those of the same cast which are made between different people only in place: for law is an agreement and a pledge, as the sophist Lycophron says, between the citizens of their intending to do justice to each other, though not sufficient to make all the citizens just and good: and that this is fact is evident, for could any one bring different places together, as, for instance, enclose Megara and Corinth in a wall, yet they would not be one city, not even if the inhabitants intermarried with each other, though this inter-community contributes much to make a place one city. Besides, could we suppose a set of people to live separate from each other, but within such a distance as would admit of an intercourse, and that there were laws subsisting between each party, to prevent their injuring one another in their mutual dealings, supposing one a carpenter, another a husbandman, shoemaker, and the like, and that their numbers were ten thousand, still all that they would have together in common would be a tariff for trade, or an alliance for mutual defence, but not the same city. And why? not because their mutual intercourse is not near enough, for even if persons so situated should come to one place, and every one should live in his own house as in his native city, and there should be alliances subsisting between each party to mutually assist and prevent any injury being done to the other, still they would not be admitted to be a city by those who think correctly, if they preserved the same customs when they were together as when they were separate.

It is evident, then, that a city is not a community of place; nor established for the sake of mutual safety or traffic with each other; but that these things are the necessary consequences of a city, although they may all exist where there is no city: but a city is a society of people joining together with their families and their children to live agreeably for the sake of having their lives as happy and as independent as possible: and for this purpose it is necessary that they should live in one place and intermarry with each other: hence in all cities there are family-meetings, clubs, sacrifices, and public entertainments to promote friendship; for a love of sociability is friendship itself; so that the end then for which a city is established is, that the inhabitants of it may live happy, and these things are conducive to that end: for it is a community of families and villages for the sake of a perfect independent life; that is, as we have already said, for the sake of living well and happily. It is not therefore founded for the purpose of men's merely [1281a] living together, but for their living as men ought; for which reason those who contribute most to this end deserve to have greater power in the city than those who are their equals in family and freedom, but their inferiors in civil virtue, or those who excel them in wealth but are below them in worth. It is evident from what has been said, that in all disputes upon government each party says something that is just.

CHAPTER X

It may also be a doubt where the supreme power ought to be lodged. Shall it be with the majority, or the wealthy, with a number of proper persons, or one better than the rest, or with a tyrant? But whichever of these we prefer some difficulty will arise. For what? shall the poor have it because they are the majority? they may then divide among themselves, what belongs to the rich: nor is this unjust; because truly it has been so judged by the supreme power. But what avails it to point out what is the height of injustice if this is not? Again, if the many seize into their own hands everything which belongs to the few, it is evident that the city will be at an end. But virtue will never destroy what is virtuous; nor can what is right be the ruin of the state: therefore such a law can never be right,

nor can the acts of a tyrant ever be wrong, for of necessity they must all be just; for he, from his unlimited power, compels every one to obey his command, as the multitude oppress the rich. Is it right then that the rich, the few, should have the supreme power? and what if they be guilty of the same rapine and plunder the possessions of the majority, that will be as right as the other: but that all things of this sort are wrong and unjust is evident. Well then, these of the better sort shall have it: but must not then all the other citizens live unhonoured, without sharing the offices of the city; for the offices of a city are its honours, and if one set of men are always in power, it is evident that the rest must be without honour. Well then, let it be with one person of all others the fittest for it: but by this means the power will be still more contracted, and a greater number than before continue unhonoured. But some one may say, that it is wrong to let man have the supreme power and not the law, as his soul is subject to so many passions. But if this law appoints an aristocracy, or a democracy, how will it help us in our present doubts? for those things will happen which we have already mentioned.

CHAPTER XI

Other particulars we will consider separately; but it seems proper to prove, that the supreme power ought to be lodged with the many, rather than with those of the better sort, who are few; and also to explain what doubts (and probably just ones) may arise: now, though not one individual of the many may himself be fit for the supreme power, yet when these many are joined together, it does not follow but they may be better qualified for it than those; and this not separately, but as a collective body; as the public suppers exceed those which are given at one person's private expense: for, as they are many, each person brings in his share of virtue and wisdom; and thus, coming together, they are like one man made up of a multitude, with many feet, many hands, and many intelligences: thus is it with respect to the manners and understandings of the multitude taken together; for which reason the public are the best judges of music and poetry; for some understand one part, some another, and all collectively the whole; and in this particular men of consequence differ from each of the many; as they say those who are beautiful do from those who are not so, and as fine pictures excel any natural objects, by collecting the several beautiful parts which were dispersed among different originals into one, although the separate parts, as the eye or any other, might be handsomer than in the picture.

But if this distinction is to be made between every people and every general assembly, and some few men of consequence, it may be doubtful whether it is true; nay, it is clear enough that, with respect to a few, it is not; since the same conclusion might be applied even to brutes: and indeed wherein do some men differ from brutes? Not but that nothing prevents what I have said being true of the people in some states. The doubt then which we have lately proposed, with all its consequences, may be settled in this manner; it is necessary that the freemen who compose the bulk of the people should have absolute power in some things; but as they are neither men of property, nor act uniformly upon principles of virtue, it is not safe to trust them with the first offices in the state, both on account of their iniquity and their ignorance; from the one of which they will do what is wrong, from the other they will mistake: and yet it is dangerous to allow them no power or share in the government; for when there are many poor people who are incapable of acquiring the honours of their country, the state must necessarily have many enemies in it; let them then be permitted to vote in the public assemblies and to determine causes; for which reason Socrates, and some other legislators, gave them the power of electing the officers of the state, and also of inquiring into their conduct when they came out of office, and only prevented their being magistrates by themselves; for the multitude when they are collected together have all of them sufficient understanding for these purposes, and, mixing among those of higher rank, are serviceable to the city, as some things, which alone are improper for food, when mixed with others make the whole more wholesome than a few of them would be.

But there is a difficulty attending this form of government, for it seems, that the person who himself was capable of curing any one who was then sick, must be the best judge whom to employ as a physician; but such a one must be himself a physician; and the same holds true in every other practice and art: and as a physician ought [1282a] to give an account of his practice to a physician, so ought it to be in other arts: those whose business is physic may be divided into three sorts, the first of these is he who makes up the medicines; the second prescribes, and is to the other as the architect is to the mason; the third is he who understands the science, but never practises it: now these three distinctions may be found in those who understand all other arts; nor have we less opinion of their judgment who are only instructed in the principles of the art than of those who practise it: and with respect to elections the same method of proceeding seems right; for to elect a proper person in any science is the business of those who are skilful therein; as in geometry, of geometricians; in steering, of steersmen: but if some individuals should know something of particular arts and works, they do not know more than the professors of them: so that even upon this principle neither the election of magistrates, nor the censure of their conduct, should be entrusted to the many.

But probably all that has been here said may not be right; for, to resume the argument I lately used, if the people are not very brutal indeed, although we allow that each individual knows less of these affairs than those who have given particular attention to them, yet when they come together they will know them better, or at least not worse; besides, in some particular arts it is not the workman only who is the best judge; namely, in those the works of which are understood by those who do not profess them: thus he who builds a house is not the only judge of it, for the master of the family who inhabits it is a better; thus also a steersman is a better judge of a tiller than he who made it; and he who gives an entertainment than the cook. What has been said seems a sufficient solution of this difficulty; but there is another that follows: for it seems absurd that the power of the state should be lodged with those who are but of indifferent morals, instead of those who are of excellent characters. Now the power of election and censure are of the utmost consequence, and this, as has been said, in some states they entrust to the people; for the general assembly is the supreme court of all, and they have a voice in this, and deliberate in all public affairs, and try all causes, without any objection to the meanness of their circumstances, and at any age: but their treasurers, generals, and other great officers of state are taken from men of great fortune and worth. This difficulty also may be solved upon the same principle; and here too they may be right, for the power is not in the man who is member of the assembly, or council, but the assembly itself, and the council, and the people, of which each individual of the whole community are the parts, I mean as senator, adviser, or judge; for which reason it is very right, that the many should have the greatest powers in their own hands; for the people, the council, and the judges are composed of them, and the property of all these collectively is more than the property of any person or a few who fill the great offices of the state: and thus I determine these points.

The first question that we stated shows plainly, that the supreme power should be lodged in laws duly made and that the magistrate or magistrates, either one or more, should be authorised to determine those cases which the laws cannot particularly speak to, as it is impossible for them, in general language, to explain themselves upon everything that may arise: but what these laws are which are established upon the best foundations has not been yet explained, but still remains a matter of some question: but the laws of every state will necessarily be like every state, either trifling or excellent, just or unjust; for it is evident, that the laws must be framed correspondent to the constitution of the government; and, if so, it is plain, that a well-formed government will have good laws, a bad one, bad ones.

CHAPTER XII

Since in every art and science the end aimed at is always good, so particularly in this, which is the most excellent of all, the founding of civil society, the good wherein aimed at is justice; for it is this which is for the benefit of all. Now, it is the common opinion, that justice is a certain equality; and in this point all the philosophers are agreed when they treat of morals: for they say what is just, and to whom; and that equals ought to receive equal: but we should know how we are to determine what things are equal and what unequal; and in this there is some difficulty, which calls for the philosophy of the politician. Some persons will probably say, that the employments of the state ought to be given according to every particular excellence of each citizen, if there is no other difference between them and the rest of the community, but they are in every respect else alike: for justice attributes different things to persons differing from each other in their character, according to their respective merits. But if this is admitted to be true, complexion, or height, or any such advantage will be a claim for a greater share of the public rights. But that this is evidently absurd is clear from other arts and sciences; for with respect to musicians who play on the flute together, the best flute is not given to him who is of the best family, for he will play never the better for that, but the best instrument ought to be given to him who is the best artist.

If what is now said does not make this clear, we will explain it still further: if there should be any one, a very excellent player on the flute, but very deficient in family and beauty, though each of them are more valuable endowments than a skill in music, and excel this art in a higher degree than that player excels others, yet the best flutes ought to be given to him; for the superiority [1283a] in beauty and fortune should have a reference to the business in hand; but these have none. Moreover, according to this reasoning, every possible excellence might come in comparison with every other; for if bodily strength might dispute the point with riches or liberty, even any bodily strength might do it; so that if one person excelled in size more than another did in virtue, and his size was to qualify him to take place of the other's virtue, everything must then admit of a comparison with each other; for if such a size is greater than virtue by so much, it is evident another must be equal to it: but, since this is impossible, it is plain that it would be contrary to common sense to dispute a right to any office in the state from every superiority whatsoever: for if one person is slow and the other swift, neither is the one better qualified nor the other worse on that account, though in the gymnastic races a difference in these particulars would gain the prize; but a pretension to the offices of the state should be founded on a superiority in

those qualifications which are useful to it: for which reason those of family, independency, and fortune, with great propriety, contend with each other for them; for these are the fit persons to fill them: for a city can no more consist of all poor men than it can of all slaves But if such persons are requisite, it is evident that those also who are just and valiant are equally so; for without justice and valour no state can be supported, the former being necessary for its existence, the latter for its happiness.

CHAPTER XIII

It seems, then, requisite for the establishment of a state, that all, or at least many of these particulars should be well canvassed and inquired into; and that virtue and education may most justly claim the right of being considered as the necessary means of making the citizens happy, as we have already said. As those who are equal in one particular are not therefore equal in all, and those who are unequal in one particular are not therefore unequal in all, it follows that all those governments which are established upon a principle which supposes they are, are erroneous.

We have already said, that all the members of the community will dispute with each other for the offices of the state; and in some particulars justly, but not so in general; the rich, for instance, because they have the greatest landed property, and the ultimate right to the soil is vested in the community; and also because their fidelity is in general most to be depended on. The freemen and men of family will dispute the point with each other, as nearly on an equality; for these latter have a right to a higher regard as citizens than obscure persons, for honourable descent is everywhere of great esteem: nor is it an improper conclusion, that the descendants of men of worth will be men of worth themselves; for noble birth is the fountain of virtue to men of family: for the same reason also we justly say, that virtue has a right to put in her pretensions. Justice, for instance, is a virtue, and so necessary to society, that all others must yield her the precedence.

Let us now see what the many have to urge on their side against the few; and they may say, that if, when collectively taken, they are compared with them, they are stronger, richer, and better than they are. But should it ever happen that all these should inhabit the [1283b] same city, I mean the good, the rich, the noble, as well as the many, such as usually make up the community, I ask, will there then be any reason to dispute concerning who shall govern, or will there not? for in every community which we have mentioned there is no dispute where the supreme power should be placed; for as these differ from each other, so do those in whom that is placed; for in one state the rich enjoy it, in others the meritorious, and thus each according to their separate manners. Let us however consider what is to be done when all these happen at the same time to inhabit the same city. If the virtuous should be very few in number, how then shall we act? shall we prefer the virtuous on account of their abilities, if they are capable of governing the city? or should they be so many as almost entirely to compose the state?

There is also a doubt concerning the pretensions of all those who claim the honours of government: for those who found them either on fortune or family have nothing which they can justly say in their defence; since it is evident upon their principle, that if any one person can be found richer than all the rest, the right of governing all these will be justly vested in this one person. In the same manner, one man who is of the best family will claim it from those who dispute the point upon family merit: and probably in an aristocracy the same dispute might arise on the score of virtue, if there is one man better than all the other men of worth who are in the same community; it seems just, by the same reasoning, that he should enjoy the supreme power. And upon this principle also, while the many suppose they ought to have the supreme command, as being more powerful than the few, if one or more than one, though a small number should be found stronger than themselves, these ought rather to have it than they.

All these things seem to make it plain, that none of these principles are justly founded on which these persons would establish their right to the supreme power; and that all men whatsoever ought to obey them: for with respect to those who claim it as due to their virtue or their fortune, they might have justly some objection to make; for nothing hinders but that it may sometimes happen, that the many may be better or richer than the few, not as individuals, but in their collective capacity.

As to the doubt which some persons have proposed and objected, we may answer it in this manner; it is this, whether a legislator, who would establish the most perfect system of laws, should calculate them for the use of the better part of the citizens, or the many, in the circumstances we have already mentioned? The rectitude of anything consists in its equality; that therefore which is equally right will be advantageous to the whole state, and to every member of it in common.

Now, in general, a citizen is one who both shares in the government and also in his turn submits to be governed; [1284a] their condition, it is true, is different in different states: the best is that in which a man is enabled to choose and to persevere in a course of virtue during his whole life, both in his public and private state. But should there be one person, or a very few, eminent for an

uncommon degree of virtue, though not enough to make up a civil state, so that the virtue of the many, or their political abilities, should be too inferior to come in comparison with theirs, if more than one; or if but one, with his only; such are not to be considered as part of the city; for it would be doing them injustice to rate them on a level with those who are so far their inferiors in virtue and political abilities, that they appear to them like a god amongst men. From whence it is evident, that a system of laws must be calculated for those who are equal to each other in nature and power. Such men, therefore, are not the object of law; for they are themselves a law: and it would be ridiculous in any one to endeavour to include them in the penalties of a law: for probably they might say what Antisthenes tells us the lions did to the hares when they demanded to be admitted to an equal share with them in the government. And it is on this account that democratic states have established the ostracism; for an equality seems the principal object of their government. For which reason they compel all those who are very eminent for their power, their fortune, their friendships, or any other cause which may give them too great weight in the government, to submit to the ostracism, and leave the city for a stated time; as the fabulous histories relate the Argonauts served Hercules, for they refused to take him with them in the ship Argo on account of his superior valour. For which reason those who hate a tyranny and find fault with the advice which Periander gave to Thrasybulus, must not think there was nothing to be said in its defence; for the story goes, that Periander said nothing to the messenger in answer to the business he was consulted about, but striking off those ears of corn which were higher than the rest, reduced the whole crop to a level; so that the messenger, without knowing the cause of what was done, related the fact to Thrasybulus, who understood by it that he must take off all the principal men in the city. Nor is this serviceable to tyrants only; nor is it tyrants only who do it; for the same thing is practised both in oligarchies and democracies: for the ostracism has in a manner nearly the same power, by restraining and banishing those who are too great; and what is done in one city is done also by those who have the supreme power in separate states; as the Athenians with respect to the Samians, the Chians, and the Lesbians; for when they suddenly acquired the superiority over all Greece, they brought the other states into subjection, contrary to the treaties which subsisted between them. The King of Persia also very often reduces the Medes and Babylonians when they assume upon their former power: [1284b] and this is a principle which all governments whatsoever keep in their eye; even those which are best administered, as well as those which are not, do it; these for the sake of private utility, the others for the public good.

The same thing is to be perceived in the other arts and sciences; for a painter would not represent an animal with a foot disproportionally large, though he had drawn it remarkably beautiful; nor would the shipwright make the prow or any other part of the vessel larger than it ought to be; nor will the master of the band permit any who sings louder and better than the rest to sing in concert with them. There is therefore no reason that a monarch should not act in agreement with free states, to support his own power, if they do the same thing for the benefit of their respective communities; upon which account when there is any acknowledged difference in the power of the citizens, the reason upon which the ostracism is founded will be politically just; but it is better for the legislator so to establish his state at the beginning as not to want this remedy: but if in course of time such an inconvenience should arise, to endeavour to amend it by some such correction. Not that this was the use it was put to: for many did not regard the benefit of their respective communities, but made the ostracism a weapon in the hand of sedition.

It is evident, then, that in corrupt governments it is partly just and useful to the individual, though probably it is as clear that it is not entirely just: for in a well-governed state there may be great doubts about the use of it, not on account of the pre-eminence which one may have in strength, riches, or connection: but when the pre-eminence is virtue, what then is to be done? for it seems not right to turn out and banish such a one; neither does it seem right to govern him, for that would be like desiring to share the power with Jupiter and to govern him: nothing then remains but what indeed seems natural, and that is for all persons quietly to submit to the government of those who are thus eminently virtuous, and let them be perpetually kings in the separate states.

CHAPTER XIV

What has been now said, it seems proper to change our subject and to inquire into the nature of monarchies; for we have already admitted them to be one of those species of government which are properly founded. And here let us consider whether a kingly government is proper for a city or a country whose principal object is the happiness of the inhabitants, or rather some other. But let us first determine whether this is of one kind only, or more; [1285a] and it is easy to know that it consists of many different species, and that the forms of government are not the same in all: for at Sparta the kingly power seems chiefly regulated by the laws; for it is not supreme in all circumstances; but when the king quits the territories of the state he is their general in war; and all religious affairs are entrusted to him: indeed the kingly power with them is chiefly that of a general who cannot be called to an account for his conduct, and whose command is for life: for he has not the power of life and death, except as a general; as they frequently had in their expeditions by martial law, which we learn from Homer; for when Agamemnon is affronted in council, he restrains his

resentment, but when he is in the field and armed with this power, he tells the Greeks:

"Whoe'er I know shall shun th' impending fight, To dogs and vultures soon shall be a prey; For death is mine...."

This, then, is one species of monarchical government in which the kingly power is in a general for life; and is sometimes hereditary, sometimes elective: besides, there is also another, which is to be met with among some of the barbarians, in which the kings are invested with powers nearly equal to a tyranny, yet are, in some respects, bound by the laws and the customs of their country; for as the barbarians are by nature more prone to slavery than the Greeks, and those in Asia more than those in Europe, they endure without murmuring a despotic government; for this reason their governments are tyrannies; but yet not liable to be overthrown, as being customary and according to law. Their guards also are such as are used in a kingly government, not a despotic one; for the guards of their kings are his citizens, but a tyrant's are foreigners. The one commands, in the manner the law directs, those who willingly obey; the other, arbitrarily, those who consent not. The one, therefore, is guarded by the citizens, the other against them.

These, then, are the two different sorts of these monarchies, and another is that which in ancient Greece they called _aesumnetes_; which is nothing more than an elective tyranny; and its difference from that which is to be found amongst the barbarians consists not in its not being according to law, but only in its not being according to the ancient customs of the country. Some persons possessed this power for life, others only for a particular time or particular purpose, as the people of Mitylene elected Pittacus to oppose the exiles, who were headed by Antimenides and Alcaeus the poet, as we learn from a poem of his; for he upbraids the Mitylenians for having chosen Pittacus for their tyrant, and with one [1285b] voice extolling him to the skies who was the ruin of a rash and devoted people. These sorts of government then are, and ever were, despotic, on account of their being tyrannies; but inasmuch as they are elective, and over a free people, they are also kingly.

A fourth species of kingly government is that which was in use in the heroic times, when a free people submitted to a kingly government, according to the laws and customs of their country. For those who were at first of benefit to mankind, either in arts or arms, or by collecting them into civil society, or procuring them an establishment, became the kings of a willing people, and established an hereditary monarchy. They were particularly their generals in war, and presided over their sacrifices, excepting such only as belonged to the priests: they were also the supreme judges over the people; and in this case some of them took an oath, others did not; they did, the form of swearing was by their sceptre held out.

In ancient times the power of the kings extended to everything whatsoever, both civil, domestic, and foreign; but in after-times they relinquished some of their privileges, and others the people assumed, so that, in some states, they left their kings only the right of presiding over the sacrifices; and even those whom it were worth while to call by that name had only the right of being commander-in-chief in their foreign wars.

These, then, are the four sorts of kingdoms: the first is that of the heroic times; which was a government over a free people, with its rights in some particulars marked out; for the king was their general, their judge, and their high priest. The second, that of the barbarians; which is an hereditary despotic government regulated by laws: the third is that which they call aesumnetic, which is an elective tyranny. The fourth is the Lacedaemonian; and this, in few words, is nothing more than an hereditary generalship: and in these particulars they differ from each other. There is a fifth species of kingly government, which is when one person has a supreme power over all things whatsoever, in the manner that every state and every city has over those things which belong to the public: for as the master of a family is king in his own house, so such a king is master of a family in his own city or state.

CHAPTER XV

But the different sorts of kingly governments may, if I may so say, be reduced to two; which we will consider more particularly. The last spoken of, and the Lacedaemonian, for the chief of the others are placed between these, which are as it were at the extremities, they having less power than an absolute government, and yet more than the Lacedaemonians; so that the whole matter in question may be reduced to these two points; the one is, whether it is advantageous to the citizens to have the office of general continue in one person for life, and whether it should be confined to any particular families or whether every one should be eligible: the other, whether [1286a] it is advantageous for one person to have the supreme power over everything or not. But to enter into the particulars concerning the office of a Lacedaemonian general would be rather to frame laws for a state than to consider the nature and utility of its constitution, since we know that the appointing of a general is what is done in every state. Passing over this question then, we will proceed to consider the other part of their government, which is the polity of the state; and this it will be necessary to examine particularly into, and to go through such questions as may arise.

Now the first thing which presents itself to our consideration is this, whether it is best to be governed by a good man, or by good laws? Those who prefer a kingly government think that laws can only speak a general language, but cannot adapt themselves to particular circumstances; for which reason it is absurd in any science to follow written rule; and even in Egypt the physician was allowed to alter the mode of cure which the law prescribed to him, after the fourth day; but if he did it sooner it was at his own peril: from whence it is evident, on the very same account, that a government of written laws is not the best; and yet general reasoning is necessary to all those who are to govern, and it will be much more perfect in those who are entirely free from passions than in those to whom they are natural. But now this is a quality which laws possess; while the other is natural to the human soul. But some one will say in answer to this, that man will be a better judge of particulars. It will be necessary, then, for a king to be a lawgiver, and that his laws should be published, but that those should have no authority which are absurd, as those which are not, should. But whether is it better for the community that those things which cannot possibly come under the cognisance of the law either at all or properly should be under the government of every worthy citizen, as the present method is, when the public community, in their general assemblies, act as judges and counsellors, where all their determinations are upon particular cases, for one individual, be he who he will, will be found, upon comparison, inferior to a whole people taken collectively: but this is what a city is, as a public entertainment is better than one man's portion: for this reason the multitude judge of many things better than any one single person. They are also less liable to corruption from their numbers, as water is from its quantity: besides, the judgment of an individual must necessarily be perverted if he is overcome by anger or any other passion; but it would be hard indeed if the whole community should be misled by anger. Moreover, let the people be free, and they will do nothing but in conformity to the law, except only in those cases which the law cannot speak to. But though what I am going to propose may not easily be met with, yet if the majority of the state should happen to be good men, should they prefer one uncorrupt governor or many equally good, is it not evident that they should choose the many? But there may be divisions among [1286b] these which cannot happen when there is but one. In answer to this it may be replied that all their souls will be as much animated with virtue as this one man's.

If then a government of many, and all of them good men, compose an aristocracy, and the government of one a kingly power, it is evident that the people should rather choose the first than the last; and this whether the state is powerful or not, if many such persons so alike can be met with: and for this reason probable it was, that the first governments were generally monarchies; because it was difficult to find a number of persons eminently virtuous, more particularly as the world was then divided into small communities; besides, kings were appointed in return for the benefits they had conferred on mankind; but such actions are peculiar to good men: but when many persons equal in virtue appeared at the time, they brooked not a superiority, but sought after an equality and established a free state; but after this, when they degenerated, they made a property of the public; which probably gave rise to oligarchies; for they made wealth meritorious, and the honours of government were reserved for the rich: and these afterwards turned to tyrannies and these in their turn gave rise to democracies; for the power of the tyrants continually decreasing, on account of their rapacious avarice, the people grew powerful enough to frame and establish democracies: and as cities after that happened to increase, probably it was not easy for them to be under any other government than a democracy. But if any person prefers a kingly government in a state, what is to be done with the king's children? Is the family also to reign? But should they have such children as some persons usually have, it will be very detrimental. It may be said, that then the king who has it in his power will never permit such children to succeed to his kingdom. But it is not easy to trust to that; for it is very hard and requires greater virtue than is to be met with in human nature. There is also a doubt concerning the power with which a king should be entrusted: whether he should be allowed force sufficient to compel those who do not choose to be obedient to the laws, and how he is to support his government? for if he is to govern according to law and do nothing of his own will which is contrary thereunto, at the same time it will be necessary to protect that power with which he guards the law, This matter however may not be very difficult to determine; for he ought to have a proper power, and such a one is that which will be sufficient to make the king superior to any one person or even a large part of the community, but inferior to the whole, as the ancients always appointed guards for that person whom they created aesumnetes or tyrant; and some one advised the Syracusians, when Dionysius asked for guards, to allow him such.

CHAPTER XVI

[1287a] We will next consider the absolute monarch that we have just mentioned, who does everything according to his own will: for a king governing under the direction of laws which he is obliged to follow does not of himself create any particular species of government, as we have already said: for in every state whatsoever, either aristocracy or democracy, it is easy to appoint a general for life; and there are many who entrust the administration of affairs to one person only; such is the government at Dyrrachium, and nearly the same at Opus. As for an absolute monarchy as it is called, that is to say, when the whole state is wholly subject to the will of one person, namely the king, it seems to many that it is unnatural that one man should have the entire rule over his

fellow-citizens when the state consists of equals: for nature requires that the same right and the same rank should necessarily take place amongst all those who are equal by nature: for as it would be hurtful to the body for those who are of different constitutions to observe the same regimen, either of diet or clothing, so is it with respect to the honours of the state as hurtful, that those who are equal in merit should be unequal in rank; for which reason it is as much a man's duty to submit to command as to assume it, and this also by rotation; for this is law, for order is law; and it is more proper that law should govern than any one of the citizens: upon the same principle, if it is advantageous to place the supreme power in some particular persons, they should be appointed to be only guardians, and the servants of the laws, for the supreme power must be placed somewhere; but they say, that it is unjust that where all are equal one person should continually enjoy it. But it seems unlikely that man should be able to adjust that which the law cannot determine; it may be replied, that the law having laid down the best rules possible, leaves the adjustment and application of particulars to the discretion of the magistrate; besides, it allows anything to be altered which experience proves may be better established. Moreover, he who would place the supreme power in mind, would place it in God and the laws; but he who entrusts man with it, gives it to a wild beast, for such his appetites sometimes make him; for passion influences those who are in power, even the very best of men: for which reason law is reason without desire.

The instance taken from the arts seems fallacious: wherein it is said to be wrong for a sick person to apply for a remedy to books, but that it would be far more eligible to employ those who are skilful in physic; for these do nothing contrary to reason from motives of friendship but earn their money by curing the sick, whereas those who have the management of public affairs do many things through hatred or favour. And, as a proof of what we have advanced, it may be observed, that whenever a sick person suspects that his physician has been persuaded by his enemies to be guilty of any foul practice to him in his profession, he then rather chooses to apply to books for his cure: and not only this [1287b] but even physicians themselves when they are ill call in other physicians: and those who teach others the gymnastic exercises, exercise with those of the same profession, as being incapable from self-partiality to form a proper judgment of what concerns themselves. From whence it is evident, that those who seek for what is just, seek for a mean; now law is a mean. Moreover; the moral law is far superior and conversant with far superior objects than the written law; for the supreme magistrate is safer to be trusted to than the one, though he is inferior to the other. But as it is impossible that one person should have an eye to everything himself, it will be necessary that the supreme magistrate should employ several subordinate ones under him; why then should not this be done at first, instead of appointing one person in this manner? Besides, if, according to what has been already said, the man of worth is on that account fit to govern, two men of worth are certainly better than one: as, for instance, in Homer, "Let two together go:" and also Agamemnon's wish; "Were ten such faithful counsel mine!" Not but that there are even now some particular magistrates invested with supreme power to decide, as judges, those things which the law cannot, as being one of those cases which comes not properly under its jurisdiction; for of those which can there is no doubt: since then laws comprehend some things, but not all, it is necessary to enquire and consider which of the two is preferable, that the best man or the best law should govern; for to reduce every subject which can come under the deliberation of man into a law is impossible.

No one then denies, that it is necessary that there should be some person to decide those cases which cannot come under the cognisance of a written law: but we say, that it is better to have many than one; for though every one who decides according to the principles of the law decides justly; yet surely it seems absurd to suppose, that one person can see better with two eyes, and hear better with two ears, or do better with two hands and two feet, than many can do with many: for we see that absolute monarchs now furnish themselves with many eyes and ears and hands and feet; for they entrust those who are friends to them and their government with part of their power; for if they are not friends to the monarch, they will not do what he chooses; but if they are friends to him, they are friends also to his government: but a friend is an equal and like his friend: if then he thinks that such should govern, he thinks that his equal also should govern. These are nearly the objections which are usually made to a kingly power.

CHAPTER XVII

Probably what we have said may be true of some persons, but not of others; for some men are by nature formed to be under the government of a master; others, of a king; others, to be the citizens of a free state, just and useful; but a tyranny is not according to nature, nor the other perverted forms of government; for they are contrary to it. But it is evident from what has been said, that among equals it is neither advantageous nor [1288a] right that one person should be lord over all where there are no established laws, but his will is the law; or where there are; nor is it right that one who is good should have it over those who are good; or one who is not good over those who are not good; nor one who is superior to the rest in worth, except in a particular manner, which shall be described, though indeed it has been already mentioned. But let us next determine what people are best qualified for a

kingly government, what for an aristocratic, and what for a democratic. And, first, for a kingly; and it should be those who are accustomed by nature to submit the civil government of themselves to a family eminent for virtue: for an aristocracy, those who are naturally framed to bear the rule of free men, whose superior virtue makes them worthy of the management of others: for a free state, a war-like people, formed by nature both to govern and be governed by laws which admit the poorest citizen to share the honours of the commonwealth according to his worth. But whenever a whole family or any one of another shall happen so far to excel in virtue as to exceed all other persons in the community, then it is right that the kingly power should be in them, or if it is an individual who does so, that he should be king and lord of all; for this, as we have just mentioned, is not only correspondent to that principle of right which all founders of all states, whether aristocracies, oligarchies, or democracies, have a regard to (for in placing the supreme power they all think it right to fix it to excellence, though not the same); but it is also agreeable to what has been already said; as it would not be right to kill, or banish, or ostracise such a one for his superior merit. Nor would it be proper to let him have the supreme power only in turn; for it is contrary to nature that what is highest should ever be lowest: but this would be the case should such a one ever be governed by others. So that there can nothing else be done but to submit, and permit him continually to enjoy the supreme power. And thus much with respect to kingly power in different states, and whether it is or is not advantageous to them, and to what, and in what manner.

CHAPTER XVIII

Since then we have said that there are three sorts of regular governments, and of these the best must necessarily be that which is administered by the best men (and this must be that which happens to have one man, or one family, or a number of persons excelling all the rest in virtue, who are able to govern and be governed in such a manner as will make life most agreeable, and we have already shown that the virtue of a good man and of a citizen in the most perfect government will be the same), it is evident, that in the same manner, and for those very qualities which would procure a man the character of good, any one would say, that the government of a state was a well-established aristocracy or kingdom; so that it will be found to be education and [1288b] morals that are almost the whole which go to make a good man, and the same qualities will make a good citizen or good king.

These particulars being treated of, we will now proceed to consider what sort of government is best, how it naturally arises, and how it is established; for it is necessary to make a proper inquiry concerning this.

BOOK IV

CHAPTER I

In every art and science which is not conversant in parts but in some one genus in which it is complete, it is the business of that art alone to determine what is fitted to its particular genus; as what particular exercise is fitted to a certain particular body, and suits it best: for that body which is formed by nature the most perfect and superior to others necessarily requires the best exercise-and also of what one kind that must be which will suit the generality; and this is the business of the gymnastic arts: and although any one should not desire to acquire an exact knowledge and skill in these exercises, yet it is not, on that account, the less necessary that he who professes to be a master and instruct the youth in them should be perfect therein: and we see that this is what equally befalls the healing, shipbuilding, cloth-making, and indeed all other arts; so that it evidently belongs to the same art to find out what kind of government is best, and would of all others be most correspondent to our wish, while it received no molestation from without: and what particular species of it is adapted to particular persons; for there are many who probably are incapable of enjoying the best form: so that the legislator, and he who is truly a politician, ought to be acquainted not only with that which is most perfect imaginable, but also that which is the best suited to any given circumstances. There is, moreover, a third sort, an imaginary one, and he ought, if such a one should be presented to his consideration, to be able to discern what sort of one it would be at the beginning; and, when once established, what would be the proper means to preserve it a long time. I mean, for instance, if a state should happen not to have the best form of government, or be deficient in what was necessary, or not receive every advantage possible, but something less. And, besides all this, it is necessary to know what sort of government is best fitting for all cities: for most of those writers who have treated this subject, however speciously they may handle other parts of it, have failed in describing the practical parts: for it is not enough to be able to perceive what is best without it is what can be put in practice. It should also be simple, and easy for all to attain to. But some seek only the most subtile forms of government. Others again, choosing [1289a] rather to treat of what is common, censure those under which they live, and extol the excellence of a particular state, as the Lacedaemonian, or some other: but every legislator ought to establish such a form of government as from the present state and

disposition of the people who are to receive it they will most readily submit to and persuade the community to partake of: for it is not a business of less trouble to correct the mistakes of an established government than to form a new one; as it is as difficult to recover what we have forgot as to learn anything afresh. He, therefore, who aspires to the character of a legislator, ought, besides all we have already said, to be able to correct the mistakes of a government already established, as we have before mentioned. But this is impossible to be done by him who does not know how many different forms of government there are: some persons think that there is only one species both of democracy and oligarchy; but this is not true: so that every one should be acquainted with the difference of these governments, how great they are, and whence they arise; and should have equal knowledge to perceive what laws are best, and what are most suitable to each particular government: for all laws are, and ought to be, framed agreeable to the state that is to be governed by them, and not the state to the laws: for government is a certain ordering in a state which particularly respects the magistrates in what manner they shall be regulated, and where the supreme power shall be placed; and what shall be the final object which each community shall have in view; but the laws are something different from what regulates and expresses the form of the constitution-it is their office to direct the conduct of the magistrate in the execution of his office and the punishment of offenders. From whence it is evident, that the founders of laws should attend both to the number and the different sorts of government; for it is impossible that the same laws should be calculated for all sorts of oligarchies and all sorts of democracies, for of both these governments there are many species, not one only.

CHAPTER II

Since, then, according to our first method in treating of the different forms of government, we have divided those which are regular into three sorts, the kingly, the aristocratical, the free states, and shown the three excesses which these are liable to: the kingly, of becoming tyrannical; the aristocratical, oligarchical; and the free state, democratical: and as we have already treated of the aristocratical and kingly; for to enter into an inquiry what sort of government is best is the same thing as to treat of these two expressly; for each of them desires to be established upon the principles of virtue: and as, moreover, we have already determined wherein a kingly power and an aristocracy differ from each other, and when a state may be said to be governed by a king, it now remains that we examine into a free state, and also these other governments, an oligarchy, a democracy, and a [1289b] tyranny; and it is evident of these three excesses which must be the worst of all, and which next to it; for, of course, the excesses of the best and most holy must be the worst; for it must necessarily happen either that the name of king only will remain, or else that the king will assume more power than belongs to him, from whence tyranny will arise, the worst excess imaginable, a government the most contrary possible to a free state. The excess next hurtful is an oligarchy; for an aristocracy differs much from this sort of government: that which is least so is a democracy. This subject has been already treated of by one of those writers who have gone before me, though his sentiments are not the same as mine: for he thought, that of all excellent constitutions, as a good oligarchy or the like, a democracy was the worst, but of all bad ones, the best.

Now I affirm, that all these states have, without exception, fallen into excess; and also that he should not have said that one oligarchy was better than another, but that it was not quite so bad. But this question we shall not enter into at present. We shall first inquire how many different sorts of free states there are; since there are many species of democracies and oligarchies; and which of them is the most comprehensive, and most desirable after the best form of government; or if there is any other like an aristocracy, well established; and also which of these is best adapted to most cities, and which of them is preferable for particular persons: for, probably, some may suit better with an oligarchy than a democracy, and others better with a democracy than an oligarchy; and afterwards in what manner any one ought to proceed who desires to establish either of these states, I mean every species of democracy, and also of oligarchy. And to conclude, when we shall have briefly gone through everything that is necessary, we will endeavour to point out the sources of corruption, and stability, in government, as well those which are common to all as those which are peculiar to each state, and from what causes they chiefly arise.

CHAPTER III

The reason for there being many different sorts of governments is this, that each state consists of a great number of parts; for, in the first place, we see that all cities are made up of families: and again, of the multitude of these some must be rich, some poor, and others in the middle station; and that, both of the rich and poor, some will be used to arms, others not. We see also, that some of the common people are husbandmen, others attend the market, and others are artificers. There is also a difference between the nobles in their wealth, and the dignity in which they live: for instance, in the number of horses they breed; for this cannot be supported without a large fortune: for which reason, in former times, those cities whose strength consisted in horse became by that

means oligarchies; and they used horse in their expeditions against the neighbouring cities; as the Eretrians the Chalcidians, the Magnetians, who lived near the river Meander, and many others in Asia. Moreover, besides the difference of fortune, there is that which arises from family and merit; or, if there are any other distinctions [1290a] which make part of the city, they have been already mentioned in treating of an aristocracy, for there we considered how many parts each city must necessarily be composed of; and sometimes each of these have a share in the government, sometimes a few, sometimes more.

It is evident then, that there must be many forms of government, differing from each other in their particular constitution: for the parts of which they are composed each differ from the other. For government is the ordering of the magistracies of the state; and these the community share between themselves, either as they can attain them by force, or according to some common equality which there is amongst them, as poverty, wealth, or something which they both partake of. There must therefore necessarily be as many different forms of governments as there are different ranks in the society, arising from the superiority of some over others, and their different situations. And these seem chiefly to be two, as they say, of the winds: namely, the north and the south; and all the others are declinations from these. And thus in politics, there is the government of the many and the government of the few; or a democracy and an oligarchy: for an aristocracy may be considered as a species of oligarchy, as being also a government of the few; and what we call a free state may be considered as a democracy: as in the winds they consider the west as part of the north, and the east as part of the south: and thus it is in music, according to some, who say there are only two species of it, the Doric and the Phrygian, and all other species of composition they call after one of these names; and many people are accustomed to consider the nature of government in the same light; but it is both more convenient and more correspondent to truth to distinguish governments as I have done, into two species: one, of those which are established upon proper principles; of which there may be one or two sorts: the other, which includes all the different excesses of these; so that we may compare the best form of government to the most harmonious piece of music; the oligarchic and despotic to the more violent tunes; and the democratic to the soft and gentle airs.

CHAPTER IV

We ought not to define a democracy as some do, who say simply, that it is a government where the supreme power is lodged in the people; for even in oligarchies the supreme power is in the majority. Nor should they define an oligarchy a government where the supreme power is in the hands of a few: for let us suppose the number of a people to be thirteen hundred, and that of these one thousand were rich, who would not permit the three hundred poor to have any share in the government, although they were free, and their equal in everything else; no one would say, that this government was a democracy. In like manner, if the poor, when few in number, should acquire the power over the rich, though more than themselves, no one would say, that this was an oligarchy; nor this, when the rest who are rich have no share in the administration. We should rather say, that a democracy is when the supreme power is in the [1290b] hands of the freemen; an oligarchy, when it is in the hands of the rich: it happens indeed that in the one case the many will possess it, in the other the few; because there are many poor and few rich. And if the power of the state was to be distributed according to the size of the citizens, as they say it is in Ethiopia, or according to their beauty, it would be an oligarchy: for the number of those who are large and beautiful is small.

Nor are those things which we have already mentioned alone sufficient to describe these states; for since there are many species both of a democracy and an oligarchy, the matter requires further consideration; as we cannot admit, that if a few persons who are free possess the supreme power over the many who are not free, that this government is a democracy: as in Apollonia, in Ionia, and in Thera: for in each of these cities the honours of the state belong to some few particular families, who first founded the colonies. Nor would the rich, because they are superior in numbers, form a democracy, as formerly at Colophon; for there the majority had large possessions before the Lydian war: but a democracy is a state where the freemen and the poor, being the majority, are invested with the power of the state. An oligarchy is a state where the rich and those of noble families, being few, possess it.

We have now proved that there are various forms of government and have assigned a reason for it; and shall proceed to show that there are even more than these, and what they are, and why; setting out with the principle we have already laid down. We admit that every city consists not of one, but many parts: thus, if we should endeavour to comprehend the different species of animals we should first of all note those parts which every animal must have, as a certain sensorium, and also what is necessary to acquire and retain food, as a mouth and a belly; besides certain parts to enable it to move from place to place. If, then, these are the only parts of an animal and there are differences between them; namely, in their various sorts of stomachs, bellies, and sensoriums: to which we must add their motive powers; the number of the combinations of all these must necessarily make up the different species of

animals. For it is not possible that the same kind of animal should have any very great difference in its mouth or ears; so that when all these are collected, who happen to have these things similar in all, they make up a species of animals of which there are as many as there are of these general combinations of necessary parts.

The same thing is true of what are called states; for a city is not made of one but many parts, as has already been often said; one of which is those who supply it with provisions, called husbandmen, another called mechanics, [1291a] whose employment is in the manual arts, without which the city could not be inhabited; of these some are busied about what is absolutely necessary, others in what contribute to the elegancies and pleasures of life; the third sort are your exchange-men, I mean by these your buyers, sellers, merchants, and victuallers; the fourth are your hired labourers or workmen; the fifth are the men-at-arms, a rank not less useful than the other, without you would have the community slaves to every invader; but what cannot defend itself is unworthy of the name of a city; for a city is self-sufficient, a slave not. So that when Socrates, in Plato's Republic, says that a city is necessarily composed of four sorts of people, he speaks elegantly but not correctly, and these are, according to him, weavers, husbandmen, shoe-makers, and builders; he then adds, as if these were not sufficient, smiths, herdsmen for what cattle are necessary, and also merchants and victuallers, and these are by way of appendix to his first list; as if a city was established for necessity, and not happiness, or as if a shoe-maker and a husbandman were equally useful. He reckons not the military a part before the increase of territory and joining to the borders of the neighbouring powers will make war necessary: and even amongst them who compose his four divisions, or whoever have any connection with each other, it will be necessary to have some one to distribute justice, and determine between man and man. If, then, the mind is a more valuable part of man than the body, every one would wish to have those things more regarded in his city which tend to the advantage of these than common matters, such are war and justice; to which may be added council, which is the business of civil wisdom (nor is it of any consequence whether these different employments are filled by different persons or one, as the same man is oftentimes both a soldier and a husbandman): so that if both the judge and the senator are parts of the city, it necessarily follows that the soldier must be so also. The seventh sort are those who serve the public in expensive employments at their own charge: these are called the rich. The eighth are those who execute the different offices of the state, and without these it could not possibly subsist: it is therefore necessary that there should be some persons capable of governing and filling the places in the city; and this either for life or in rotation: the office of senator, and judge, of which we have already sufficiently treated, are the only ones remaining. If, then, these things are necessary for a state, that it may be happy and just, it follows that the citizens who engage in public affairs should be men of abilities therein. [1291b] Several persons think, that different employments may be allotted to the same person; as a soldier's, a husbandman's, and an artificer's; as also that others may be both senators and judges.

Besides, every one supposes himself a man of political abilities, and that he is qualified for almost every department in the state. But the same person cannot at once be poor and rich: for which reason the most obvious division of the city is into two parts, the poor and rich; moreover, since for the generality the one are few, the other many, they seem of all the parts of a city most contrary to each other; so that as the one or the other prevail they form different states; and these are the democracy and the oligarchy.

But that there are many different states, and from what causes they arise, has been already mentioned: and that there are also different species both of democracies and oligarchies we will now show. Though this indeed is evident from what we have already said: there are also many different sorts of common people, and also of those who are called gentlemen. Of the different sorts of the first are husbandmen, artificers, exchange-men, who are employed in buying and selling, seamen, of which some are engaged in war, some in traffic, some in carrying goods and passengers from place to place, others in fishing, and of each of these there are often many, as fishermen at Tarentum and Byzantium, masters of galleys at Athens, merchants at AEgina and Chios, those who let ships on freight at Tenedos; we may add to these those who live by their manual labour and have but little property; so that they cannot live without some employ: and also those who are not free-born on both sides, and whatever other sort of common people there may be. As for gentlemen, they are such as are distinguished either by their fortune, their birth, their abilities, or their education, or any such-like excellence which is attributed to them.

The most pure democracy is that which is so called principally from that equality which prevails in it: for this is what the law in that state directs; that the poor shall be in no greater subjection than the rich; nor that the supreme power shall be lodged with either of these, but that both shall share it. For if liberty and equality, as some persons suppose, are chiefly to be found in a democracy, it must be most so by every department of government being alike open to all; but as the people are the majority, and what they vote is law, it follows that such a state must be a democracy. This, then, is one species thereof. Another is, when the magistrates are elected by a certain census; but this should be but small, and every one who was included in it should be eligible, but as soon as he was below it should lose that right. [1292a] Another sort is, in which every citizen who is not infamous has a share in the

government, but where the government is in the laws. Another, where every citizen without exception has this right. Another is like these in other particulars, but there the people govern, and not the law: and this takes place when everything is determined by a majority of votes, and not by a law; which happens when the people are influenced by the demagogues: for where a democracy is governed by stated laws there is no room for them, but men of worth fill the first offices in the state: but where the power is not vested in the laws, there demagogues abound: for there the people rule with kingly power: the whole composing one body; for they are supreme, not as individuals but in their collective capacity.

Homer also discommends the government of many; but whether he means this we are speaking of, or where each person exercises his power separately, is uncertain. When the people possess this power they desire to be altogether absolute, that they may not be under the control of the law, and this is the time when flatterers are held in repute. Nor is there any difference between such a people and monarchs in a tyranny: for their manners are the same, and they both hold a despotic power over better persons than themselves. For their decrees are like the others' edicts; their demagogues like the others' flatterers: but their greatest resemblance consists in the mutual support they give to each other, the flatterer to the tyrant, the demagogue to the people: and to them it is owing that the supreme power is lodged in the votes of the people, and not in the laws; for they bring everything before them, as their influence is owing to their being supreme whose opinions they entirely direct; for these are they whom the multitude obey. Besides, those who accuse the magistrates insist upon it, that the right of determining on their conduct lies in the people, who gladly receive their complaints as the means of destroying all their offices.

Any one, therefore, may with great justice blame such a government as being a democracy, and not a free state; for where the government is not in the laws, then there is no free state, for the law ought to be supreme over all things; and particular incidents which arise should be determined by the magistrates or the state. If, therefore, a democracy is to be reckoned a free state, it is evident that any such establishment which centres all power in the votes of the people cannot, properly speaking, be a democracy: for their decrees cannot be general in their extent. Thus, then, we may describe the several species of democracies.

CHAPTER V

Of the different species of oligarchies one is, when the right to the offices is regulated by a certain census; so that the poor, although the majority, have no share in it; while all those who are included therein take part in the management of public affairs. Another sort is, when [1292b] the magistrates are men of very small fortune, who upon any vacancy do themselves fill it up: and if they do this out of the community at large, the state approaches to an aristocracy; if out of any particular class of people, it will be an oligarchy. Another sort of oligarchy is, when the power is an hereditary nobility. The fourth is, when the power is in the same hands as the other, but not under the control of law; and this sort of oligarchy exactly corresponds to a tyranny in monarchies, and to that particular species of democracies which I last mentioned in treating of that state: this has the particular name of a dynasty. These are the different sorts of oligarchies and democracies.

It should also be known, that it often happens that a free state, where the supreme power is in the laws, may not be democratic, and yet in consequence of the established manners and customs of the people, may be governed as if it was; so, on the other hand, where the laws may countenance a more democratic form of government, these may make the state inclining to an oligarchy; and this chiefly happens when there has been any alteration in the government; for the people do not easily change, but love their own ancient customs; and it is by small degrees only that one thing takes place of another; so that the ancient laws will remain, while the power will be in the hands of those who have brought about a revolution in the state.

CHAPTER VI

It is evident from what has been said, that there are as many different sorts of democracies and oligarchies as I have reckoned up: for, of necessity, either all ranks of the people which I have enumerated must have a share in the government, or some only, and others not; for when the husbandmen, and those only who possess moderate fortunes, have the supreme power, they will govern according to law; for as they must get their livings by their employs, they have but little leisure for public business: they will therefore establish proper laws, and never call public assemblies but when there is a necessity for them; and they will readily let every one partake with them in the administration of public affairs as soon as they possess that fortune which the law requires for their qualification: every one, therefore, who is qualified will have his share in the government: for to exclude any would be to make the government an oligarchy, and for all to have leisure to attend without they had a subsistence would be impossible: for these reasons, therefore, this government is a species of democracy. Another species is distinguished by the mode of electing their

magistrates, in which every one is eligible, to whose birth there are no objections, provided he is supposed to have leisure to attend: for which reason in such a democracy the supreme power will be vested in the laws, as there will be nothing paid to those who go to the public assemblies. A third species is where every freeman has a right to a share in the government, which he will not accept for the cause already assigned; for which reason here also the supreme power will be in the law. The fourth species [1293a] of democracy, the last which was established in order of time, arose when cities were greatly enlarged to what they were at first, and when the public revenue became something considerable; for then the populace, on account of their numbers, were admitted to share in the management of public affairs, for then even the poorest people were at leisure to attend to them, as they received wages for so doing; nay, they were more so than others, as they were not hindered by having anything of their own to mind, as the rich had; for which reason these last very often did not frequent the public assemblies and the courts of justice: thus the supreme power was lodged in the poor, and not in the laws. These are the different sorts of democracies, and such are the causes which necessarily gave birth to them.

The first species of oligarchy is, when the generality of the state are men of moderate and not too large property; for this gives them leisure for the management of public affairs: and, as they are a numerous body, it necessarily follows that the supreme power must be in the laws, and not in men; for as they are far removed from a monarchical government, and have not sufficient fortune to neglect their private affairs, while they are too many to be supported by the public, they will of course determine to be governed by the laws, and not by each other. But if the men of property in the state are but few, and their property is large, then an oligarchy of the second sort will take place; for those who have most power will think that they have a right to lord it over the others; and, to accomplish this, they will associate to themselves some who have an inclination for public affairs, and as they are not powerful enough to govern without law, they will make a law for that purpose. And if those few who have large fortunes should acquire still greater power, the oligarchy will then alter into one of the third sort; for they will get all the offices of the state into their own hands by a law which directs the son to succeed upon the death of his father; and, after that, when, by means of their increasing wealth and powerful connections, they extend still further their oppression, a monarchical dynasty will directly succeed wherein men will be supreme, and not the law; and this is the fourth species of an oligarchy correspondent to the last-mentioned class of democracies.

CHAPTER VII

There are besides two other states, a democracy and an oligarchy, one of which all speak of, and it is always esteemed a species of the four sorts; and thus they reckon them up; a monarchy, an oligarchy, a democracy, and this fourth which they call an aristocracy. There is also a fifth, which bears a name that is also common to the other four, namely, a state: but as this is seldom to be met with, it has escaped those who have endeavoured to enumerate the different sorts of governments, which [1293b] they fix at four only, as does Plato in his Republic.

An aristocracy, of which I have already treated in the first book, is rightly called so; for a state governed by the best men, upon the most virtuous principles, and not upon any hypothesis, which even good men may propose, has alone a right to be called an aristocracy, for it is there only that a man is at once a good man and a good citizen; while in other states men are good only relative to those states. Moreover, there are some other states which are called by the same name, that differ both from oligarchies and free states, wherein not only the rich but also the virtuous have a share in the administration; and have therefore acquired the name of aristocracies; for in those governments wherein virtue is not their common care, there are still men of worth and approved goodness. Whatever state, then, like the Carthaginians, favours the rich, the virtuous, and the citizens at large, is a sort of aristocracy: when only the two latter are held in esteem, as at Lacedaemon, and the state is jointly composed of these, it is a virtuous democracy. These are the two species of aristocracies after the first, which is the best of all governments. There is also a third, which is, whenever a free state inclines to the dominion of a few.

CHAPTER VIII

It now remains for us to treat of that government which is particularly called a free state, and also of a tyranny; and the reason for my choosing to place that free state here is, because this, as well as those aristocracies already mentioned, although they do not seem excesses, yet, to speak true, they have all departed from what a perfect government is. Nay, they are deviations both of them equally from other forms, as I said at the beginning. It is proper to mention a tyranny the last of all governments, for it is of all others the least like one: but as my intention is to treat of all governments in general, for this reason that also, as I have said, will be taken into consideration in its proper place.

I shall now inquire into a free state and show what it is; and we shall the better understand its positive nature as we have already described an oligarchy and a democracy; for a free state is indeed nothing more than a mixture of them, and it has been usual to call those which incline most to a democracy, a free state; those which incline most to an oligarchy, an aristocracy, because those who are rich are generally men of family and education; besides, they enjoy those things which others are often guilty of crimes to procure: for which reason they are regarded as men of worth and honour and note.

Since, then, it is the genius of an aristocracy to allot the larger part of the government to the best citizens, they therefore say, that an oligarchy is chiefly composed of those men who are worthy and honourable: now it [1294a] seems impossible that where the government is in the hands of the good, there the laws should not be good, but bad; or, on the contrary, that where the government is in the hands of the bad, there the laws should be good; nor is a government well constituted because the laws are, without at the same time care is taken that they are observed; for to enforce obedience to the laws which it makes is one proof of a good constitution in the state-another is, to have laws well calculated for those who are to abide by them; for if they are improper they must be obeyed: and this may be done two ways, either by their being the best relative to the particular state, or the best absolutely. An aristocracy seems most likely to confer the honours of the state on the virtuous; for virtue is the object of an aristocracy, riches of an oligarchy, and liberty of a democracy; for what is approved of by the majority will prevail in all or in each of these three different states; and that which seems good to most of those who compose the community will prevail: for what is called a state prevails in many communities, which aim at a mixture of rich and poor, riches and liberty: as for the rich, they are usually supposed to take the place of the worthy and honourable. As there are three things which claim an equal rank in the state, freedom, riches, and virtue (for as for the fourth, rank, it is an attendant on two of the others, for virtue and riches are the origin of family), it is evident, that the conjuncture of the rich and the poor make up a free state; but that all three tend to an aristocracy more than any other, except that which is truly so, which holds the first rank.

We have already seen that there are governments different from a monarchy, a democracy, and an oligarchy; and what they are, and wherein they differ from each other; and also aristocracies and states properly so called, which are derived from them; and it is evident that these are not much unlike each other.

CHAPTER IX

We shall next proceed to show how that government which is peculiarly called a state arises alongside of democracy and oligarchy, and how it ought to be established; and this will at the same time show what are the proper boundaries of both these governments, for we must mark out wherein they differ from one another, and then from both these compose a state of such parts of each of them as will show from whence they were taken.

There are three different ways in which two states may be blended and joined together; for, in the first place, all those rules may be adopted which the laws of each of them have ordered; as for instance in the judicial department, for in an oligarchy the rich are fined if they do not come to the court as jurymen, but the poor are not paid for their attendance; but in democracies they are, while the rich are not fined for their neglect. Now these things, as being common to both, are fit to be observed in a free [1294b] state which is composed of both. This, then, is one way in which they may be joined together. In the second place, a medium may be taken between the different methods which each state observes; for instance, in a democracy the right to vote in the public assembly is either confined by no census at all, or limited by a very small one; in an oligarchy none enjoy it but those whose census is high: therefore, as these two practices are contrary to each other, a census between each may be established in such a state. In the third place, different laws of each community may be adopted; as, for instance, as it seems correspondent to the nature of a democracy, that the magistrates should be chosen by lot, but an aristocracy by vote, and in the one state according to a census, but not in the other: let, then, an aristocracy and a free state copy something from each of them; let them follow an oligarchy in choosing their magistrates by vote, but a democracy in not admitting of any census, and thus blend together the different customs of the two governments. But the best proof of a happy mixture of a democracy and an oligarchy is this, when a person may properly call the same state a democracy and an oligarchy. It is evident that those who speak of it in this manner are induced to it because both these governments are there well blended together: and indeed this is common to all mediums, that the extremes of each side should be discerned therein, as at Lacedaemon; for many affirm that it is a democracy from the many particulars in which it follows that form of government; as for instance, in the first place, in the bringing up of their children, for the rich and poor are brought up in the same manner; and their education is such that the children of the poor may partake of it; and the same rules are observed when they are youths and men, there is no distinction between a rich person and a poor one; and in their public tables the same provision is served to all. The rich also wear only such clothes as the poorest man is able to purchase. Moreover, with respect to two

magistracies of the highest rank, one they have a right to elect to, the other to fill; namely, the senate and the ephori. Others consider it as an oligarchy, the principles of which it follows in many things, as in choosing all their officers by vote, and not by lot; in there being but a few who have a right to sit in judgment on capital causes and the like. Indeed, a state which is well composed of two others ought to resemble them both, and neither, Such a state ought to have its means of preservation in itself, and not without; and when I say in itself, I do not mean that it should owe this to the forbearance of their neighbours, for this may happen to a bad government, but to every member of the community's not being willing that there should be the least alteration in their constitution. Such is the method in which a free state or aristocracy ought to be established.

CHAPTER X

It now remains to treat of a tyranny; not that there is [1295a] much to be said on that subject, but as it makes part of our plan, since we enumerated it amongst our different sorts of governments. In the beginning of this work we inquired into the nature of kingly government, and entered into a particular examination of what was most properly called so, and whether it was advantageous to a state or not, and what it should be, and how established; and we divided a tyranny into two pieces when we were upon this subject, because there is something analogous between this and a kingly government, for they are both of them established by law; for among some of the barbarians they elect a monarch with absolute power, and formerly among the Greeks there were some such, whom they called sesumnetes. Now these differ from each other; for some possess only kingly power regulated by law, and rule those who voluntarily submit to their government; others rule despotically according to their own will. There is a third species of tyranny, most properly so called, which is the very opposite to kingly power; for this is the government of one who rules over his equals and superiors without being accountable for his conduct, and whose object is his own advantage, and not the advantage of those he governs; for which reason he rules by compulsion, for no freemen will ever willingly submit to such a government. These are the different species of tyrannies, their principles, and their causes.

CHAPTER XI

We proceed now to inquire what form of government and what manner of life is best for communities in general, not adapting it to that superior virtue which is above the reach of the vulgar, or that education which every advantage of nature and fortune only can furnish, nor to those imaginary plans which may be formed at pleasure; but to that mode of life which the greater part of mankind can attain to, and that government which most cities may establish: for as to those aristocracies which we have now mentioned, they are either too perfect for a state to support, or one so nearly alike to that state we now going to inquire into, that we shall treat of them both as one.

The opinions which we form upon these subjects must depend upon one common principle: for if what I have said in my treatise on Morals is true, a happy life must arise from an uninterrupted course of virtue; and if virtue consists in a certain medium, the middle life must certainly be the happiest; which medium is attainable [1295b] by every one. The boundaries of virtue and vice in the state must also necessarily be the same as in a private person; for the form of government is the life of the city. In every city the people are divided into three sorts; the very rich, the very poor, and those who are between them. If this is universally admitted, that the mean is best, it is evident that even in point of fortune mediocrity is to be preferred; for that state is most submissive to reason; for those who are very handsome, or very strong, or very noble, or very rich; or, on the contrary; those who are very poor, or very weak, or very mean, with difficulty obey it; for the one are capricious and greatly flagitious, the other rascally and mean, the crimes of each arising from their different excesses: nor will they go through the different offices of the state; which is detrimental to it: besides, those who excel in strength, in riches, or friends, or the like, neither know how nor are willing to submit to command: and this begins at home when they are boys; for there they are brought up too delicately to be accustomed to obey their preceptors: as for the very poor, their general and excessive want of what the rich enjoy reduces them to a state too mean: so that the one know not how to command, but to be commanded as slaves, the others know not how to submit to any command, nor to command themselves but with despotic power.

A city composed of such men must therefore consist of slaves and masters, not freemen; where one party must hate, and the other despise, where there could be no possibility of friendship or political community: for community supposes affection; for we do not even on the road associate with our enemies. It is also the genius of a city to be composed as much as possible of equals; which will be most so when the inhabitants are in the middle state: from whence it follows, that that city must be best framed which is composed of those whom we say are naturally its proper members. It is men of this station also who will be best assured of safety and protection; for they will neither covet what belongs to others, as the poor do; nor will others covet what is theirs, as the poor do

what belongs to the rich; and thus, without plotting against any one, or having any one plot against them, they will live free from danger: for which reason Phocylides wisely wishes for the middle state, as being most productive of happiness. It is plain, then, that the most perfect political community must be amongst those who are in the middle rank, and those states are best instituted wherein these are a larger and more respectable part, if possible, than both the other; or, if that cannot be, at least than either of them separate; so that being thrown into the balance it may prevent either scale from preponderating.

It is therefore the greatest happiness which the citizens can enjoy to possess a moderate and convenient fortune; for when some possess too much, and others nothing at [1296a] all, the government must either be in the hands of the meanest rabble or else a pure oligarchy; or, from the excesses of both, a tyranny; for this arises from a headstrong democracy or an oligarchy, but very seldom when the members of the community are nearly on an equality with each other. We will assign a reason for this when we come to treat of the alterations which different states are likely to undergo. The middle state is therefore best, as being least liable to those seditions and insurrections which disturb the community; and for the same reason extensive governments are least liable to these inconveniences; for there those in a middle state are very numerous, whereas in small ones it is easy to pass to the two extremes, so as hardly to have any in a medium remaining, but the one half rich, the other poor: and from the same principle it is that democracies are more firmly established and of longer continuance than oligarchies; but even in those when there is a want of a proper number of men of middling fortune, the poor extend their power too far, abuses arise, and the government is soon at an end.

We ought to consider as a proof of what I now advance, that the best lawgivers themselves were those in the middle rank of life, amongst whom was Solon, as is evident from his poems, and Lycurgus, for he was not a king, and Charondas, and indeed most others. What has been said will show us why of so many free states some have changed to democracies, others to oligarchies: for whenever the number of those in the middle state has been too small, those who were the more numerous, whether the rich or the poor, always overpowered them and assumed to themselves the administration of public affairs; from hence arose either a democracy or an oligarchy. Moreover, when in consequence of their disputes and quarrels with each other, either the rich get the better of the poor, or the poor of the rich, neither of them will establish a free state; but, as the record of their victory, one which inclines to their own principles, and form either a democracy or an oligarchy.

Those who made conquests in Greece, having all of them an eye to the respective forms of government in their own cities, established either democracies or oligarchies, not considering what was serviceable to the state, but what was similar to their own; for which reason a government has never been established where the supreme power has been placed amongst those of the middling rank, or very seldom; and, amongst a few, one man only of those who have yet been conquerors has been persuaded to give the preference to this order of [1296b] men: it is indeed an established custom with the inhabitants of most cities not to desire an equality, but either to aspire to govern, or when they are conquered, to submit.

Thus we have shown what the best state is, and why. It will not be difficult to perceive of the many states which there are, for we have seen that there are various forms both of democracies and oligarchies, to which we should give the first place, to which the second, and in the same manner the next also; and to observe what are the particular excellences and defects of each, after we have first described the best possible; for that must be the best which is nearest to this, that worst which is most distant from the medium, without any one has a particular plan of his own which he judges by. I mean by this, that it may happen, that although one form of government may be better than another, yet there is no reason to prevent another from being preferable thereunto in particular circumstances and for particular purposes.

CHAPTER XII

After what has been said, it follows that we should now show what particular form of government is most suitable for particular persons; first laying this down as a general maxim, that that party which desires to support the actual administration of the state ought always to be superior to that which would alter it. Every city is made up of quality and quantity: by quality I mean liberty, riches, education, and family, and by quantity its relative populousness: now it may happen that quality may exist in one of those parts of which the city is composed, and quantity in another; thus the number of the ignoble may be greater than the number of those of family, the number of the poor than that of the rich; but not so that the quantity of the one shall overbalance the quality of the other; those must be properly adjusted to each other; for where the number of the poor exceeds the proportion we have mentioned, there a democracy will rise up, and if the husbandry should have more power than others, it will be a democracy of husbandmen; and the democracy will be a particular species according to that class of men which may happen to be most

numerous: thus, should these be the husbandmen, it will be of these, and the best; if of mechanics and those who hire themselves out, the worst possible: in the same manner it may be of any other set between these two. But when the rich and the noble prevail more by their quality than they are deficient in quantity, there an oligarchy ensues; and this oligarchy may be of different species, according to the nature of the prevailing party. Every legislator in framing his constitution ought to have a particular regard to those in the middle rank of life; and if he intends an oligarchy, these should be the object of his laws; if a democracy, to these they should be entrusted; and whenever their number exceeds that of the two others, or at least one of them, they give [1297a] stability to the constitution; for there is no fear that the rich and the poor should agree to conspire together against them, for neither of these will choose to serve the other. If any one would choose to fix the administration on the widest basis, he will find none preferable to this; for to rule by turns is what the rich and the poor will not submit to, on account of their hatred to each other. It is, moreover, allowed that an arbitrator is the most proper person for both parties to trust to; now this arbitrator is the middle rank.

Those who would establish aristocratical governments are mistaken not only in giving too much power to the rich, but also in deceiving the common people; for at last, instead of an imaginary good, they must feel a real evil, for the encroachments of the rich are more destructive to the state than those of the poor.

CHAPTER XIII

There are five particulars in which, under fair pretences, the rich craftily endeavour to undermine the rights of the people, these are their public assemblies, their offices of state, their courts of justice, their military power, and their gymnastic exercises. With respect to their public assemblies, in having them open to all, but in fining the rich only, or others very little, for not attending; with respect to offices, in permitting the poor to swear off, but not granting this indulgence to those who are within the census; with respect to their courts of justice, in fining the rich for non-attendance, but the poor not at all, or those a great deal, and these very little, as was done by the laws of Charondas. In some places every citizen who was enrolled had a right to attend the public assemblies and to try causes; which if they did not do, a very heavy fine was laid upon them; that through fear of the fine they might avoid being enrolled, as they were then obliged to do neither the one nor the other. The same spirit of legislation prevailed with respect to their bearing arms and their gymnastic exercises; for the poor are excused if they have no arms, but the rich are fined; the same method takes place if they do not attend their gymnastic exercises, there is no penalty on one, but there is on the other: the consequence of which is, that the fear of this penalty induces the rich to keep the one and attend the other, while the poor do neither. These are the deceitful contrivances of oligarchical legislators.

The contrary prevails in a democracy; for there they make the poor a proper allowance for attending the assemblies and the courts, but give the rich nothing for doing it: whence it is evident, that if any one would properly blend these customs together, they must extend both the pay and the fine to every member of the community, and then every one would share in it, whereas part only now do. The citizens of a free state ought to [1297b] consist of those only who bear arms: with respect to their census it is not easy to determine exactly what it ought to be, but the rule that should direct upon this subject should be to make it as extensive as possible, so that those who are enrolled in it make up a greater part of the people than those who are not; for those who are poor, although they partake not of the offices of the state, are willing to live quiet, provided that no one disturbs them in their property: but this is not an easy matter; for it may not always happen, that those who are at the head of public affairs are of a humane behaviour. In time of war the poor are accustomed to show no alacrity without they have provisions found them; when they have, then indeed they are willing to fight.

In some governments the power is vested not only in those who bear arms, but also in those who have borne them. Among the Malienses the state was composed of these latter only, for all the officers were soldiers who had served their time. And the first states in Greece which succeeded those where kingly power was established, were governed by the military. First of all the horse, for at that time the strength and excellence of the army depended on the horse, for as to the heavy-armed foot they were useless without proper discipline; but the art of tactics was not known to the ancients, for which reason their strength lay in their horse: but when cities grew larger, and they depended more on their foot, greater numbers partook of the freedom of the city; for which reason what we call republics were formerly called democracies. The ancient governments were properly oligarchies or kingdoms; for on account of the few persons in each state, it would have been impossible to have found a sufficient number of the middle rank; so these being but few, and those used to subordination, they more easily submitted to be governed.

We have now shown why there are many sorts of governments, and others different from those we have treated of: for there are more species of democracies than one, and the like is true of other forms, and what are their differences, and whence they arise;

and also of all others which is the best, at least in general; and which is best suited for particular people.

CHAPTER XIV

We will now proceed to make some general reflections upon the governments next in order, and also to consider each of them in particular; beginning with those principles which appertain to each: now there are three things in all states which a careful legislator ought well to consider, which are of great consequence to all, and which properly attended to the state must necessarily be happy; and according to the variation of which the one will differ from the other. The first of these is the [1298a] public assembly; the second the officers of the state, that is, who they ought to be, and with what power they should be entrusted, and in what manner they should be appointed; the third, the judicial department.

Now it is the proper business of the public assembly to determine concerning war and peace, making or breaking off alliances, to enact laws, to sentence to death, banishment, or confiscation of goods, and to call the magistrates to account for their behaviour when in office. Now these powers must necessarily be entrusted to the citizens in general, or all of them to some; either to one magistrate or more; or some to one, and some to another, or some to all, but others to some: to entrust all to all is in the spirit of a democracy, for the people aim at equality. There are many methods of delegating these powers to the citizens at large, one of which is to let them execute them by turn, and not altogether, as was done by Tellecles, the Milesian, in his state. In others the supreme council is composed of the different magistrates, and they succeed to the offices of the community by proper divisions of tribes, wards, and other very small proportions, till every one in his turn goes through them: nor does the whole community ever meet together, without it is when new laws are enacted, or some national affair is debated, or to hear what the magistrates have to propose to them. Another method is for the people to meet in a collective body, but only for the purpose of holding the comitia, making laws, determining concerning war or peace, and inquiring into the conduct of their magistrates, while the remaining part of the public business is conducted by the magistrates, who have their separate departments, and are chosen out of the whole community either by vote or ballot. Another method is for the people in general to meet for the choice of the magistrates, and to examine into their conduct; and also to deliberate concerning war and alliances, and to leave other things to the magistrates, whoever happen to be chosen, whose particular employments are such as necessarily require persons well skilled therein. A fourth method is for every person to deliberate upon every subject in public assembly, where the magistrates can determine nothing of themselves, and have only the privilege of giving their opinions first; and this is the method of the most pure democracy, which is analogous to the proceedings in a dynastic oligarchy and a tyrannic monarchy.

These, then, are the methods in which public business is conducted in a democracy. When the power is in the hands of part of the community only, it is an oligarchy and this also admits of different customs; for whenever the officers of the state are chosen out of those who have a moderate fortune, and these from that circumstance are many, and when they depart not from that line which the law has laid down, but carefully follow it, and when all within the census are eligible, certainly it is then an oligarchy, but founded on true principles of government [1298b] from its moderation. When the people in general do not partake of the deliberative power, but certain persons chosen for that purpose, who govern according to law; this also, like the first, is an oligarchy. When those who have the deliberative power elect each other, and the son succeeds to the father, and when they can supersede the laws, such a government is of necessity a strict oligarchy. When some persons determine on one thing, and others on another, as war and peace, and when all inquire into the conduct of their magistrates, and other things are left to different officers, elected either by vote or lot, then the government is an aristocracy or a free state. When some are chosen by vote and others by lot, and these either from the people in general, or from a certain number elected for that purpose, or if both the votes and the lots are open to all, such a state is partly an aristocracy, partly a free government itself. These are the different methods in which the deliberative power is vested in different states, all of whom follow some regulation here laid down. It is advantageous to a democracy, in the present sense of the word, by which I mean a state wherein the people at large have a supreme power, even over the laws, to hold frequent public assemblies; and it will be best in this particular to imitate the example of oligarchies in their courts of justice; for they fine those who are appointed to try causes if they do not attend, so should they reward the poor for coming to the public assemblies: and their counsels will be best when all advise with each other, the citizens with the nobles, the nobles with the citizens. It is also advisable when the council is to be composed of part of the citizens, to elect, either by vote or lot, an equal number of both ranks. It is also proper, if the common people in the state are very numerous, either not to pay every one for his attendance, but such a number only as will make them equal to the nobles, or to reject many of them by lot.

In an oligarchy they should either call up some of the common people to the council, or else establish a court, as is done in some other states, whom they call pre-advisers or guardians of the laws, whose business should be to propose first what they should

afterwards enact. By this means the people would have a place in the administration of public affairs, without having it in their power to occasion any disorder in the government. Moreover, the people may be allowed to have a vote in whatever bill is proposed, but may not themselves propose anything contrary thereto; or they may give their advice, while the power of determining may be with the magistrates only. It is also necessary to follow a contrary practice to what is established in democracies, for the people should be allowed the power of pardoning, but not of condemning, for the cause should be referred back again to the magistrates: whereas the contrary takes place in republics; for the power of pardoning is with the few, but not of condemning, which is always referred [1299a] to the people at large. And thus we determine concerning the deliberative power in any state, and in whose hands it shall be.

CHAPTER XV

We now proceed to consider the choice of magistrates; for this branch of public business contains many different Parts, as how many there shall be, what shall be their particular office, and with respect to time how long each of them shall continue in place; for some make it six months, others shorter, others for a year, others for a much longer time; or whether they should be perpetual or for a long time, or neither; for the same person may fill the same office several times, or he may not be allowed to enjoy it even twice, but only once: and also with respect to the appointment of magistrates, who are to be eligible, who is to choose them, and in what manner; for in all these particulars we ought properly to distinguish the different ways which may be followed; and then to show which of these is best suited to such and such governments.

Now it is not easy to determine to whom we ought properly to give the name of magistrate, for a government requires many persons in office; but every one of those who is either chosen by vote or lot is not to be reckoned a magistrate. The priests, for instance, in the first place; for these are to be considered as very different from civil magistrates: to these we may add the choregi and heralds; nay, even ambassadors are elected: there are some civil employments which belong to the citizens; and these are either when they are all engaged in one thing, as when as soldiers they obey their general, or when part of them only are, as in governing the women or educating the youth; and also some economic, for they often elect corn-meters: others are servile, and in which, if they are rich, they employ slaves. But indeed they are most properly called magistrates, who are members of the deliberative council, or decide causes, or are in some command, the last more especially, for to command is peculiar to magistrates. But to speak truth, this question is of no great consequence, nor is it the province of the judges to decide between those who dispute about words; it may indeed be an object of speculative inquiry; but to inquire what officers are necessary in a state, and how many, and what, though not most necessary, may yet be advantageous in a well-established government, is a much more useful employment, and this with respect to all states in general, as well as to small cities.

In extensive governments it is proper to allot one employment to one person, as there are many to serve the public in so numerous a society, where some may be passed over for a long time, and others never be in office but once; and indeed everything is better done which has the whole attention of one person, than when that [1299b] attention is divided amongst many; but in small states it is necessary that a few of the citizens should execute many employments; for their numbers are so small it will not be convenient to have many of them in office at the same time; for where shall we find others to succeed them in turn? Small states will sometimes want the same magistrates and the same laws as large ones; but the one will not want to employ them so often as the other; so that different charges may be intrusted to the same person without any inconvenience, for they will not interfere with each other, and for want of sufficient members in the community it will be necessary. If we could tell how many magistrates are necessary in every city, and how many, though not necessary, it is yet proper to have, we could then the better know how many different offices one might assign to one magistrate. It is also necessary to know what tribunals in different places should have different things under their jurisdiction, and also what things should always come under the cognisance of the same magistrate; as, for instance, decency of manners, shall the clerk of the market take cognisance of that if the cause arises in the market, and another magistrate in another place, or the same magistrate everywhere: or shall there be a distinction made of the fact, or the parties? as, for instance, in decency of manners, shall it be one cause when it relates to a man, another when it relates to a woman?

In different states shall the magistrates be different or the same? I mean, whether in a democracy, an oligarchy, an aristocracy, and a monarchy, the same persons shall have the same power? or shall it vary according to the different formation of the government? as in an aristocracy the offices of the state are allotted to those who are well educated; in an oligarchy to those who are rich; in a democracy to the freemen? Or shall the magistrates differ as the communities differ? For it may happen that the very same may be sometimes proper, sometimes otherwise: in this state it may be necessary that the magistrate have great powers, in that but small. There are also certain magistrates peculiar to certain states--as the pre-advisers are not proper in a democracy, but a senate is; for

one such order is necessary, whose business shall be to consider beforehand and prepare those bills which shall be brought before the people that they may have leisure to attend to their own affairs; and when these are few in number the state inclines to an oligarchy. The pre-advisers indeed must always be few for they are peculiar to an oligarchy: and where there are both these offices in the same state, the pre-adviser's is superior to the senator's, the one having only a democratical power, the other an oligarchical: and indeed the [1300a] power of the senate is lost in those democracies, in which the people, meeting in one public assembly, take all the business into their own hands; and this is likely to happen either when the community in general are in easy circumstances, or when they are paid for their attendance; for they are then at leisure often to meet together and determine everything for themselves. A magistrate whose business is to control the manners of the boys, or women, or who takes any department similar to this, is to be found in an aristocracy, not in a democracy; for who can forbid the wives of the poor from appearing in public? neither is such a one to be met with in an oligarchy; for the women there are too delicate to bear control. And thus much for this subject. Let us endeavour to treat at large of the establishment of magistrates, beginning from first principles. Now, they differ from each other in three ways, from which, blended together, all the varieties which can be imagined arise. The first of these differences is in those who appoint the magistrates, the second consists in those who are appointed, the third in the mode of appointment; and each of these three differ in three manners; for either all the citizens may appoint collectively, or some out of their whole body, or some out of a particular order in it, according to fortune, family, or virtue, or some other rule (as at Megara, where the right of election was amongst those who had returned together to their country, and had reinstated themselves by force of arms) and this either by vote or lot. Again, these several modes may be differently formed together, as some magistrates may be chosen by part of the community, others by the whole; some out of part, others out of the whole; some by vote, others by lot: and each of these different modes admit of a four-fold subdivision; for either all may elect all by vote or by lot; and when all elect, they may either proceed without any distinction, or they may elect by a certain division of tribes, wards, or companies, till they have gone through the whole community: and some magistrates may be elected one way, and others another. Again, if some magistrates are elected either by vote or lot of all the citizens, or by the vote of some and the lot of some, or some one way and some another; that is to say, some by the vote of all, others by the lot of all, there will then be twelve different methods of electing the magistrates, without blending the two together. Of these there are two adapted to a democracy; namely, to have all the magistrates chosen out of all the people, either by vote or lot, or both; that is to say, some of them by lot, some by vote. In a free state the whole community should not elect at the same time, but some out of the whole, or out of some particular rank; and this either by lot, or vote, or both: and they should elect either out of the whole community, or out of some particular persons in it, and this both by lot and vote. In an oligarchy it is proper to choose some magistrates out of the whole body of the citizens, some by vote, some by lot, others by both: by lot is most correspondent to that form of government. In a free aristocracy, some magistrates [1300b] should be chosen out of the community in general, others out of a particular rank, or these by choice, those by lot. In a pure oligarchy, the magistrates should be chosen out of certain ranks, and by certain persons, and some of those by lot, others by both methods; but to choose them out of the whole community is not correspondent to the nature of this government. It is proper in an aristocracy for the whole community to elect their magistrates out of particular persons, and this by vote. These then are all the different ways of electing of magistrates; and they have been allotted according to the nature of the different communities; but what mode of proceeding is proper for different communities, or how the offices ought to be established, or with what powers shall be particularly explained. I mean by the powers of a magistrate, what should be his particular province, as the management of the finances or the laws of the state; for different magistrates have different powers, as that of the general of the army differs from the clerk of the market.

CHAPTER XVI

Of the three parts of which a government is formed, we now come to consider the judicial; and this also we shall divide in the same manner as we did the magisterial, into three parts. Of whom the judges shall consist, and for what causes, and how. When I say of whom, I mean whether they shall be the whole people, or some particulars; by for what causes I mean, how many different courts shall be appointed; by how, whether they shall be elected by vote or lot. Let us first determine how many different courts there ought to be. Now these are eight. The first of these is the court of inspection over the behaviour of the magistrates when they have quitted their office; the second is to punish those who have injured the public; the third is to take cognisance of those causes in which the state is a party; the fourth is to decide between magistrates and private persons, who appeal from a fine laid upon them; the fifth is to determine disputes which may arise concerning contracts of great value; the sixth is to judge between foreigners, and of murders, of which there are different species; and these may all be tried by the same judges or by different ones; for there are murders of malice prepense and of chance-medley; there is also justifiable homicide, where the fact is admitted, and the legality of it disputed.

There is also another court called at Athens the Court of Phreattae, which determines points relating to a murder committed by one who has run away, to decide whether he shall return; though such an affair happens but seldom, and in very large cities; the seventh, to determine causes wherein strangers are concerned, and this whether they are between stranger and stranger or between a stranger and a citizen. The eighth and last is for small actions, from one to five drachma's, or a little more; for these ought also to be legally determined, but not to be brought before the whole body of the judges. But without entering into any particulars concerning actions for murder, and those wherein strangers are the parties, let us particularly treat of those courts which have the jurisdiction of those matters which more particularly relate to the affairs of the community and which if not well conducted occasion seditions and commotions in the state. Now, of necessity, either all persons must have a right to judge of all these different causes, appointed for that purpose, either by vote or lot, or all of all, some of them by vote, and others by lot, or in some causes by vote, in others by lot. Thus there will be four sorts of judges. There [1301a] will be just the same number also if they are chosen out of part of the people only; for either all the judges must be chosen out of that part either by vote or lot, or some by lot and some by vote, or the judges in particular causes must be chosen some by vote, others by lot; by which means there will be the same number of them also as was mentioned. Besides, different judges may be joined together; I mean those who are chosen out of the whole people or part of them or both; so that all three may sit together in the same court, and this either by vote, lot, or both. And thus much for the different sorts of judges. Of these appointments that which admits all the community to be judges in all causes is most suitable to a democracy; the second, which appoints that certain persons shall judge all causes, to an oligarchy; the third, which appoints the whole community to be judges in some causes, but particular persons in others, to an aristocracy or free state.

BOOK V

CHAPTER I

We have now gone through those particulars we proposed to speak of; it remains that we next consider from what causes and how alterations in government arise, and of what nature they are, and to what the destruction of each state is owing; and also to what form any form of polity is most likely to shift into, and what are the means to be used for the general preservation of governments, as well as what are applicable to any particular state; and also of the remedies which are to be applied either to all in general, or to any one considered separately, when they are in a state of corruption: and here we ought first to lay down this principle, that there are many governments, all of which approve of what is just and what is analogically equal; and yet have failed from attaining thereunto, as we have already mentioned; thus democracies have arisen from supposing that those who are equal in one thing are so in every other circumstance; as, because they are equal in liberty, they are equal in everything else; and oligarchies, from supposing that those who are unequal in one thing are unequal in all; that when men are so in point of fortune, that inequality extends to everything else. Hence it follows, that those who in some respects are equal with others think it right to endeavour to partake of an equality with them in everything; and those who are superior to others endeavour to get still more; and it is this more which is the inequality: thus most states, though they have some notion of what is just, yet are almost totally wrong; and, upon this account, when either party has not that share in the administration which answers to his expectations, he becomes seditious: but those who of all others have the greatest right to be so are the last that are; namely, those who excel in virtue; for they alone can be called generally superior. There are, too, some persons of distinguished families who, because they are so, disdain to be on an equality with others, for those esteem themselves noble who boast of their ancestors' merit and fortune: these, to speak truth, are the origin and fountain from whence seditions arise. The alterations which men may propose to make in governments are two; for either they may change the state already established into some other, as when they propose to erect an oligarchy where there is a democracy; or a democracy, or free state, where there is an oligarchy, or an aristocracy from these, or those from that; or else, when they have no objection to the established government, which they like very well, but choose to have the sole management in it themselves; either in the hands of a few or one only. They will also raise commotions concerning the degree in which they would have the established power; as if, for instance, the government is an oligarchy, to have it more purely so, and in the same manner if it is a democracy, or else to have it less so; and, in like manner, whatever may be the nature of the government, either to extend or contract its powers; or else to make some alterations in some parts of it; as to establish or abolish a particular magistracy, as some persons say Lysander endeavoured to abolish the kingly power in Sparta; and Pausanias that of the ephori. Thus in Epidamnus there was an alteration in one part of the constitution, for instead of the philarchi they established a senate. It is also necessary for all the magistrates at Athens; to attend in the court of the Helisea when any new magistrate is created: the power of the archon also in that state partakes of the nature of an oligarchy: inequality is always the occasion of sedition, but not when those who are

unequal are treated in a different manner correspondent to that inequality. Thus kingly power is unequal when exercised over equals. Upon the whole, those who aim after an equality are the cause of seditions. Equality is twofold, either in number or value. Equality in number is when two things contain the same parts or the same quantity; equality in value is by proportion as two exceeds one, and three two by the same number-thus by proportion four exceeds two, and two one in the same degree, for two is the same part of four that one is of two; that is to say, half. Now, all agree in what is absolutely and simply just; but, as we have already said they dispute concerning proportionate value; for some persons, if they are equal in one respect, think themselves equal in all; others, if they are superior in one thing, think they may claim the superiority in all; from whence chiefly arise two sorts of governments, a democracy and an oligarchy; for nobility and virtue are to be found only [1302a] amongst a few; the contrary amongst the many; there being in no place a hundred of the first to be met with, but enough of the last everywhere. But to establish a government entirely upon either of these equalities is wrong, and this the example of those so established makes evident, for none of them have been stable; and for this reason, that it is impossible that whatever is wrong at the first and in its principles should not at last meet with a bad end: for which reason in some things an equality of numbers ought to take place, in others an equality in value. However, a democracy is safer and less liable to sedition than an oligarchy; for in this latter it may arise from two causes, for either the few in power may conspire against each other or against the people; but in a democracy only one; namely, against the few who aim at exclusive power; but there is no instance worth speaking of, of a sedition of the people against themselves. Moreover, a government composed of men of moderate fortunes comes much nearer to a democracy than an oligarchy, and is the safest of all such states.

CHAPTER II

Since we are inquiring into the causes of seditions and revolutions in governments, we must begin entirely with the first principles from whence they arise. Now these, so to speak, are nearly three in number; which we must first distinguish in general from each other, and endeavour to show in what situation people are who begin a sedition; and for what causes; and thirdly, what are the beginnings of political troubles and mutual quarrels with each other. Now that cause which of all others most universally inclines men to desire to bring about a change in government is that which I have already mentioned; for those who aim at equality will be ever ready for sedition, if they see those whom they esteem their equals possess more than they do, as well as those also who are not content with equality but aim at superiority, if they think that while they deserve more than, they have only equal with, or less than, their inferiors. Now, what they aim at may be either just or unjust; just, when those who are inferior are seditious, that they may be equal; unjust, when those who are equal are so, that they may be superior. These, then, are the situations in which men will be seditious: the causes for which they will be so are profit and honour; and their contrary: for, to avoid dishonour or loss of fortune by mulcts, either on their own account or their friends, they will raise a commotion in the state. The original causes which dispose men to the things which I have mentioned are, taken in one manner, seven in number, in another they are more; two of which are the same with those that have been already mentioned: but influencing in a different manner; for profit and honour sharpen men against each other; not to get the possession of them for themselves (which was what I just now supposed), but when they see others, some justly, others [1302b] unjustly, engrossing them. The other causes are haughtiness, fear, eminence, contempt, disproportionate increase in some part of the state. There are also other things which in a different manner will occasion revolutions in governments; as election intrigues, neglect, want of numbers, a too great dissimilarity of circumstances.

CHAPTER III

What influence ill-treatment and profit have for this purpose, and how they may be the causes of sedition, is almost self-evident; for when the magistrates are haughty and endeavour to make greater profits than their office gives them, they not only occasion seditions amongst each other, but against the state also who gave them their power; and this their avarice has two objects, either private property or the property of the state. What influence honours have, and how they may occasion sedition, is evident enough; for those who are themselves unhonoured while they see others honoured, will be ready for any disturbance: and these things are done unjustly when any one is either honoured or discarded contrary to their deserts, justly when they are according to them. Excessive honours are also a cause of sedition when one person or more are greater than the state and the power of the government can permit; for then a monarchy or a dynasty is usually established: on which account the ostracism was introduced in some places, as at Argos and Athens: though it is better to guard against such excesses in the founding of a state, than when they have been permitted to take place, to correct them afterward. Those who have been guilty of crimes will be the cause of sedition, through fear of punishment; as will those also who expect an injury, that they may prevent it; as was the case at Rhodes, when the nobles conspired against the people on account of the decrees they expected would pass against them. Contempt also is a cause

of sedition and conspiracies; as in oligarchies, where there are many who have no share in the administration. The rich also even in democracies, despising the disorder and anarchy which will arise, hope to better themselves by the same means which happened at Thebes after the battle of Oenophyta, where, in consequence of bad administration, the democracy was destroyed; as it was at Megara, where the power of the people was lost through anarchy and disorder; the same thing happened at Syracuse before the tyranny of Gelon; and at Rhodes there was the same sedition before the popular government was overthrown. Revolutions in state will also arise from a disproportionate increase; for as the body consists of many parts, it ought to increase proportion-ably to preserve its symmetry, which would otherwise be destroyed; as if the foot was to be four cubits long, and the rest of the body but two palms; it might otherwise [1303a] be changed into an animal of a different form, if it increase beyond proportion not only in quantity, but also in disposition of parts; so also a city consists of parts, some of which may often increase without notice, as the number of poor in democracies and free states. They will also sometimes happen by accident, as at Tarentum, a little after the Median war, where so many of the nobles were killed in a battle by the Iapygi, that from a free state the government was turned into a democracy; and at Argos, where so many of the citizens were killed by Cleomenes the Spartan, that they were obliged to admit several husbandmen to the freedom of the state: and at Athens, through the unfortunate event of the infantry battles, the number of the nobles was reduced by the soldiers being chosen from the list of citizens in the Lacedaemonian wars. Revolutions also sometimes take place in a democracy, though seldomer; for where the rich grow numerous or properties increase, they become oligarchies or dynasties. Governments also sometimes alter without seditions by a combination of the meaner people; as at Hersea: for which purpose they changed the mode of election from votes to lots, and thus got themselves chosen: and by negligence, as when the citizens admit those who are not friends to the constitution into the chief offices of the state, which happened at Orus, when the oligarchy of the archons was put an end to at the election of Heracleodorus, who changed that form of government into a democratic free state. By little and little, I mean by this, that very often great alterations silently take place in the form of government from people's overlooking small matters; as at Ambracia, where the census was originally small, but at last became nothing at all, as if a little and nothing at all were nearly or entirely alike. That state also is liable to seditions which is composed of different nations, till their differences are blended together and undistinguishable; for as a city cannot be composed of every multitude, so neither can it in every given time; for which reason all those republics which have hitherto been originally composed of different people or afterwards admitted their neighbours to the freedom of their city, have been most liable to revolutions; as when the Achaeans joined with the Traezenians in founding Sybaris; for soon after, growing more powerful than the Traezenians, they expelled them from the city; from whence came the proverb of Sybarite wickedness: and again, disputes from a like cause happened at Thurium between the Sybarites and those who had joined with them in building the city; for they assuming upon these, on account of the country being their own, were driven out. And at Byzantium the new citizens, being detected in plots against the state, were driven out of the city by force of arms. The Antisseans also, having taken in those who were banished from Chios, afterwards did the same thing; and also the Zancleans, after having taken in the people of Samos. The Appolloniats, in the Euxine Sea, having admitted their sojourners to the freedom of their city, were troubled with seditions: and the Syracusians, after the expulsion of their tyrants, having enrolled [1303b] strangers and mercenaries amongst their citizens, quarrelled with each other and came to an open rupture: and the people of Amphipolis, having taken in a colony of Chalcidians, were the greater part of them driven out of the city by them. Many persons occasion seditions in oligarchies because they think themselves ill-used in not sharing the honours of the state with their equals, as I have already mentioned; but in democracies the principal people do the same because they have not more than an equal share with others who are not equal to them. The situation of the place will also sometimes occasion disturbances in the state when the ground is not well adapted for one city; as at Clazomene, where the people who lived in that part of the town called Chytrum quarrelled with them who lived in the island, and the Colophonians with the Notians. At Athens too the disposition of the citizens is not the same, for those who live in the Piraeus are more attached to a popular government than those who live in the city properly so called; for as the interposition of a rivulet, however small, will occasion the line of the phalanx to fluctuate, so any trifling disagreement will be the cause of seditions; but they will not so soon flow from anything else as from the disagreement between virtue and vice, and next to that between poverty and riches, and so on in order, one cause having more influence than another; one of which that I last mentioned.

CHAPTER IV

But seditions in government do not arise for little things, but from them; for their immediate cause is something of moment. Now, trifling quarrels are attended with the greatest consequences when they arise between persons of the first distinction in the state, as was the case with the Syracusians in a remote period; for a revolution in the government was brought about by a quarrel between two young men who were in office, upon a love affair; for one of them being absent, the other seduced his mistress; he in his turn,

offended with this, persuaded his friend's wife to come and live with him; and upon this the whole city took part either with the one or the other, and the government was overturned: therefore every one at the beginning of such disputes ought to take care to avoid the consequences; and to smother up all quarrels which may happen to arise amongst those in power, for the mischief lies in the beginning; for the beginning is said to be half of the business, so that what was then but a little fault will be found afterwards to bear its full proportion to what follows. Moreover, disputes between men of note involve the whole city in their consequences; in Hestiaea, after the Median war: two brothers having a dispute about their paternal estate; he who was the poorer, from the other's having concealed part of the effects, and some money which his father had found, engaged the popular party on his side, while the other, who was rich, the men of fashion. And at Delphos, [1304a] a quarrel about a wedding was the beginning of all the seditions that afterwards arose amongst them; for the bridegroom, being terrified by some unlucky omen upon waiting upon the bride, went away without marrying her; which her relations resenting, contrived secretly to convey some sacred money into his pocket while he was sacrificing, and then killed him as an impious person. At Mitylene also, a dispute, which arose concerning a right of heritage, was the beginning of great evils, and a war with the Athenians, in which Paches took their city, for Timophanes, a man of fortune, leaving two daughters, Doxander, who was circumvented in procuring them in marriage for his two sons, began a sedition, and excited the Athenians to attack them, being the host of that state. There was also a dispute at Phocea, concerning a right of inheritance, between Mnasis, the father of Mnasis, and Euthucrates, the father of Onomarchus, which brought on the Phoceans the sacred war. The government too of Epidamnus was changed from a quarrel that arose from an intended marriage; for a certain man having contracted his daughter in marriage, the father of the young person to whom she was contracted, being archon, punishes him, upon which account he, resenting the affront, associated himself with those who were excluded from any share in the government, and brought about a revolution. A government may be changed either into an oligarchy, democracy, or a free state; when the magistrates, or any part of the city acquire great credit, or are increased in power, as the court of Areopagus at Athens, having procured great credit during the Median war, added firmness to their administration; and, on the other hand, the maritime force, composed of the commonalty, having gained the victory at Salamis, by their power at sea, got the lead in the state, and strengthened the popular party: and at Argos, the nobles, having gained great credit by the battle of Mantinea against the Lacedaemonians, endeavoured to dissolve the democracy. And at Syracuse, the victory in their war with the Athenians being owing to the common people, they changed their free state into a democracy: and at Chalcis, the people having taken off the tyrant Phocis, together with the nobles, immediately seized the government: and at Ambracia also the people, having expelled the tyrant Periander, with his party, placed the supreme power in themselves. And this in general ought to be known, that whosoever has been the occasion of a state being powerful, whether private persons, or magistrates, a certain tribe, or any particular part of the citizens, or the multitude, be they who they will, will be the cause of disputes in the state. For either some persons, who envy them the honours they have acquired, will begin to be seditious, or they, on account of the dignity they have acquired, will not be content with their former equality. A state is also liable to commotions when those parts of it which seem to be opposite to each other approach to an [1304b] equality, as the rich and the common people; so that the part which is between them both is either nothing at all, or too little to be noticed; for if one party is so much more powerful than the other, as to be evidently stronger, that other will not be willing to hazard the danger: for which reason those who are superior in excellence and virtue will never be the cause of seditions; for they will be too few for that purpose when compared to the many. In general, the beginning and the causes of seditions in all states are such as I have now described, and revolutions therein are brought about in two ways, either by violence or fraud: if by violence, either at first by compelling them to submit to the change when it is made. It may also be brought about by fraud in two different ways, either when the people, being at first deceived, willingly consent to an alteration in their government, and are afterwards obliged by force to abide by it: as, for instance, when the four hundred imposed upon the people by telling them that the king of Persia would supply them with money for the war against the Lacedaemonians; and after they had been guilty of this falsity, they endeavoured to keep possession of the supreme power; or when they are at first persuaded and afterwards consent to be governed: and by one of these methods which I have mentioned are all revolutions in governments brought about.

CHAPTER V

We ought now to inquire into those events which will arise from these causes in every species of government. Democracies will be most subject to revolutions from the dishonesty of their demagogues; for partly, by informing against men of property, they induce them to join together through self-defence, for a common fear will make the greatest enemies unite; and partly by setting the common people against them: and this is what any one may continually see practised in many states. In the island of Cos, for instance, the democracy was subverted by the wickedness of the demagogues, for the nobles entered into a combination with each other. And at Rhodes the demagogues, by distributing of bribes, prevented the people from paying the trierarchs what was owing to

them, who were obliged by the number of actions they were harassed with to conspire together and destroy the popular state. The same thing was brought about at Heraclea, soon after the settlement of the city, by the same persons; for the citizens of note, being ill treated by them, quitted the city, but afterwards joining together they returned and overthrew the popular state. Just in the same manner the democracy was destroyed in Megara; for there the demagogues, to procure money by confiscations, drove out the nobles, till the number of those who were banished was considerable, who, [1305a] returning, got the better of the people in a battle, and established an oligarchy. The like happened at Cume, during the time of the democracy, which Thrasymachus destroyed; and whoever considers what has happened in other states may perceive the same revolutions to have arisen from the same causes. The demagogues, to curry favour with the people, drive the nobles to conspire together, either by dividing their estates, or obliging them to spend them on public services, or by banishing them, that they may confiscate the fortunes of the wealthy. In former times, when the same person was both demagogue and general, the democracies were changed into tyrannies; and indeed most of the ancient tyrannies arose from those states: a reason for which then subsisted, but not now; for at that time the demagogues were of the soldiery; for they were not then powerful by their eloquence; but, now the art of oratory is cultivated, the able speakers are at present the demagogues; but, as they are unqualified to act in a military capacity, they cannot impose themselves on the people as tyrants, if we except in one or two trifling instances. Formerly, too, tyrannies were more common than now, on account of the very extensive powers with which some magistrates were entrusted: as the prytanes at Miletus; for they were supreme in many things of the last consequence; and also because at that time the cities were not of that very great extent, the people in general living in the country, and being employed in husbandry, which gave them, who took the lead in public affairs, an opportunity, if they had a turn for war, to make themselves tyrants; which they all did when they had gained the confidence of the people; and this confidence was their hatred to the rich. This was the case of Pisistratus at Athens, when he opposed the Pediaci: and of Theagenes in Megara, who slaughtered the cattle belonging to the rich, after he had seized those who kept them by the riverside. Dionysius also, for accusing Daphnseus and the rich, was thought worthy of being raised to a tyranny, from the confidence which the people had of his being a popular man in consequence of these enmities. A government shall also alter from its ancient and approved democratic form into one entirely new, if there is no census to regulate the election of magistrates; for, as the election is with the people, the demagogues who are desirous of being in office, to flatter them, will endeavour with all their power to make the people superior even to the laws. To prevent this entirely, or at least in a great measure, the magistrates should be elected by the tribes, and not by the people at large. These are nearly the revolutions to which democracies are liable, and also the causes from whence they arise.

CHAPTER VI

There are two things which of all others most evidently occasion a revolution in an oligarchy; one is, when the people are ill used, for then every individual is ripe for [1305b] sedition; more particularly if one of the oligarchy should happen to be their leader; as Lygdamis, at Naxus, who was afterwards tyrant of that island. Seditions also which arise from different causes will differ from each other; for sometimes a revolution is brought about by the rich who have no share in the administration, which is in the hands of a very few indeed: and this happened at Massilia, Ister, Heraclea, and other cities; for those who had no share in the government ceased not to raise disputes till they were admitted to it: first the elder brothers, and then the younger also: for in some places the father and son are never in office at the same time; in others the elder and younger brother: and where this is observed the oligarchy partakes something of a free state. At Ister it was changed into a democracy; in Heraclea, instead of being in the hands of a few, it consisted of six hundred. At Cnidus the oligarchy was destroyed by the nobles quarrelling with each other, because the government was in the hands of so few: for there, as we have just mentioned, if the father was in office, the son could not; or, if there were many brothers, the eldest only; for the people, taking advantage of their disputes, elected one of the nobles for their general, and got the victory: for where there are seditions government is weak. And formerly at Erithria, during the oligarchy of the Basilides, although the state flourished greatly under their excellent management, yet because the people were displeased that the power should be in the hands of so few, they changed the government. Oligarchies also are subject to revolutions, from those who are in office therein, from the quarrels of the demagogues with each other. The demagogues are of two sorts; one who flatter the few when they are in power: for even these have their demagogues; such was Charicles at Athens, who had great influence over the thirty; and, in the same manner, Phrynichus over the four hundred. The others are those demagogues who have a share in the oligarchy, and flatter the people: such were the state-guardians at Larissa, who flattered the people because they were elected by them. And this will always happen in every oligarchy where the magistrates do not elect themselves, but are chosen out of men either of great fortune or certain ranks, by the soldiers or by the people; as was the custom at Abydos. And when the judicial department is not in the hands of the supreme power, the demagogues, favouring the people in their causes, overturn the

government; which happened at Heraclea in Pontus: and also when some desire to contract the power of the oligarchy into fewer hands; for those who endeavour to support an equality are obliged to apply to the people for assistance. An oligarchy is also subject to revolutions when the nobility spend their fortunes by luxury; for such persons are desirous of innovations, and either endeavour to be tyrants themselves or to support others in being so, as [1306a] Hypparinus supported Dionysius of Syracuse. And at Amphipolis one Cleotimus collected a colony of Chalcidians, and when they came set them to quarrel with the rich: and at AEgina a certain person who brought an action against Chares attempted on that account to alter the government. Sometimes they will try to raise commotions, sometimes they will rob the public, and then quarrel with each other, or else fight with those who endeavour to detect them; which was the case at Apollonia in Pontus. But if the members of an oligarchy agree among themselves the state is not very easily destroyed without some external force. Pharsalus is a proof of this, where, though the place is small, yet the citizens have great power, from the prudent use they make of it. An oligarchy also will be destroyed when they create another oligarchy under it; that is, when the management of public affairs is in the hands of a few, and not equally, but when all of them do not partake of the supreme power, as happened once at Elis, where the supreme power in general was in the hands of a very few out of whom a senate was chosen, consisting but of ninety, who held their places for life; and their mode of election was calculated to preserve the power amongst each other's families, like the senators at Lacedaemon. An oligarchy is liable to a revolution both in time of war and peace; in war, because through a distrust in the citizens the government is obliged to employ mercenary troops, and he to whom they give the command of the army will very often assume the tyranny, as Timophanes did at Corinth; and if they appoint more than one general, they will very probably establish a dynasty: and sometimes, through fear of this, they are forced to let the people in general have some share in the government, because they are obliged to employ them. In peace, from their want of confidence in each other, they will entrust the guardianship of the state to mercenaries and their general, who will be an arbiter between them, and sometimes become master of both, which happened at Larissa, when Simos and the Aleuadae had the chief power. The same thing happened at Abydos, during the time of the political clubs, of which Iphiades' was one. Commotions also will happen in an oligarchy from one party's overbearing and insulting another, or from their quarrelling about their law-suits or marriages. How their marriages, for instance, will have that effect has been already shown: and in Eretria, Diagoras destroyed the oligarchy of the knights upon the same account. A sedition also arose at Heraclea, from a certain person being condemned by the court; and at Thebes, in consequence of a man's being guilty of adultery; [1306b] the punishment indeed which Eurytion suffered at Heraclea was just, yet it was illegally executed: as was that at Thebes upon Archias; for their enemies endeavoured to have them publicly bound in the pillory. Many revolutions also have been brought about in oligarchies by those who could not brook the despotism which those persons assumed who were in power, as at Cnidus and Chios. Changes also may happen by accident in what we call a free state and in an oligarchy; wheresoever the senators, judges, and magistrates are chosen according to a certain census; for it often happens that the highest census is fixed at first; so that a few only could have a share in the government, in an oligarchy, or in a free state those of moderate fortunes only; when the city grows rich, through peace or some other happy cause, it becomes so little that every one's fortune is equal to the census, so that the whole community may partake of all the honours of government; and this change sometimes happens by little and little, and insensible approaches, sometimes quicker. These are the revolutions and seditions that arise in oligarchies, and the causes to which they are owing: and indeed both democracies and oligarchies sometimes alter, not into governments of a contrary form, but into those of the same government; as, for instance, from having the supreme power in the law to vest it in the ruling party, or the contrariwise.

CHAPTER VII

Commotions also arise in aristocracies, from there being so few persons in power (as we have already observed they do in oligarchies, for in this particular an aristocracy is most near an oligarchy, for in both these states the administration of public affairs is in the hands of a few; not that this arises from the same cause in both, though herein they chiefly seem alike): and these will necessarily be most likely to happen when the generality of the people are high-spirited and think themselves equal to each other in merit; such were those at Lacedasmon, called the Partheniae (for these were, as well as others, descendants of citizens), who being detected in a conspiracy against the state, were sent to found Tarentum. They will happen also when some great men are disgraced by those who have received higher honours than themselves, to whom they are no ways inferior in abilities, as Lysander by the kings: or when an ambitious man cannot get into power, as Cinadon, who, in the reign of Agesilaus, was chief in a conspiracy against the Spartans: and also when some are too poor and others too rich, which will most frequently happen in time of war; as at Lacedaemon during the Messenian war, which is proved by a poem of Tyrtaeus, [1307a] called "Eunomia;" for some persons being reduced thereby, desired that the lands might be divided: and also when some person of very high rank might still be higher if he could rule alone, which seemed to be Pausanias's intention at Lacedaemon, when he was their general in the Median

war, and Anno's at Carthage. But free states and aristocracies are mostly destroyed from want of a fixed administration of public affairs; the cause of which evil arises at first from want of a due mixture of the democratic and the oligarchic parts in a free state; and in an aristocracy from the same causes, and also from virtue not being properly joined to power; but chiefly from the two first, I mean the undue mixture of the democratic and oligarchic parts; for these two are what all free states endeavour to blend together, and many of those which we call aristocracies, in this particular these states differ from each other, and on this account the one of them is less stable than the other, for that state which inclines most to an oligarchy is called an aristocracy, and that which inclines most to a democracy is called a free state; on which account this latter is more secure than the former, for the wider the foundation the securer the building, and it is ever best to live where equality prevails. But the rich, if the community gives them rank, very often endeavour to insult and tyrannise over others. On the whole, whichever way a government inclines, in that it will settle, each party supporting their own. Thus a free state will become a democracy; an aristocracy an oligarchy; or the contrary, an aristocracy may change into a democracy (for the poor, if they think themselves injured, directly take part with the contrary side) and a free state into an oligarchy. The only firm state is that where every one enjoys that equality he has a right to and fully possesses what is his own. And what I have been speaking of happened to the Thurians; for the magistrates being elected according to a very high census, it was altered to a lower, and they were subdivided into more courts, but in consequence of the nobles possessing all the land, contrary to law; the state was too much of an oligarchy, which gave them an opportunity of encroaching greatly on the rest of the people; but these, after they had been well inured to war, so far got the better of their guards as to expel every one out of the country who possessed more than he ought. Moreover, as all aristocracies are free oligarchies, the nobles therein endeavour to have rather too much power, as at Lacedaemon, where property is now in the hands of a few, and the nobles have too much liberty to do as they please and make such alliances as they please. Thus the city of the Locrians was ruined from an alliance with Dionysius; which state was neither a democracy nor well-tempered aristocracy. But an aristocracy chiefly approaches to a secret change by its being destroyed by degrees, as we [1307b] have already said of all governments in general; and this happens from the cause of the alteration being trifling; for whenever anything which in the least regards the state is treated with contempt, after that something else, and this of a little more consequence, will be more easily altered, until the whole fabric of government is entirely subverted, which happened in the government of Thurium; for the law being that they should continue soldiers for five years, some young men of a martial disposition, who were in great esteem amongst their officers, despising those who had the management of public affairs, and imagining they could easily accomplish their intention, first endeavoured to abolish this law, with a view of having it lawful to continue the same person perpetually in the military, perceiving that the people would readily appoint them. Upon this, the magistrates who are called counselors first joined together with an intention to oppose it but were afterwards induced to agree to it, from a belief that if that law was not repealed they would permit the management of all other public affairs to remain in their hands; but afterwards, when they endeavoured to restrain some fresh alterations that were making, they found that they could do nothing, for the whole form of government was altered into a dynasty of those who first introduced the innovations. In short, all governments are liable to be destroyed either from within or from without; from without when they have for their neighbour a state whose policy is contrary to theirs, and indeed if it has great power the same thing will happen if it is not their neighbour; of which both the Athenians and the Lacedaemonians are a proof; for the one, when conquerors everywhere destroyed the oligarchies; the other the democracies. These are the chief causes of revolutions and dissensions in governments.

CHAPTER VIII

We are now to consider upon what the preservation of governments in general and of each state in particular depends; and, in the first place, it is evident that if we are right in the causes we have assigned for their destruction, we know also the means of their preservation; for things contrary produce contraries: but destruction and preservation are contrary to each other. In well-tempered governments it requires as much care as anything whatsoever, that nothing be done contrary to law: and this ought chiefly to be attended to in matters of small consequence; for an illegality that approaches insensibly, approaches secretly, as in a family small expenses continually repeated consume a man's income; for the understanding is deceived thereby, as by this false argument; if every part is little, then the whole is little: now, this in one sense is true, in another is false, for the whole and all the parts together are large, though made up of small parts. The first therefore of anything is what the state ought to guard against. In the next place, no credit ought to be given to those who endeavour to deceive the people with false pretences; for they will be [1308a] confuted by facts. The different ways in which they will attempt to do this have been already mentioned. You may often perceive both aristocracies and oligarchies continuing firm, not from the stability of their forms of government, but from the wise conduct of the magistrates, both towards those who have a part in the management of public affairs, and those also who have not: towards those who have not, by never injuring them; and also introducing those who are of most consequence amongst them into office; nor

disgracing those who are desirous of honour; or encroaching on the property of individuals; towards those who have, by behaving to each other upon an equality; for that equality which the favourers of a democracy desire to have established in the state is not only just, but convenient also, amongst those who are of the same rank: for which reason, if the administration is in the hands of many, those rules which are established in democracies will be very useful; as to let no one continue in office longer than six months: that all those who are of the same rank may have their turn; for between these there is a sort of democracy: for which reason demagogues are most likely to arise up amongst them, as we have already mentioned: besides, by this means both aristocracies and democracies will be the less liable to be corrupted into dynasties, because it will not be so easy for those who are magistrates for a little to do as much mischief as they could in a long time: for it is from hence that tyrannies arise in democracies and oligarchies; for either those who are most powerful in each state establish a tyranny, as the demagogues in the one, the dynasties in the other, or the chief magistrates who have been long in power. Governments are sometimes preserved not only by having the means of their corruption at a great distance, but also by its being very near them; for those who are alarmed at some impending evil keep a stricter hand over the state; for which reason it is necessary for those who have the guardianship of the constitution to be able to awaken the fears of the people, that they may preserve it, and not like a night-guard to be remiss in protecting the state, but to make the distant danger appear at hand. Great care ought also to be used to endeavour to restrain the quarrels and disputes of the nobles by laws, as well as to prevent those who are not already engaged in them from taking a part therein; for to perceive an evil at its very first approach is not the lot of every one, but of the politician. To prevent any alteration taking place in an oligarchy or free state on account of the census, if that happens to continue the same while the quantity of money is increased, it will be useful to take a general account of the whole amount of it in former times, to compare it with the present, and to do this every year in those cities where the census is yearly, [1308b] in larger communities once in three or five years; and if the whole should be found much larger or much less than it was at the time when the census was first established in the state, let there be a law either to extend or contract it, doing both these according to its increase or decrease; if it increases making the census larger, if it decreases smaller: and if this latter is not done in oligarchies and free states, you will have a dynasty arise in the one, an oligarchy in the other: if the former is not, free states will be changed into democracies, and oligarchies into free states or democracies. It is a general maxim in democracies, oligarchies, monarchies, and indeed in all governments, not to let any one acquire a rank far superior to the rest of the community, but rather to endeavour to confer moderate honours for a continuance than great ones for a short time; for these latter spoil men, for it is not every one who can bear prosperity: but if this rule is not observed, let not those honours which were conferred all at once be all at once taken away, but rather by degrees. But, above all things, let this regulation be made by the law, that no one shall have too much power, either by means of his fortune or friends; but if he has, for his excess therein, let it be contrived that he shall quit the country. Now, as many persons promote innovations, that they may enjoy their own particular manner of living, there ought to be a particular officer to inspect the manners of every one, and see that these are not contrary to the genius of the state in which he lives, whether it may be an oligarchy, a democracy, or any other form of government; and, for the same reason, those should be guarded against who are most prosperous in the city: the means of doing which is by appointing those who are otherwise to the business and the offices of the state. I mean, to oppose men of account to the common people, the poor to the rich, and to blend both these into one body, and to increase the numbers of those who are in the middle rank; and this will prevent those seditions which arise from an inequality of condition. But above all, in every state it is necessary, both by the laws and every other method possible, to prevent those who are employed by the public from being venal, and this particularly in an oligarchy; for then the people will not be so much displeased from seeing themselves excluded from a share in the government (nay, they will rather be glad to have leisure to attend their private affairs) as at suspecting that the officers of the state steal the public money, then indeed they are afflicted with double concern, both because they are deprived of the honours of the state, and pillaged by those who enjoy them. There is one method of blending together a democracy and an aristocracy, [1309a] if office brought no profit; by which means both the rich and the poor will enjoy what they desire; for to admit all to a share in the government is democratical; that the rich should be in office is aristocratical. This must be done by letting no public employment whatsoever be attended with any emolument; for the poor will not desire to be in office when they can get nothing by it, but had rather attend to their own affairs: but the rich will choose it, as they want nothing of the community. Thus the poor will increase their fortunes by being wholly employed in their own concerns; and the principal part of the people will not be governed by the lower sort. To prevent the exchequer from being defrauded, let all public money be delivered out openly in the face of the whole city, and let copies of the accounts be deposited in the different wards tribes, and divisions. But, as the magistrates are to execute their offices without any advantages, the law ought to provide proper honours for those who execute them well. In democracies also it is necessary that the rich should be protected, by not permitting their lands to be divided, nor even the produce of them, which in some states is done unperceivably. It would be also better if the people would prevent them when they offer to exhibit a number of unnecessary and yet expensive public entertainments of plays, music, processions, and the like. In an oligarchy it is necessary to

take great care of the poor, and allot them public employments which are gainful; and, if any of the rich insult them, to let their punishment be severer than if they insulted one of their own rank; and to let estates pass by affinity, and not gift: nor to permit any person to have more than one; for by this means property will be more equally divided, and the greater part of the poor get into better circumstances. It is also serviceable in a democracy and an oligarchy to allot those who take no part in public affairs an equality or a preference in other things; the rich in a democracy, to the poor in an oligarchy: but still all the principal offices in the state to be filled only by those who are best qualified to discharge them.

CHAPTER IX

There are three qualifications necessary for those who fill the first departments in government; first of all, an affection for the established constitution; second place, abilities every way completely equal to the business of their office; in the third, virtue and justice correspondent to the nature of that particular state they are placed in; for if justice is not the same in all states, it is evident that there must be different species thereof. There may be some doubt, when all these qualifications do not in the same persons, in what manner the choice shall be made; as for instance, suppose that one person is an accomplished general, but a bad man and no friend to the [1309b] constitution; another is just and a friend to it, which shall one prefer? we should then consider of two qualities, which of them the generality possess in a greater degree, which in a less; for which reason in the choice of a general we should regard his courage more than his virtue as the more uncommon quality; as there are fewer capable of conducting an army than there are good men: but, to protect the state or manage the finances, the contrary rule should be followed; for these require greater virtue than the generality are possessed of, but only that knowledge which is common to all. It may be asked, if a man has abilities equal to his appointment in the state, and is affectionate to the constitution, what occasion is there for being virtuous, since these two things alone are sufficient to enable him to be useful to the public? it is, because those who possess those qualities are often deficient in prudence; for, as they often neglect their own affairs, though they know them and love themselves, so nothing will prevent their serving the public in the same manner. In short, whatsoever the laws contain which we allow to be useful to the state contributes to its preservation: but its first and principal support is (as has been often insisted upon) to have the number of those who desire to preserve it greater than those who wish to destroy it. Above all things that ought not to be forgotten which many governments now corrupted neglect; namely, to preserve a mean. For many things seemingly favourable to a democracy destroy a democracy, and many things seemingly favourable to an oligarchy destroy an oligarchy. Those who think this the only virtue extend it to excess, not considering that as a nose which varies a little from perfect straightness, either towards a hook nose or a flat one, may yet be beautiful and agreeable to look at; but if this particularity is extended beyond measure, first of all the properties of the part is lost, but at last it can hardly be admitted to be a nose at all, on account of the excess of the rise or sinking: thus it is with other parts of the human body; so also the same thing is true with respect to states; for both an oligarchy and a democracy may something vary from their most perfect form and yet be well constituted; but if any one endeavours to extend either of them too far, at first he will make the government the worse for it, but at last there will be no government at all remaining. The lawgiver and the politician therefore should know well what preserves and what destroys a democracy or an oligarchy, for neither the one nor the other can possibly continue without rich and poor: but that whenever an entire equality of circumstances [1310a] prevails, the state must necessarily become of another form; so that those who destroy these laws, which authorise an inequality in property, destroy the government. It is also an error in democracies for the demagogues to endeavour to make the common people superior to the laws; and thus by setting them at variance with the rich, dividing one city into two; whereas they ought rather to speak in favour of the rich. In oligarchies, on the contrary, it is wrong to support those who are in administration against the people. The oaths also which they take in an oligarchy ought to be contrary to what they now are; for, at present, in some places they swear, "I will be adverse to the common people, and contrive all I can against them;" whereas they ought rather to suppose and pretend the contrary; expressing in their oaths, that they will not injure the people. But of all things which I have mentioned, that which contributes most to preserve the state is, what is now most despised, to educate your children for the state; for the most useful laws, and most approved by every statesman, will be of no service if the citizens are not accustomed to and brought up in the principles of the constitution; of a democracy, if that is by law established; of an oligarchy, if that is; for if there are bad morals in one man, there are in the city. But to educate a child fit for the state, it must not be done in the manner which would please either those who have the power in an oligarchy or those who desire a democracy, but so as they may be able to conduct either of these forms of governments. But now the children of the magistrates in an oligarchy are brought up too delicately, and the children of the poor hardy with exercise and labour; so that they are both desirous of and able to promote innovations. In democracies of the purest form they pursue a method which is contrary to their welfare; the reason of which is, that they define liberty wrong: now, there are two things which seem to be the objects of a democracy, that the people in general should possess the supreme power,

and all enjoy freedom; for that which is just seems to be equal, and what the people think equal, that is a law: now, their freedom and equality consists in every one's doing what they please: that is in such a democracy every one may live as he likes; "as his inclination guides," in the words of Euripides: but this is wrong, for no one ought to think it slavery to live in subjection to government, but protection. Thus I have mentioned the causes of corruption in different states, and the means of their preservation.

CHAPTER X

It now remains that we speak of monarchies, their causes of corruption, and means of preservation; and indeed almost the same things which have been said of other governments happen to kingdoms and tyrannies; for a kingdom partakes of an aristocracy, a tyranny of the worst species of an oligarchy and democracy; for which reason it is the worst that man can submit to, as being composed of two, both of which are bad, and collectively retains all the corruptions and all the defects of both these states. These two species of monarchies arise from principles contrary to each other: a kingdom is formed to protect the better sort of people against the multitude, and kings are appointed out of those, who are chosen either for their superior virtue and actions flowing from virtuous principles, or else from their noble descent; but a tyrant is chosen out of the meanest populace; an enemy to the better sort, that the common people may not be oppressed by them. That this is true experience convinces us; for the generality of tyrants were indeed mere demagogues, who gained credit with the people by oppressing the nobles. Some tyrannies were established in this manner after the cities were considerably enlarged--others before that time, by kings who exceeded the power which their country allowed them, from a desire of governing despotically: others were founded by those who were elected to the superior offices in the state; for formerly the people appointed officers for life, who came to be at the head of civil and religious affairs, and these chose one out of their body in whom the supreme power over all the magistrates was placed. By all these means it was easy to establish a tyranny, if they chose it; for their power was ready at hand, either by their being kings, or else by enjoying the honours of the state; thus Phidon at Argos and other tyrants enjoyed originally the kingly power; Phalaris and others in Ionia, the honours of the state. Pansetius at Leontium, Cypselus at Corinth, Pisistratus at Athens, Dionysius at Syracuse, and others, acquired theirs by having been demagogues. A kingdom, as we have said, partakes much of the nature of an aristocracy, and is bestowed according to worth, as either virtue, family, beneficent actions, or these joined with power; for those who have been benefactors to cities and states, or have it in their powers to be so, have acquired this honour, and those who have prevented a people from falling into slavery by war, as Codrus, or those who have freed them from it, as Cyrus, or the founders of cities, or settlers of colonies, as the kings of Sparta, Macedon, and Molossus. A king desires to be the guardian of his people, that those who have property may be secure in the possession of it, and that the people in general meet with no injury; but a tyrant, as has been often said, has no regard to the common good, except for his own advantage; his only object is pleasure, but a king's is virtue: what a tyrant therefore is ambitious of engrossing is wealth, but a king rather honour. The guards too of a king are citizens, a tyrant's foreigners.

That a tyranny contains all that is bad both in a democracy and an oligarchy is evident; with an oligarchy it has for its end gain, as the only means of providing the tyrant with guards and the luxuries of life; like that it places no confidence in the people; and therefore deprives them of the use of arms: it is also common to them both to persecute the populace, to drive them out of the city and their own habitations. With a democracy it quarrels with the nobles, and destroys them both publicly and privately, or drives them into banishment, as rivals and an impediment to the government; hence naturally arise conspiracies both amongst those who desire to govern and those who desire not to be slaves; hence arose Periander's advice to Thrasybulus to take off the tallest stalks, hinting thereby, that it was necessary to make away with the eminent citizens. We ought then in reason, as has been already said, to account for the changes which arise in a monarchy from the same causes which produce them in other states: for, through injustice received, fear, and contempt, many of those who are under a monarchical government conspire against it; but of all species of injustice, injurious contempt has most influence on them for that purpose: sometimes it is owing to their being deprived of their private fortunes. The dissolution too of a kingdom and a tyranny are generally the same; for monarchs abound in wealth and honour, which all are desirous to obtain. Of plots: some aim at the life of those who govern, others at their government; the first arises from hatred to their persons; which hatred may be owing to many causes, either of which will be sufficient to excite their anger, and the generality of those who are under the influence of that passion will join in a conspiracy, not for the sake of their own advancement, but for revenge. Thus the plot against the children of Pisistratus arose from their injurious treatment of Harmodius's sister, and insulting him also; for Harmodius resenting the injury done to his sister, and Aristogiton the injury done to Harmodius. Periander the tyrant of Ambracia also lost his life by a conspiracy, for some improper liberties he took with a boy in his cups: and Philip was slain by Pausanias for neglecting to revenge him of the affront he had received from Attains; as was Amintas the Little by Darda, for insulting him on account of his age; and the eunuch by Evagoras the Cyprian in revenge for having taken his son's wife away from him....

Many also who have had their bodies scourged with stripes have, through resentment, either killed those who caused them to be inflicted or conspired against them, even when they had kingly power, as at Mitylene Megacles, joining with his friends, killed the Penthelidee, who used to go about striking those they met with clubs. Thus, in later times, Smendes killed Penthilus for whipping him and dragging him away from his wife. Decamnichus also was the chief cause of the conspiracy against Archelaus, for he urged others on: the occasion of his resentment was his having delivered him to Euripides the poet to be scourged; for Euripides was greatly offended with him for having said something of the foulness of his breath. And many others have been killed or conspired against on the same account. Fear too is a cause which produces the same effects, as well in monarchies as in other states: thus Artabanes conspired against Xerxes through fear of punishment for having hanged Darius according to his orders, whom he supposed he intended to pardon, as the order was given at supper-time. Some kings also have been [1312a] dethroned and killed in consequence of the contempt they were held in by the people; as some one conspired against Sardanapalus, having seen him spinning with his wife, if what is related of him is true, or if not of him, it may very probably be true of some one else. Dion also conspired against Dionysius the Younger, seeing his subjects desirous of a conspiracy, and that he himself was always drunk: and even a man's friends will do this if they despise him; for from the confidence he places in them, they think that they shall not be found out. Those also who think they shall gain his throne will conspire against a king through contempt; for as they are powerful themselves, and despise the danger, on account of their own strength, they will readily attempt it. Thus a general at the head of his army will endeavour to dethrone the monarch, as Cyrus did Astyages, despising both his manner of life and his forces; his forces for want of action, his life for its effeminacy: thus Suthes, the Thracian, who was general to Amadocus, conspired against him. Sometimes more than one of these causes will excite men to enter into conspiracies, as contempt and desire of gain; as in the instance of Mithridates against Ariobarzanes. Those also who are of a bold disposition, and have gained military honours amongst kings, will of all others be most like to engage in sedition; for strength and courage united inspire great bravery: whenever, therefore, these join in one person, he will be very ready for conspiracies, as he will easily conquer. Those who conspire against a tyrant through love of glory and honour have a different motive in view from what I have already mentioned; for, like all others who embrace danger, they have only glory and honour in view, and think, not as some do, of the wealth and pomp they may acquire, but engage in this as they would in any other noble action, that they may be illustrious and distinguished, and destroy a tyrant, not to succeed in his tyranny, but to acquire renown. No doubt but the number of those who act upon this principle is small, for we must suppose they regard their own safety as nothing in case they should not succeed, and must embrace the opinion of Dion (which few can do) when he made war upon Dionysius with a very few troops; for he said, that let the advantage he made be ever so little it would satisfy him to have gained it; and that, should it be his lot to die the moment he had gained footing in his country, he should think his death sufficiently glorious. A tyranny also is exposed to the same destruction as all other states are, from too powerful neighbours: for it is evident, that an opposition of principles will make them desirous of subverting it; and what they desire, all who can, do: and there is a principle of opposition in one state to another, as a democracy against a tyranny, as says Hesiod, "a potter against a potter;" for the extreme of a democracy is a tyranny; a kingly power against an aristocracy, from their different forms of government--for which reason the Lacedaemonians destroyed many tyrannies; as did the Syracusians during the prosperity of their state. Nor are they only destroyed from without, but also from within, when those who have no share in the power bring about a revolution, as happened to Gelon, and lately to Dionysius; to the first, by means of Thrasybulus, the brother of Hiero, who nattered Gelon's son, and induced him to lead a life of pleasure, that he himself might govern; but the family joined together and endeavoured to support the tyranny and expel Thrasybulus; but those whom they made of their party seized the opportunity and expelled the whole family. Dion made war against his relation Dionysius, and being assisted by the people, first expelled and then killed him. As there are two causes which chiefly induce men to conspire against tyrants, hatred and contempt, one of these, namely hatred, seems inseparable from them. Contempt also is often the cause of their destruction: for though, for instance, those who raised themselves to the supreme power generally preserved it; but those who received it from them have, to speak truth, almost immediately all of them lost it; for, falling into an effeminate way of life, they soon grew despicable, and generally fell victims to conspiracies. Part of their hatred may be very fitly ascribed to anger; for in some cases this is their motive to action: for it is often a cause which impels them to act more powerfully than hatred, and they proceed with greater obstinacy against those whom they attack, as this passion is not under the direction of reason. Many persons also indulge this passion through contempt; which occasioned the fall of the Pisistratidae and many others. But hatred is more powerful than anger; for anger is accompanied with grief, which prevents the entrance of reason; but hatred is free from it. In short, whatever causes may be assigned as the destruction of a pure oligarchy unmixed with any other government and an extreme democracy, the same may be applied to a tyranny; for these are divided tyrannies.

Kingdoms are seldom destroyed by any outward attack; for which reason they are generally very stable; but they have many causes of subversion within; of which two are the principal; one is when those who are in power [1313a] excite a sedition, the other when they endeavour to establish a tyranny by assuming greater power than the law gives them. A kingdom, indeed, is not what we ever see erected in our times, but rather monarchies and tyrannies; for a kingly government is one that is voluntarily submitted to, and its supreme power admitted upon great occasions: but where many are equal, and there are none in any respect so much better than another as to be qualified for the greatness and dignity of government over them, then these equals will not willingly submit to be commanded; but if any one assumes the government, either by force or fraud, this is a tyranny. To what we have already said we shall add, the causes of revolutions in an hereditary kingdom. One of these is, that many of those who enjoy it are naturally proper objects of contempt only: another is, that they are insolent while their power is not despotic; but they possess kingly honours only. Such a state is soon destroyed; for a king exists but while the people are willing to obey, as their submission to him is voluntary, but to a tyrant involuntary. These and such-like are the causes of the destruction of monarchies.

CHAPTER XI

Monarchies, in a word, are preserved by means contrary to what I have already mentioned as the cause of their destruction; but to speak to each separately: the stability of a kingdom will depend upon the power of the king's being kept within moderate bounds; for by how much the less extensive his power is, by so much the longer will his government continue; for he will be less despotic and more upon an equality of condition with those he governs; who, on that account, will envy him the less.

It was on this account that the kingdom of the Molossi continued so long; and the Lacedaemonians from their government's being from the beginning divided into two parts, and also by the moderation introduced into the other parts of it by Theopompus, and his establishment of the ephori; for by taking something from the power he increased the duration of the kingdom, so that in some measure he made it not less, but bigger; as they say he replied to his wife, who asked him if he was not ashamed to deliver down his kingdom to his children reduced from what he received it from his ancestors? No, says he, I give it him more lasting. Tyrannies are preserved two ways most opposite to each other, one of which is when the power is delegated from one to the other, and in this manner many tyrants govern in their states. Report says that Periander founded many of these. There are also many of them to be met with amongst the Persians. What has been already mentioned is as conducive as anything can be to preserve a tyranny; namely, to keep down those who are of an aspiring disposition, to take off those who will not submit, to allow no public meals, no clubs, no education, nothing at all, but to guard against everything that gives rise to high spirits or mutual confidence; nor to suffer the learned meetings of those who are at leisure to hold conversation with each other; and to endeavour by every means possible to keep all the people strangers to each other; for knowledge increases mutual confidence; and to oblige all strangers to appear in public, and to live near the city-gate, that all their actions may be sufficiently seen; for those who are kept like slaves seldom entertain any noble thoughts: in short, to imitate everything which the Persians and barbarians do, for they all contribute to support slavery; and to endeavour to know what every one who is under their power does and says; and for this purpose to employ spies: such were those women whom the Syracusians called potagogides Hiero also used to send out listeners wherever there was any meeting or conversation; for the people dare not speak with freedom for fear of such persons; and if any one does, there is the less chance of its being concealed; and to endeavour that the whole community should mutually accuse and come to blows with each other, friend with friend, the commons with the nobles, and the rich with each other. It is also advantageous for a tyranny that all those who are under it should be oppressed with poverty, that they may not be able to compose a guard; and that, being employed in procuring their daily bread, they may have no leisure to conspire against their tyrants. The Pyramids of Egypt are a proof of this, and the votive edifices of the Cyposelidse, and the temple of Jupiter Olympus, built by the Pisistratidae, and the works of Polycrates at Samos; for all these produced one end, the keeping the people poor. It is necessary also to multiply taxes, as at Syracuse; where Dionysius in the space of five years collected all the private property of his subjects into his own coffers. A tyrant also should endeavour to engage his subjects in a war, that they may have employment and continually depend upon their general. A king is preserved by his friends, but a tyrant is of all persons the man who can place no confidence in friends, as every one has it in his desire and these chiefly in their power to destroy him. All these things also which are done in an extreme democracy should be done in a tyranny, as permitting great licentiousness to the women in the house, that they may reveal their husbands' secrets; and showing great indulgence to slaves also for the same reason; for slaves and women conspire not against tyrants: but when they are treated with kindness, both of them are abettors of tyrants, and extreme democracies also; and the people too in such a state desire to be despotic. For which reason flatterers are in repute in both these: the demagogue in the democracy, for he is the proper flatterer of the people; among tyrants, he who will servilely adapt himself to their humours; for this is the business of [1314a] flatterers. And for this reason tyrants always love the worst of wretches, for they rejoice in being flattered, which no man of a liberal

spirit will submit to; for they love the virtuous, but flatter none. Bad men too are fit for bad purposes; "like to like," as the proverb says. A tyrant also should show no favour to a man of worth or a freeman; for he should think, that no one deserved to be thought these but himself; for he who supports his dignity, and is a friend to freedom, encroaches upon the superiority and the despotism of the tyrant: such men, therefore, they naturally hate, as destructive to their government. A tyrant also should rather admit strangers to his table and familiarity than citizens, as these are his enemies, but the others have no design against him. These and such-like are the supports of a tyranny, for it comprehends whatsoever is wicked. But all these things may be comprehended in three divisions, for there are three objects which a tyranny has in view; one of which is, that the citizens should be of poor abject dispositions; for such men never propose to conspire against any one. The second is, that they should have no confidence in each other; for while they have not this, the tyrant is safe enough from destruction. For which reason they are always at enmity with those of merit, as hurtful to their government; not only as they scorn to be governed despotically, but also because they can rely upon each other's fidelity, and others can rely upon theirs, and because they will not inform against their associates, nor any one else. The third is, that they shall be totally without the means of doing anything; for no one undertakes what is impossible for him to perform: so that without power a tyranny can never be destroyed. These, then, are the three objects which the inclinations of tyrants desire to see accomplished; for all their tyrannical plans tend to promote one of these three ends, that their people may neither have mutual confidence, power, nor spirit. This, then, is one of the two methods of preserving tyrannies: the other proceeds in a way quite contrary to what has been already described, and which may be discerned from considering to what the destruction of a kingdom is owing; for as one cause of that is, making the government approach near to a tyranny, so the safety of a tyranny consists in making the government nearly kingly; preserving only one thing, namely power, that not only the willing, but the unwilling also, must be obliged to submit; for if this is once lost, the tyranny is at an end. This, then, as the foundation, must be preserved: in other particulars carefully do and affect to seem like a king; first, appear to pay a great attention [1314b] to what belongs to the public; nor make such profuse presents as will offend the people; while they are to supply the money out of the hard labour of their own hands, and see it given in profusion to mistresses, foreigners, and fiddlers; keeping an exact account both of what you receive and pay; which is a practice some tyrants do actually follow, by which means they seem rather fathers of families than tyrants: nor need you ever fear the want of money while you have the supreme power of the state in your own hands. It is also much better for those tyrants who quit their kingdom to do this than to leave behind them money they have hoarded up; for their regents will be much less desirous of making innovations, and they are more to be dreaded by absent tyrants than the citizens; for such of them as he suspects he takes with him, but these regents must be left behind. He should also endeavour to appear to collect such taxes and require such services as the exigencies of the state demand, that whenever they are wanted they may be ready in time of war; and particularly to take care that he appear to collect and keep them not as his own property, but the public's. His appearance also should not be severe, but respectable, so that he should inspire those who approach him with veneration and not fear; but this will not be easily accomplished if he is despised. If, therefore, he will not take the pains to acquire any other, he ought to endeavour to be a man of political abilities, and to fix that opinion of himself in the judgment of his subjects. He should also take care not to appear to be guilty of the least offence against modesty, nor to suffer it in those under him: nor to permit the women of his family to treat others haughtily; for the haughtiness of women has been the ruin of many tyrants. With respect to the pleasures of sense, he ought to do directly contrary to the practice of some tyrants at present; for they do not only continually indulge themselves in them for many days together, but they seem also to desire to have other witnesses of it, that they may wonder at their happiness; whereas he ought really to be moderate in these, and, if not, to appear to others to avoid them-for it is not the sober man who is exposed either to plots or contempt, but the drunkard; not the early riser, but the sluggard. His conduct in general should also be contrary to what is reported of former tyrants; for he ought to improve and adorn his city, so as to seem a guardian and not a tyrant; and, moreover., always to [1315a] seem particularly attentive to the worship of the gods; for from persons of such a character men entertain less fears of suffering anything illegal while they suppose that he who governs them is religious and reverences the gods; and they will be less inclined to raise insinuations against such a one, as being peculiarly under their protection: but this must be so done as to give no occasion for any suspicion of hypocrisy. He should also take care to show such respect to men of merit in every particular, that they should not think they could be treated with greater distinction by their fellow-citizens in a free state. He should also let all honours flow immediately from himself, but every censure from his subordinate officers and judges. It is also a common protection of all monarchies not to make one person too great, or, certainly, not many; for they will support each other: but, if it is necessary to entrust any large powers to one person, to take care that it is not one of an ardent spirit; for this disposition is upon every opportunity most ready for a revolution: and, if it should seem necessary to deprive any one of his power, to do it by degrees, and not reduce him all at once. It is also necessary to abstain from all kinds of insolence; more particularly from corporal punishment; which you must be most cautious never to exercise over those who have a delicate sense of honour; for, as those who love money are touched to the quick when anything affects their property, so are men of honour and principle when they receive

any disgrace: therefore, either never employ personal punishment, or, if you do, let it be only in the manner in which a father would correct his son, and not with contempt; and, upon the whole, make amends for any seeming disgrace by bestowing greater honours. But of all persons who are most likely to entertain designs against the person of a tyrant, those are chiefly to be feared and guarded against who regard as nothing the loss of their own lives, so that they can but accomplish their purpose: be very careful therefore of those who either think themselves affronted, or those who are dear to them; for those who are excited by anger to revenge regard as nothing their own persons: for, as Heraclitus says, it is dangerous to fight with an angry man who will purchase with his life the thing he aims at. As all cities are composed of two sorts of persons, the rich and the poor, it is necessary that both these should find equal protection from him who governs them, and that the one party should not have it in their power to injure the other; but that the tyrant should attach to himself that party which is the most powerful; which, if he does, he will have no occasion either to make his slaves free, or to deprive citizens of their arms; for the strength of either of the parties added to his own forces will render him superior to any conspiracy. It would be superfluous to go through all particulars; for the rule of conduct which the tyrant ought to pursue is evident enough, and that is, to affect to appear not the tyrant, but the king; the guardian of those he governs, not their plunderer, [1315b] but their protector, and to affect the middle rank in life, not one superior to all others: he should, therefore, associate his nobles with him and soothe his people; for his government will not only be necessarily more honourable and worthy of imitation, as it will be over men of worth, and not abject wretches who perpetually both hate and fear him; but it will be also more durable. Let him also frame his life so that his manners may be consentaneous to virtue, or at least let half of them be so, that he may not be altogether wicked, but only so in part.

CHAPTER XII

Indeed an oligarchy and a tyranny are of all governments of the shortest duration. The tyranny of Orthagoras and his family at Sicyon, it is true, continued longer than any other: the reason for which was, that they used their power with moderation, and were in many particulars obedient to the laws; and, as Clisthenes was an able general, he never fell into contempt, and by the care he took that in many particulars his government should be popular. He is reported also to have presented a person with a crown who adjudged the victory to another; and some say that it is the statue of that judge which is placed in the forum.

They say also, that Pisistratus submitted to be summoned into the court of the Areopagites. The second that we shall mention is the tyranny of the Cypselidse, at Corinth, which continued seventy-seven years and six months; for Cypselus was tyrant there thirty years, Periander forty-four, and Psammetichus, the son of Georgias, three years; the reason for which was, that Cypselus was a popular man, and governed without guards. Periander indeed ruled like a tyrant, but then he was an able general. The third was that of the Pisistradidae at Athens; but it was not continual: for Pisistratus himself was twice expelled; so that out of thirty-three years he was only fifteen in power, and his son eighteen; so that the whole time was thirty-three years. Of the rest we shall mention that of Hiero, and Gelo at Syracuse; and this did not continue long, for both their reigns were only eighteen years; for Gelo died in the eighth year of his tyranny, and Hiero in his tenth. Thrasybulus fell in his eleventh month, and many other tyrannies have continued a very short time. We have now gone through the general cases of corruption and [1316a] means of preservation both in free states and monarchies. In Plato's Republic, Socrates is introduced treating upon the changes which different governments are liable to: but his discourse is faulty; for he does not particularly mention what changes the best and first governments are liable to; for he only assigns the general cause, of nothing being immutable, but that in time everything will alter [***tr.: text is unintelligible here***] he conceives that nature will then produce bad men, who will not submit to education, and in this, probably, he is not wrong; for it is certain that there are some persons whom it is impossible by any education to make good men; but why should this change be more peculiar to what he calls the best-formed government, than to all other forms, and indeed to all other things that exist? and in respect to his assigned time, as the cause of the alteration of all things, we find that those which did not begin to exist at the same time cease to be at the same time; so that, if anything came into beginning the day before the solstice, it must alter at the same time. Besides, why should such a form of government be changed into the Lacedaemonian? for, in general, when governments alter, they alter into the contrary species to what they before were, and not into one like their former. And this reasoning holds true of other changes; for he says, that from the Lacedaemonian form it changes into an oligarchy, and from thence into a democracy, and from a democracy into a tyranny: and sometimes a contrary change takes place, as from a democracy into an oligarchy, rather than into a monarchy. With respect to a tyranny he neither says whether there will be any change in it; or if not, to what cause it will be owing; or if there is, into what other state it will alter: but the reason of this is, that a tyranny is an indeterminate government; and, according to him, every state ought to alter into the first, and most perfect, thus the continuity and circle would be preserved. But one tyranny often changed into another; as at Syria, from Myron's to Clisthenes'; or into an oligarchy, as was Antileo's at Chalcas; or into a democracy, as was Gelo's at Syracuse; or into an aristocracy, as was

Charilaus's at Lacedaemon, and at Carthage. An oligarchy is also changed into a tyranny; such was the rise of most of the ancient tyrannies in Sicily; at Leontini, into the tyranny of Panaetius; at Gela, into that of Cleander; at Rhegium into that of Anaxilaus; and the like in many other cities. It is absurd also to suppose, that a state is changed into an oligarchy because those who are in power are avaricious and greedy of money, and not because those who are by far richer than their fellow citizens think it unfair that those who have nothing should have an equal share in the rule of the state with themselves, who possess so much-for in many oligarchies it is not allowable to be employed in money-getting, and there are many laws to prevent it. But in Carthage, which is a democracy, money-getting is creditable, and yet their form of government remains unaltered. It is also absurd to say, that in an oligarchy there are two cities, one of the poor and another of the rich; for why should this happen to them more than to the Lacedaemonians, or any other state where all possess not equal property, or where all are not equally good? for though no one member of the community should be poorer than he was before, yet a democracy might nevertheless change into an oligarchy; if the rich should be more powerful than the poor, and the one too negligent, and the other attentive: and though these changes are owing to many causes, yet he mentions but one only, that the citizens become poor by luxury, and paying interest-money; as if at first they were all rich, or the greater part of them: but this is not so, but when some of those who have the principal management of public affairs lose their fortunes, they will endeavour to bring about a revolution; but when others do, nothing of consequence will follow, nor when such states do alter is there any more reason for their altering into a democracy than any other. Besides, though some of the members of the community may not have spent their fortunes, yet if they share not in the honours of the state, or if they are ill-used and insulted, they will endeavour to raise seditions, and bring about a revolution, that they may be allowed to do as they like; which, Plato says, arises from too much liberty. Although there are many oligarchies and democracies, yet Socrates, when he is treating of the changes they may undergo, speaks of them as if there was but one of each sort.

BOOK VI

CHAPTER I

We have already shown what is the nature of the supreme council in the state, and wherein one may differ from another, and how the different magistrates should be regulated; and also the judicial department, and what is best suited to what state; and also to what causes both the destruction and preservation of governments are owing.

As there are very many species of democracies, as well as of other states, it will not be amiss to consider at the same time anything which we may have omitted to mention concerning either of them, and to allot to each that mode of conduct which is peculiar to and advantageous for them; and also to inquire into the combinations of all these different modes of government which we [1317a] have mentioned; for as these are blended together the government is altered, as from an aristocracy to be an oligarchy, and from a free state to be a democracy. Now, I mean by those combinations of government (which I ought to examine into, but have not yet done), namely, whether the deliberative department and the election of magistrates is regulated in a manner correspondent to an oligarchy, or the judicial to an aristocracy, or the deliberative part only to an oligarchy, and the election of magistrates to an aristocracy, or whether, in any other manner, everything is not regulated according to the nature of the government. But we will first consider what particular sort of democracy is fitted to a particular city, and also what particular oligarchy to a particular people; and of other states, what is advantageous to what. It is also necessary to show clearly, not only which of these governments is best for a state, but also how it ought to be established there, and other things we will treat of briefly.

And first, we will speak of a democracy; and this will at the same time show clearly the nature of its opposite which some persons call an oligarchy; and in doing this we must examine into all the parts of a democracy, and everything that is connected therewith; for from the manner in which these are compounded together different species of democracies arise: and hence it is that they are more than one, and of various natures. Now, there are two causes which occasion there being so many democracies; one of which is that which we have already mentioned; namely, there being different sorts of people; for in one country the majority are husbandmen, in another mechanics, and hired servants; if the first of these is added to the second, and the third to both of them, the democracy will not only differ in the particular of better or worse, but in this, that it will be no longer the same government; the other is that which we will now speak of. The different things which are connected with democracies and seem to make part of these states, do, from their being joined to them, render them different from others: this attending a few, that more, and another all. It is necessary that he who would found any state which he may happen to approve of, or correct one, should be acquainted with all these particulars. All founders of states endeavour to comprehend within their own plan everything of nearly the same kind with it; but in doing this they err, in the manner I have already described in treating of the preservation and destruction of governments. I

will now speak of these first principles and manners, and whatever else a democratical state requires.

CHAPTER II

Now the foundation of a democratical state is liberty, and people have been accustomed to say this as if here only liberty was to be found; for they affirm that this is the end proposed by every democracy. But one part of liberty is to govern and be governed alternately; for, according to democratical justice, equality is measured by numbers, and not by worth: and this being just, it is necessary that the supreme power should be vested in the people at large; and that what the majority determine should be final: so that in a democracy the poor ought to have more power than the rich, as being the greater number; for this is one mark of liberty which all framers of a democracy lay down as a criterion of that state; another is, to live as every one likes; for this, they say, is a right which liberty gives, since he is a slave who must live as he likes not. This, then, is another criterion of a democracy. Hence arises the claim to be under no command whatsoever to any one, upon any account, any otherwise than by rotation, and that just as far only as that person is, in his turn, under his also. This also is conducive to that equality which liberty demands. These things being premised, and such being the government, it follows that such rules as the following should be observed in it, that all the magistrates should be chosen out of all the people, and all to command each, and each in his turn all: that all the magistrates should be chosen by lot, except to those offices only which required some particular knowledge and skill: that no census, or a very small one, should be required to qualify a man for any office: that none should be in the same employment twice, or very few, and very seldom, except in the army: that all their appointments should be limited to a very short time, or at least as many as possible: that the whole community should be qualified to judge in all causes whatsoever, let the object be ever so extensive, ever so interesting, or of ever so high a nature; as at Athens, where the people at large judge the magistrates when they come out of office, and decide concerning public affairs as well as private contracts: that the supreme power should be in the public assembly; and that no magistrate should be allowed any discretionary power but in a few instances, and of no consequence to public business. Of all magistrates a senate is best suited to a democracy, where the whole community is not paid for giving their attendance; for in that case it loses its power; for then the people will bring all causes before them, by appeal, as we have already mentioned in a former book. In the next place, there should, if possible, be a fund to pay all the citizens--who have any share in the management of public affairs, either as members of the assembly, judges, and magistrates; but if this cannot be done, at least the magistrates, the judges the senators, and members of the supreme assembly, and also those officers who are obliged to eat at a common table ought to be paid. Moreover, as an oligarchy is said to be a government of men of family, fortune, and education; so, on the contrary, a democracy is a government in the hands of men of no birth, indigent circumstances, and mechanical employments. In this state also no office [1318a] should be for life; and, if any such should remain after the government has been long changed into a democracy, they should endeavour by degrees to diminish the power; and also elect by lot instead of vote. These things, then, appertain to all democracies; namely, to be established on that principle of justice which is homogeneous to those governments; that is, that all the members of the state, by number, should enjoy an equality, which seems chiefly to constitute a democracy, or government of the people: for it seems perfectly equal that the rich should have no more share in the government than the poor, nor be alone in power; but that all should be equal, according to number; for thus, they think, the equality and liberty of the state best preserved.

CHAPTER III

In the next place we must inquire how this equality is to be procured. Shall the qualifications be divided so that five hundred rich should be equal to a thousand poor, or shall the thousand have equal power with the five hundred? or shall we not establish our equality in this manner? but divide indeed thus, and afterwards taking an equal number both out of the five hundred and the thousand, invest them with the power of creating the magistrates and judges. Is this state then established according to perfect democratical justice, or rather that which is guided by numbers only? For the defenders of a democracy say, that that is just which the majority approve of: but the favourers of an oligarchy say, that that is just which those who have most approve of; and that we ought to be directed by the value of property. Both the propositions are unjust; for if we agree with what the few propose we erect a tyranny: for if it should happen that an individual should have more than the rest who are rich, according to oligarchical justice, this man alone has a right to the supreme power; but if superiority of numbers is to prevail, injustice will then be done by confiscating the property of the rich, who are few, as we have already said. What then that equality is, which both parties will admit, must be collected from the definition of right which is common to them both; for they both say that what the majority of the state approves of ought to be established. Be it so; but not entirely: but since a city happens to be made up of two different ranks of people, the rich and the poor, let that be established which is approved of by both these, or the greater part: but should there be opposite

sentiments, let that be established which shall be approved of by the greater part: but let this be according to the census; for instance, if there should be ten of the rich and twenty of the poor, and six of the first and fifteen of the last should agree upon any measure, and the remaining four of the rich should join with the remaining five of the poor in opposing it, that party whose census when added together should determine which opinion should be law, and should these happen to be equal, it should be regarded as a case similar to an assembly or court of justice dividing equally upon any question that comes before them, who either determine it by lot or some such method. But although, with [1318b] respect to what is equal and just, it may be very difficult to establish the truth, yet it is much easier to do than to persuade those who have it in their power to encroach upon others to be guided thereby; for the weak always desire what is equal and just, but the powerful pay no regard thereunto.

CHAPTER IV

There are four kinds of democracies. The best is that which is composed of those first in order, as we have already said, and this also is the most ancient of any. I call that the first which every one would place so, was he to divide the people; for the best part of these are the husbandmen. We see, then, that a democracy may be framed where the majority live by tillage or pasturage; for, as their property is but small, they will not be at leisure perpetually to hold public assemblies, but will be continually employed in following their own business, not having otherwise the means of living; nor will they be desirous of what another enjoys, but will rather like to follow their own business than meddle with state affairs and accept the offices of government, which will be attended with no great profit; for the major part of mankind are rather desirous of riches than honour (a proof of this is, that they submitted to the tyrannies in ancient times, and do now submit to the oligarchies, if no one hinders them in their usual occupations, or deprives them of their property; for some of them soon get rich, others are removed from poverty); besides, their having the right of election and calling their magistrates to account for their conduct when they come out of office, will satisfy their desire of honours, if any of them entertain that passion: for in some states, though the commonalty have not the right of electing the magistrates, yet it is vested in part of that body chosen to represent them: and it is sufficient for the people at large to possess the deliberative power: and this ought to be considered as a species of democracy; such was that formerly at Mantinsea: for which reason it is proper for the democracy we have been now treating of to have a power (and it has been usual for them to have it) of censuring their magistrates when out of office, and sitting in judgment upon all causes: but that the chief magistrates should be elected, and according to a certain census, which should vary with the rank of their office, or else not by a census, but according to their abilities for their respective appointments. A state thus constituted must be well constituted; for the magistracies will be always filled with the best men with the approbation of the people; who will not envy their superiors: and these and the nobles should be content with this part in the administration; for they will not be governed by their inferiors. They will be also careful to use their power with moderation, as there are others to whom full power is delegated to censure their conduct; for it is very serviceable to the state to have them dependent upon others, and not to be permitted to do whatsoever they choose; for with such a liberty there would be no check to that evil particle there is in every one: therefore it is [1319a] necessary and most for the benefit of the state that the offices thereof should be filled by the principal persons in it, whose characters are unblemished, and that the people are not oppressed. It is now evident that this is the best species of democracy, and on what account; because the people are such and have such powers as they ought to have. To establish a democracy of husbandmen some of those laws which were observed in many ancient states are universally useful; as, for instance, on no account to permit any one to possess more than a certain quantity of land, or within a certain distance from the city. Formerly also, in some states, no one was allowed to sell their original lot of land. They also mention a law of one Oxylus, which forbade any one to add to their patrimony by usury. We ought also to follow the law of the Aphutaeans, as useful to direct us in this particular we are now speaking of; for they having but very little ground, while they were a numerous people, and at the same time were all husbandmen, did not include all their lands within the census, but divided them in such a manner that, according to the census, the poor had more power than the rich. Next to the commonalty of husbandmen is one of shepherds and herdsmen; for they have many things in common with them, and, by their way of life, are excellently qualified to make good soldiers, stout in body, and able to continue in the open air all night. The generality of the people of whom other democracies are composed are much worse than these; for their lives are wretched nor have they any business with virtue in anything they do; these are your mechanics, your exchange-men, and hired servants; as all these sorts of men frequent the exchange and the citadel, they can readily attend the public assembly; whereas the husbandmen, being more dispersed in the country, cannot so easily meet together; nor are they equally desirous of doing it with these others! When a country happens to be so situated that a great part of the land lies at a distance from the city, there it is easy to establish a good democracy or a free state for the people in general will be obliged to live in the country; so that it will be necessary in such a democracy, though there may be an exchange-mob at hand, never to allow a legal assembly without the inhabitants of the country attend. We have shown in what

manner the first and best democracy ought to be established, and it will be equally evident as to the rest, for from these we [1319b] should proceed as a guide, and always separate the meanest of the people from the rest. But the last and worst, which gives to every citizen without distinction a share in every part of the administration, is what few citizens can bear, nor is it easy to preserve for any long time, unless well supported by laws and manners. We have already noticed almost every cause that can destroy either this or any other state. Those who have taken the lead in such a democracy have endeavoured to support it, and make the people powerful by collecting together as many persons as they could and giving them their freedom, not only legitimately but naturally born, and also if either of their parents were citizens, that is to say, if either their father or mother; and this method is better suited to this state than any other: and thus the demagogues have usually managed. They ought, however, to take care, and do this no longer than the common people are superior to the nobles and those of the middle rank, and then stop; for, if they proceed still further, they will make the state disorderly, and the nobles will ill brook the power of the common people, and be full of resentment against it; which was the cause of an insurrection at Cyrene: for a little evil is overlooked, but when it becomes a great one it strikes the eye. It is, moreover, very-useful in such a state to do as Clisthenes did at Athens, when he was desirous of increasing the power of the people, and as those did who established the democracy in Cyrene; that is, to institute many tribes and fraternities, and to make the religious rites of private persons few, and those common; and every means is to be contrived to associate and blend the people together as much as possible; and that all former customs be broken through. Moreover, whatsoever is practised in a tyranny seems adapted to a democracy of this species; as, for instance, the licentiousness of the slaves, the women, and the children; for this to a certain degree is useful in such a state; and also to overlook every one's living as they choose; for many will support such a government: for it is more agreeable to many to live without any control than as prudence would direct.

CHAPTER V

It is also the business of the legislator and all those who would support a government of this sort not to make it too great a work, or too perfect; but to aim only to render it stable: for, let a state be constituted ever so badly, there is no difficulty in its continuing a few days: they should therefore endeavour to procure its safety by all those ways which we have described in assigning the causes of the preservation and destruction of governments; avoiding what is hurtful, and by framing such laws, written and unwritten, as contain those things which chiefly tend to the preservation of the state; nor to suppose that that is useful either for a democratic or [1320a] an oligarchic form of government which contributes to make them more purely so, but what will contribute to their duration: but our demagogues at present, to flatter the people, occasion frequent confiscations in the courts; for which reason those who have the welfare of the state really at heart should act directly opposite to what they do, and enact a law to prevent forfeitures from being divided amongst the people or paid into the treasury, but to have them set apart for sacred uses: for those who are of a bad disposition would not then be the less cautious, as their punishment would be the same; and the community would not be so ready to condemn those whom they sat in judgment on when they were to get nothing by it: they should also take care that the causes which are brought before the public should be as few as possible, and punish with the utmost severity those who rashly brought an action against any one; for it is not the commons but the nobles who are generally prosecuted: for in all things the citizens of the same state ought to be affectionate to each other, at least not to treat those who have the chief power in it as their enemies. Now, as the democracies which have been lately established are very numerous, and it is difficult to get the common people to attend the public assemblies without they are paid for it, this, when there is not a sufficient public revenue, is fatal to the nobles; for the deficiencies therein must be necessarily made up by taxes, confiscations, and fines imposed by corrupt courts of justice: which things have already destroyed many democracies. Whenever, then, the revenues of the state are small, there should be but few public assemblies and but few courts of justice: these, however, should have very extensive jurisdictions, but should continue sitting a few days only, for by this means the rich would not fear the expense, although they should receive nothing for their attendance, though the poor did; and judgment also would be given much better; for the rich will not choose to be long absent from their own affairs, but will willingly be so for a short time: and, when there are sufficient revenues, a different conduct ought to be pursued from what the demagogues at present follow; for now they divide the surplus of the public money amongst the poor; these receive it and again want the same supply, while the giving it is like pouring water into a sieve: but the true patriot in a democracy ought to take care that the majority of the community are not too poor, for this is the cause of rapacity in that government; he therefore should endeavour that they may enjoy perpetual plenty; and as this also is advantageous to the rich, what can be saved out of the public money should be put by, and then divided at once amongst the poor, if possible, in such a quantity as may enable every one of them to purchase a little field, and, if that cannot be done, at least to give each of them enough to procure the implements [1320b] of trade and husbandry; and if there is not enough for all to receive so much at once, then to divide it according to tribes or any other allotment. In the meantime let the rich pay them for necessary services, but not be obliged to find them in

useless amusements. And something like this was the manner in which they managed at Carthage, and preserved the affections of the people; for by continually sending some of their community into colonies they procured plenty. It is also worthy of a sensible and generous nobility to divide the poor amongst them, and supplying them with what is necessary, induce them to work; or to imitate the conduct of the people at Tarentum: for they, permitting the poor to partake in common of everything which is needful for them, gain the affections of the commonalty. They have also two different ways of electing their magistrates; for some are chosen by vote, others by lot; by the last, that the people at large may have some share in the administration; by the former, that the state may be well governed: the same may be accomplished if of the same magistrates you choose some by vote, others by lot. And thus much for the manner in which democracies ought to be established.

CHAPTER VI

What has been already said will almost of itself sufficiently show how an oligarchy ought to be founded; for he who would frame such a state should have in his view a democracy to oppose it; for every species of oligarchy should be founded on principles diametrically opposite to some species of democracy.

The first and best-framed oligarchy is that which approaches near to what we call a free state; in which there ought to be two different census, the one high, the other low: from those who are within the latter the ordinary officers of the state ought to be chosen; from the former the supreme magistrates: nor should any one be excluded from a part of the administration who was within the census; which should be so regulated that the commonalty who are included in it should by means thereof be superior to those who have no share in the government; for those who are to have the management of public affairs ought always to be chosen out of the better sort of the people. Much in the same manner ought that oligarchy to be established which is next in order: but as to that which is most opposite to a pure democracy, and approaches nearest to a dynasty and a tyranny, as it is of all others the worst, so it requires the greatest care and caution to preserve it: for as bodies of sound and healthy constitutions and ships which are well manned and well found for sailing can bear many injuries without perishing, while a diseased body or a leaky ship with an indifferent crew cannot support the [1321a] least shock; so the worst-established governments want most looking after. A number of citizens is the preservation of a democracy; for these are opposed to those rights which are founded in rank: on the contrary, the preservation of an oligarchy depends upon the due regulation of the different orders in the society.

CHAPTER VII

As the greater part of the community are divided into four sorts of people; husbandmen, mechanics, traders, and hired servants; and as those who are employed in war may likewise be divided into four; the horsemen, the heavy-armed soldier, the light-armed, and the sailor, where the nature of the country can admit a great number of horse; there a powerful oligarchy may be easily established: for the safety of the inhabitants depends upon a force of that sort; but those who can support the expense of horsemen must be persons of some considerable fortune. Where the troops are chiefly heavy-armed, there an oligarchy, inferior in power to the other, may be established; for the heavy-armed are rather made up of men of substance than the poor: but the light-armed and the sailors always contribute to support a democracy: but where the number of these is very great and a sedition arises, the other parts of the community fight at a disadvantage; but a remedy for this evil is to be learned from skilful generals, who always mix a proper number of light-armed soldiers with their horse and heavy-armed: for it is with those that the populace get the better of the men of fortune in an insurrection; for these being lighter are easily a match for the horse and the heavy-armed: so that for an oligarchy to form a body of troops from these is to form it against itself: but as a city is composed of persons of different ages, some young and some old, the fathers should teach their sons, while they were very young, a light and easy exercise; but, when they are grown up, they should be perfect in every warlike exercise. Now, the admission of the people to any share in the government should either be (as I said before) regulated by a census, or else, as at Thebes, allowed to those who for a certain time have ceased from any mechanic employment, or as at Massalia, where they are chosen according to their worth, whether citizens or foreigners. With respect to the magistrates of the highest rank which it may be necessary to have in a state, the services they are bound to do the public should be expressly laid down, to prevent the common people from being desirous of accepting their employments, and also to induce them to regard their magistrates with favour when they know what a price they pay for their honours. It is also necessary that the magistrates, upon entering into their offices, should make magnificent sacrifices and erect some public structure, that the people partaking of the entertainment, and seeing the city ornamented with votive gifts in their temples and public structures, may see with pleasure the stability of the government: add to this also, that the nobles will have their generosity recorded: but now this is not the conduct which those who are at present at the head of an oligarchy pursue, but the

contrary; for they are not more desirous of honour than of gain; for which reason such oligarchies may more properly be called little democracies. Thus [1321b] we have explained on what principles a democracy and an oligarchy ought to be established.

CHAPTER VIII

After what has been said I proceed next to treat particularly of the magistrates; of what nature they should be, how many, and for what purpose, as I have already mentioned: for without necessary magistrates no state can exist, nor without those which contribute to its dignity and good order can exist happily: now it is necessary that in small states the magistrates should be few; in a large one, many: also to know well what offices may be joined together, and what ought to be separated. The first thing necessary is to establish proper regulators in the markets; for which purpose a certain magistrate should be appointed to inspect their contracts and preserve good order; for of necessity, in almost every city there must be both buyers and sellers to supply each other's mutual wants: and this is what is most productive of the comforts of life; for the sake of which men seem to have joined together in one community. A second care, and nearly related to the first, is to have an eye both to the public and private edifices in the city, that they may be an ornament; and also to take care of all buildings which are likely to fall: and to see that the highways are kept in proper repair; and also that the landmarks between different estates are preserved, that there may be no disputes on that account; and all other business of the same nature. Now, this business may be divided into several branches, over each of which in populous cities they appoint a separate person; one to inspect the buildings, another the fountains, another the harbours; and they are called the inspectors of the city. A third, which is very like the last, and conversant nearly about the same objects, only in the country, is to take care of what is done out of the city. The officers who have this employment we call inspectors of the lands, or inspectors of the woods; but the business of all three of them is the same. There must also be other officers appointed to receive the public revenue and to deliver it out to those who are in the different departments of the state: these are called receivers or quaestors. There must also be another, before whom all private contracts and sentences of courts should be enrolled, as well as proceedings and declarations. Sometimes this employment is divided amongst many, but there is one supreme over the rest; these are called proctors, notaries, and the like. Next to these is an officer whose business is of all others the most necessary, and yet most difficult; namely, to take care that sentence is executed upon those who are condemned; and that every one pays the fines laid on him; and also to have the charge of those who are in prison. [1322a] This office is very disagreeable on account of the odium attending it, so that no one will engage therein without it is made very profitable, or, if they do, will they be willing to execute it according to law; but it is most necessary, as it is of no service to pass judgment in any cause without that judgment is carried into execution: for without this human society could not subsist: for which reason it is best that this office should not be executed by one person, but by some of the magistrates of the other courts. In like manner, the taking care that those fines which are ordered by the judges are levied should be divided amongst different persons. And as different magistrates judge different causes, let the causes of the young be heard by the young: and as to those which are already brought to a hearing, let one person pass sentence, and another see it executed: as, for instance, let the magistrates who have the care of the public buildings execute the sentence which the inspectors of the markets have passed, and the like in other cases: for by so much the less odium attends those who carry the laws into execution, by so much the easier will they be properly put in force: therefore for the same persons to pass the sentence and to execute it will subject them to general hatred; and if they pass it upon all, they will be considered as the enemies of all. Thus one person has often the custody of the prisoner's body, while another sees the sentence against him executed, as the eleven did at Athens: for which reason it is prudent to separate these offices, and to give great attention thereunto as equally necessary with anything we have already mentioned; for it will certainly happen that men of character will decline accepting this office, and worthless persons cannot properly be entrusted with it, as having themselves rather an occasion for a guard than being qualified to guard others. This, therefore, ought by no means to be a separate office from others; nor should it be continually allotted to any individuals, but the young men; where there is a city-guard, the youths ought in turns to take these offices upon them. These, then, as the most necessary magistrates, ought to be first mentioned: next to these are others no less necessary, but of much higher rank, for they ought to be men of great skill and fidelity. These are they who have the guard of the city, and provide everything that is necessary for war; whose business it is, both in war and peace, to defend the walls and the gates, and to take care to muster and marshal the citizens. Over all these there are sometimes more officers, sometimes fewer: thus in little cities there is only one whom they call either general or polemarch; but where there are horse and light-armed troops, and bowmen, and sailors, they sometimes put distinct commanders over each of these; who again have others under them, according to their different divisions; all of which join together to make one military body: and thus much for this department. Since some of the magistrates, if not all, have business with the public money, it is necessary that there should be other officers, whose employment should be nothing else than to take an account of what they have, and correct any mismanagement therein. But besides all these magistrates there is one who is supreme

over them all, who very often has in his own power the disposal of the public revenue and taxes; who presides over the people when the supreme power is in them; for there must be some magistrate who has a power to summon them together, and to preside as head of the state. These are sometimes called preadvisers; but where there are many, more properly a council. These are nearly the civil magistrates which are requisite to a government: but there are other persons whose business is confined to religion; as the priests, and those who are to take care of the temples, that they are kept in proper repair, or, if they fall down, that they may be rebuilt; and whatever else belongs to public worship. This charge is sometimes entrusted to one person, as in very small cities: in others it is delegated to many, and these distinct from the priesthood, as the builders or keepers of holy places, and officers of the sacred revenue. Next to these are those who are appointed to have the general care of all those public sacrifices to the tutelar god of the state, which the laws do not entrust to the priests: and these in different states have different appellations. To enumerate in few words the different departments of all those magistrates who are necessary: these are either religion, war, taxes, expenditures, markets, public buildings, harbours, highways. Belonging to the courts of justice there are scribes to enroll private contracts; and there must also be guards set over the prisoners, others to see the law is executed, council on either side, and also others to watch over the conduct of those who are to decide the causes. Amongst the magistrates also may finally be reckoned those who are to give their advice in public affairs. But separate states, who are peculiarly happy and have leisure to attend to more minute particulars, and are very attentive to good order, require particular magistrates for themselves; such as those who have the government of the women; who are to see the laws are executed; who take care of the boys and preside over their education. To these may be added those who have the care of their gymnastic exercises, [1323a] their theatres, and every other public spectacle which there may happen to be. Some of these, however, are not of general use; as the governors of the women: for the poor are obliged to employ their wives and children in servile offices for want of slaves. As there are three magistrates to whom some states entrust the supreme power; namely, guardians of the laws, preadvisers, and senators; guardians of the laws suit best to an aristocracy, preadvisers to an oligarchy, and a senate to a democracy. And thus much briefly concerning all magistrates.

BOOK VII

CHAPTER I

He who proposes to make that inquiry which is necessary concerning what government is best, ought first to determine what manner of living is most eligible; for while this remains uncertain it will also be equally uncertain what government is best: for, provided no unexpected accidents interfere, it is highly probable, that those who enjoy the best government will live the most happily according to their circumstances; he ought, therefore, first to know what manner of life is most desirable for all; and afterwards whether this life is the same to the man and the citizen, or different. As I imagine that I have already sufficiently shown what sort of life is best in my popular discourses on that subject, I think I may very properly repeat the same here; as most certainly no one ever called in question the propriety of one of the divisions; namely, that as what is good, relative to man, may be divided into three sorts, what is external, what appertains to the body, and what to the soul, it is evident that all these must conspire to make a man happy: for no one would say that a man was happy who had no fortitude, no temperance, no justice, no prudence; but was afraid of the flies that flew round him: nor would abstain from the meanest theft if he was either hungry or dry, or would murder his dearest friend for a farthing; and also was in every particular as wanting in his understanding as an infant or an idiot. These truths are so evident that all must agree to them; though some may dispute about the quantity and the degree: for they may think, that a very little virtue is sufficient for happiness; but for riches, property, power, honour, and all such things, they endeavour to increase them without bounds: but to such we reply, that it is easy to prove from what experience teaches us in these cases, that these external goods produce not virtue, but virtue them. As to a happy life, whether it is to be found in pleasure or virtue or both, certain it is, that those whose morals are most pure, and whose understandings are best cultivated, will enjoy more of it, although their fortune is but moderate than those do who own an exuberance of wealth, are deficient in those; and this utility any one who reflects may easily convince himself of; for whatsoever is external has its boundary, as a machine, and whatsoever is useful in its excess is either necessarily hurtful, or at best useless to the possessor; but every good quality of the soul the higher it is in degree, so much the more useful it is, if it is permitted on this subject to use the word useful as well as noble. It is also very evident, that the accidents of each subject take place of each other, as the subjects themselves, of which we allow they are accidents, differ from each other in value; so that if the soul is more noble than any outward possession, as the body, both in itself and with respect to us, it must be admitted of course that the best accidents of each must follow the same analogy. Besides, it is for the sake of the soul that these things are desirable; and it is on this account that wise men should desire them, not the soul for them. Let us therefore be well assured, that every one enjoys as much happiness as he possesses virtue and wisdom, and acts according to their dictates;

since for this we have the example of GOD Himself, _who is completely happy, not from any external good, but in Himself, and because such is His nature_. For good fortune is something different from happiness, as every good which depends not on the mind is owing to chance or fortune; but it is not from fortune that any one is wise and just: hence it follows, that that city is happiest which is the best and acts best: for no one can do well who acts not well; nor can the deeds either of man or city be praiseworthy without virtue and wisdom; for whatsoever is just, or wise, or prudent in a man, the same things are just, wise, and prudent in a city.

Thus much by way of introduction; for I could not but just touch upon this subject, though I could not go through a complete investigation of it, as it properly belongs to another question: let us at present suppose so much, that a man's happiest life, both as an individual and as a citizen, is a life of virtue, accompanied with those enjoyments which virtue usually procures. If [1324a] there are any who are not convinced by what I have said, their doubts shall be answered hereafter, at present we shall proceed according to our intended method.

CHAPTER II

It now remains for us to say whether the happiness of any individual man and the city is the same or different: but this also is evident; for whosoever supposes that riches will make a person happy, must place the happiness of the city in riches if it possesses them; those who prefer a life which enjoys a tyrannic power over others will also think, that the city which has many others under its command is most happy: thus also if any one approves a man for his virtue, he will think the most worthy city the happiest: but here there are two particulars which require consideration, one of which is, whether it is the most eligible life to be a member of the community and enjoy the rights of a citizen, or whether to live as a stranger, without interfering in public affairs; and also what form of government is to be preferred, and what disposition of the state is best; whether the whole community should be eligible to a share in the administration, or only the greater part, and some only: as this, therefore, is a subject of political examination and speculation, and not what concerns the individual, and the first of these is what we are at present engaged in, the one of these I am not obliged to speak to, the other is the proper business of my present design. It is evident that government must be the best which is so established, that every one therein may have it in his power to act virtuously and live happily: but some, who admit that a life of virtue is most eligible, still doubt which is preferable a public life of active virtue, or one entirely disengaged from what is without and spent in contemplation; which some say is the only one worthy of a philosopher; and one of these two different modes of life both now and formerly seem to have been chosen by all those who were the most virtuous men; I mean the public or philosophic. And yet it is of no little consequence on which side the truth lies; for a man of sense must naturally incline to the better choice; both as an individual and a citizen. Some think that a tyrannic government over those near us is the greatest injustice; but that a political one is not unjust: but that still is a restraint on the pleasures and tranquillity of life. Others hold the quite contrary opinion, and think that a public and active life is the only life for man: for that private persons have no opportunity of practising any one virtue, more than they have who are engaged in public life the management of the [1324b] state. These are their sentiments; others say, that a tyrannical and despotical mode of government is the only happy one; for even amongst some free states the object of their laws seems to be to tyrannise over their neighbours: so that the generality of political institutions, wheresoever dispersed, if they have any one common object in view, have all of them this, to conquer and govern. It is evident, both from the laws of the Lacedaemonians and Cretans, as well as by the manner in which they educated their children, that all which they had in view was to make them soldiers: besides, among all nations, those who have power enough and reduce others to servitude are honoured on that account; as were the Scythians, Persians, Thracians, and Gauls: with some there are laws to heighten the virtue of courage; thus they tell us that at Carthage they allowed every person to wear as many rings for distinction as he had served campaigns. There was also a law in Macedonia, that a man who had not himself killed an enemy should be obliged to wear a halter; among the Scythians, at a festival, none were permitted to drink out of the cup was carried about who had not done the same thing. Among the Iberians, a warlike nation, they fixed as many columns upon a man's tomb as he had slain enemies: and among different nations different things of this sort prevail, some of them established by law, others by custom. Probably it may seem too absurd to those who are willing to take this subject into their consideration to inquire whether it is the business of a legislator to be able to point out by what means a state may govern and tyrannise over its neighbours, whether they will, or will not: for how can that belong either to the politician or legislator which is unlawful? for that cannot be lawful which is done not only justly, but unjustly also: for a conquest may be unjustly made. But we see nothing of this in the arts: for it is the business neither of the physician nor the pilot to use either persuasion or force, the one to his patients, the other to his passengers: and yet many seem to think a despotic government is a political one, and what they would not allow to be just or proper, if exercised over themselves, they will not blush to exercise over others; for they endeavour to be wisely governed themselves, but think it of no consequence whether others are so or not: but a despotic power is absurd, except only where nature has framed the one party for dominion, the other for subordination; and

therefore no one ought to assume it over all in general, but those only which are the proper objects thereof: thus no one should hunt men either for food or sacrifice, but what is fit for those purposes, and these are wild animals which are eatable.

Now a city which is well governed might be very [1325a] happy in itself while it enjoyed a good system of laws, although it should happen to be so situated as to have no connection with any other state, though its constitution should not be framed for war or conquest; for it would then have no occasion for these. It is evident therefore that the business of war is to be considered as commendable, not as a final end, but as the means of procuring it. It is the duty of a good legislator to examine carefully into his state; and the nature of the people, and how they may partake of every intercourse, of a good life, and of the happiness which results from it: and in this respect some laws and customs differ from others. It is also the duty of a legislator, if he has any neighbouring states to consider in what manner he shall oppose each of them, or what good offices he shall show them. But what should be the final end of the best governments will be considered hereafter.

CHAPTER III

We will now speak to those who, while they agree that a life of virtue is most eligible, yet differ in the use of it addressing ourselves to both these parties; for there are some who disapprove of all political governments, and think that the life of one who is really free is different from the life of a citizen, and of all others most eligible: others again think that the citizen is the best; and that it is impossible for him who does nothing to be well employed; but that virtuous activity and happiness are the same thing. Now both parties in some particulars say what is right, in others what is wrong, thus, that the life of a freeman is better than the life of a slave is true, for a slave, as a slave, is employed in nothing honourable; for the common servile employments which he is commanded to perform have nothing virtuous in them; but, on the other hand, it is not true that a submission to all sorts of governments is slavery; for the government of freemen differs not more from the government of slaves than slavery and freedom differ from each other in their nature; and how they do has been already mentioned. To prefer doing of nothing to virtuous activity is also wrong, for happiness consists in action, and many noble ends are produced by the actions of the just and wise. From what we have already determined on this subject, some one probably may think, that supreme power is of all things best, as that will enable a man to command very many useful services from others; so that he who can obtain this ought not to give it up to another, but rather to seize it: and, for this purpose, the father should have no attention or regard for the son, or the son for the father, or friend for friend; for what is best is most eligible: but to be a member of the community and be in felicity is best. What these persons advance might probably be true, if the supreme good was certainly theirs who plunder and use violence to others: but it is [1325b] most unlikely that it should be so; for it is a mere supposition: for it does not follow that their actions are honourable who thus assume the supreme power over others, without they were by nature as superior to them as a man to a woman, a father to a child, a master to a slave: so that he who so far forsakes the paths of virtue can never return back from whence he departed from them: for amongst equals whatever is fair and just ought to be reciprocal; for this is equal and right; but that equals should not partake of what is equal, or like to like, is contrary to nature: but whatever is contrary to nature is not right; therefore, if there is any one superior to the rest of the community in virtue and abilities for active life, him it is proper to follow, him it is right to obey, but the one alone will not do, but must be joined to the other also: and, if we are right in what we have now said, it follows that happiness consists in virtuous activity, and that both with respect to the community as well as the individual an active life is the happiest: not that an active life must necessarily refer to other persons, as some think, or that those studies alone are practical which are pursued to teach others what to do; for those are much more so whose final object is in themselves, and to improve the judgment and understanding of the man; for virtuous activity has an end, therefore is something practical; nay, those who contrive the plan which others follow are more particularly said to act, and are superior to the workmen who execute their designs. But it is not necessary that states which choose to have no intercourse with others should remain inactive; for the several members thereof may have mutual intercourse with each other; for there are many opportunities for this among the different citizens; the same thing is true of every individual: for, was it otherwise, neither could the Deity nor the universe be perfect; to neither of whom can anything external separately exist. Hence it is evident that that very same life which is happy for each individual is happy also for the state and every member of it.

CHAPTER IV

As I have now finished what was introductory to this subject, and considered at large the nature of other states, it now remains that I should first say what ought to be the establishment of a city which one should form according to one's wish; for no good state can exist without a moderate proportion of what is necessary. Many things therefore ought to be forethought of as desirable, but none of them such as are impossible: I mean relative to the number of citizens and the extent of the territory: for as other artificers, such as

the weaver and the shipwright, ought to have such materials as are fit for their work, since so much the better they are, by so much [1326a] superior will the work itself necessarily be; so also ought the legislator and politician endeavour to procure proper materials for the business they have in hand. Now the first and principal instrument of the politician is the number of the people; he should therefore know how many, and what they naturally ought to be: in like manner the country, how large, and what it is. Most persons think that it is necessary for a city to be large to be happy: but, should this be true, they cannot tell what is a large one and what a small one; for according to the multitude of the inhabitants they estimate the greatness of it; but they ought rather to consider its strength than its numbers; for a state has a certain object in view, and from the power which it has in itself of accomplishing it, its greatness ought to be estimated; as a person might say, that Hippocrates was a greater physician, though not a greater man, than one that exceeded him in the size of his body: but if it was proper to determine the strength of the city from the number of the inhabitants, it should never be collected from the multitude in general who may happen to be in it; for in a city there must necessarily be many slaves, sojourners, and foreigners; but from those who are really part of the city and properly constitute its members; a multitude of these is indeed a proof of a large city, but in a state where a large number of mechanics inhabit, and but few soldiers, such a state cannot be great; for the greatness of the city, and the number of men in it, are not the same thing. This too is evident from fact, that it is very difficult, if not impossible, to govern properly a very numerous body of men; for of all the states which appear well governed we find not one where the rights of a citizen are open to an indiscriminate multitude. And this is also evident from the nature of the thing; for as law is a certain order, so good law is of course a certain good order: but too large a multitude are incapable of this, unless under the government of that DIVINE POWER which comprehends the universe. Not but that, as quantity and variety are usually essential to beauty, the perfection of a city consists in the largeness of it as far as that largeness is consistent with that order already mentioned: but still there is a determinate size to all cities, as well as everything else, whether animals, plants, or machines, for each of these, if they are neither too little nor too big, have their proper powers; but when they have not their due growth, or are badly constructed, as a ship a span long is not properly a ship, nor one of two furlongs length, but when it is of a fit size; for either from its smallness or from its largeness it may be quite useless: so is it with a city; one that is too small has not [1326b] in itself the power of self-defence, but this is essential to a city: one that is too large is capable of self-defence in what is necessary; but then it is a nation and not a city: for it will be very difficult to accommodate a form of government to it: for who would choose to be the general of such an unwieldy multitude, or who could be their herald but a stentor? The first thing therefore necessary is, that a city should consist of such numbers as will be sufficient to enable the inhabitants to live happily in their political community: and it follows, that the more the inhabitants exceed that necessary number the greater will the city be: but this must not be, as we have already said, without bounds; but what is its proper limit experience will easily show, and this experience is to be collected from the actions both of the governors and the governed. Now, as it belongs to the first to direct the inferior magistrates and to act as judges, it follows that they can neither determine causes with justice nor issue their orders with propriety without they know the characters of their fellow-citizens: so that whenever this happens not to be done in these two particulars, the state must of necessity be badly managed; for in both of them it is not right to determine too hastily and without proper knowledge, which must evidently be the case where the number of the citizens is too many: besides, it is more easy for strangers and sojourners to assume the rights of citizens, as they will easily escape detection in so great a multitude. It is evident, then, that the best boundary for a city is that wherein the numbers are the greatest possible, that they may be the better able to be sufficient in themselves, while at the same time they are not too large to be under the eye and government of the magistrates. And thus let us determine the extent of a city.

CHAPTER V

What we have said concerning a city may nearly be applied to a country; for as to what soil it should be, every one evidently will commend it if it is such as is sufficient in itself to furnish what will make the inhabitants happy; for which purpose it must be able to supply them with all the necessaries of life; for it is the having these in plenty, without any want, which makes them content. As to its extent, it should be such as may enable the inhabitants to live at their ease with freedom and temperance. Whether we have done right or wrong in fixing this limit to the territory shall be considered more minutely hereafter, when we come particularly to inquire into property, and what fortune is requisite for a man to live on, and how and in what manner they ought to employ it; for there are many doubts upon this question, while each party insists upon their own plan of life being carried to an excess, the one of severity, the other of indulgence. What the situation of the country should be it is not difficult to determine, in some particulars respecting that we ought to be advised by those who are skilful in military affairs. It should be difficult of access to an enemy, but easy to the inhabitants: and as we said, that the number of [1327a] inhabitants ought to be such as can come under the eye of the magistrate, so should it be with the country; for then it is easily defended. As to the position of the city, if one could place it to one's

wish, it is convenient to fix it on the seaside: with respect to the country, one situation which it ought to have has been already mentioned, namely, that it should be so placed as easily to give assistance to all places, and also to receive the necessaries of life from all parts, and also wood, or any other materials which may happen to be in the country.

CHAPTER VI

But with respect to placing a city in the neighbourhood of the sea, there are some who have many doubts whether it is serviceable or hurtful to a well-regulated state; for they say, that the resort of persons brought up under a different system of government is disserviceable to the state, as well by impeding the laws as by their numbers; for a multitude of merchants must necessarily arise from their trafficking backward and forward upon the seas, which will hinder the well-governing of the city: but if this inconvenience should not arise, it is evident that it is better, both on account of safety and also for the easier acquisition of the necessaries of life, that both the city and the country should be near the sea; for it is necessary that those who are to sustain the attack of the enemy should be ready with their assistance both by land and by sea, and to oppose any inroad, both ways if possible but if not, at least where they are most powerful, which they may do while they possess both. A maritime situation is also useful for receiving from others what your own country will not produce, and exporting those necessaries of your own growth which are more than you have occasion for; but a city ought to traffic to supply its own wants, and not the wants of others; for those who themselves furnish an open market for every one, do it for the sake of gain; which it is not proper for a well-established state to do, neither should they encourage such a commerce. Now, as we see that many places and cities have docks and harbours lying very convenient for the city, while those who frequent them have no communication with the citadel, and yet they are not too far off, but are surrounded by walls and such-like fortifications, it is evident, that if any good arises from such an intercourse the city will receive it, but if anything hurtful, it will be easy to restrain it by a law declaring and deputing whom the state will allow to have an intercourse with each other, and whom not. As to a naval power, it is by no means doubtful that it is necessary to have one to a certain degree; and this not only for the sake of the [1327b] city itself, but also because it may be necessary to appear formidable to some of the neighbouring states, or to be able to assist them as well by sea as by land; but to know how great that force should be, the health of the state should be inquired into, and if that appears vigorous and enables her to take the lead of other communities, it is necessary that her force should correspond with her actions. As for that multitude of people which a maritime power creates, they are by no means necessary to a state, nor ought they to make a part of the citizens; for the mariners and infantry, who have the command, are freemen, and upon these depends a naval engagement: but when there are many servants and husbandmen, there they will always have a number of sailors, as we now see happens to some states, as in Heraclea, where they man many triremes, though the extent of their city is much inferior to some others. And thus we determine concerning the country, the port, the city, the sea, and a maritime power: as to the number of the citizens, what that ought to be we have already said.

CHAPTER VII

We now proceed to point out what natural disposition the members of the community ought to be of: but this any one will easily perceive who will cast his eye over the states of Greece, of all others the most celebrated, and also the other different nations of this habitable world. Those who live in cold countries, as the north of Europe, are full of courage, but wanting in understanding and the arts: therefore they are very tenacious of their liberty; but, not being politicians, they cannot reduce their neighbours under their power: but the Asiatics, whose understandings are quick, and who are conversant in the arts, are deficient in courage; and therefore are always conquered and the slaves of others: but the Grecians, placed as it were between these two boundaries, so partake of them both as to be at the same time both courageous and sensible; for which reason Greece continues free, and governed in the best manner possible, and capable of commanding the whole world, could they agree upon one system of policy. Now this is the difference between the Grecians and other nations, that the latter have but one of these qualities, whereas in the former they are both happily blended together. Hence it is evident, that those persons ought to be both sensible and courageous who will readily obey a legislator, the object of whose laws is virtue. As to what some persons say, that the military must be mild and tender to those they know, but severe and cruel to those they know not, it is courage which [1328a] makes any one lovely; for that is the faculty of the soul which we most admire: as a proof of this, our resentment rises higher against our friends and acquaintance than against those we know not: for which reason Archilaus accusing his friends says very properly to himself, Shall my friends insult me? The spirit of freedom and command also is what all inherit who are of this disposition for courage is commanding and invincible. It also is not right for any one to say, that you should be severe to those you know not; for this behaviour is proper for no one: nor are those who are of a noble disposition harsh in their manners, excepting only to the wicked; and when they are particularly so, it is, as has been already said, against their friends, when they think they have injured them;

which is agreeable to reason: for when those who think they ought to receive a favour from any one do not receive it, beside the injury done them, they consider what they are deprived of: hence the saying, "Cruel are the wars of brothers;" and this, "Those who have greatly loved do greatly hate." And thus we have nearly determined how many the inhabitants of a city ought to be, and what their natural disposition, and also the country how large, and of what sort is necessary; I say nearly, because it is needless to endeavour at as great accuracy in those things which are the objects of the senses as in those which are inquired into by the understanding only.

CHAPTER VIII

As in natural bodies those things are not admitted to be parts of them without which the whole would not exist, so also it is evident that in a political state everything that is necessary thereunto is not to be considered as a part of it, nor any other community from whence one whole is made; for one thing ought to be common and the same to the community, whether they partake of it equally or unequally, as, for instance, food, land, or the like; but when one thing is for the benefit of one person, and another for the benefit of another, in this there is nothing like a community, excepting that one makes it and the other uses it; as, for instance, between any instrument employed in making any work, and the workmen, as there is nothing common between the house and the builder, but the art of the builder is employed on the house. Thus property is necessary for states, but property is no part of the state, though many species of it have life; but a city is a community of equals, for the purpose of enjoying the best life possible: but the happiest life is the best which consists in the perfect practice of virtuous energies: as therefore some persons have great, others little or no opportunity of being employed in these, it is evident that this is the cause of the difference there is between the different cities and communities there are to be found; for while each of these endeavour to acquire what is best by various and different means, they give [1328b] rise to different modes of living and different forms of government. We are now to consider what those things are without which a city cannot possibly exist; for what we call parts of the city must of necessity inhere in it: and this we shall plainly understand, if we know the number of things necessary to a city: first, the inhabitants must have food: secondly, arts, for many instruments are necessary in life: thirdly, arms, for it is necessary that the community should have an armed force within themselves, both to support their government against those of their own body who might refuse obedience to it, and also to defend it from those who might attempt to attack it from without: fourthly, a certain revenue, as well for the internal necessities of the state as for the business of war: fifthly, which is indeed the chief concern, a religious establishment: sixthly in order, but first of all in necessity, a court to determine both criminal and civil causes. These things are absolutely necessary, so to speak, in every state; for a city is a number of people not accidentally met together, but with a purpose of ensuring to themselves sufficient independency and self-protection; and if anything necessary for these purposes is wanting, it is impossible that in such a situation these ends can be obtained. It is necessary therefore that a city should be capable of acquiring all these things: for this purpose a proper number of husbandmen are necessary to procure food, also artificers and soldiers, and rich men, and priests and judges, to determine what is right and proper.

CHAPTER IX

Having determined thus far, it remains that we consider whether all these different employments shall be open to all; for it is possible to continue the same persons always husbandmen, artificers, judges, or counsellors; or shall we appoint different persons to each of those employments which we have already mentioned; or shall some of them be appropriated to particulars, and others of course common to all? but this does not take place in every state, for, as we have already said, it is possible that all may be common to all, or not, but only common to some; and this is the difference between one government and another: for in democracies the whole community partakes of everything, but in oligarchies it is different.

Since we are inquiring what is the best government possible, and it is admitted to be that in which the citizens are happy; and that, as we have already said, it is impossible to obtain happiness without virtue; it follows, that in the best-governed states, where the citizens are really men of intrinsic and not relative goodness, none of them should be permitted to exercise any mechanic employment or follow merchandise, as being ignoble and destructive to virtue; neither should they be husband-[1329a] men, that they may be at leisure to improve in virtue and perform the duty they owe to the state. With respect to the employments of a soldier, a senator, and a judge, which are evidently necessary to the community, shall they be allotted to different persons, or shall the same person execute both? This question, too, is easily answered: for in some cases the same persons may execute them, in others they should be different, where the different employments require different abilities, as when courage is wanting for one, judgment for the other, there they should be allotted to different persons; but when it is evident, that it is impossible to oblige those

who have arms in their hands, and can insist on their own terms, to be always under command; there these different employments should be trusted to one person; for those who have arms in their hands have it in their option whether they will or will not assume the supreme power: to these two (namely, those who have courage and judgment) the government must be entrusted; but not in the same manner, but as nature directs; what requires courage to the young, what requires judgment to the old; for with the young is courage, with the old is wisdom: thus each will be allotted the part they are fit for according to their different merits. It is also necessary that the landed property should belong to these men; for it is necessary that the citizens should be rich, and these are the men proper for citizens; for no mechanic ought to be admitted to the rights of a citizen, nor any other sort of people whose employment is not entirely noble, honourable, and virtuous; this is evident from the principle we at first set out with; for to be happy it is necessary to be virtuous; and no one should say that a city is happy while he considers only one part of its citizens, but for that purpose he ought to examine into all of them. It is evident, therefore, that the landed property should belong to these, though it may be necessary for them to have husbandmen, either slaves, barbarians, or servants. There remains of the different classes of the people whom we have enumerated, the priests, for these evidently compose a rank by themselves; for neither are they to be reckoned amongst the husbandmen nor the mechanics; for reverence to the gods is highly becoming every state: and since the citizens have been divided into orders, the military and the council, and it is proper to offer due worship to the gods, and since it is necessary that those who are employed in their service should have nothing else to do, let the business of the priesthood be allotted to those who are in years. We have now shown what is necessary to the existence of a city, and of what parts it consists, and that husbandmen, mechanic, and mercenary servants are necessary to a city; but that the parts of it are soldiers and sailors, and that these are always different from those, but from each other only occasionally.

CHAPTER X

It seems neither now nor very lately to have been known [1329b] to those philosophers who have made politics their study, that a city ought to be divided by families into different orders of men; and that the husbandmen and soldiers should be kept separate from each other; which custom is even to this day preserved in Egypt and in Crete; also Sesostris having founded it in Egypt, Minos in Crete. Common meals seem also to have been an ancient regulation, and to have been established in Crete during the reign of Minos, and in a still more remote period in Italy; for those who are the best judges in that country say that one Italus being king of AEnotria., from whom the people, changing their names, were called Italians instead of AEnotrians, and that part of Europe was called Italy which is bounded by the Scylletic Gulf on the one side and the Lametic on the other, the distance between which is about half a day's journey. This Italus, they relate, made the AEnotrians, who were formerly shepherds, husbandmen, and gave them different laws from what they had before, and to have been the first who established common meals, for which reason some of his descendants still use them, and observe some of his laws. The Opici inhabit that part which lies towards the Tyrrhenian Sea, who both now are and formerly were called Ausonians. The Chones inhabited the part toward Iapigia and the Ionian Sea which is called Syrtis. These Chones were descended from the AEnotrians. Hence arose the custom of common meals, but the separation of the citizens into different families from Egypt: for the reign of Sesostris is of much higher antiquity than that of Minos. As we ought to think that most other things were found out in a long, nay, even in a boundless time (reason teaching us that want would make us first invent that which was necessary, and, when that was obtained, then those things which were requisite for the conveniences and ornament of life), so should we conclude the same with respect to a political state; now everything in Egypt bears the marks of the most remote antiquity, for these people seem to be the most ancient of all others, and to have acquired laws and political order; we should therefore make a proper use of what is told us of them, and endeavour to find out what they have omitted. We have already said, that the landed property ought to belong to the military and those who partake of the government of the state; and that therefore the husbandmen should be a separate order of people; and how large and of what nature the country ought to be: we will first treat of the division of the land, and of the husbandmen, how many and of what sort they ought to be; since we by no means hold that property ought to be common, as some persons have said, only thus far, in friendship, it [1330a] should be their custom to let no citizen want subsistence. As to common meals, it is in general agreed that they are proper in well-regulated cities; my reasons for approving of them shall be mentioned hereafter: they are what all the citizens ought to partake of; but it will not be easy for the poor, out of what is their own, to furnish as much as they are ordered to do, and supply their own house besides. The expense also of religious worship should be defrayed by the whole state. Of necessity therefore the land ought to be divided into two parts, one of which should belong to the community in general, the other to the individuals separately; and each of these parts should again be subdivided into two: half of that which belongs to the public should be appropriated to maintain the worship of the gods, the other half to support the common meals. Half of that which belongs to the individuals should be at the extremity of the country, the other half near the city, so that these two portions being allotted to each person, all would partake of

land in both places, which would be both equal and right; and induce them to act in concert with greater harmony in any war with their neighbours: for when the land is not divided in this manner, one party neglects the inroads of the enemy on the borders, the other makes it a matter of too much consequence and more than is necessary; for which reason in some places there is a law which forbids the inhabitants of the borders to have any vote in the council when they are debating upon a war which is made against them as their private interest might prevent their voting impartially. Thus therefore the country ought to be divided and for the reasons before mentioned. Could one have one's choice, the husbandmen should by all means be slaves, not of the same nation, or men of any spirit; for thus they would be laborious in their business, and safe from attempting any novelties: next to these barbarian servants are to be preferred, similar in natural disposition to these we have already mentioned. Of these, let those who are to cultivate the private property of the individual belong to that individual, and those who are to cultivate the public territory belong to the public. In what manner these slaves ought to be used, and for what reason it is very proper that they should have the promise of their liberty made them, as a reward for their services, shall be mentioned hereafter.

CHAPTER XI

We have already mentioned, that both the city and all the country should communicate both with the sea and the continent as much as possible. There are these four things which we should be particularly desirous of in the position of the city with respect to itself: in the first place, health is to be consulted as the first thing necessary: now a city which fronts the east and receives the winds which blow from thence is esteemed most healthful; next to this that which has a northern position is to be preferred, as best in winter. It should next be contrived that it may have a proper situation for the business of government and for defence in war: that in war the citizens may [1330b] have easy access to it; but that it may be difficult of access to, and hardly to be taken by, the enemy. In the next place particularly, that there may be plenty of water, and rivers near at hand: but if those cannot be found, very large cisterns must be prepared to save rain-water, so that there may be no want of it in case they should be driven into the town in time of war. And as great care should be taken of the health of the inhabitants, the first thing to be attended to is, that the city should have a good situation and a good position; the second is, that they may have good water to drink; and this not be negligently taken care of; for what we chiefly and most frequently use for the support of the body must principally influence the health of it; and this influence is what the air and water naturally have: for which reason in all wise governments the waters ought to be appropriated to different purposes, and if they are not equally good, and if there is not a plenty of necessary water, that which is to drink should be separated from that which is for other uses. As to fortified places, what is proper for some governments is not proper for all; as, for instance, a lofty citadel is proper for a monarchy and an oligarchy; a city built upon a plain suits a democracy; neither of these for an aristocracy, but rather many strong places. As to the form of private houses, those are thought to be best and most useful for their different purposes which are distinct and separate from each other, and built in the modern manner, after the plan of Hippodamus: but for safety in time of war, on the contrary, they should be built as they formerly were; for they were such that strangers could not easily find their way out of them, and the method of access to them such as an enemy could with difficulty find out if he proposed to besiege them. A city therefore should have both these sorts of buildings, which may easily be contrived if any one will so regulate them as the planters do their rows of vines; not that the buildings throughout the city should be detached from each other, only in some parts of it; thus elegance and safety will be equally consulted. With respect to walls, those who say that a courageous people ought not to have any, pay too much respect to obsolete notions; particularly as we may see those who pride themselves therein continually confuted by facts. It is indeed disreputable for those who are equal, or nearly so, to the enemy, to endeavour to take refuge within their walls--but since it very often happens, that those who make the attack are too powerful for the bravery and courage of those few who oppose them to resist, if you would not suffer the calamities of war and the insolence of the enemy, it must be thought the part of a good soldier to seek for safety under the shelter and protection of walls more especially since so many missile weapons and machines have been most ingeniously invented to besiege cities with. Indeed to neglect surrounding a city with a wall would be similar to choosing a country which is easy of access to an enemy, or levelling the eminences of it; or as if an individual should not have a wall to his house lest it should be thought that the owner of it was a coward: nor should this be left unconsidered, that those who have a city surrounded with walls may act both ways, either as if it had or as if it had not; but where it has not they cannot do this. If this is true, it is not only necessary to have walls, but care must be taken that they may be a proper ornament to the city, as well as a defence in time of war; not only according to the old methods, but the modern improvements also: for as those who make offensive war endeavour by every way possible to gain advantages over their adversaries, so should those who are upon the defensive employ all the means already known, and such new ones as philosophy can invent, to defend themselves: for those who are well prepared are seldom first attacked.

CHAPTER XII

As the citizens in general are to eat at public tables in certain companies, and it is necessary that the walls should have bulwarks and towers in proper places and at proper distances, it is evident that it will be very necessary to have some of these in the towers; let the buildings for this purpose be made the ornaments of the walls. As to temples for public worship, and the hall for the public tables of the chief magistrates, they ought to be built in proper places, and contiguous to each other, except those temples which the law or the oracle orders to be separate from all other buildings; and let these be in such a conspicuous eminence, that they may have every advantage of situation, and in the neighbourhood of that part of the city which is best fortified. Adjoining to this place there ought to be a large square, like that which they call in Thessaly The Square of Freedom, in which nothing is permitted to be bought or sold; into which no mechanic nor husbandman, nor any such person, should be permitted to enter, unless commanded by the magistrates. It will also be an ornament to this place if the gymnastic exercises of the elders are performed in it. It is also proper, that for performing these exercises the citizens should be divided into distinct classes, according to their ages, and that the young persons should have proper officers to be with them, and that the seniors should be with the magistrates; for having them before their eyes would greatly inspire true modesty and ingenuous fear. There ought to be another square [1331b] separate from this for buying and selling, which should be so situated as to be commodious for the reception of goods both by sea and land. As the citizens may be divided into magistrates and priests, it is proper that the public tables of the priests should be in buildings near the temples. Those of the magistrates who preside over contracts, indictments, and such-like, and also over the markets, and the public streets near the square, or some public way, I mean the square where things are bought and sold; for I intended the other for those who are at leisure, and this for necessary business. The same order which I have directed here should be observed also in the country; for there also their magistrates such as the surveyors of the woods and overseers of the grounds, must necessarily have their common tables and their towers, for the purpose of protection against an enemy. There ought also to be temples erected at proper places, both to the gods and the heroes; but it is unnecessary to dwell longer and most minutely on these particulars--for it is by no means difficult to plan these things, it is rather so to carry them into execution; for the theory is the child of our wishes, but the practical part must depend upon fortune; for which reason we shall decline saying anything farther upon these subjects.

CHAPTER XIII

We will now show of what numbers and of what sort of people a government ought to consist, that the state may be happy and well administered. As there are two particulars on which the excellence and perfection of everything depend, one of these is, that the object and end proposed should be proper; the other, that the means to accomplish it should be adapted to that purpose; for it may happen that these may either agree or disagree with each other; for the end we propose may be good, but in taking the means to obtain it we may err; at other times we may have the right and proper means in our power, but the end may be bad, and sometimes we may mistake in both; as in the art of medicine the physician does not sometimes know in what situation the body ought to be, to be healthy; nor what to do to procure the end he aims at. In every art and science, therefore, we should be master of this knowledge, namely, the proper end, and the means to obtain it. Now it is evident that all persons are desirous to live well and be happy; but that some have the means thereof in their own power, others not; and this either through nature [1332a] or fortune; for many ingredients are necessary to a happy life; but fewer to those who are of a good than to those who are of a bad disposition. There are others who continually have the means of happiness in their own power, but do not rightly apply them. Since we propose to inquire what government is best, namely, that by which a state may be best administered, and that state is best administered where the people are the happiest, it is evident that happiness is a thing we should not be unacquainted with. Now, I have already said in my treatise on Morals (if I may here make any use of what I have there shown), that happiness consists in the energy and perfect practice of virtue; and this not relatively, but simply; I mean by relatively, what is necessary in some certain circumstances; by simply, what is good and fair in itself: of the first sort are just punishments, and restraints in a just cause; for they arise from virtue and are necessary, and on that account are virtuous; though it is more desirable that neither any state nor any individual should stand in need of them; but those actions which are intended either to procure honour or wealth are simply good; the others eligible only to remove an evil; these, on the contrary, are the foundation and means of relative good. A worthy man indeed will bear poverty, disease, and other unfortunate accidents with a noble mind; but happiness consists in the contrary to these (now we have already determined in our treatise on Morals, that he is a man of worth who considers what is good because it is virtuous as what is simply good; it is evident, therefore, that all the actions of such a one must be worthy and simply good): this has led some persons to conclude, that the cause of happiness was external goods; which would be as if any one should suppose that the playing well upon the lyre was owing to the instrument, and not to the art. It necessarily follows from what has been said, that some things should be ready at hand and others procured by the legislator; for which reason in founding a city we earnestly wish that there may

be plenty of those things which are supposed to be under the dominion of fortune (for some things we admit her to be mistress over); but for a state to be worthy and great is not only the work of fortune but of knowledge and judgment also. But for a state to be worthy it is necessary that those citizens which are in the administration should be worthy also; but as in our city every citizen is to be so, we must consider how this may be accomplished; for if this is what every one could be, and not some individuals only, it would be more desirable; for then it would follow, that what might be done by one might be done by all. Men are worthy and good three ways; by nature, by custom, by reason. In the first place, a man ought to be born a man, and not any other animal; that is to say, he ought to have both a body and soul; but it avails not to be only born [1332b] with some things, for custom makes great alterations; for there are some things in nature capable of alteration either way which are fixed by custom, either for the better or the worse. Now, other animals live chiefly a life of nature; and in very few things according to custom; but man lives according to reason also, which he alone is endowed with; wherefore he ought to make all these accord with each other; for if men followed reason, and were persuaded that it was best to obey her, they would act in many respects contrary to nature and custom. What men ought naturally to be, to make good members of a community, I have already determined; the rest of this discourse therefore shall be upon education; for some things are acquired by habit, others by hearing them.

CHAPTER XIV

As every political community consists of those who govern and of those who are governed, let us consider whether during the continuance of their lives they ought to be the same persons or different; for it is evident that the mode of education should be adapted to this distinction. Now, if one man differed from another as much, as we believe, the gods and heroes differ from men: in the first place, being far their superiors in body; and, secondly, in the soul: so that the superiority of the governors over the governed might be evident beyond a doubt, it is certain that it would be better for the one always to govern, the other always to be governed: but, as this is not easy to obtain, and kings are not so superior to those they govern as Scylax informs us they are in India, it is evident that for many reasons it is necessary that all in their turns should both govern and be governed: for it is just that those who are equal should have everything alike; and it is difficult for a state to continue which is founded in injustice; for all those in the country who are desirous of innovation will apply themselves to those who are under the government of the rest, and such will be their numbers in the state, that it will be impossible for the magistrates to get the better of them. But that the governors ought to excel the governed is beyond a doubt; the legislator therefore ought to consider how this shall be, and how it may be contrived that all shall have their equal share in the administration. Now, with respect to this it will be first said, that nature herself has directed us in our choice, laying down the selfsame thing when she has made some young, others old: the first of whom it becomes to obey, the latter to command; for no one when he is young is offended at his being under government, or thinks himself too good for it; more especially when he considers that he himself shall receive the same honours which he pays when he shall arrive at a proper age. In some respects it must be acknowledged that the governors and the governed are the same, in others they are different; it is therefore necessary that their education should be in [1333a] some respect the same, in others different: as they say, that he will be a good governor who has first learnt to obey. Now of governments, as we have already said, some are instituted for the sake of him who commands; others for him who obeys: of the first sort is that of the master over the servant; of the latter, that of freemen over each other. Now some things which are commanded differ from others; not in the business, but in the end proposed thereby: for which reason many works, even of a servile nature, are not disgraceful for young freemen to perform; for many things which are ordered to be done are not honourable or dishonourable so much in their own nature as in the end which is proposed, and the reason for which they are undertaken. Since then we have determined, that the virtue of a good citizen and good governor is the same as of a good man; and that every one before he commands should have first obeyed, it is the business of the legislator to consider how his citizens may be good men, what education is necessary to that purpose, and what is the final object of a good life. The soul of man may be divided into two parts; that which has reason in itself, and that which hath not, but is capable of obeying its dictates: and according to the virtues of these two parts a man is said to be good: but of those virtues which are the ends, it will not be difficult for those to determine who adopt the division I have already given; for the inferior is always for the sake of the superior; and this is equally evident both in the works of art as well as in those of nature; but that is superior which has reason. Reason itself also is divided into two parts, in the manner we usually divide it; the theoretic and the practical; which division therefore seems necessary for this part also: the same analogy holds good with respect to actions; of which those which are of a superior nature ought always to be chosen by those who have it in their power; for that is always most eligible to every one which will procure the best ends. Now life is divided into labour and rest, war and peace; and of what we do the objects are partly necessary and useful, partly noble: and we should give the same preference to these that we do to the different parts of the soul and its actions, as war to procure peace; labour, rest; and the useful, the noble. The politician, therefore, who composes a body of

laws ought to extend his views to everything; the different parts of the soul and their actions; more particularly to those things which are of a superior nature and ends; and, in the same manner, to the lives of men and their different actions.

They ought to be fitted both for labour and war, but rather [1333b] for rest and peace; and also to do what is necessary and useful, but rather what is fair and noble. It is to those objects that the education of the children ought to tend, and of all the youths who want instruction. All the Grecian states which now seem best governed, and the legislators who founded those states, appear not to have framed their polity with a view to the best end, or to every virtue, in their laws and education; but eagerly to have attended to what is useful and productive of gain: and nearly of the same opinion with these are some persons who have written lately, who, by praising the Lacedaemonian state, show they approve of the intention of the legislator in making war and victory the end of his government. But how contrary to reason this is, is easily proved by argument, and has already been proved by facts (but as the generality of men desire to have an extensive command, that they may have everything desirable in the greater abundance; so Thibron and others who have written on that state seem to approve of their legislator for having procured them an extensive command by continually enuring them to all sorts of dangers and hardships): for it is evident, since the Lacedemonians have now no hope that the supreme power will be in their own hand, that neither are they happy nor was their legislator wise. This also is ridiculous, that while they preserved an obedience to their laws, and no one opposed their being governed by them, they lost the means of being honourable: but these people understand not rightly what sort of government it is which ought to reflect honour on the legislator; for a government of freemen is nobler than despotic power, and more consonant to virtue. Moreover, neither should a city be thought happy, nor should a legislator be commended, because he has so trained the people as to conquer their neighbours; for in this there is a great inconvenience: since it is evident that upon this principle every citizen who can will endeavour to procure the supreme power in his own city; which crime the Lacedaemonians accuse Pausanias of, though he enjoyed such great honours.

Such reasoning and such laws are neither political, useful nor true: but a legislator ought to instil those laws on the minds of men which are most useful for them, both in their public and private capacities. The rendering a people fit for war, that they may enslave their inferiors ought not to be the care of the legislator; but that they may not themselves be reduced to slavery by others. In [1334a] the next place, he should take care that the object of his government is the safety of those who are under it, and not a despotism over all: in the third place, that those only are slaves who are fit to be only so. Reason indeed concurs with experience in showing that all the attention which the legislator pays to the business of war, and all other rules which he lays down, should have for their object rest and peace; since most of those states (which we usually see) are preserved by war; but, after they have acquired a supreme power over those around them, are ruined; for during peace, like a sword, they lose their brightness: the fault of which lies in the legislator, who never taught them how to be at rest.

CHAPTER XV

As there is one end common to a man both as an individual and a citizen, it is evident that a good man and a good citizen must have the same object in view; it is evident that all the virtues which lead to rest are necessary; for, as we have often said, the end of war is peace, of labour, rest; but those virtues whose object is rest, and those also whose object is labour, are necessary for a liberal life and rest; for we want a supply of many necessary things that we may be at rest. A city therefore ought to be temperate, brave, and patient; for, according to the proverb, "Rest is not for slaves;" but those who cannot bravely face danger are the slaves of those who attack them. Bravery, therefore, and patience are necessary for labour, philosophy for rest, and temperance and justice in both; but these chiefly in time of peace and rest; for war obliges men to be just and temperate; but the enjoyment of pleasure, with the rest of peace, is more apt to produce insolence; those indeed who are easy in their circumstances, and enjoy everything that can make them happy, have great occasion for the virtues of temperance and justice. Thus if there are, as the poets tell us, any inhabitants in the happy isles, to these a higher degree of philosophy, temperance, and justice will be necessary, as they live at their ease in the full plenty of every sensual pleasure. It is evident, therefore, that these virtues are necessary in every state that would be happy or worthy; for he who is worthless can never enjoy real good, much less is he qualified to be at rest; but can appear good only by labour and being at war, but in peace and at rest the meanest of creatures. For which reason virtue should not be cultivated as the Lacedaemonians did; for they did not differ from others in their opinion concerning the supreme good, but in [1334b] imagining this good was to be procured by a particular virtue; but since there are greater goods than those of war, it is evident that the enjoyment of those which are valuable in themselves should be desired, rather than those virtues which are useful in war; but how and by what means this is to be acquired is now to be considered. We have already assigned three causes on which it will depend; nature, custom, and reason, arid shown what sort of men nature must produce for this purpose; it remains then

that we determine which we shall first begin by in education, reason or custom, for these ought always to preserve the most entire harmony with each other; for it may happen that reason may err from the end proposed, and be corrected by custom. In the first place, it is evident that in this as in other things, its beginning or production arises from some principle, and its end also arises from another principle, which is itself an end. Now, with us, reason and intelligence are the end of nature; our production, therefore, and our manners ought to be accommodated to both these. In the next place, as the soul and the body are two distinct things, so also we see that the soul is divided into two parts, the reasoning and not-reasoning, with their habits which are two in number, one belonging to each, namely appetite and intelligence; and as the body is in production before the soul, so is the not-reasoning part of the soul before the reasoning; and this is evident; for anger, will and desire are to be seen in children nearly as soon as they are born; but reason and intelligence spring up as they grow to maturity. The body, therefore, necessarily demands our care before the soul; next the appetites for the sake of the mind; the body for the sake of the soul.

CHAPTER XVI

If then the legislator ought to take care that the bodies of the children are as perfect as possible, his first attention ought to be given to matrimony; at what time and in what situation it is proper that the citizens should engage in the nuptial contract. Now, with respect to this alliance, the legislator ought both to consider the parties and their time of life, that they may grow old at the same part of time, and that their bodily powers may not be different; that is to say, the man being able to have children, but the woman too old to bear them; or, on the contrary, the woman be young enough to produce children, but the man too old to be a father; for from such a situation discords and disputes continually arise. In the next place, with respect to the succession of children, there ought not to be too great an interval of time between them and their parents; for when there is, the parent can receive no benefit from his child's affection, or the child any advantage from his father's protection; [1335a] neither should the difference in years be too little, as great inconveniences may arise from it; as it prevents that proper reverence being shown to a father by a boy who considers him as nearly his equal in age, and also from the disputes it occasions in the economy of the family. But, to return from this digression, care ought to be taken that the bodies of the children may be such as will answer the expectations of the legislator; this also will be affected by the same means. Since season for the production of children is determined (not exactly, but to speak in general), namely, for the man till seventy years, and the woman till fifty, the entering into the marriage state, as far as time is concerned, should be regulated by these periods. It is extremely bad for the children when the father is too young; for in all animals whatsoever the parts of the young are imperfect, and are more likely to be productive of females than males, and diminutive also in size; the same thing of course necessarily holds true in men; as a proof of this you may see in those cities where the men and women usually marry very young, the people in general are very small and ill framed; in child-birth also the women suffer more, and many of them die. And thus some persons tell us the oracle of Traezenium should be explained, as if it referred to the many women who were destroyed by too early marriages, and not their gathering their fruits too soon. It is also conducive to temperance not to marry too soon; for women who do so are apt to be intemperate. It also prevents the bodies of men from acquiring their full size if they marry before their growth is completed; for this is the determinate period, which prevents any further increase; for which reason the proper time for a woman to marry is eighteen, for a man thirty-seven, a little more or less; for when they marry at that time their bodies are in perfection, and they will also cease to have children at a proper time; and moreover with respect to the succession of the children, if they have them at the time which may reasonably be expected, they will be just arriving into perfection when their parents are sinking down under the load of seventy years. And thus much for the time which is proper for marriage; but moreover a proper season of the year should be observed, as many persons do now, and appropriate the winter for this business. The married couple ought also to regard the precepts of physicians and naturalists, each of whom have treated on these [1335b] subjects. What is the fit disposition of the body will be better mentioned when we come to speak of the education of the child; we will just slightly mention a few particulars. Now, there is no occasion that any one should have the habit of body of a wrestler to be either a good citizen, or to enjoy a good constitution, or to be the father of healthy children; neither should he be infirm or too much dispirited by misfortunes, but between both these. He ought to have a habit of labour, but not of too violent labour; nor should that be confined to one object only, as the wrestler's is; but to such things as are proper for freemen. These things are equally necessary both for men and women. Women with child should also take care that their diet is not too sparing, and that they use sufficient exercise; which it will be easy for the legislator to effect if he commands them once every day to repair to the worship of the gods who are supposed to preside over matrimony. But, contrary to what is proper for the body, the mind ought to be kept as tranquil as possible; for as plants partake of the nature of the soil, so does the child receive much of the disposition of the mother. With respect to the exposing or bringing up of children, let it be a law, that nothing imperfect or maimed shall be brought up,..... As the proper time has been pointed out for a man and a woman to enter into the marriage state, so also let us determine how long

it is advantageous for the community that they should have children; for as the children of those who are too young are imperfect both in body and mind, so also those whose parents are too old are weak in both: while therefore the body continues in perfection, which (as some poets say, who reckon the different periods of life by sevens) is till fifty years, or four or five more, the children may be equally perfect; but when the parents are past that age it is better they should have no more. With respect to any connection between a man and a woman, or a woman and a man, when either of the parties are betrothed, let it be held in utter detestation [1336a] on any pretext whatsoever; but should any one be guilty of such a thing after the marriage is consummated, let his infamy be as great as his guilt deserves.

CHAPTER XVII

When a child is born it must be supposed that the strength of its body will depend greatly upon the quality of its food. Now whoever will examine into the nature of animals, and also observe those people who are very desirous their children should acquire a warlike habit, will find that they feed them chiefly with milk, as being best accommodated to their bodies, but without wine, to prevent any distempers: those motions also which are natural to their age are very serviceable; and to prevent any of their limbs from being crooked, on account of their extreme ductility, some people even now use particular machines that their bodies may not be distorted. It is also useful to enure them to the cold when they are very little; for this is very serviceable for their health; and also to enure them to the business of war; for which reason it is customary with many of the barbarians to dip their children in rivers when the water is cold; with others to clothe them very slightly, as among the Celts; for whatever it is possible to accustom children to, it is best to accustom them to it at first, but to do it by degrees: besides, boys have naturally a habit of loving the cold, on account of the heat. These, then, and such-like things ought to be the first object of our attention: the next age to this continues till the child is five years old; during which time it is best to teach him nothing at all, not even necessary labour, lest it should hinder his growth; but he should be accustomed to use so much motion as not to acquire a lazy habit of body; which he will get by various means and by play also: his play also ought to be neither illiberal nor too laborious nor lazy. Their governors and preceptors also should take care what sort of tales and stories it may be proper for them to hear; for all these ought to pave the way for their future instruction: for which reason the generality of their play should be imitations of what they are afterwards to do seriously. They too do wrong who forbid by laws the disputes between boys and their quarrels, for they contribute to increase their growth--as they are a sort of exercise to the body: for the struggles of the heart and the compression of the spirits give strength to those who labour, which happens to boys in their disputes. The preceptors also ought to have an eye upon their manner of life, and those with whom they converse; and to take care that they are never in the company of slaves. At this time and till they are seven [1336b] years old it is necessary that they should be educated at home. It is also very proper to banish, both from their hearing and sight, everything which is illiberal and the like. Indeed it is as much the business of the legislator as anything else, to banish every indecent expression out of the state: for from a permission to speak whatever is shameful, very quickly arises the doing it, and this particularly with young people: for which reason let them never speak nor hear any such thing: but if it appears that any freeman has done or said anything that is forbidden before he is of age to be thought fit to partake of the common meals, let him be punished by disgrace and stripes; but if a person above that age does so, let him be treated as you would a slave, on account of his being infamous. Since we forbid his speaking everything which is forbidden, it is necessary that he neither sees obscene stories nor pictures; the magistrates therefore are to take care that there are no statues or pictures of anything of this nature, except only to those gods to whom the law permits them, and to which the law allows persons of a certain age to pay their devotions, for themselves, their wives, and children. It should also be illegal for young persons to be present either at iambics or comedies before they are arrived at that age when they are allowed to partake of the pleasures of the table: indeed a good education will preserve them from all the evils which attend on these things. We have at present just touched upon this subject; it will be our business hereafter, when we properly come to it, to determine whether this care of children is unnecessary, or, if necessary, in what manner it must be done; at present we have only mentioned it as necessary. Probably the saying of Theodoras, the tragic actor, was not a bad one: That he would permit no one, not even the meanest actor, to go upon the stage before him, that he might first engage the ear of the audience. The same thing happens both in our connections with men and things: what we meet with first pleases best; for which reason children should be kept strangers to everything which is bad, more particularly whatsoever is loose and offensive to good manners. When five years are accomplished, the two next may be very properly employed in being spectators of those exercises they will afterwards have to learn. There are two periods into which education ought to be divided, according to the age of the child; the one is from his being seven years of age to the time of puberty; the other from thence till he is one-and-twenty: for those who divide ages by the number seven [1337a] are in general wrong: it is much better to follow the division of nature; for every art and every instruction is intended to complete what nature has left defective: we must first consider if any regulation whatsoever

is requisite for children; in the next place, if it is advantageous to make it a common care, or that every one should act therein as he pleases, which is the general practice in most cities; in the third place, what it ought to be.

BOOK VIII

CHAPTER I

No one can doubt that the magistrate ought greatly to interest himself in the care of youth; for where it is neglected it is hurtful to the city, for every state ought to be governed according to its particular nature; for the form and manners of each government are peculiar to itself; and these, as they originally established it, so they usually still preserve it. For instance, democratic forms and manners a democracy; oligarchic, an oligarchy: but, universally, the best manners produce the best government. Besides, as in every business and art there are some things which men are to learn first and be made accustomed to, which are necessary to perform their several works; so it is evident that the same thing is necessary in the practice of virtue. As there is one end in view in every city, it is evident that education ought to be one and the same in each; and that this should be a common care, and not the individual's, as it now is, when every one takes care of his own children separately; and their instructions are particular also, each person teaching them as they please; but what ought to be engaged in ought to be common to all. Besides, no one ought to think that any citizen belongs to him in particular, but to the state in general; for each one is a part of the state, and it is the natural duty of each part to regard the good of the whole: and for this the Lacedaemonians may be praised; for they give the greatest attention to education, and make it public. It is evident, then, that there should be laws concerning education, and that it should be public.

CHAPTER II

What education is, and how children ought to be instructed, is what should be well known; for there are doubts concerning the business of it, as all people do not agree in those things they would have a child taught, both with respect to their improvement in virtue and a happy life: nor is it clear whether the object of it should be to improve the reason or rectify the morals. From the present mode of education we cannot determine with certainty to which men incline, whether to instruct a child in what will be useful to him in life; or what tends to virtue, and what is excellent: for all these things have their separate defenders. As to virtue, there is no particular [1337b] in which they all agree: for as all do not equally esteem all virtues, it reasonably follows that they will not cultivate the same. It is evident that what is necessary ought to be taught to all: but that which is necessary for one is not necessary for all; for there ought to be a distinction between the employment of a freeman and a slave. The first of these should be taught everything useful which will not make those who know it mean. Every work is to be esteemed mean, and every art and every discipline which renders the body, the mind, or the understanding of freemen unfit for the habit and practice of virtue: for which reason all those arts which tend to deform the body are called mean, and all those employments which are exercised for gain; for they take off from the freedom of the mind and render it sordid. There are also some liberal arts which are not improper for freemen to apply to in a certain degree; but to endeavour to acquire a perfect skill in them is exposed to the faults I have just mentioned; for there is a great deal of difference in the reason for which any one does or learns anything: for it is not illiberal to engage in it for one's self, one's friend, or in the cause of virtue; while, at the same time, to do it for the sake of another may seem to be acting the part of a servant and a slave. The mode of instruction which now prevails seems to partake of both parts.

CHAPTER III

There are four things which it is usual to teach children--reading, gymnastic exercises, and music, to which (in the fourth place) some add painting. Reading and painting are both of them of singular use in life, and gymnastic exercises, as productive of courage. As to music, some persons may doubt, as most persons now use it for the sake of pleasure: but those who originally made it part of education did it because, as has been already said, nature requires that we should not only be properly employed, but to be able to enjoy leisure honourably: for this (to repeat what I have already said) is of all things the principal. But, though both labour and rest are necessary, yet the latter is preferable to the first; and by all means we ought to learn what we should do when at rest: for we ought not to employ that time at play; for then play would be the necessary business of our lives. But if this cannot be, play is more necessary for those who labour than those who are at rest: for he who labours requires relaxation; which play will supply: for as labour is attended with pain and continued exertion, it is necessary that play should be introduced, under proper regulations, as a medicine: for such an employment of the mind is a relaxation to it, and eases with pleasure. [1338a] Now rest itself seems to partake of pleasure, of happiness, and an agreeable life: but this cannot be theirs who labour, but theirs who are at rest;

for he who labours, labours for the sake of some end which he has not: but happiness is an end which all persons think is attended with pleasure and not with pain: but all persons do not agree in making this pleasure consist in the same thing; for each one has his particular standard, correspondent to his own habits; but the best man proposes the best pleasure, and that which arises from the noblest actions. But it is evident, that to live a life of rest there are some things which a man must learn and be instructed in; and that the object of this learning and this instruction centres in their acquisition: but the learning and instruction which is given for labour has for its object other things; for which reason the ancients made music a part of education; not as a thing necessary, for it is not of that nature, nor as a thing useful, as reading, in the common course of life, or for managing of a family, or for learning anything as useful in public life. Painting also seems useful to enable a man to judge more accurately of the productions of the finer arts: nor is it like the gymnastic exercises, which contribute to health and strength; for neither of these things do we see produced by music; there remains for it then to be the employment of our rest, which they had in view who introduced it; and, thinking it a proper employment for freemen, to them they allotted it; as Homer sings:

"How right to call Thalia to the feast:"

and of some others he says:

"The bard was call'd, to ravish every ear:"

and, in another place, he makes Ulysses say the happiest part of man's life is

"When at the festal board, in order plac'd, They hear the song."

It is evident, then, that there is a certain education in which a child may be instructed, not as useful nor as necessary, but as noble and liberal: but whether this is one or more than one, and of what sort they are, and how to be taught, shall be considered hereafter: we are now got so far on our way as to show that we have the testimony of the ancients in our favour, by what they have delivered down upon education--for music makes this plain. Moreover, it is necessary to instruct children in what is useful, not only on account of its being useful in itself, as, for instance, to learn to read, but also as the means of acquiring other different sorts of instruction: thus they should be instructed in painting, not only to prevent their being mistaken in purchasing pictures, or in buying or selling of vases, but rather as it makes [1338b] them judges of the beauties of the human form; for to be always hunting after the profitable ill agrees with great and freeborn souls. As it is evident whether a boy should be first taught morals or reasoning, and whether his body or his understanding should be first cultivated, it is plain that boys should be first put under the care of the different masters of the gymnastic arts, both to form their bodies and teach them their exercises.

CHAPTER IV

Now those states which seem to take the greatest care of their children's education, bestow their chief attention on wrestling, though it both prevents the increase of the body and hurts the form of it. This fault the Lacedaemonians did not fall into, for they made their children fierce by painful labour, as chiefly useful to inspire them with courage: though, as we have already often said, this is neither the only thing nor the principal thing necessary to attend to; and even with respect to this they may not thus attain their end; for we do not find either in other animals, or other nations, that courage necessarily attends the most cruel, but rather the milder, and those who have the dispositions of lions: for there are many people who are eager both to kill men and to devour human flesh, as the Achaeans and Heniochi in Pontus, and many others in Asia, some of whom are as bad, others worse than these, who indeed live by tyranny, but are men of no courage. Nay, we know that the Lacedaemonians themselves, while they continued those painful labours, and were superior to all others (though now they are inferior to many, both in war and gymnastic exercises), did not acquire their superiority by training their youth to these exercises, but because those who were disciplined opposed those who were not disciplined at all. What is fair and honourable ought then to take place in education of what is fierce and cruel: for it is not a wolf, nor any other wild beast, which will brave any noble danger, but rather a good man. So that those who permit boys to engage too earnestly in these exercises, while they do not take care to instruct them in what is necessary to do, to speak the real truth, render them mean and vile, accomplished only in one duty of a citizen, and in every other respect, as reason evinces, good for nothing. Nor should we form our judgments from past events, but from what we see at present: for now they have rivals in their mode of education, whereas formerly they had not. That gymnastic exercises are useful, and in what manner, is admitted; for during youth it is very proper to go through a course of those which are most gentle, omitting that violent diet and those painful exercises which are prescribed as necessary; that they may not prevent the growth of the body: and it is no small proof that they have this effect, that amongst the Olympic candidates we can scarce find two or three who have gained a victory

both when boys and men: because the necessary exercises they went through when young deprived them of their strength. When they have allotted three years from the time of puberty to other parts of education, they are then of a proper age to submit to labour and a regulated diet; for it is impossible for the mind and body both to labour at the same time, as they are productive of contrary evils to each other; the labour of the body preventing the progress of the mind, and the mind of the body.

CHAPTER V

With respect to music we have already spoken a little in a doubtful manner upon this subject. It will be proper to go over again more particularly what we then said, which may serve as an introduction to what any other person may choose to offer thereon; for it is no easy matter to distinctly point out what power it has, nor on what accounts one should apply it, whether as an amusement and refreshment, as sleep or wine; as these are nothing serious, but pleasing, and the killers of care, as Euripides says; for which reason they class in the same order and use for the same purpose all these, namely, sleep, wine, and music, to which some add dancing; or shall we rather suppose that music tends to be productive of virtue, having a power, as the gymnastic exercises have to form the body in a certain way, to influence the manners so as to accustom its professors to rejoice rightly? or shall we say, that it is of any service in the conduct of life, and an assistant to prudence? for this also is a third property which has been attributed to it. Now that boys are not to be instructed in it as play is evident; for those who learn don't play, for to learn is rather troublesome; neither is it proper to permit boys at their age to enjoy perfect leisure; for to cease to improve is by no means fit for what is as yet imperfect; but it may be thought that the earnest attention of boys in this art is for the sake of that amusement they will enjoy when they come to be men and completely formed; but, if this is the case, why are they themselves to learn it, and not follow the practice of the kings of the Medes and Persians, who enjoy the pleasure of music by hearing others play, and being shown its beauties by them; for of necessity those must be better skilled therein who make this science their particular study and business, than those who have only spent so much time at it as was sufficient just to learn the principles of it. But if this is a reason for a child's being taught anything, they ought also to learn the art of cookery, but this is absurd. The same doubt occurs if music has a power of improving the manners; for why should they on this account themselves learn it, and not reap every advantage of regulating the passions or forming a judgment [1339b] on the merits of the performance by hearing others, as the Lacedaemonians; for they, without having ever learnt music, are yet able to judge accurately what is good and what is bad; the same reasoning may be applied if music is supposed to be the amusement of those who live an elegant and easy life, why should they learn themselves, and not rather enjoy the benefit of others' skill. Let us here consider what is our belief of the immortal gods in this particular. Now we find the poets never represent Jupiter himself as singing and playing; nay, we ourselves treat the professors of these arts as mean people, and say that no one would practise them but a drunkard or a buffoon. But probably we may consider this subject more at large hereafter. The first question is, whether music is or is not to make a part of education? and of those three things which have been assigned as its proper employment, which is the right? Is it to instruct, to amuse, or to employ the vacant hours of those who live at rest? or may not all three be properly allotted to it? for it appears to partake of them all; for play is necessary for relaxation, and relaxation pleasant, as it is a medicine for that uneasiness which arises from labour. It is admitted also that a happy life must be an honourable one, and a pleasant one too, since happiness consists in both these; and we all agree that music is one of the most pleasing things, whether alone or accompanied with a voice; as Musseus says, "Music's the sweetest joy of man;" for which reason it is justly admitted into every company and every happy life, as having the power of inspiring joy. So that from this any one may suppose that it is necessary to instruct young persons in it; for all those pleasures which are harmless are not only conducive to the final end of life, but serve also as relaxations; and, as men are but rarely in the attainment of that final end, they often cease from their labour and apply to amusement, with no further view than to acquire the pleasure attending it. It is therefore useful to enjoy such pleasures as these. There are some persons who make play and amusement their end, and probably that end has some pleasure annexed to it, but not what should be; but while men seek the one they accept the other for it; because there is some likeness in human actions to the end; for the end is pursued for the sake of nothing else that attends it; but for itself only; and pleasures like these are sought for, not on account of what follows them, but on account of what has gone before them, as labour and grief; for which reason they seek for happiness in these sort of pleasures; and that this is the reason any one may easily perceive. That music should be pursued, not on this account only, but also as it is very serviceable during the hours of relaxation from labour, probably no [1340a] one doubts; we should also inquire whether besides this use it may not also have another of nobler nature--and we ought not only to partake of the common pleasure arising from it (which all have the sensation of, for music naturally gives pleasure, therefore the use of it is agreeable to all ages and all dispositions); but also to examine if it tends anything to improve our manners and our souls. And this will be easily known if we feel our dispositions any way influenced thereby; and that they are so is evident from many other instances, as well as the music at the Olympic games; and this confessedly fills the soul with

enthusiasm; but enthusiasm is an affection of the soul which strongly agitates the disposition. Besides, all those who hear any imitations sympathise therewith; and this when they are conveyed even without rhythm or verse. Moreover, as music is one of those things which are pleasant, and as virtue itself consists in rightly enjoying, loving, and hating, it is evident that we ought not to learn or accustom ourselves to anything so much as to judge right and rejoice in honourable manners and noble actions. But anger and mildness, courage and modesty, and their contraries, as well as all other dispositions of the mind, are most naturally imitated by music and poetry; which is plain by experience, for when we hear these our very soul is altered; and he who is affected either with joy or grief by the imitation of any objects, is in very nearly the same situation as if he was affected by the objects themselves; thus, if any person is pleased with seeing a statue of any one on no other account but its beauty, it is evident that the sight of the original from whence it was taken would also be pleasing; now it happens in the other senses there is no imitation of manners; that is to say, in the touch and the taste; in the objects of sight, a very little; for these are merely representations of things, and the perceptions which they excite are in a manner common to all. Besides, statues and paintings are not properly imitations of manners, but rather signs and marks which show the body is affected by some passion. However, the difference is not great, yet young men ought not to view the paintings of Pauso, but of Polygnotus, or any other painter or statuary who expresses manners. But in poetry and music there are imitations of manners; and this is evident, for different harmonies differ from each other so much by nature, that those who hear them are differently affected, and are not in the same disposition of mind when one is performed as when another is; the one, for instance, occasions grief 13406 and contracts the soul, as the mixed Lydian: others soften the mind, and as it were dissolve the heart: others fix it in a firm and settled state, such is the power of the Doric music only; while the Phrygian fills the soul with enthusiasm, as has been well described by those who have written philosophically upon this part of education; for they bring examples of what they advance from the things themselves. The same holds true with respect to rhythm; some fix the disposition, others occasion a change in it; some act more violently, others more liberally. From what has been said it is evident what an influence music has over the disposition of the mind, and how variously it can fascinate it: and if it can do this, most certainly it is what youth ought to be instructed in. And indeed the learning of music is particularly adapted to their disposition; for at their time of life they do not willingly attend to anything which is not agreeable; but music is naturally one of the most agreeable things; and there seems to be a certain connection between harmony and rhythm; for which reason some wise men held the soul itself to be harmony; others, that it contains it.

CHAPTER VI

We will now determine whether it is proper that children should be taught to sing, and play upon any instrument, which we have before made a matter of doubt. Now, it is well known that it makes a great deal of difference when you would qualify any one in any art, for the person himself to learn the practical part of it; for it is a thing very difficult, if not impossible, for a man to be a good judge of what he himself cannot do. It is also very necessary that children should have some employment which will amuse them; for which reason the rattle of Archytas seems well contrived, which they give children to play with, to prevent their breaking those things which are about the house; for at their age they cannot sit still: this therefore is well adapted to infants, as instruction ought to be their rattle as they grow up; hence it is evident that they should be so taught music as to be able to practise it. Nor is it difficult to say what is becoming or unbecoming of their age, or to answer the objections which some make to this employment as mean and low. In the first place, it is necessary for them to practise, that they may be judges of the art: for which reason this should be done when they are young; but when they are grown older the practical part may be dropped; while they will still continue judges of what is excellent in the art, and take a proper pleasure therein, from the knowledge they acquired of it in their youth. As to the censure which some persons throw upon music, as something mean and low, it is not difficult to answer that, if we will but consider how far we propose those who are to be educated so as to become good citizens should be instructed in this art, [1341a] and what music and what rhythms they should be acquainted with; and also what instruments they should play upon; for in these there is probably a difference. Such then is the proper answer to that censure: for it must be admitted, that in some cases nothing can prevent music being attended, to a certain degree, with the bad effects which are ascribed to it; it is therefore clear that the learning of it should never prevent the business of riper years; nor render the body effeminate, and unfit for the business of war or the state; but it should be practised by the young, judged of by the old. That children may learn music properly, it is necessary that they should not be employed in those parts of it which are the objects of dispute between the masters in that science; nor should they perform such pieces as are wondered at from the difficulty of their execution; and which, from being first exhibited in the public games, are now become a part of education; but let them learn so much of it as to be able to receive proper pleasure from excellent music and rhythms; and not that only which music must make all animals feel, and also slaves and boys, but more. It is therefore plain what instruments they should use; thus, they should never be taught to play upon the flute, or any other instrument which requires great

skill, as the harp or the like, but on such as will make them good judges of music, or any other instruction: besides, the flute is not a moral instrument, but rather one that will inflame the passions, and is therefore rather to be used when the soul is to be animated than when instruction is intended. Let me add also, that there is something therein which is quite contrary to what education requires; as the player on the flute is prevented from speaking: for which reason our forefathers very properly forbade the use of it to youth and freemen, though they themselves at first used it; for when their riches procured them greater leisure, they grew more animated in the cause of virtue; and both before and after the Median war their noble actions so exalted their minds that they attended to every part of education; selecting no one in particular, but endeavouring to collect the whole: for which reason they introduced the flute also, as one of the instruments they were to learn to play on. At Lacedaemon the choregus himself played on the flute; and it was so common at Athens that almost every freeman understood it, as is evident from the tablet which Thrasippus dedicated when he was choregus; but afterwards they rejected it as dangerous; having become better judges of what tended to promote virtue and what did not. For the same reason many of the ancient instruments were thrown aside, as the dulcimer and the lyre; as also those which were to inspire those who played on them with pleasure, and which required a nice finger and great skill to play well on. What the ancients tell us, by way of fable, of the flute is indeed very rational; namely, that after Minerva had found it, she threw it away: nor are they wrong who say that the goddess disliked it for deforming the face of him who played thereon: not but that it is more probable that she rejected it as the knowledge thereof contributed nothing to the improvement of the mind. Now, we regard Minerva as the inventress of arts and sciences. As we disapprove of a child's being taught to understand instruments, and to play like a master (which we would have confined to those who are candidates for the prize in that science; for they play not to improve themselves in virtue, but to please those who hear them, and gratify their importunity); therefore we think the practice of it unfit for freemen; but then it should be confined to those who are paid for doing it; for it usually gives people sordid notions, for the end they have in view is bad: for the impertinent spectator is accustomed to make them change their music; so that the artists who attend to him regulate their bodies according to his motions.

CHAPTER VII

We are now to enter into an inquiry concerning harmony and rhythm; whether all sorts of these are to be employed in education, or whether some peculiar ones are to be selected; and also whether we should give the same directions to those who are engaged in music as part of education, or whether there is something different from these two. Now, as all music consists in melody and rhythm, we ought not to be unacquainted with the power which each of these has in education; and whether we should rather choose music in which melody prevails, or rhythm: but when I consider how many things have been well written upon these subjects, not only by some musicians of the present age, but also by some philosophers who are perfectly skilled in that part of music which belongs to education; we will refer those who desire a very particular knowledge therein to those writers, and shall only treat of it in general terms, without descending to particulars. Melody is divided by some philosophers, whose notions we approve of, into moral, practical, and that which fills the mind with enthusiasm: they also allot to each of these a particular kind of harmony which naturally corresponds therewith: and we say that music should not be applied to one purpose only, but many; both for instruction and purifying the soul (now I use the word purifying at present without any explanation, but shall speak more at large of it in my Poetics); and, in the third place, as an agreeable manner of spending the time and a relaxation from the uneasiness of the mind. [1342a] It is evident that all harmonies are to be used; but not for all purposes; but the most moral in education: but to please the ear, when others play, the most active and enthusiastic; for that passion which is to be found very strong in some souls is to be met with also in all; but the difference in different persons consists in its being in a less or greater degree, as pity, fear, and enthusiasm also; which latter is so powerful in some as to overpower the soul: and yet we see those persons, by the application of sacred music to soothe their mind, rendered as sedate and composed as if they had employed the art of the physician: and this must necessarily happen to the compassionate, the fearful, and all those who are subdued by their passions: nay, all persons, as far as they are affected with those passions, admit of the same cure, and are restored to tranquillity with pleasure. In the same manner, all music which has the power of purifying the soul affords a harmless pleasure to man. Such, therefore, should be the harmony and such the music which those who contend with each other in the theatre should exhibit: but as the audience is composed of two sorts of people, the free and the well-instructed, the rude the mean mechanics, and hired servants, and a long collection of the like, there must be some music and some spectacles to please and soothe them; for as their minds are as it were perverted from their natural habits, so also is there an unnatural harmony, and overcharged music which is accommodated to their taste: but what is according to nature gives pleasure to every one, therefore those who are to contend upon the theatre should be allowed to use this species of music. But in education ethic melody and ethic harmony should be used, which is the Doric, as we have already said, or any other which those philosophers who are skilful in that music which is to be employed in education shall

approve of. But Socrates, in Plato's Republic, is very wrong when he [1342b] permits only the Phrygian music to be used as well as the Doric, particularly as amongst other instruments he banishes the flute; for the Phrygian music has the same power in harmony as the flute has amongst the instruments; for they are both pathetic and raise the mind: and this the practice of the poets proves; for in their bacchanal songs, or whenever they describe any violent emotions of the mind, the flute is the instrument they chiefly use: and the Phrygian harmony is most suitable to these subjects. Now, that the dithyrambic measure is Phrygian is allowed by general consent; and those who are conversant in studies of this sort bring many proofs of it; as, for instance, when Philoxenus endeavoured to compose dithyrambic music for Doric harmony, he naturally fell back again into Phrygian, as being fittest for that purpose; as every one indeed agrees, that the Doric music is most serious, and fittest to inspire courage: and, as we always commend the middle as being between the two extremes, and the Doric has this relation with respect to other harmonies, it is evident that is what the youth ought to be instructed in. There are two things to be taken into consideration, both what is possible and what is proper; every one then should chiefly endeavour to attain those things which contain both these qualities: but this is to be regulated by different times of life; for instance, it is not easy for those who are advanced in years to sing such pieces of music as require very high notes, for nature points out to them those which are gentle and require little strength of voice (for which reason some who are skilful in music justly find fault with Socrates for forbidding the youth to be instructed in gentle harmony; as if, like wine, it would make them drunk, whereas the effect of that is to render men bacchanals, and not make them languid): these therefore are what should employ those who are grown old. Moreover, if there is any harmony which is proper for a child's age, as being at the same time elegant and instructive, as the Lydian of all others seems chiefly to be-These then are as it were the three boundaries of education, moderation, possibility, and decorum.

Ambractia, the government of, changed, 151

Andromadas Reginus, a lawgiver to the Thracian Calcidians, 65

Animals, their different provisions by nature, 14; intended by nature for the benefit of man, 14; what constitutes their different species, 113

Animals, tame, why better than wild, 8

Arbitrator and judge, their difference, 49

Architas his rattle, 248

Areopagus, senate of, 63

Argonauts refuse to take Hercules with them, 93

Aristocracies, causes of commotions in them, 157; chief cause of their alteration, 158; may degenerate into an oligarchy, 79

Aristocracy, what, 78; treated of, 120; its object, 121

Art, works of, which most excellent, 20

Artificers and slaves, their difference, 24

Assemblies, public, advantageous to a democracy, 134

Assembly, public, its proper business, 133

Athens, different dispositions of the citizens of, 149

Barter, its original, 15

Being, what the nature of every one is, 3

Beings, why some command, others obey, 2

Body by nature to be governed, 8; requires our care before the soul, 232

Calchis, the government of, changed, 151

Calcidians, 65

Carthaginian government described, 60

Census in a free state should be as extensive as possible, 131; how to be altered, 162

Charondas supposed to be the scholar of Zaleucus, 64

Child, how to be managed when first born, 235; should be taught nothing till he is five years old, 235; how then to be educated, 236

Children, the proper government of, 22; what their proper virtues, 23; what they are usually taught, 240

Cities, how governed at first, 3; what, 3; the work of nature, 3; prior in contemplation to a family, or an individual, 4

Citizen, who is one? 66, 68; should know both how to command and obey, 73

Citizens must have some things in common, 26; should be exempted from servile labour, 51; privileges different in different governments, 68; if illegally made, whether illegal, 69; who admitted to be, 75; in the best states ought not to follow merchandise, 216

City, may be too much one, 27, 35; what, 66, 82; when it continues the same, 70; for whose sake established, 76; its end, 83; of what parts made up, 113; best composed of equals, 126

City of the best form, what its establishment ought to be, 149; wherein its greatness consists, 149; may be either too large or too small, 209; what should be its situation, 211; whether proper near the sea, 211; ought to be divided by families into different sorts of men, 218

City and confederacy, their difference, 37; wherein it should be one, 27

Command amongst equals should be in rotation, 101

Common meals not well established at Lacedaemon-well at Crete, 56; the model from whence the Lacedaemonian was taken, 56; inferior to it in some respects, 56

Community, its recommendations deceitful, 34; into what people it may be divided, 194

Community of children, 29, 30; inconveniences attending it, 31

Community of goods, its inconveniences, 28; destructive of modesty and liberality, 34

Community of wives, its inconveniences, 27

Contempt a cause of sedition, 146

Courage of a man different from a woman's, 74

Courts, how many there ought to be, 140

Courts of justice should be few in a small state, 192

Cretan customs similar to the Lacedasmonian, 57; assembly open to every citizen, 58

Cretans, their power, 58; their public meals, how conducted 58

Crete, the government of, 57; description of the island of 57

Customs at Carthage, Lacedaemon, and amongst the Scythians and Iberians, concerning those who had killed an enemy, 204, 205

Dadalus's statues, 6.

Delphos, an account of a sedition there, 150

Demagogues, their influence in a democracy, 116.

Democracies, arose out of tyrannies, 100; whence they arose, 142; when changed into tyrannies, 153; their different sorts, 184, 188; general rules for their establishment, 185; should not be made too perfect, 191

Democracy, what, 79, 80; its definition, 112, 113; different sorts of, 115, 118; its object, 122; how subverted in the Isle of Cos, 152

Democracy and aristocracy, how they may be blended together, 163

Democratical state, its foundation, 184

Despotic power absurd, 205

Dion, his noble resolution, 171

Dionysius, his taxes, 175

Dissolution of kingdoms and tyrannies, 169

Domestic employments of men and women different, 74

Domestic government, its object, 77

Domestic society the first, 3

Draco, 65

Dyrrachium, government of, 101

Economy and money-getting, difference, 17

Education necessary for the happiness of the city, 90; of all things most necessary to preserve the state, 166; what it ought to be, 166; the objects of it, 228, 229; should be taken care of by the magistrate, and correspond to the nature of government, 238; should be a common care, and regulated by laws, 238

Employment, one to be allotted to one person in an extensive government, 136

Employments in the state, how to be disposed of, 88-90; whether all should be open to all, 216

Ephialtes abridges the power of the senate of Areopagus, 63

Ephori, at Sparta, their power too great, 54; improperly chosen, 54; flattered by their kings, 54; the supreme judges, 55; manner of life too indulgent, 55

Epidamnus, an account of a revolution there, 150

Equality, how twofold, 143; in a democracy, how to be procured, 186

Euripides quoted, 72

Family government, of what it consists, 5

Father should not be too young, 232

Females and slaves, wherein they differ, 2; why upon a level amongst barbarians, 3

Forfeitures, how to be applied, 192

Fortune improper pretension for power, 91

Freemen in general, what power they ought to have, 86

Free state treated of, 121; how it arises out of a democracy and oligarchy, 122, 123

Friendship weakened by a community of children, 31

General, the office of, how to be disposed of, 98

Gods, why supposed subject to kingly government, 3

Good, relative to man, how divided, 201

Good and evil, the perception of, necessary to form a family and a city, 4

Good fortune something different from happiness, 202

Government should continue as much as possible in the same hands, 28; in what manner it should be in rotation, 28; what, 66; which best, of a good man or good laws, 98; good, to what it should owe its preservation, 124; what the best, 225

Government of the master over the slave sometimes reciprocally useful, ii

Governments, how different from each other, 67; whether more than one form should be established, 76; should endeavour to prevent others from being too powerful-- instances of it, 93; how compared to music, in; in general, to what they owe their preservation, 160

Governments, political, regal, family, and servile, their difference from each other, i

Governors and governed, whether their virtues are the same or different, 23; whether they should be the same persons or different, 227

Grecians, their superiority over other people, 213

Guards of a king natives, 96,168; of a tyrant foreigners, 96, 168

Gymnastic exercises, when to be performed, 223; how far they should be made a part of education, 242, 243

Happiness, wherein it consists, 207

Happy life, where most likely to be found, 202

Harmony, whether all kinds of it are to be used in education, 251

Helots troublesome to the Lacedaemonians, 87

Herdsmen compose the second-best democracy, 189

Hippodamus, an account of, 46; his plan of government, 46, 47: objected to, 47, 48

Homer quoted, 95, 116

Honours, an inequality of, occasions seditions, 44

Horse most suitable to an oligarchy, 195

Houses, private, their best form, 221

Human flesh devoured by some nations, 242

Husbandmen compose the best democracy, 189; will choose to govern according to law, 118

Husbandry, art of, whether part of money-getting, 13

Instruments, their difference from each other, 6; wherein they differ from possessions, 6

Italy, its ancient boundary, 218

Jason's declaration, 72

Judge should not act as an arbitrator, 48, 49; which is best for an individual, or the people in general, 98, 99

Judges, many better than one, 102; of whom to consist, 102; how many different sorts are necessary, 141

Judicial part of government, how to be divided, 140

Jurymen, particular powers sometimes appointed to that office, 68

Justice, what, 88; the course of, impeded in Crete, 59; different in different situations, 74

King, from whom to be chosen 60; the guardian of his people 168

King's children, what to be done with, 100

King's power, what it should be 100; when unequal, 143

Kingdom, what, 78

Kingdoms, their object, 167; how bestowed, 168; causes of their dissolution, 173; how preserved, 173

Kingly government in the heroic times, what, 96

Kingly power regulated by the laws at Sparta in peace, 95; absolute in war, 95

Kings formerly in Crete, 58; their power afterwards devolved to the kosmoi, 58; method of electing them at Carthage, 60

Knowledge of the master and slave different from each other, ii

Kosmoi, the power of, 58; their number, 58; wherein inferior to the ephori, 58; allowed to resign their office before their time is elapsed, 59

Lacedamonian customs similar to the Cretan, 57

Lacedaemonian government much esteemed, 41; the faults of it, 53-56; calculated only for war, 56; how composed of a democracy and oligarchy, 124

Lacedaemonian revenue badly raised, 56, 57

Lacedaemonians, wherein they admit things to be common, 33

Land should be divided into two parts, 219

Law makes one man a slave, another free, 6; whether just or not, 9; at Thebes respecting tradesmen, 75; nothing should be done contrary to it, 160

Law and government, their difference, 107, 108

Laws, when advantageous to alter them, 49,50, 52; of every state will be like the state, 88; whom they should be calculated for, 92; decide better than men, 101; moral preferable to written, 102; must sometimes bend to ancient customs, 117; should be framed to the state, 107; the same suit not all governments, 108

Legislator ought to know not only what is best, but what is practical, n

Legislators should fix a proper medium in property, 46

Liberty, wherein it partly consists, 184, 185

Life, happy, owing to a course of virtue, 125; how divided, 228

Locrians forbid men to sell their property, 43

Lycophron's account of law, 82

Lycurgus gave over reducing the women to obedience, 53; made it infamous for any one to sell his possessions, 53; some of his laws censured, 54; spent much time at Crete, 57; supposed to be the scholar of Thales, 64

Lysander wanted to abolish the kingly power in Sparta, 143

Magistrate, to whom that name is properly given, 136

Magistrates, when they make the state incline to an oligarchy, 61; when to an aristocracy, 61; at Athens, from whom to be chosen, 64; to determine those causes which the law cannot be applied to, 88; whether their power is to be the same, or different in different communities, 137; how they differ from each other, 138; in those who appoint them, 138; should be continued but a short time in democracies, 161; how to be chosen in a democracy, 185; different sorts and employments, 196

Making and using, their difference, 6

Malienses, their form of government, 131

Man proved to be a political animal, 4; has alone a perception of good and evil, 4; without law and justice the worst of beings, 5

Master, power of, whence it arises, as some think, 5

Matrimony, when to be engaged in, 232

Meals, common, established in Crete and Italy, 218; expense of, should be defrayed by the whole state, 219

Mechanic employments useful for citizens, 73

Mechanics, whether they should be allowed to be citizens, 74, 75; cannot acquire the practice of virtue, 75; admitted to be citizens in an oligarchy, 75

Medium of circumstances best, 126

Members of the community, their different pretences to the employments of the state, 90; what natural dispositions they ought to be of, 213

Men, some distinguished by nature for governors, others to be governed, 7; their different modes of living, 13; worthy three ways, 226

Merchandise, three different ways of carrying it on, 20

Middle rank of men make the best citizens, 127; most conducive to the preservation of the state, 128; should be particularly attended to by the legislators, 130

Military, how divided, 194

Mitylene, an account of a dispute there, 150

Monarch, absolute, 100

Monarchies, their nature, 95, 96; sometimes elective, 95; sometimes hereditary, 95; whence they sometimes arise, 146; causes of corruption in them, 167; how preserved, 173

Money, how it made its way into commerce, 16; first weighed, 16; afterwards stamped, 16; its value dependent on agreement, 16; how gained by exchange, 19

Money--getting considered at large, 17, 18

Monopolising gainful, 21; sometimes practised by cities, 21

Monopoly of iron in Sicily, a remarkable instance of the profit of it, 21

Music, how many species of it, in; why a part of education, 240; how far it should be taught, 242, 243; professors of it considered as mean people, 244; imitates the disposition of the mind, 246; improves our manners, 246; Lydian, softens the mind, 247; pieces of, difficult in their execution, not to be taught to children, 249

Nature requires equality amongst equals, 101

Naval power should be regulated by the strength of the city, 212

Necessary parts of a city, what, 215

Nobles, the difference between them, no; should take care of the poor, 193

Oath, an improper one in an oligarchy, 166

Officers of state, who they ought to be, 135; how long to continue, 135; who to choose them, 136

Offices, distinction between them, 67; when subversive of the rights of the people, 130

Offspring, an instance of the likeness of, to the sire, 30

Oligarchies arise where the strength of the state consists in horse, no; whence they arose, 142

Oligarchy admits not hired servants to be citizens, 75; its object, 79; what, 79, 81; its definition, 112; different sorts of, 117, 119; its object, 122; how it ought to be founded, 195

Onomacritus supposed to have drawn up laws, 64

Ostracism, why established, 93, 146; its power, 93; a weapon in the hand of sedition, 94

Painting, why it should be made a part of education, 241

Particulars, five, in which the rights of the people will be undermined, 130

Pausanias wanted to abolish the ephori, 143

People, how they should be made one, 35; of Athens assume upon their victory over the Medes, 64; what best to submit to a kingly government, 104; to an aristocratic, 104; to a free state, 104; should be allowed the power of pardoning, not of condemning, 135

Periander's advice to Thrasy-bulus, 93, 169

Pericles introduces the paying of those who attended the court of justice, 64

Philolaus, a Theban legislator, quits his native country, 64

Phocea, an account of a dispute there, 150

Physician, his business, 86

Physicians, their mode of practice in Egypt, 98; when ill consult others, 102

Pittacus, 65

Plato censured, 180

Poor excused from bearing arms and from gymnastic exercises in an oligarchy, 131; paid for attending the public assemblies in a democracy, 131

Power of the master, its object, 77

Power, supreme, where it ought to be lodged, 84; why with the many, 85, 87

Powers of a state, different methods of delegating them to the citizens, 132-134

Preadvisers, court of, 135

Priesthood, to whom to be allotted, 217

Prisoners of war, whether they may be justly made slaves, 9

Private property not regulated the source of sedition, 42; Phaleas would have it equal, 42; how Phaleas would correct the irregularities of it, 43; Plato would allow a certain difference in it, 43

Property, its nature, 12; how it should be regulated, 32, 33; the advantages of having it private, 34; what quantity the public ought to have, 44; ought not to be common, 219

Public assemblies, when subversive of the liberties of the people, 130

Public money, how to be divided, 193

Qualifications necessary for those who are to fill the first departments in government, 164

Quality of a city, what meant by it, 129

Quantity, 129

Rest and peace the proper objects of the legislator, 230

Revolutions in a democracy, whence they arise, 152; in an oligarchy, 156

Rich fined in an oligarchy for not bearing arms and attending the gymnastic exercises, 131; receive nothing for attending the public assemblies in a democracy, 131

Rights of a citizen, whether advantageous or not, 203

Seditions sometimes prevented by equality, 45; their causes, 144-146; how to be prevented, 163

Senate suits a democracy, 185

Shepherds compose the second-best democracy, 189

Slave, his nature and use, 6; a chattel, 7; by law, how, 9

Slavery not founded in nature but law, as some think, 6

Slaves, an inquiry into the virtues they are capable of, 23; difficult to manage properly, 51; their different sorts, 73

Society necessary to man, 77

Society, civil, the greatest blessing to man, 4; different from a commercial intercourse, 82

Socrates, his mistakes on government, Book II. passim; his division of the inhabitants, 38; would have the women go to war, 38; Aristotle's opinion of his discourses, 38; his city would require a country of immeasurable extent, 39; his comparison of the human species to different kinds of metals, 40; his account of the different orders of men in a city imperfect, 3

Sojourners, their situation, 66

Solon's opinion of riches, 14; law for restraining property, 43; alters the Athenian government, 63

Soul by nature the governor over the body, and in what manner, 8; of man how divided, 228, 231

Speech a proof that man was formed for society, 4

State, each, consists of a great number of parts, 109; its disproportionate increase the cause of revolutions, 147; firm, what, 159

Stealing, how to be prevented, 44

Submission to government, when it is slavery, 206

Supreme power should be ultimately vested in the laws, 101

Syracuse, the government of, languid, 151

Temperance in a man different from a woman, 74

Temples, how to be built, 223

Thales, his contrivance to get money, 21; supposed to be the companion of Onomacritus, 64

Things necessary to be known for the management of domestic affairs, 19, 20; necessary in the position of a city, 220

Tribunals, what different things they should have under their jurisdictions, 137

Tyrannies, how established, 168; how preserved, 174, 176; of short duration, 180; instances thereof, 180

Tyranny, what, 79; not natural, 103; whence it arises, 108; treated of, 124; contains all that is bad in all governments, 125

Tyrant, from whom usually chosen, 167; his object, 168; his guards, 168

Tyrants, many of them originally enjoyed only kingly power, 168; the causes of their being conspired against, 169, 170; always love the worst of men, 175

Uses of possessions, two, 15

Usury detested, 19

Venality to be guarded against, IDS

Village, what, 3

Virtue of a citizen has reference to the state, 71; different in different governments, 71

Virtues different in different persons, 23, 24; whether the same constitute a good man and a valuable citizen, 71

Walls necessary for a city, 222

War, what is gained by it in some degree a natural acquisition, 14; not a final end, 205, 229

Wife, the proper government of, 22

Women, what their proper virtue, 23; not to be indulged in improper liberties, 52; had great influence at Lacedaemon, 52; of great disservice to the Lacedemonians, 52; why indulged by them, 53; their proper time of marrying, 233; how to be managed when with child, 234

Zaleucus, legislator of the Western Locrians, 64; supposed to be the scholar of Thales, 64

A TREATISE ON GOVERNMENT

By Aristotle

Translated From The Greek Of Aristotle By William Ellis, A.M.

London & Toronto Published By J M Dent & Sons Ltd. & In New York By E. P. Dutton &. Co

First Issue Of This Edition 1912 Reprinted 1919, 1923, 1928

INTRODUCTION

The Politics of Aristotle is the second part of a treatise of which the Ethics is the first part. It looks back to the Ethics as the Ethics looks forward to the Politics. For Aristotle did not separate, as we are inclined to do, the spheres of the statesman and the moralist. In the Ethics he has described the character necessary for the good life, but that life is for him essentially to be lived in society, and when in the last chapters of the Ethics he comes to the practical application of his inquiries, that finds expression not in moral exhortations addressed to the individual but in a description of the legislative opportunities of the statesman. It is the legislator's task to frame a society which shall make the good life possible. Politics for Aristotle is not a struggle between individuals or classes for power, nor a device for getting done such elementary tasks as the maintenance of order and security without too great encroachments on individual liberty. The state is "a community of well-being in families and aggregations of families for the sake of a perfect and self-sufficing life." The legislator is a craftsman whose material is society and whose aim is the good life.

In an early dialogue of Plato's, the Protagoras, Socrates asks Protagoras why it is not as easy to find teachers of virtue as it is to find teachers of swordsmanship, riding, or any other art. Protagoras' answer is that there are no special teachers of virtue, because virtue is taught by the whole community. Plato and Aristotle both accept the view of moral education implied in this answer. In a passage of the Republic (492 b) Plato repudiates the notion that the sophists have a corrupting moral influence upon young men. The public themselves, he says, are the real sophists and the most complete and thorough educators. No private education can hold out against the irresistible force of public opinion and the ordinary moral standards of society. But that makes it all the more essential that public opinion and social environment should not be left to grow up at haphazard as they ordinarily do, but should be made by the wise legislator the expression of the good and be informed in all their details by his knowledge. The legislator is the only possible teacher of virtue.

Such a programme for a treatise on government might lead us to expect in the Politics mainly a description of a Utopia or ideal state which might inspire poets or philosophers but have little direct effect upon political institutions. Plato's Republic is obviously impracticable, for its author had turned away in despair from existing politics. He has no proposals, in that dialogue at least, for making the best of things as they are. The first lesson his philosopher has to learn is to turn away from this world of becoming and decay, and to look upon the unchanging eternal world of ideas. Thus his ideal city is, as he says, a pattern laid up in heaven by which the just man may rule his life, a pattern therefore in the meantime for the individual and not for the statesman. It is a city, he admits in the Laws, for gods or the children of gods, not for men as they are.

Aristotle has none of the high enthusiasm or poetic imagination of Plato. He is even unduly impatient of Plato's idealism, as is shown by the criticisms in the second book. But he has a power to see the possibilities of good in things that are imperfect, and the patience of the true politician who has learned that if he would make men what they ought to be, he must take them as he finds them. His ideal is constructed not of pure reason or poetry, but from careful and sympathetic study of a wide range of facts. His criticism of Plato in the light of history, in Book II. chap, v., though as a criticism it is curiously inept, reveals his own attitude admirably: "Let us remember that we should not disregard the experience of ages; in the multitude of years, these things, if they

were good, would certainly not have been unknown; for almost everything has been found out, although sometimes they are not put together; in other cases men do not use the knowledge which they have." Aristotle in his Constitutions had made a study of one hundred and fifty-eight constitutions of the states of his day, and the fruits of that study are seen in the continual reference to concrete political experience, which makes the Politics in some respects a critical history of the workings of the institutions of the Greek city state. In Books IV., V., and VI. the ideal state seems far away, and we find a dispassionate survey of imperfect states, the best ways of preserving them, and an analysis of the causes of their instability. It is as though Aristotle were saying: "I have shown you the proper and normal type of constitution, but if you will not have it and insist on living under a perverted form, you may as well know how to make the best of it." In this way the Politics, though it defines the state in the light of its ideal, discusses states and institutions as they are. Ostensibly it is merely a continuation of the Ethics, but it comes to treat political questions from a purely political standpoint.

This combination of idealism and respect for the teachings of experience constitutes in some ways the strength and value of the Politics, but it also makes it harder to follow. The large nation states to which we are accustomed make it difficult for us to think that the state could be constructed and modelled to express the good life. We can appreciate Aristotle's critical analysis of constitutions, but find it hard to take seriously his advice to the legislator. Moreover, the idealism and the empiricism of the Politics are never really reconciled by Aristotle himself.

It may help to an understanding of the Politics if something is said on those two points.

We are accustomed since the growth of the historical method to the belief that states are "not made but grow," and are apt to be impatient with the belief which Aristotle and Plato show in the powers of the lawgiver. But however true the maxim may be of the modern nation state, it was not true of the much smaller and more self-conscious Greek city. When Aristotle talks of the legislator, he is not talking in the air. Students of the Academy had been actually called on to give new constitutions to Greek states. For the Greeks the constitution was not merely as it is so often with us, a matter of political machinery. It was regarded as a way of life. Further, the constitution within the framework of which the ordinary process of administration and passing of decrees went on, was always regarded as the work of a special man or body of men, the lawgivers. If we study Greek history, we find that the position of the legislator corresponds to that assigned to him by Plato and Aristotle. All Greek states, except those perversions which Aristotle criticises as being "above law," worked under rigid constitutions, and the constitution was only changed when the whole people gave a commission to a lawgiver to draw up a new one. Such was the position of the AEsumnetes, whom Aristotle describes in Book III. chap, xiv., in earlier times, and of the pupils of the Academy in the fourth century. The lawgiver was not an ordinary politician. He was a state doctor, called in to prescribe for an ailing constitution. So Herodotus recounts that when the people of Cyrene asked the oracle of Delphi to help them in their dissensions, the oracle told them to go to Mantinea, and the Mantineans lent them Demonax, who acted as a "setter straight" and drew up a new constitution for Cyrene. So again the Milesians, Herodotus tells us, were long troubled by civil discord, till they asked help from Paros, and the Parians sent ten commissioners who gave Miletus a new constitution. So the Athenians, when they were founding their model new colony at Thurii, employed Hippodamus of Miletus, whom Aristotle mentions in Book II, as the best expert in town-planning, to plan the streets of the city, and Protagoras as the best expert in law-making, to give the city its laws. In the Laws Plato represents one of the persons of the dialogue as having been asked by the people of Gortyna to draw up laws for a colony which they were founding. The situation described must have occurred frequently in actual life. The Greeks thought administration should be democratic and law-making the work of experts. We think more naturally of law-making as the special right of the people and administration as necessarily confined to experts.

Aristotle's Politics, then, is a handbook for the legislator, the expert who is to be called in when a state wants help. We have called him a state doctor. It is one of the most marked characteristics of Greek political theory that Plato and Aristotle think of the statesman as one who has knowledge of what ought to be done, and can help those who call him in to prescribe for them, rather than one who has power to control the forces of society. The desire of society for the statesman's advice is taken for granted, Plato in the Republic says that a good constitution is only possible when the ruler does not want to rule; where men contend for power, where they have not learnt to distinguish between the art of getting hold of the helm of state and the art of steering, which alone is statesmanship, true politics is impossible.

With this position much that Aristotle has to say about government is in agreement. He assumes the characteristic Platonic view that all men seek the good, and go wrong through ignorance, not through evil will, and so he naturally regards the state as a community which exists for the sake of the good life. It is in the state that that common seeking after the good which is the profoundest truth about men and nature becomes explicit and knows itself. The state is for Aristotle prior to the family and the village, although it succeeds them in time, for only when the state with its conscious organisation is reached can man understand

the secret of his past struggles after something he knew not what. If primitive society is understood in the light of the state, the state is understood in the light of its most perfect form, when the good after which all societies are seeking is realised in its perfection. Hence for Aristotle as for Plato, the natural state or the state as such is the ideal state, and the ideal state is the starting-point of political inquiry.

In accordance with the same line of thought, imperfect states, although called perversions, are regarded by Aristotle as the result rather of misconception and ignorance than of perverse will. They all represent, he says, some kind of justice. Oligarchs and democrats go wrong in their conception of the good. They have come short of the perfect state through misunderstanding of the end or through ignorance of the proper means to the end. But if they are states at all, they embody some common conception of the good, some common aspirations of all their members.

The Greek doctrine that the essence of the state consists in community of purpose is the counterpart of the notion often held in modern times that the essence of the state is force. The existence of force is for Plato and Aristotle a sign not of the state but of the state's failure. It comes from the struggle between conflicting misconceptions of the good. In so far as men conceive the good rightly they are united. The state represents their common agreement, force their failure to make that agreement complete. The cure, therefore, of political ills is knowledge of the good life, and the statesman is he who has such knowledge, for that alone can give men what they are always seeking.

If the state is the organisation of men seeking a common good, power and political position must be given to those who can forward this end. This is the principle expressed in Aristotle's account of political justice, the principle of "tools to those who can use them." As the aim of the state is differently conceived, the qualifications for government will vary. In the ideal state power will be given to the man with most knowledge of the good; in other states to the men who are most truly capable of achieving that end which the citizens have set themselves to pursue. The justest distribution of political power is that in which there is least waste of political ability.

Further, the belief that the constitution of a state is only the outward expression of the common aspirations and beliefs of its members, explains the paramount political importance which Aristotle assigns to education. It is the great instrument by which the legislator can ensure that the future citizens of his state will share those common beliefs which make the state possible. The Greeks with their small states had a far clearer apprehension than we can have of the dependence of a constitution upon the people who have to work it.

Such is in brief the attitude in which Aristotle approaches political problems, but in working out its application to men and institutions as they are, Aristotle admits certain compromises which are not really consistent with it.

1. Aristotle thinks of membership of a state as community in pursuit of the good. He wishes to confine membership in it to those who are capable of that pursuit in the highest and most explicit manner. His citizens, therefore, must be men of leisure, capable of rational thought upon the end of life. He does not recognise the significance of that less conscious but deep-seated membership of the state which finds its expression in loyalty and patriotism. His definition of citizen includes only a small part of the population of any Greek city. He is forced to admit that the state is not possible without the co-operation of men whom he will not admit to membership in it, either because they are not capable of sufficient rational appreciation of political ends, like the barbarians whom he thought were natural slaves, or because the leisure necessary for citizenship can only be gained by the work of the artisans who by that very work make themselves incapable of the life which they make possible for others. "The artisan only attains excellence in proportion as he becomes a slave," and the slave is only a living instrument of the good life. He exists for the state, but the state does not exist for him.

2. Aristotle in his account of the ideal state seems to waver between two ideals. There is the ideal of an aristocracy and the ideal of what he calls constitutional government, a mixed constitution. The principle of "tools to those who can use them" ought to lead him, as it does Plato, to an aristocracy. Those who have complete knowledge of the good must be few, and therefore Plato gave entire power in his state into the hands of the small minority of philosopher guardians. It is in accordance with this principle that Aristotle holds that kingship is the proper form of government when there is in the state one man of transcendent virtue. At the same time, Aristotle always holds that absolute government is not properly political, that government is not like the rule of a shepherd over his sheep, but the rule of equals over equals. He admits that the democrats are right in insisting that equality is a necessary element in the state, though he thinks they do not admit the importance of other equally necessary elements. Hence he comes to say that ruling and being ruled over by turns is an essential feature of constitutional government, which he admits as an alternative to

aristocracy. The end of the state, which is to be the standard of the distribution of political power, is conceived sometimes as a good for the apprehension and attainment of which "virtue" is necessary and sufficient (this is the principle of aristocracy), and sometimes as a more complex good, which needs for its attainment not only "virtue" but wealth and equality. This latter conception is the principle on which the mixed constitution is based. This in its distribution of political power gives some weight to "virtue," some to wealth, and some to mere number. But the principle of "ruling and being ruled by turns" is not really compatible with an unmodified principle of "tools to those who can use them." Aristotle is right in seeing that political government demands equality, not in the sense that all members of the state should be equal in ability or should have equal power, but in the sense that none of them can properly be regarded simply as tools with which the legislator works, that each has a right to say what will be made of his own life. The analogy between the legislator and the craftsman on which Plato insists, breaks down because the legislator is dealing with men like himself, men who can to some extent conceive their own end in life and cannot be treated merely as means to the end of the legislator. The sense of the value of "ruling and being ruled in turn" is derived from the experience that the ruler may use his power to subordinate the lives of the citizens of the state not to the common good but to his own private purposes. In modern terms, it is a simple, rough-and-ready attempt to solve that constant problem of politics, how efficient government is to be combined with popular control. This problem arises from the imperfection of human nature, apparent in rulers as well as in ruled, and if the principle which attempts to solve it be admitted as a principle of importance in the formation of the best constitution, then the starting-point of politics will be man's actual imperfection, not his ideal nature. Instead, then, of beginning with a state which would express man's ideal nature, and adapting it as well as may be to man's actual shortcomings from that ideal, we must recognise that the state and all political machinery are as much the expression of man's weakness as of his ideal possibilities. The state is possible only because men have common aspirations, but government, and political power, the existence of officials who are given authority to act in the name of the whole state, are necessary because men's community is imperfect, because man's social nature expresses itself in conflicting ways, in the clash of interests, the rivalry of parties, and the struggle of classes, instead of in the united seeking after a common good. Plato and Aristotle were familiar with the legislator who was called in by the whole people, and they tended therefore to take the general will or common consent of the people for granted. Most political questions are concerned with the construction and expression of the general will, and with attempts to ensure that the political machinery made to express the general will shall not be exploited for private or sectional ends.

Aristotle's mixed constitution springs from a recognition of sectional interests in the state. For the proper relation between the claims of "virtue," wealth, and numbers is to be based not upon their relative importance in the good life, but upon the strength of the parties which they represent. The mixed constitution is practicable in a state where the middle class is strong, as only the middle class can mediate between the rich and the poor. The mixed constitution will be stable if it represents the actual balance of power between different classes in the state. When we come to Aristotle's analysis of existing constitutions, we find that while he regards them as imperfect approximations to the ideal, he also thinks of them as the result of the struggle between classes. Democracy, he explains, is the government not of the many but of the poor; oligarchy a government not of the few but of the rich. And each class is thought of, not as trying to express an ideal, but as struggling to acquire power or maintain its position. If ever the class existed in unredeemed nakedness, it was in the Greek cities of the fourth century, and its existence is abundantly recognised by Aristotle. His account of the causes of revolutions in Book V. shows how far were the existing states of Greece from the ideal with which he starts. His analysis of the facts forces him to look upon them as the scene of struggling factions. The causes of revolutions are not described as primarily changes in the conception of the common good, but changes in the military or economic power of the several classes in the state. The aim which he sets before oligarchs or democracies is not the good life, but simple stability or permanence of the existing constitution.

With this spirit of realism which pervades Books IV., V., and VI. the idealism of Books I., II., VII., and VIII. is never reconciled. Aristotle is content to call existing constitutions perversions of the true form. But we cannot read the Politics without recognising and profiting from the insight into the nature of the state which is revealed throughout. Aristotle's failure does not lie in this, that he is both idealist and realist, but that he keeps these two tendencies too far apart. He thinks too much of his ideal state, as something to be reached once for all by knowledge, as a fixed type to which actual states approximate or from which they are perversions. But if we are to think of actual politics as intelligible in the light of the ideal, we must think of that ideal as progressively revealed in history, not as something to be discovered by turning our back on experience and having recourse to abstract reasoning. If we stretch forward from what exists to an ideal, it is to a better which may be in its turn transcended, not to a single immutable best. Aristotle found in the society of his time men who were not capable of political reflection, and who, as he thought, did their best work under superintendence. He therefore called them natural slaves. For, according to Aristotle, that is a man's natural condition in which he does his best work. But Aristotle also thinks of nature as something fixed and immutable; and therefore sanctions the institution of

slavery, which assumes that what men are that they will always be, and sets up an artificial barrier to their ever becoming anything else. We see in Aristotle's defence of slavery how the conception of nature as the ideal can have a debasing influence upon views of practical politics. His high ideal of citizenship offers to those who can satisfy its claims the prospect of a fair life; those who fall short are deemed to be different in nature and shut out entirely from approach to the ideal.

BIBLIOGRAPHY

First edition of works (with omission of Rhetorica, Poetica, and second book of OEconomica), 5 vols. by Aldus Manutius, Venice, 1495-8; re-impression supervised by Erasmus and with certain corrections by Grynaeus (including Rhetorica and Poetica), 1531, 1539, revised 1550; later editions were followed by that of Immanuel Bekker and Brandis (Greek and Latin), 5 vols. The 5th vol. contains the Index by Bonitz, 1831-70; Didot edition (Greek and Latin), 5 vols. 1848-74.

ENGLISH TRANSLATIONS: Edited by T. Taylor, with Porphyry's Introduction, 9 vols., 1812; under editorship of J. A. Smith and W. D. Ross, 1908.

Later editions of separate works:

De Anima: Torstrik, 1862; Trendelenburg, 2nd edition, 1877, with English translation, E. Wallace, 1882; Biehl, 1884, 1896; with English, R. D. Hicks, 1907.

Ethica: J. S. Brewer (Nicomachean), 1836; W. E. Jelf, 1856; J. E. T. Rogers, 1865; A. Grant, 1857-8, 1866, 1874, 1885; E. Moore, 1871, 1878, 4th edition, 1890; Ramsauer (Nicomachean), 1878, Susemihl, 1878, 1880, revised by O. Apelt, 1903; A. Grant, 1885; I. Bywater (Nicomachean), 1890; J. Burnet, 1900.

Historia Animalium: Schneider, 1812; Aubert and Wimmer, 1860, Dittmeyer, 1907.

Metaphysica: Schwegler, 1848; W. Christ, 1899.

Organon: Waitz, 1844-6.

Poetica: Vahlen, 1867, 1874, with Notes by E. Moore, 1875; with English translation by E. R. Wharton, 1883, 1885; Uberweg, 1870, 1875; with German translation, Susemihl, 1874; Schmidt, 1875; Christ, 1878; I. Bywater, 1898; T. G. Tucker, 1899.

De Republics, Atheniensium: Text and facsimile of Papyrus, F. G. Kenyon, 1891, 3rd edition, 1892; Kaibel and Wilamowitz--Moel-lendorf, 1891, 3rd edition, 1898; Van Herwerden and Leeuwen (from Kenyon's text), 1891; Blass, 1892, 1895, 1898, 1903; J. E. Sandys, 1893.

Politica: Susemihl, 1872; with German, 1878, 3rd edition, 1882; Susemihl and Hicks, 1894, etc.; O. Immisch, 1909.

Physica: C. Prantl, 1879.

Rhetorica: Stahr, 1862; Sprengel (with Latin text), 1867; Cope and Sandys, 1877; Roemer, 1885, 1898.

ENGLISH TRANSLATIONS OF ONE OR MORE WORKS: De Anima (with Parva Naturalia), by W. A. Hammond, 1902. Ethica: Of Morals to Nicomachus, by E. Pargiter, 1745; with Politica, by J. Gillies, 1797, 1804, 1813; with Rhetorica and Poetica, by T. Taylor, 1818, and later editions. Nicomachean Ethics, 1819; mainly from text of Bekker, by D. P. Chase, 1847; revised 1861, and later editions with an introductory essay by G. H. Lewes (Camelot Classics), 1890; re-edited by J. M. Mitchell (New Universal Library), 1906, 1910; with an introductory essay by Prof. J.H. Smith (Everyman's Library), 1911; by R.W.Browne (Bohn's Classical Library), 1848, etc.; by R. Williams, 1869, 1876; by W. M. Hatch and others (with translation of paraphrase attributed to Andronicus of Rhodes), edited by E. Hatch, 1879; by F, H. Peters, 1881; J. E. C. Welldon, 1892; J. Gillies (Lubbock's Hundred Books), 1893. Historia Animalium, by R. Creswell (Bohn's Classical Library), 1848; with Treatise on Physiognomy, by T. Taylor, 1809. Metaphysica, by T. Taylor, 1801; by J. H. M'Mahon (Bohn's Classical Library), 1848. Organon, with Porphyry's Introduction, by O. F. Owen (Bohn's Classical Library), 1848. Posterior Analytics, E. Poste, 1850; E. S. Bourchier, 1901; On Fallacies, E. Poste, 1866. Parva Naturalia (Greek and English), by G. R. T. Ross, 1906; with De Anima, by W. A. Hammond, 1902. Youth and Old Age, Life and Death and Respiration, W. Ogle, 1897. Poetica, with Notes from the French of D'Acier, 1705; by H. J. Pye, 1788, 1792; T. Twining, 1789,1812, with Preface and Notes by H. Hamilton, 1851; Treatise on Rhetorica and Poetica, by T. Hobbes (Bohn's

Classical Library), 1850; by Wharton, 1883 (see Greek version), S. H. Butcher, 1895, 1898, 3rd edition, 1902; E. S. Bourchier, 1907; by Ingram Bywater, 1909. De Partibus Animalium, W. Ogle, 1882. De Republica Athenientium, by E. Poste, 1891; F. G. Kenyon, 1891; T. J. Dymes, 1891. De Virtutibus et Vitiis, by W. Bridgman, 1804. Politica, from the French of Regius, 1598; by W. Ellis, 1776, 1778, 1888 (Morley's Universal Library), 1893 (Lubbock's Hundred Books); by E. Walford (with AEconomics, and Life by Dr. Gillies) (Bohn's Classical Library), 1848; J. E. C. Welldon, 1883; B. Jowett, 1885; with Introduction and Index by H. W. C. Davis, 1905; Books i. iii. iv. (vii.) from Bekker's text by W. E. Bolland, with Introduction by A. Lang, 1877. Problemata (with writings of other philosophers), 1597, 1607, 1680, 1684, etc. Rhetorica: A summary by T. Hobbes, 1655 (?), new edition, 1759; by the translators of the Art of Thinking, 1686, 1816; by D. M. Crimmin, 1812; J. Gillies, 1823; Anon. 1847; J. E. C. Welldon, 1886; R. C. Jebb, with Introduction and Supplementary Notes by J. E. Sandys, 1909 (see under Poetica and Ethica). Secreta Secretorum (supposititious work), Anon. 1702; from the Hebrew version by M. Gaster, 1907, 1908. Version by Lydgate and Burgh, edited by R. Steele (E.E.T.S.), 1894, 1898.

Bain and G. C. Robertson, 1872, 1880; E. Wallace, Outlines of the Philosophy of Aristotle, 1875, 1880; A. Grant (Ancient Classics for English readers), 1877; T. Davidson, Aristotle and Ancient Educational Ideals (Great Educators), 1892.

A TREATISE ON GOVERNMENT

BOOK I

CHAPTER I

As we see that every city is a society, and every society Ed. is established for some good purpose; for an apparent [Bekker 1252a] good is the spring of all human actions; it is evident that this is the principle upon which they are every one founded, and this is more especially true of that which has for its object the best possible, and is itself the most excellent, and comprehends all the rest. Now this is called a city, and the society thereof a political society; for those who think that the principles of a political, a regal, a family, and a herile government are the same are mistaken, while they suppose that each of these differ in the numbers to whom their power extends, but not in their constitution: so that with them a herile government is one composed of a very few, a domestic of more, a civil and a regal of still more, as if there was no difference between a large family and a small city, or that a regal government and a political one are the same, only that in the one a single person is continually at the head of public affairs; in the other, that each member of the state has in his turn a share in the government, and is at one time a magistrate, at another a private person, according to the rules of political science. But now this is not true, as will be evident to any one who will consider this question in the most approved method. As, in an inquiry into every other subject, it is necessary to separate the different parts of which it is compounded, till we arrive at their first elements, which are the most minute parts thereof; so by the same proceeding we shall acquire a knowledge of the primary parts of a city and see wherein they differ from each other, and whether the rules of art will give us any assistance in examining into each of these things which are mentioned.

CHAPTER II

Now if in this particular science any one would attend to its original seeds, and their first shoot, he would then as in others have the subject perfectly before him; and perceive, in the first place, that it is requisite that those should be joined together whose species cannot exist without each other, as the male and the female, for the business of propagation; and this not through choice, but by that natural impulse which acts both upon plants and animals also, for the purpose of their leaving behind them others like themselves. It is also from natural causes that some beings command and others obey, that each may obtain their mutual safety; for a being who is endowed with a mind capable of reflection and forethought is by nature the superior and governor, whereas he whose excellence is merely corporeal is formect to be a slave; whence it follows that the different state of master [1252b] and slave is equally advantageous to both. But there is a natural difference between a female and a slave: for nature is not like the artists who make the Delphic swords for the use of the poor, but for every particular purpose she has her separate instruments, and thus her ends are most complete, for whatsoever is employed on one subject only, brings that one to much greater perfection than when employed on many; and yet among the barbarians, a female and a slave are upon a level in the community, the reason for which is, that amongst them there are none qualified by nature to govern, therefore their society can be nothing but between slaves of

different sexes. For which reason the poets say, it is proper for the Greeks to govern the barbarians, as if a barbarian and a slave were by nature one. Now of these two societies the domestic is the first, and Hesiod is right when he says, "First a house, then a wife, then an ox for the plough," for the poor man has always an ox before a household slave. That society then which nature has established for daily support is the domestic, and those who compose it are called by Charondas _homosipuoi_, and by Epimenides the Cretan _homokapnoi_; but the society of many families, which was first instituted for their lasting, mutual advantage, is called a village, and a village is most naturally composed of the descendants of one family, whom some persons call homogalaktes, the children and the children's children thereof: for which reason cities were originally governed by kings, as the barbarian states now are, which are composed of those who had before submitted to kingly government; for every family is governed by the elder, as are the branches thereof, on account of their relationship thereunto, which is what Homer says, "Each one ruled his wife and child;" and in this scattered manner they formerly lived. And the opinion which universally prevails, that the gods themselves are subject to kingly government, arises from hence, that all men formerly were, and many are so now; and as they imagined themselves to be made in the likeness of the gods, so they supposed their manner of life must needs be the same. And when many villages so entirely join themselves together as in every respect to form but one society, that society is a city, and contains in itself, if I may so speak, the end and perfection of government: first founded that we might live, but continued that we may live happily. For which reason every city must be allowed to be the work of nature, if we admit that the original society between male and female is; for to this as their end all subordinate societies tend, and the end of everything is the nature of it. For what every being is in its most perfect state, that certainly is the nature of that being, whether it be a man, a horse, or a house: besides, whatsoever produces the final cause and the end which we [1253a] desire, must be best; but a government complete in itself is that final cause and what is best. Hence it is evident that a city is a natural production, and that man is naturally a political animal, and that whosoever is naturally and not accidentally unfit for society, must be either inferior or superior to man: thus the man in Homer, who is reviled for being "without society, without law, without family." Such a one must naturally be of a quarrelsome disposition, and as solitary as the birds. The gift of speech also evidently proves that man is a more social animal than the bees, or any of the herding cattle: for nature, as we say, does nothing in vain, and man is the only animal who enjoys it. Voice indeed, as being the token of pleasure and pain, is imparted to others also, and thus much their nature is capable of, to perceive pleasure and pain, and to impart these sensations to others; but it is by speech that we are enabled to express what is useful for us, and what is hurtful, and of course what is just and what is unjust: for in this particular man differs from other animals, that he alone has a perception of good and evil, of just and unjust, and it is a participation of these common sentiments which forms a family and a city. Besides, the notion of a city naturally precedes that of a family or an individual, for the whole must necessarily be prior to the parts, for if you take away the whole man, you cannot say a foot or a hand remains, unless by equivocation, as supposing a hand of stone to be made, but that would only be a dead one; but everything is understood to be this or that by its energic qualities and powers, so that when these no longer remain, neither can that be said to be the same, but something of the same name. That a city then precedes an individual is plain, for if an individual is not in himself sufficient to compose a perfect government, he is to a city as other parts are to a whole; but he that is incapable of society, or so complete in himself as not to want it, makes no part of a city, as a beast or a god. There is then in all persons a natural impetus to associate with each other in this manner, and he who first founded civil society was the cause of the greatest good; for as by the completion of it man is the most excellent of all living beings, so without law and justice he would be the worst of all, for nothing is so difficult to subdue as injustice in arms: but these arms man is born with, namely, prudence and valour, which he may apply to the most opposite purposes, for he who abuses them will be the most wicked, the most cruel, the most lustful, and most gluttonous being imaginable; for justice is a political virtue, by the rules of it the state is regulated, and these rules are the criterion of what is right.

CHAPTER III

SINCE it is now evident of what parts a city is composed, it will be necessary to treat first of family government, for every city is made up of families, and every family [1253b] has again its separate parts of which it is composed. When a family is complete, it consists of freemen and slaves; but as in every subject we should begin with examining into the smallest parts of which it consists, and as the first and smallest parts of a family are the master and slave, the husband and wife, the father and child, let us first inquire into these three, what each of them may be, and what they ought to be; that is to say, the herile, the nuptial, and the paternal. Let these then be considered as the three distinct parts of a family: some think that the providing what is necessary for the family is something different from the government of it, others that this is the greatest part of it; it shall be considered separately; but we will first speak of a master and a slave, that we may both understand the nature of those things which are absolutely necessary, and also try if we can learn anything better on this subject than what is already known. Some persons have thought that the power

of the master over his slave originates from his superior knowledge, and that this knowledge is the same in the master, the magistrate, and the king, as we have already said; but others think that herile government is contrary to nature, and that it is the law which makes one man a slave and another free, but that in nature there is no difference; for which reason that power cannot be founded in justice, but in force.

CHAPTER IV

Since then a subsistence is necessary in every family, the means of procuring it certainly makes up part of the management of a family, for without necessaries it is impossible to live, and to live well. As in all arts which are brought to perfection it is necessary that they should have their proper instruments if they would complete their works, so is it in the art of managing a family: now of instruments some of them are alive, others inanimate; thus with respect to the pilot of the ship, the tiller is without life, the sailor is alive; for a servant is as an instrument in many arts. Thus property is as an instrument to living; an estate is a multitude of instruments; so a slave is an animated instrument, but every one that can minister of himself is more valuable than any other instrument; for if every instrument, at command, or from a preconception of its master's will, could accomplish its work (as the story goes of the statues of Daedalus; or what the poet tells us of the tripods of Vulcan, "that they moved of their own accord into the assembly of the gods "), the shuttle would then weave, and the lyre play of itself; nor would the architect want servants, or the [1254a] master slaves. Now what are generally called instruments are the efficients of something else, but possessions are what we simply use: thus with a shuttle we make something else for our use; but we only use a coat, or a bed: since then making and using differ from each other in species, and they both require their instruments, it is necessary that these should be different from each other. Now life is itself what we use, and not what we employ as the efficient of something else; for which reason the services of a slave are for use. A possession may be considered in the same nature as a part of anything; now a part is not only a part of something, but also is nothing else; so is a possession; therefore a master is only the master of the slave, but no part of him; but the slave is not only the slave of the master, but nothing else but that. This fully explains what is the nature of a slave, and what are his capacities; for that being who by nature is nothing of himself, but totally another's, and is a man, is a slave by nature; and that man who is the property of another, is his mere chattel, though he continues a man; but a chattel is an instrument for use, separate from the body.

CHAPTER V

But whether any person is such by nature, and whether it is advantageous and just for any one to be a slave or no, or whether all slavery is contrary to nature, shall be considered hereafter; not that it is difficult to determine it upon general principles, or to understand it from matters of fact; for that some should govern, and others be governed, is not only necessary but useful, and from the hour of their birth some are marked out for those purposes, and others for the other, and there are many species of both sorts. And the better those are who are governed the better also is the government, as for instance of man, rather than the brute creation: for the more excellent the materials are with which the work is finished, the more excellent certainly is the work; and wherever there is a governor and a governed, there certainly is some work produced; for whatsoever is composed of many parts, which jointly become one, whether conjunct or separate, evidently show the marks of governing and governed; and this is true of every living thing in all nature; nay, even in some things which partake not of life, as in music; but this probably would be a disquisition too foreign to our present purpose. Every living thing in the first place is composed of soul and body, of these the one is by nature the governor, the other the governed; now if we would know what is natural, we ought to search for it in those subjects in which nature appears most perfect, and not in those which are corrupted; we should therefore examine into a man who is most perfectly formed both in soul and body, in whom this is evident, for in the depraved and vicious the body seems [1254b] to rule rather than the soul, on account of their being corrupt and contrary to nature. We may then, as we affirm, perceive in an animal the first principles of herile and political government; for the soul governs the body as the master governs his slave; the mind governs the appetite with a political or a kingly power, which shows that it is both natural and advantageous that the body should be governed by the soul, and the pathetic part by the mind, and that part which is possessed of reason; but to have no ruling power, or an improper one, is hurtful to all; and this holds true not only of man, but of other animals also, for tame animals are naturally better than wild ones, and it is advantageous that both should be under subjection to man; for this is productive of their common safety: so is it naturally with the male and the female; the one is superior, the other inferior; the one governs, the other is governed; and the same rule must necessarily hold good with respect to all mankind. Those men therefore who are as much inferior to others as the body is to the soul, are to be thus disposed of, as the proper use of them is their bodies, in which their excellence consists; and if what I have said be true, they are slaves by nature, and it is advantageous to them to be always under government. He then is by nature formed a

slave who is qualified to become the chattel of another person, and on that account is so, and who has just reason enough to know that there is such a faculty, without being indued with the use of it; for other animals have no perception of reason, but are entirely guided by appetite, and indeed they vary very little in their use from each other; for the advantage which we receive, both from slaves and tame animals, arises from their bodily strength administering to our necessities; for it is the intention of nature to make the bodies of slaves and freemen different from each other, that the one should be robust for their necessary purposes, the others erect, useless indeed for what slaves are employed in, but fit for civil life, which is divided into the duties of war and peace; though these rules do not always take place, for slaves have sometimes the bodies of freemen, sometimes the souls; if then it is evident that if some bodies are as much more excellent than others as the statues of the gods excel the human form, every one will allow that the inferior ought to be slaves to the superior; and if this is true with respect to the body, it is still juster to determine in the same manner, when we consider the soul; though it is not so easy to perceive the beauty of [1255a] the soul as it is of the body. Since then some men are slaves by nature, and others are freemen, it is clear that where slavery is advantageous to any one, then it is just to make him a slave.

CHAPTER VI

But it is not difficult to perceive that those who maintain the contrary opinion have some reason on their side; for a man may become a slave two different ways; for he may be so by law also, and this law is a certain compact, by which whatsoever is taken in battle is adjudged to be the property of the conquerors: but many persons who are conversant in law call in question this pretended right, and say that it would be hard that a man should be compelled by violence to be the slave and subject of another who had the power to compel him, and was his superior in strength; and upon this subject, even of those who are wise, some think one way and some another; but the cause of this doubt and variety of opinions arises from hence, that great abilities, when accompanied with proper means, are generally able to succeed by force: for victory is always owing to a superiority in some advantageous circumstances; so that it seems that force never prevails but in consequence of great abilities. But still the dispute concerning the justice of it remains; for some persons think, that justice consists in benevolence, others think it just that the powerful should govern: in the midst of these contrary opinions, there are no reasons sufficient to convince us, that the right of being master and governor ought not to be placed with those who have the greatest abilities. Some persons, entirely resting upon the right which the law gives (for that which is legal is in some respects just), insist upon it that slavery occasioned by war is just, not that they say it is wholly so, for it may happen that the principle upon which the wars were commenced is unjust; moreover no one will say that a man who is unworthily in slavery is therefore a slave; for if so, men of the noblest families might happen to be slaves, and the descendants of slaves, if they should chance to be taken prisoners in war and sold: to avoid this difficulty they say that such persons should not be called slaves, but barbarians only should; but when they say this, they do nothing more than inquire who is a slave by nature, which was what we at first said; for we must acknowledge that there are some persons who, wherever they are, must necessarily be slaves, but others in no situation; thus also it is with those of noble descent: it is not only in their own country that they are Esteemed as such, but everywhere, but the barbarians are respected on this account at home only; as if nobility and freedom were of two sorts, the one universal, the other not so. Thus says the Helen of Theodectes:

"Who dares reproach me with the name of slave? When from the immortal gods, on either side, I draw my lineage."

Those who express sentiments like these, shew only that they distinguish the slave and the freeman, the noble and the ignoble from each other by their virtues and their [1255b] vices; for they think it reasonable, that as a man begets a man, and a beast a beast, so from a good man, a good man should be descended; and this is what nature desires to do, but frequently cannot accomplish it. It is evident then that this doubt has some reason in it, and that these persons are not slaves, and those freemen, by the appointment of nature; and also that in some instances it is sufficiently clear, that it is advantageous to both parties for this man to be a slave, and that to be a master, and that it is right and just, that some should be governed, and others govern, in the manner that nature intended; of which sort of government is that which a master exercises over a slave. But to govern ill is disadvantageous to both; for the same thing is useful to the part and to the whole, to the body and to the soul; but the slave is as it were a part of the master, as if he were an animated part of his body, though separate. For which reason a mutual utility and friendship may subsist between the master and the slave, I mean when they are placed by nature in that relation to each other, for the contrary takes place amongst those who are reduced to slavery by the law, or by conquest.

CHAPTER VII

It is evident from what has been said, that a herile and a political government are not the same, or that all governments are alike to each other, as some affirm; for one is adapted to the nature of freemen, the other to that of slaves. Domestic government is a monarchy, for that is what prevails in every house; but a political state is the government of free men and equals. The master is not so called from his knowing how to manage his slave, but because he is so; for the same reason a slave and a freeman have their respective appellations. There is also one sort of knowledge proper for a master, another for a slave; the slave's is of the nature of that which was taught by a slave at Syracuse; for he for a stipulated sum instructed the boys in all the business of a household slave, of which there are various sorts to be learnt, as the art of cookery, and other such-like services, of which some are allotted to some, and others to others; some employments being more honourable, others more necessary; according to the proverb, "One slave excels another, one master excels another:" in such-like things the knowledge of a slave consists. The knowledge of the master is to be able properly to employ his slaves, for the mastership of slaves is the employment, not the mere possession of them; not that this knowledge contains anything great or respectable; for what a slave ought to know how to do, that a master ought to know how to order; for which reason, those who have it in their power to be free from these low attentions, employ a steward for this business, and apply themselves either to public affairs or philosophy: the knowledge of procuring what is necessary for a family is different from that which belongs either to the master or the slave: and to do this justly must be either by war or hunting. And thus much of the difference between a master and a slave.

CHAPTER VIII

[1256a] As a slave is a particular species of property, let us by all means inquire into the nature of property in general, and the acquisition of money, according to the manner we have proposed. In the first place then, some one may doubt whether the getting of money is the same thing as economy, or whether it is a part of it, or something subservient to it; and if so, whether it is as the art of making shuttles is to the art of weaving, or the art of making brass to that of statue founding, for they are not of the same service; for the one supplies the tools, the other the matter: by the matter I mean the subject out of which the work is finished, as wool for the cloth and brass for the statue. It is evident then that the getting of money is not the same thing as economy, for the business of the one is to furnish the means of the other to use them; and what art is there employed in the management of a family but economy, but whether this is a part of it, or something of a different species, is a doubt; for if it is the business of him who is to get money to find out how riches and possessions may be procured, and both these arise from various causes, we must first inquire whether the art of husbandry is part of money-getting or something different, and in general, whether the same is not true of every acquisition and every attention which relates to provision. But as there are many sorts of provision, so are the methods of living both of man and the brute creation very various; and as it is impossible to live without food, the difference in that particular makes the lives of animals so different from each other. Of beasts, some live in herds, others separate, as is most convenient for procuring themselves food; as some of them live upon flesh, others on fruit, and others on whatsoever they light on, nature having so distinguished their course of life, that they can very easily procure themselves subsistence; and as the same things are not agreeable to all, but one animal likes one thing and another another, it follows that the lives of those beasts who live upon flesh must be different from the lives of those who live on fruits; so is it with men, their lives differ greatly from each other; and of all these the shepherd's is the idlest, for they live upon the flesh of tame animals, without any trouble, while they are obliged to change their habitations on account of their flocks, which they are compelled to follow, cultivating, as it were, a living farm. Others live exercising violence over living creatures, one pursuing this thing, another that, these preying upon men; those who live near lakes and marshes and rivers, or the sea itself, on fishing, while others are fowlers, or hunters of wild beasts; but the greater part of mankind live upon the produce of the earth and its cultivated fruits; and the manner in which all those live who follow the direction of nature, and labour for their own subsistence, is nearly the same, without ever thinking to procure any provision by way of exchange or merchandise, such are shepherds, husband-men, [1256b] robbers, fishermen, and hunters: some join different employments together, and thus live very agreeably; supplying those deficiencies which were wanting to make their subsistence depend upon themselves only: thus, for instance, the same person shall be a shepherd and a robber, or a husbandman and a hunter; and so with respect to the rest, they pursue that mode of life which necessity points out. This provision then nature herself seems to have furnished all animals with, as well immediately upon their first origin as also when they are arrived at a state of maturity; for at the first of these periods some of them are provided in the womb with proper nourishment, which continues till that which is born can get food for itself, as is the case with worms and birds; and as to those which bring forth their young alive, they have the means for their subsistence for a certain time within themselves, namely milk. It is evident then that we may conclude of those things that are, that plants are created for the sake of animals, and animals for the sake of men; the tame for our use and provision; the wild, at least the greater part, for our provision also, or for some other advantageous purpose, as furnishing us with clothes, and the like. As

nature therefore makes nothing either imperfect or in vain, it necessarily follows that she has made all these things for men: for which reason what we gain in war is in a certain degree a natural acquisition; for hunting is a part of it, which it is necessary for us to employ against wild beasts; and those men who being intended by nature for slavery are unwilling to submit to it, on which occasion such a. war is by nature just: that species of acquisition then only which is according to nature is part of economy; and this ought to be at hand, or if not, immediately procured, namely, what is necessary to be kept in store to live upon, and which are useful as well for the state as the family. And true riches seem to consist in these; and the acquisition of those possessions which are necessary for a happy life is not infinite; though Solon says otherwise in this verse:

"No bounds to riches can be fixed for man;"

for they may be fixed as in other arts; for the instruments of no art whatsoever are infinite, either in their number or their magnitude; but riches are a number of instruments in domestic and civil economy; it is therefore evident that the acquisition of certain things according to nature is a part both of domestic and civil economy, and for what reason.

CHAPTER IX

There is also another species of acquisition which they [1257a] particularly call pecuniary, and with great propriety; and by this indeed it seems that there are no bounds to riches and wealth. Now many persons suppose, from their near relation to each other, that this is one and the same with that we have just mentioned, but it is not the same as that, though not very different; one of these is natural, the other is not, but rather owing to some art and skill; we will enter into a particular examination of this subject. The uses of every possession are two, both dependent upon the thing itself, but not in the same manner, the one supposing an inseparable connection with it, the other not; as a shoe, for instance, which may be either worn, or exchanged for something else, both these are the uses of the shoe; for he who exchanges a shoe with some man who wants one, for money or provisions, uses the shoe as a shoe, but not according to the original intention, for shoes were not at first made to be exchanged. The same thing holds true of all other possessions; for barter, in general, had its original beginning in nature, some men having a surplus, others too little of what was necessary for them: hence it is evident, that the selling provisions for money is not according to the natural use of things; for they were obliged to use barter for those things which they wanted; but it is plain that barter could have no place in the first, that is to say, in family society; but must have begun when the number of those who composed the community was enlarged: for the first of these had all things in common; but when they came to be separated they were obliged to exchange with each other many different things which both parties wanted. Which custom of barter is still preserved amongst many barbarous nations, who procure one necessary with another, but never sell anything; as giving and receiving wine for corn and the like. This sort of barter is not contradictory to nature, nor is it any species of money-getting; but is necessary in procuring that subsistence which is so consonant thereunto. But this barter introduced the use of money, as might be expected; for a convenient place from whence to import what you wanted, or to export what you had a surplus of, being often at a great distance, money necessarily made its way into commerce; for it is not everything which is naturally most useful that is easiest of carriage; for which reason they invented something to exchange with each other which they should mutually give and take, that being really valuable itself, should have the additional advantage of being of easy conveyance, for the purposes of life, as iron and silver, or anything else of the same nature: and this at first passed in value simply according to its weight or size; but in process of time it had a certain stamp, to save the trouble of weighing, which stamp expressed its value. [1257b]

Money then being established as the necessary medium of exchange, another species of money-getting soon took place, namely, by buying and selling, at probably first in a simple manner, afterwards with more skill and experience, where and how the greatest profits might be made. For which reason the art of money-getting seems to be chiefly conversant about trade, and the business of it to be able to tell where the greatest profits can be made, being the means of procuring abundance of wealth and possessions: and thus wealth is very often supposed to consist in the quantity of money which any one possesses, as this is the medium by which all trade is conducted and a fortune made, others again regard it as of no value, as being of none by nature, but arbitrarily made so by compact; so that if those who use it should alter their sentiments, it would be worth nothing, as being of no service for any necessary purpose. Besides, he who abounds in money often wants necessary food; and it is impossible to say that any person is in good circumstances when with all his possessions he may perish with hunger.

Like Midas in the fable, who from his insatiable wish had everything he touched turned into gold. For which reason others endeavour to procure other riches and other property, and rightly, for there are other riches and property in nature; and these are the proper objects of economy: while trade only procures money, not by all means, but by the exchange of it, and for that purpose it

is this which it is chiefly employed about, for money is the first principle and the end of trade; nor are there any bounds to be set to what is thereby acquired. Thus also there are no limits to the art of medicine, with respect to the health which it attempts to procure; the same also is true of all other arts; no line can be drawn to terminate their bounds, the several professors of them being desirous to extend them as far as possible. (But still the means to be employed for that purpose are limited; and these are the limits beyond which the art cannot proceed.) Thus in the art of acquiring riches there are no limits, for the object of that is money and possessions; but economy has a boundary, though this has not: for acquiring riches is not the business of that, for which reason it should seem that some boundary should be set to riches, though we see the contrary to this is what is practised; for all those who get riches add to their money without end; the cause of which is the near connection of these two arts with each other, which sometimes occasions the one to change employments with the other, as getting of money is their common object: for economy requires the possession of wealth, but not on its own account but with another view, to purchase things necessary therewith; but the other procures it merely to increase it: so that some persons are confirmed in their belief, that this is the proper object of economy, and think that for this purpose money should be saved and hoarded up without end; the reason for which disposition is, that they are intent upon living, but not upon living well; and this desire being boundless in its extent, the means which they aim at for that purpose are boundless also; and those who propose to live well, often confine that to the enjoyment of the pleasures of sense; so that as this also seems to depend upon what a man has, all their care is to get money, and hence arises the other cause for this art; for as this enjoyment is excessive in its degree, they endeavour to procure means proportionate to supply it; and if they cannot do this merely by the art of dealing in money, they will endeavour to do it by other ways, and apply all their powers to a purpose they were not by nature intended for. Thus, for instance, courage was intended to inspire fortitude, not to get money by; neither is this the end of the soldier's or the physician's art, but victory and health. But such persons make everything subservient to money-getting, as if this was the only end; and to the end everything ought to refer.

We have now considered that art of money-getting which is not necessary, and have seen in what manner we became in want of it; and also that which is necessary, which is different from it; for that economy which is natural, and whose object is to provide food, is not like this unlimited in its extent, but has its bounds.

CHAPTER X

We have now determined what was before doubtful, whether or no the art of getting money is his business who is at the head of a family or a state, and though not strictly so, it is however very necessary; for as a politician does not make men, but receiving them from the hand of nature employs them to proper purposes; thus the earth, or the sea, or something else ought to supply them with provisions, and this it is the business of the master of the family to manage properly; for it is not the weaver's business to make yarn, but to use it, and to distinguish what is good and useful from what is bad and of no service; and indeed some one may inquire why getting money should be a part of economy when the art of healing is not, as it is as requisite that the family should be in health as that they should eat, or have anything else which is necessary; and as it is indeed in some particulars the business both of the master of the family, and he to whom the government of the state is entrusted, to see after the health of those under their care, but in others not, but the physician's; so also as to money; in some respects it is the business of the master of the family, in others not, but of the servant; but as we have already said, it is chiefly nature's, for it is her part to supply her offspring with food; for everything finds nourishment left for it in what produced it; for which reason the natural riches of all men arise from fruits and animals. Now money-making, as we say, being twofold, it may be applied to two purposes, the service of the house or retail trade; of which the first is necessary and commendable, the other justly censurable; for it has not its origin in [1258b] nature, but by it men gain from each other; for usury is most reasonably detested, as it is increasing our fortune by money itself, and not employing it for the purpose it was originally intended, namely exchange.

And this is the explanation of the name (TOKOS), which means the breeding of money. For as offspring resemble their parents, so usury is money bred of money. Whence of all forms of money-making it is most against nature.

CHAPTER XI

Having already sufficiently considered the general principles of this subject, let us now go into the practical part thereof; the one is a liberal employment for the mind, the other necessary. These things are useful in the management of one's affairs; to be skilful in the nature of cattle, which are most profitable, and where, and how; as for instance, what advantage will arise from keeping horses, or oxen, or sheep, or any other live stock; it is also necessary to be acquainted with the comparative value of these things, and which of them in particular places are worth most; for some do better in one place, some in another. Agriculture also should be

understood, and the management of arable grounds and orchards; and also the care of bees, and fish, and birds, from whence any profit may arise; these are the first and most proper parts of domestic management.

With respect to gaining money by exchange, the principal method of doing this is by merchandise, which is carried on in three different ways, either by sending the commodity for sale by sea or by land, or else selling it on the place where it grows; and these differ from each other in this, that the one is more profitable, the other safer. The second method is by usury. The third by receiving wages for work done, and this either by being employed in some mean art, or else in mere bodily labour. There is also a third species of improving a fortune, that is something between this and the first; for it partly depends upon nature, partly upon exchange; the subject of which is, things that are immediately from the earth, or their produce, which, though they bear no fruit, are yet useful, such as selling of timber and the whole art of metallurgy, which includes many different species, for there are various sorts of things dug out of the earth.

These we have now mentioned in general, but to enter into particulars concerning each of them, though it might be useful to the artist, would be tiresome to dwell on. Now of all the works of art, those are the most excellent wherein chance has the least to do, and those are the meanest which deprave the body, those the most servile in which bodily strength alone is chiefly wanted, those most illiberal which require least skill; but as there are books written on these subjects by some persons, as by Chares the Panian, and Apollodorus the Lemnian, upon husbandry and planting; and by others on other matters, [1259b] let those who have occasion consult them thereon; besides, every person should collect together whatsoever he hears occasionally mentioned, by means of which many of those who aimed at making a fortune have succeeded in their intentions; for all these are useful to those who make a point of getting money, as in the contrivance of Thales the Milesian (which was certainly a gainful one, but as it was his it was attributed to his wisdom, though the method he used was a general one, and would universally succeed), when they reviled him for his poverty, as if the study of philosophy was useless: for they say that he, perceiving by his skill in astrology that there would be great plenty of olives that year, while it was yet winter, having got a little money, he gave earnest for all the oil works that were in Miletus and Chios, which he hired at a low price, there being no one to bid against him; but when the season came for making oil, many persons wanting them, he all at once let them upon what terms he pleased; and raising a large sum of money by that means, convinced them that it was easy for philosophers to be rich if they chose it, but that that was not what they aimed at; in this manner is Thales said to have shown his wisdom. It indeed is, as we have said, generally gainful for a person to contrive to make a monopoly of anything; for which reason some cities also take this method when they want money, and monopolise their commodities. There was a certain person in Sicily who laid out a sum of money which was deposited in his hand in buying up all the iron from the iron merchants; so that when the dealers came from the markets to purchase, there was no one had any to sell but himself; and though he put no great advance upon it, yet by laying out fifty talents he made an hundred. When Dionysius heard this he permitted him to take his money with him, but forbid him to continue any longer in Sicily, as being one who contrived means for getting money inconsistent with his affairs. This man's view and Thales's was exactly the same; both of them contrived to procure a monopoly for themselves: it is useful also for politicians to understand these things, for many states want to raise money and by such means, as well as private families, nay more so; for which reason some persons who are employed in the management of public affairs confine themselves to this province only.

CHAPTER XII

There are then three parts of domestic government, the masters, of which we have already treated, the fathers, and the husbands; now the government of the wife and children should both be that of free persons, but not the [I259b] same; for the wife should be treated as a citizen of a free state, the children should be under kingly power; for the male is by nature superior to the female, except when something happens contrary to the usual course of nature, as is the elder and perfect to the younger and imperfect. Now in the generality of free states, the governors and the governed alternately change place; for an equality without any preference is what nature chooses; however, when one governs and another is governed, she endeavours that there should be a distinction between them in forms, expressions, and honours; according to what Amasis said of his laver. This then should be the established rule between the man and the woman. The government of children should be kingly; for the power of the father over the child is founded in affection and seniority, which is a species of kingly government; for which reason Homer very properly calls Jupiter "the father of gods and men," who was king of both these; for nature requires that a king should be of the same species with those whom he governs, though superior in some particulars, as is the case between the elder and the younger, the father and the son.

CHAPTER XIII

It is evident then that in the due government of a family, greater attention should be paid to the several members of it and their virtues than to the possessions or riches of it; and greater to the freemen than the slaves: but here some one may doubt whether there is any other virtue in a slave than his organic services, and of higher estimation than these, as temperance, fortitude, justice, and such-like habits, or whether they possess only bodily qualities: each side of the question has its difficulties; for if they possess these virtues, wherein do they differ from freemen? and that they do not, since they are men, and partakers of reason, is absurd. Nearly the same inquiry may be made concerning a woman and a child, whether these also have their proper virtues; whether a woman ought to be temperate, brave, and just, and whether a child is temperate or no; and indeed this inquiry ought to be general, whether the virtues of those who, by nature, either govern or are governed, are the same or different; for if it is necessary that both of them should partake of the fair and good, why is it also necessary that, without exception, the one should govern, the other always be governed? for this cannot arise from their possessing these qualities in different degrees; for to govern, and to be governed, are things different in species, but more or less are not. And yet it is wonderful that one party ought to have them, and the other not; for if he who is to govern should not be temperate and just, how can he govern well? or if he is to be governed, how can he be governed well? for he who is intemperate [1260a] and a coward will never do what he ought: it is evident then that both parties ought to be virtuous; but there is a difference between them, as there is between those who by nature command and who by nature obey, and this originates in the soul; for in this nature has planted the governing and submitting principle, the virtues of which we say are different, as are those of a rational and an irrational being. It is plain then that the same principle may be extended farther, and that there are in nature a variety of things which govern and are governed; for a freeman is governed in a different manner from a slave, a male from a female, and a man from a child: and all these have parts of mind within them, but in a different manner. Thus a slave can have no power of determination, a woman but a weak one, a child an imperfect one. Thus also must it necessarily be with respect to moral virtues; all must be supposed to possess them, but not in the same manner, but as is best suited to every one's employment; on which account he who is to govern ought to be perfect in moral virtue, for his business is entirely that of an architect, and reason is the architect; while others want only that portion of it which may be sufficient for their station; from whence it is evident, that although moral virtue is common to all those we have spoken of, yet the temperance of a man and a woman are not the same, nor their courage, nor their justice, though Socrates thought otherwise; for the courage of the man consists in commanding, the woman's in obeying; and the same is true in other particulars: and this will be evident to those who will examine different virtues separately; for those who use general terms deceive themselves when they say, that virtue consists in a good disposition of mind, or doing what is right, or something of this sort. They do much better who enumerate the different virtues as Georgias did, than those who thus define them; and as Sophocles speaks of a woman, we think of all persons, that their 'virtues should be applicable to their characters, for says he,

"Silence is a woman's ornament,"

but it is not a man's; and as a child is incomplete, it is evident that his virtue is not to be referred to himself in his present situation, but to that in which he will be complete, and his preceptor. In like manner the virtue of a slave is to be referred to his master; for we laid it down as a maxim, that the use of a slave was to employ him in what you wanted; so that it is clear enough that few virtues are wanted in his station, only that he may not neglect his work through idleness or fear: some person may question if what I have said is true, whether virtue is not necessary for artificers in their calling, for they often through idleness neglect their work, but the difference between them is very great; for a slave is connected with you for life, but the artificer not so nearly: as near therefore as the artificer approaches to the situation of a slave, just so much ought he to have of the virtues of one; for a mean artificer is to a certain point a slave; but then a slave is one of those things which are by nature what they are, but this is not true [1260b] of a shoemaker, or any other artist. It is evident then that a slave ought to be trained to those virtues which are proper for his situation by his master; and not by him who has the power of a master, to teach him any particular art. Those therefore are in the wrong who would deprive slaves of reason, and say that they have only to follow their orders; for slaves want more instruction than children, and thus we determine this matter. It is necessary, I am sensible, for every one who treats upon government, to enter particularly into the relations of husband and wife, and of parent and child, and to show what are the virtues of each and their respective connections with each other; what is right and what is wrong; and how the one ought to be followed, and the other avoided. Since then every family is part of a city, and each of those individuals is part of a family, and the virtue of the parts ought to correspond to the virtue of the whole; it is necessary, that both the wives and children of the community should be instructed correspondent to the nature thereof, if it is of consequence to the virtue of the state, that the wives and children therein should be virtuous, and of consequence it certainly is, for the wives are one half of the free persons; and of the children the succeeding citizens are to be

formed. As then we have determined these points, we will leave the rest to be spoken to in another place, as if the subject was now finished; and beginning again anew, first consider the sentiments of those who have treated of the most perfect forms of government.

BOOK II

CHAPTER I

Since then we propose to inquire what civil society is of all others best for those who have it in their power to live entirely as they wish, it is necessary to examine into the polity of those states which are allowed to be well governed; and if there should be any others which some persons have described, and which appear properly regulated, to note what is right and useful in them; and when we point out wherein they have failed, let not this be imputed to an affectation of wisdom, for it is because there are great defects in all those which are already established, that I have been induced to undertake this work. We will begin with that part of the subject which naturally presents itself first to our consideration. The members of every state must of necessity have all things in common, or some things common, and not others, or nothing at all common. To have nothing in common is evidently impossible, for society itself is one species of [1261a] community; and the first thing necessary thereunto is a common place of habitation, namely the city, which must be one, and this every citizen must have a share in. But in a government which is to be well founded, will it be best to admit of a community in everything which is capable thereof, or only in some particulars, but in others not? for it is possible that the citizens may have their wives, and children, and goods in common, as in Plato's Commonwealth; for in that Socrates affirms that all these particulars ought to be so. Which then shall we prefer? the custom which is already established, or the laws which are proposed in that treatise?

CHAPTER II

Now as a community of wives is attended with many other difficulties, so neither does the cause for which he would frame his government in this manner seem agreeable to reason, nor is it capable of producing that end which he has proposed, and for which he says it ought to take place; nor has he given any particular directions for putting it in practice. Now I also am willing to agree with Socrates in the principle which he proceeds upon, and admit that the city ought to be one as much as possible; and yet it is evident that if it is contracted too much, it will be no longer a city, for that necessarily supposes a multitude; so that if we proceed in this manner, we shall reduce a city to a family, and a family to a single person: for we admit that a family is one in a greater degree than a city, and a single person than a family; so that if this end could be obtained, it should never be put in practice, as it would annihilate the city; for a city does not only consist of a large number of inhabitants, but there must also be different sorts; for were they all alike, there could be no city; for a confederacy and a city are two different things; for a confederacy is valuable from its numbers, although all those who compose it are men of the same calling; for this is entered into for the sake of mutual defence, as we add an additional weight to make the scale go down. The same distinction prevails between a city and a nation when the people are not collected into separate villages, but live as the Arcadians. Now those things in which a city should be one are of different sorts, and in preserving an alternate reciprocation of power between these, the safety thereof consists (as I have already mentioned in my treatise on Morals), for amongst freemen and equals this is absolutely necessary; for all cannot govern at the same time, but either by the year, or according to some other regulation or time, by which means every one in his turn will be in office; as if the shoemakers and carpenters should exchange occupations, and not always be employed in the same calling. But as it is evidently better, that these should continue to exercise their respective trades; so also in civil society, where it is possible, it would be better that the government should continue in the same hands; but where it [1261b] is not (as nature has made all men equal, and therefore it is just, be the administration good or bad, that all should partake of it), there it is best to observe a rotation, and let those who are their equals by turns submit to those who are at that time magistrates, as they will, in their turns, alternately be governors and governed, as if they were different men: by the same method different persons will execute different offices. From hence it is evident, that a city cannot be one in the manner that some persons propose; and that what has been said to be the greatest good which it could enjoy, is absolutely its destruction, which cannot be: for the good of anything is that which preserves it. For another reason also it is clear, that it is not for the best to endeavour to make a city too much one, because a family is more sufficient in itself than a single person, a city than a family; and indeed Plato supposes that a city owes its existence to that sufficiency in themselves which the members of it enjoy. If then this sufficiency is so desirable, the less the city is one the better.

CHAPTER III

But admitting that it is most advantageous for a city to be one as much as possible, it does not seem to follow that this will take place by permitting all at once to say this is mine, and this is not mine (though this is what Socrates regards as a proof that a city is entirely one), for the word All is used in two senses; if it means each individual, what Socrates proposes will nearly take place; for each person will say, this is his own son, and his own wife, and his own property, and of everything else that may happen to belong to him, that it is his own. But those who have their wives and children in common will not say so, but all will say so, though not as individuals; therefore, to use the word all is evidently a fallacious mode of speech; for this word is sometimes used distributively, and sometimes collectively, on account of its double meaning, and is the cause of inconclusive syllogisms in reasoning. Therefore for all persons to say the same thing was their own, using the word all in its distributive sense, would be well, but is impossible: in its collective sense it would by no means contribute to the concord of the state. Besides, there would be another inconvenience attending this proposal, for what is common to many is taken least care of; for all men regard more what is their own than what others share with them in, to which they pay less attention than is incumbent on every one: let me add also, that every one is more negligent of what another is to see to, as well as himself, than of his own private business; as in a family one is often worse served by many servants than by a few. Let each citizen then in the state have a thousand children, but let none of them be considered as the children of that individual, but let the relation of father and child be common to them all, and they will all be neglected. Besides, in consequence of this, [1262a] whenever any citizen behaved well or ill, every person, be the number what it would, might say, this is my son, or this man's or that; and in this manner would they speak, and thus would they doubt of the whole thousand, or of whatever number the city consisted; and it would be uncertain to whom each child belonged, and when it was born, who was to take care of it: and which do you think is better, for every one to say this is mine, while they may apply it equally to two thousand or ten thousand; or as we say, this is mine in our present forms of government, where one man calls another his son, another calls that same person his brother, another nephew, or some other relation, either by blood or marriage, and first extends his care to him and his, while another regards him as one of the same parish and the same tribe; and it is better for any one to be a nephew in his private capacity than a son after that manner. Besides, it will be impossible to prevent some persons from suspecting that they are brothers and sisters, fathers and mothers to each other; for, from the mutual likeness there is between the sire and the offspring, they will necessarily conclude in what relation they stand to each other, which circumstance, we are informed by those writers who describe different parts of the world, does sometimes happen; for in Upper Africa there are wives in common who yet deliver their children to their respective fathers, being guided by their likeness to them. There are also some mares and cows which naturally bring forth their young so like the male, that we can easily distinguish by which of them they were impregnated: such was the mare called Just, in Pharsalia.

CHAPTER IV

Besides, those who contrive this plan of community cannot easily avoid the following evils; namely, blows, murders involuntary or voluntary, quarrels, and reproaches, all which it would be impious indeed to be guilty of towards our fathers and mothers, or those who are nearly related to us; though not to those who are not connected to us by any tie of affinity: and certainly these mischiefs must necessarily happen oftener amongst those who do not know how they are connected to each other than those who do; and when they do happen, if it is among the first of these, they admit of a legal expiation, but amongst the latter that cannot be done. It is also absurd for those who promote a community of children to forbid those who love each other from indulging themselves in the last excesses of that passion, while they do not restrain them from the passion itself, or those intercourses which are of all things most improper, between a Father and a son, a brother and a brother, and indeed the thing itself is most absurd. It is also ridiculous to prevent this intercourse between the nearest relations, for no other reason than the violence of the pleasure, while they think that the relation of father and daughter, the brother and sister, is of no consequence at all. It seems also more advantageous for the state, that the husbandmen should have their wives and children in common than the military, for there will be less affection [1262b] among them in that case than when otherwise; for such persons ought to be under subjection, that they may obey the laws, and not seek after innovations. Upon the whole, the consequences of such a law as this would be directly contrary to those things which good laws ought to establish, and which Socrates endeavoured to establish by his regulations concerning women and children: for we think that friendship is the greatest good which can happen to any city, as nothing so much prevents seditions: and amity in a city is what Socrates commends above all things, which appears to be, as indeed he says, the effect of friendship; as we learn from Aristophanes in the Erotics, who says, that those who love one another from the excess of that passion, desire to breathe the same soul, and from being two to be blended into one: from whence it would necessarily follow, that both or one of them must be destroyed. But now in a city which admits of this community, the tie of friendship must, from that very cause, be extremely weak, when no father can say, this is my son; or son, this is my father; for as a very little of what is sweet, being mixed with a great deal of

water is imperceptible after the mixture, so must all family connections, and the names they go by, be necessarily disregarded in such a community, it being then by no means necessary that the father should have any regard for him he called a son, or the brothers for those they call brothers. There are two things which principally inspire mankind with care and love of their offspring, knowing it is their own, and what ought to be the object of their affection, neither of which can take place in this sort of community. As for exchanging the children of the artificers and husbandmen with those of the military, and theirs reciprocally with these, it will occasion great confusion in whatever manner it shall be done; for of necessity, those who carry the children must know from whom they took and to whom they gave them; and by this means those evils which I have already mentioned will necessarily be the more likely to happen, as blows, incestuous love, murders, and the like; for those who are given from their own parents to other citizens, the military, for instance, will not call them brothers, sons, fathers, or mothers. The same thing would happen to those of the military who were placed among the other citizens; so that by this means every one would be in fear how to act in consequence of consanguinity. And thus let us determine concerning a community of wives and children.

CHAPTER V

We proceed next to consider in what manner property should be regulated in a state which is formed after the most perfect mode of government, whether it should be common or not; for this may be considered as a separate question from what had been determined concerning [1263a] wives and children; I mean, whether it is better that these should be held separate, as they now everywhere are, or that not only possessions but also the usufruct of them should be in common; or that the soil should have a particular owner, but that the produce should be brought together and used as one common stock, as some nations at present do; or on the contrary, should the soil be common, and should it also be cultivated in common, while the produce is divided amongst the individuals for their particular use, which is said to be practised by some barbarians; or shall both the soil and the fruit be common? When the business of the husbandman devolves not on the citizen, the matter is much easier settled; but when those labour together who have a common right of possession, this may occasion several difficulties; for there may not be an equal proportion between their labour and what they consume; and those who labour hard and have but a small proportion of the produce, will certainly complain of those who take a large share of it and do but little for that. Upon the whole, as a community between man and man so entire as to include everything possible, and thus to have all things that man can possess in common, is very difficult, so is it particularly so with respect to property; and this is evident from that community which takes place between those who go out to settle a colony; for they frequently have disputes with each other upon the most common occasions, and come to blows upon trifles: we find, too, that we oftenest correct those slaves who are generally employed in the common offices of the family: a community of property then has these and other inconveniences attending it.

But the manner of life which is now established, more particularly when embellished with good morals and a system of equal laws, is far superior to it, for it will have the advantage of both; by both I mean properties being common, and divided also; for in some respects it ought to be in a manner common, but upon the whole private: for every man's attention being employed on his own particular concerns, will prevent mutual complaints against each other; nay, by this means industry will be increased, as each person will labour to improve his own private property; and it will then be, that from a principle of virtue they will mutually perform good offices to each other, according to the proverb, "All things are common amongst friends;" and in some cities there are traces of this custom to be seen, so that it is not impracticable, and particularly in those which are best governed; some things are by this means in a manner common, and others might be so; for there, every person enjoying his own private property, some things he assists his friend with, others are considered as in common; as in Lacedaemon, where they use each other's slaves, as if they were, so to speak, their own, as they do their horses and dogs, or even any provision they may want in a journey.

It is evident then that it is best to have property private, but to make the use of it common; but how the citizens are to be brought to it is the particular [1263b] business of the legislator. And also with respect to pleasure, it is unspeakable how advantageous it is, that a man should think he has something which he may call his own; for it is by no means to no purpose, that each person should have an affection for himself, for that is natural, and yet to be a self-lover is justly censured; for we mean by that, not one that simply loves himself, but one that loves himself more than he ought; in like manner we blame a money-lover, and yet both money and self is what all men love. Besides, it is very pleasing to us to oblige and assist our friends and companions, as well as those whom we are connected with by the rights of hospitality; and this cannot be done without the establishment of private property, which cannot take place with those who make a city too much one; besides, they prevent every opportunity of exercising two principal virtues, modesty and liberality. Modesty with respect to the female sex, for this virtue requires you to abstain from her who is another's; liberality, which depends upon private property, for without that no one can appear liberal, or do any generous action;

for liberality consists in imparting to others what is our own.

This system of polity does indeed recommend itself by its good appearance and specious pretences to humanity; and when first proposed to any one, must give him great pleasure, as he will conclude it to be a wonderful bond of friendship, connecting all to all; particularly when any one censures the evils which are now to be found in society, as arising from properties not being common, I mean the disputes which happen between man and man, upon their different contracts with each other; those judgments which are passed in court in consequence of fraud, and perjury, and flattering the rich, none of which arise from properties being private, but from the vices of mankind. Besides, those who live in one general community, and have all things in common, oftener dispute with each other than those who have their property separate; from the very small number indeed of those who have their property in common, compared with those where it is appropriated, the instances of their quarrels are but few. It is also but right to mention, not only the inconveniences they are preserved from who live in a communion of goods, but also the advantages they are deprived of; for when the whole comes to be considered, this manner of life will be found impracticable.

We must suppose, then, that Socrates's mistake arose from the principle he set out with being false; we admit, indeed, that both a family and a city ought to be one in some particulars, but not entirely; for there is a point beyond which if a city proceeds in reducing itself to one, it will be no longer a city.

There is also another point at which it will still continue to be a city, but it will approach so near to not being one, that it will be worse than none; as if any one should reduce the voices of those who sing in concert to one, or a verse to a foot. But the people ought to be made one, and a community, as I have already said, by education; as property at Lacedaemon, and their public tables at Crete, were made common by their legislators. But yet, whosoever shall introduce any education, and think thereby to make his city excellent and respectable, will be absurd, while he expects to form it by such regulations, and not by manners, philosophy, and laws. And whoever [1264a] would establish a government upon a community of goods, ought to know that he should consult the experience of many years, which would plainly enough inform him whether such a scheme is useful; for almost all things have already been found out, but some have been neglected, and others which have been known have not been put in practice. But this would be most evident, if any one could see such a government really established: for it would be impossible to frame such a city without dividing and separating it into its distinct parts, as public tables, wards, and tribes; so that here the laws will do nothing more than forbid the military to engage in agriculture, which is what the Lacedaemonians are at present endeavouring to do.

Nor has Socrates told us (nor is it easy to say) what plan of government should be pursued with respect to the individuals in the state where there is a community of goods established; for though the majority of his citizens will in general consist of a multitude of persons of different occupations, of those he has determined nothing; whether the property of the husbandman ought to be in common, or whether each person should have his share to himself; and also, whether their wives and children ought to be in common: for if all things are to be alike common to all, where will be the difference between them and the military, or what would they get by submitting to their government? and upon what principles would they do it, unless they should establish the wise practice of the Cretans? for they, allowing everything else to their slaves, forbid them only gymnastic exercises and the use of arms. And if they are not, but these should be in the same situation with respect to their property which they are in other cities, what sort of a community will there be? in one city there must of necessity be two, and those contrary to each other; for he makes the military the guardians of the state, and the husbandman, artisans, and others, citizens; and all those quarrels, accusations, and things of the like sort, which he says are the bane of other cities, will be found in his also: notwithstanding Socrates says they will not want many laws in consequence of their education, but such only as may be necessary for regulating the streets, the markets, and the like, while at the same time it is the education of the military only that he has taken any care of. Besides, he makes the husbandmen masters of property upon paying a tribute; but this would be likely to make them far more troublesome and high-spirited than the Helots, the Penestise, or the slaves which others employ; nor has he ever determined whether it is necessary to give any attention to them in these particulars, nor thought of what is connected therewith, their polity, their education, their laws; besides, it is of no little consequence, nor is it easy to determine, how these should be framed so as to preserve the community of the military.

Besides, if he makes the wives common, while the property [1264b] continues separate, who shall manage the domestic concerns with the same care which the man bestows upon his fields? nor will the inconvenience be remedied by making property as well as wives common; and it is absurd to draw a comparison from the brute creation, and say, that the same principle should regulate the connection of a man and a woman which regulates theirs amongst whom there is no family association.

It is also very hazardous to settle the magistracy as Socrates has done; for he would have persons of the same rank always in office, which becomes the cause of sedition even amongst those who are of no account, but more particularly amongst those who are of a courageous and warlike disposition; it is indeed evidently necessary that he should frame his community in this manner; for that golden particle which God has mixed up in the soul of man flies not from one to the other, but always continues with the same; for he says, that some of our species have gold, and others silver, blended in their composition from the moment of their birth: but those who are to be husbandmen and artists, brass and iron; besides, though he deprives the military of happiness, he says, that the legislator ought to make all the citizens happy; but it is impossible that the whole city can be happy, without all, or the greater, or some part of it be happy. For happiness is not like that numerical equality which arises from certain numbers when added together, although neither of them may separately contain it; for happiness cannot be thus added together, but must exist in every individual, as some properties belong to every integral; and if the military are not happy, who else are so? for the artisans are not, nor the multitude of those who are employed in inferior offices. The state which Socrates has described has all these defects, and others which are not of less consequence.

CHAPTER VI

It is also nearly the same in the treatise upon Laws which was writ afterwards, for which reason it will be proper in this place to consider briefly what he has there said upon government, for Socrates has thoroughly settled but very few parts of it; as for instance, in what manner the community of wives and children ought to be regulated, how property should be established, and government conducted.

Now he divides the inhabitants into two parts, husbandmen and soldiers, and from these he select a third part who are to be senators and govern the city; but he has not said whether or no the husbandman and artificer shall have any or what share in the government, or whether they shall have arms, and join with the others in war, or not. He thinks also that the women ought to go to war, and have the same education as the soldiers; as to other particulars, he has filled his treatise with matter foreign to the purpose; and with respect to education, he has only said what that of the guards ought to be.

[1265a] As to his book of Laws, laws are the principal thing which that contains, for he has there said but little concerning government; and this government, which he was so desirous of framing in such a manner as to impart to its members a more entire community of goods than is to be found in other cities, he almost brings round again to be the same as that other government which he had first proposed; for except the community of wives and goods, he has framed both his governments alike, for the education of the citizens is to be the same in both; they are in both to live without any servile employ, and their common tables are to be the same, excepting that in that he says the women should have common tables, and that there should be a thousand men-at-arms, in this, that there should be five thousand.

All the discourses of Socrates are masterly, noble, new, and inquisitive; but that they are all true it may probably be too much to say. For now with respect to the number just spoken of, it must be acknowledged that he would want the country of Babylonia for them, or some one like it, of an immeasurable extent, to support five thousand idle persons, besides a much greater number of women and servants. Every one, it is true, may frame an hypothesis as he pleases, but yet it ought to be possible. It has been said, that a legislator should have two things in view when he frames his laws, the country and the people. He will also do well, if he has some regard to the neighbouring states, if he intends that his community should maintain any political intercourse with them, for it is not only necessary that they should understand that practice of war which is adapted to their own country, but to others also; for admitting that any one chooses not this life either in public or private, yet there is not the less occasion for their being formidable to their enemies, not only when they invade their country, but also when they retire out of it.

It may also be considered whether the quantity of each person's property may not be settled in a different manner from what he has done it in, by making it more determinate; for he says, that every one ought to have enough whereon to live moderately, as if any one had said to live well, which is the most comprehensive expression. Besides, a man may live moderately and miserably at the same time; he had therefore better have proposed, that they should live both moderately and liberally; for unless these two conspire, luxury will come in on the one hand, or wretchedness on the other, since these two modes of living are the only ones applicable to the employment of our substance; for we cannot say with respect to a man's fortune, that he is mild or courageous, but we may say that he is prudent and liberal, which are the only qualities connected therewith.

It is also absurd to render property equal, and not to provide for the increasing number of the citizens; but to leave that circumstance uncertain, as if it would regulate itself according to the number of women who [1265b] should happen to be childless,

let that be what it would because this seems to take place in other cities; but the case would not be the same in such a state which he proposes and those which now actually unite; for in these no one actually wants, as the property is divided amongst the whole community, be their numbers what they will; but as it could not then be divided, the supernumeraries, whether they were many or few, would have nothing at all. But it is more necessary than even to regulate property, to take care that the increase of the people should not exceed a certain number; and in determining that, to take into consideration those children who will die, and also those women who will be barren; and to neglect this, as is done in several cities, is to bring certain poverty on the citizens; and poverty is the cause of sedition and evil. Now Phidon the Corinthian, one of the oldest legislators, thought the families and the number of the citizens should continue the same; although it should happen that all should have allotments at the first, disproportionate to their numbers.

In Plato's Laws it is however different; we shall mention hereafter what we think would be best in these particulars. He has also neglected in that treatise to point out how the governors are to be distinguished from the governed; for he says, that as of one sort of wool the warp ought to be made, and of another the woof, so ought some to govern, and others to be governed. But since he admits, that all their property may be increased fivefold, why should he not allow the same increase to the country? he ought also to consider whether his allotment of the houses will be useful to the community, for he appoints two houses to each person, separate from each other; but it is inconvenient for a person to inhabit two houses. Now he is desirous to have his whole plan of government neither a democracy nor an oligarchy, but something between both, which he calls a polity, for it is to be composed of men-at-arms. If Plato intended to frame a state in which more than in any other everything should be common, he has certainly given it a right name; but if he intended it to be the next in perfection to that which he had already framed, it is not so; for perhaps some persons will give the preference to the Lacedaemonian form of government, or some other which may more completely have attained to the aristocratic form.

Some persons say, that the most perfect government should be composed of all others blended together, for which reason they commend that of Lacedaemon; for they say, that this is composed of an oligarchy, a monarchy, and a democracy, their kings representing the monarchical part, the senate the oligarchical; and, that in the ephori may be found the democratical, as these are taken from the people. But some say, that in the ephori is absolute power, and that it is their common meal and daily course of life, in which the democratical form is represented. It is also said in this treatise of [1266a] Laws, that the best form of government must, be one composed of a democracy and a tyranny; though such a mixture no one else would ever allow to be any government at all, or if it is, the worst possible; those propose what is much better who blend many governments together; for the most perfect is that which is formed of many parts. But now in this government of Plato's there are no traces of a monarchy, only of an oligarchy and democracy; though he seems to choose that it should rather incline to an oligarchy, as is evident from the appointment of the magistrates; for to choose them by lot is common to both; but that a man of fortune must necessarily be a member of the assembly, or to elect the magistrates, or take part in the management of public affairs, while others are passed over, makes the state incline to an oligarchy; as does the endeavouring that the greater part of the rich may be in office, and that the rank of their appointments may correspond with their fortunes.

The same principle prevails also in the choice of their senate; the manner of electing which is favourable also to an oligarchy; for all are obliged to vote for those who are senators of the first class, afterwards they vote for the same number out of the second, and then out of the third; but this compulsion to vote at the election of senators does not extend to the third and fourth classes and the first and second class only are obliged to vote for the fourth. By this means he says he shall necessarily have an equal number of each rank, but he is mistaken--for the majority will always consist of those of the first rank, and the most considerable people; and for this reason, that many of the commonalty not being obliged to it, will not attend the elections. From hence it is evident, that such a state will not consist of a democracy and a monarchy, and this will be further proved by what we shall say when we come particularly to consider this form of government.

There will also great danger arise from the manner of electing the senate, when those who are elected themselves are afterwards to elect others; for by this means, if a certain number choose to combine together, though not very considerable, the election will always fall according to their pleasure. Such are the things which Plato proposes concerning government in his book of Laws.

CHAPTER VII

There are also some other forms of government, which have been proposed either by private persons, or philosophers, or politicians, all of which come much nearer to those which have been really established, or now exist, than these two of Plato's; for

neither have they introduced the innovation of a community of wives and children, and public tables for the women, but have been contented to set out with establishing such rules as are absolutely necessary.

There are some persons who think, that the first object of government should be to regulate well everything relating to private property; for they say, that a neglect herein is the source of all seditions whatsoever. For this reason, Phaleas the Chalcedonian first proposed, that the fortunes of the citizens should be equal, which he thought was not difficult to accomplish when a community was first settled, but that it was a work of greater difficulty in one that had been long established; but yet that it might be effected, and an equality of circumstances introduced by these means, that the rich should give marriage portions, but never receive any, while the poor should always receive, but never give.

But Plato, in his treatise of Laws, thinks that a difference in circumstances should be permitted to a certain degree; but that no citizen should be allowed to possess more than five times as much as the lowest census, as we have already mentioned. But legislators who would establish this principle are apt to overlook what they ought to consider; that while they regulate the quantity of provisions which each individual shall possess, they ought also to regulate the number of his children; for if these exceed the allotted quantity of provision, the law must necessarily be repealed; and yet, in spite of the repeal, it will have the bad effect of reducing many from wealth to poverty, so difficult is it for innovators not to fall into such mistakes. That an equality of goods was in some degree serviceable to strengthen the bands of society, seems to have been known to some of the ancients; for Solon made a law, as did some others also, to restrain persons from possessing as much land as they pleased. And upon the same principle there are laws which forbid men to sell their property, as among the Locrians, unless they can prove that some notorious misfortune has befallen them. They were also to preserve their ancient patrimony, which custom being broken through by the Leucadians, made their government too democratic; for by that means it was no longer necessary to be possessed of a certain fortune to be qualified to be a magistrate. But if an equality of goods is established, this may be either too much, when it enables the people to live luxuriously, or too little, when it obliges them to live hard. Hence it is evident, that it is not proper for the legislator to establish an equality of circumstances, but to fix a proper medium. Besides, if any one should regulate the division of property in such a manner that there should be a moderate sufficiency for all, it would be of no use; for it is of more consequence that the citizen should entertain a similarity of sentiments than an equality of circumstances; but this can never be attained unless they are properly educated under the direction of the law. But probably Phaleas may say, that this in what he himself mentions; for he both proposes a equality of property and one plan of education in his city. But he should have said particularly what education he intended, nor is it of any service to have this to much one; for this education may be one, and yet such as will make the citizens over-greedy, to grasp after honours, or riches, or both. Besides, not only an inequality of possessions, but also of honours, will occasion [1267a] seditions, but this upon contrary grounds; for the vulgar will be seditious if there be an inequality of goods, by those of more elevated sentiments, if there is an equality of honours.

"When good and bad do equal honours share."

For men are not guilty of crimes for necessaries only (for which he thinks an equality of goods would be a sufficient remedy, as they would then have no occasion to steal cold or hunger), but that they may enjoy what they desire, and not wish for it in vain; for if their desire extend beyond the common necessaries of life, they were be wicked to gratify them; and not only so, but if their wishes point that way, they will do the same to enjoy those pleasures which are free from the alloy of pain. What remedy then shall we find for these three disorders? And first, to prevent stealing from necessity, let every one be supplied with a moderate subsistence, which may make the addition of his own industry necessary; second to prevent stealing to procure the luxuries of life, temperance be enjoined; and thirdly, let those who wish for pleasure in itself seek for it only in philosophy, all others want the assistance of men.

Since then men are guilty of the greatest crimes from ambition, and not from necessity, no one, for instance aims at being a tyrant to keep him from the cold, hence great honour is due to him who kills not a thief, but tyrant; so that polity which Phaleas establishes would only be salutary to prevent little crimes. He has also been very desirous to establish such rules as will conduce to perfect the internal policy of his state, and he ought also to have done the same with respect to its neighbours and all foreign nations; for the considerations of the military establishment should take place in planning every government, that it may not be unprovided in case of a war, of which he has said nothing; so also with respect to property, it ought not only to be adapted to the exigencies of the state, but also to such dangers as may arise from without.

Thus it should not be so much as to tempt those who are near, and more powerful to invade it, while those who possess it are not able to drive out the invaders, nor so little as that the state should not be able to go to war with those who are quite equal to itself, and of this he has determined nothing; it must indeed be allowed that it is advantageous to a community to be rather rich than poor;

probably the proper boundary is this, not to possess enough to make it worth while for a more powerful neighbour to attack you, any more than he would those who had not so much as yourself; thus when Autophradatus proposed to besiege Atarneus, Eubulus advised him to consider what time it would require to take the city, and then would have him determine whether it would answer, for that he should choose, if it would even take less than he proposed, to quit the place; his saying this made Autophradatus reflect upon the business and give over the siege. There is, indeed, some advantage in an equality of goods amongst the citizens to prevent seditions; and yet, to say truth, no very great one; for men of great abilities will stomach their being put upon a level with the rest of the community. For which reason they will very often appear ready for every commotion and sedition; for the wickedness of mankind is insatiable. For though at first two oboli might be sufficient, yet when once it is become customary, they continually want something more, until they set no limits to their expectations; for it is the nature of our desires to be boundless, and many live only to gratify them. But for this purpose the first object is, not so much to establish an equality of fortune, as to prevent those who are of a good disposition from desiring more than their own, and those who are of a bad one from being able to acquire it; and this may be done if they are kept in an inferior station, and not exposed to injustice. Nor has he treated well the equality of goods, for he has extended his regulation only to land; whereas a man's substance consists not only in this, but also in slaves, cattle, money, and all that variety of things which fall under the name of chattels; now there must be either an equality established in all these, or some certain rule, or they must be left entirely at large. It appears too by his laws, that he intends to establish only a small state, as all the artificers are to belong to the public, and add nothing to the complement of citizens; but if all those who are to be employed in public works are to be the slaves of the public, it should be done in the same manner as it is at Epidamnum, and as Diophantus formerly regulated it at Athens. From these particulars any one may nearly judge whether Phaleas's community is well or ill established.

CHAPTER VIII

Hippodamus, the son of Euruphon a Milesian, contrived the art of laying out towns, and separated the Pireus. This man was in other respects too eager after notice, and seemed to many to live in a very affected manner, with his flowing locks and his expensive ornaments, and a coarse warm vest which he wore, not only in the winter, but also in the hot weather. As he was very desirous of the character of a universal scholar, he was the first who, not being actually engaged in the management of public affairs, sat himself to inquire what sort of government was best; and he planned a state, consisting of ten thousand persons, divided into three parts, one consisting of artisans, another of husbandmen, and the third of soldiers; he also divided the lands into three parts, and allotted one to sacred purposes, another to the public, and the third to individuals. The first of these was to supply what was necessary for the established worship of the gods; the second was to be allotted to the support of the soldiery; and the third was to be the property of the husbandman. He thought also that there need only be three sorts of laws, corresponding to the three sorts of actions which can be brought, namely, for assault, trespasses, or death. He ordered also that there should be a particular court of appeal, into which all causes might be removed which were supposed to have been unjustly determined elsewhere; which court should be composed of old men chosen for that purpose. He thought also [1268a] that they should not pass sentence by votes; but that every one should bring with him a tablet, on which he should write, that he found the party guilty, if it was so, but if not, he should bring a plain tablet; but if he acquitted him of one part of the indictment but not of the other, he should express that also on the tablet; for he disapproved of that general custom already established, as it obliges the judges to be guilty of perjury if they determined positively either on the one side or the other. He also made a law, that those should be rewarded who found out anything for the good of the city, and that the children of those who fell in battle should be educated at the public expense; which law had never been proposed by any other legislator, though it is at present in use at Athens as well as in other cities, he would have the magistrates chosen out of the people in general, by whom he meant the three parts before spoken of; and that those who were so elected should be the particular guardians of what belonged to the public, to strangers, and to orphans.

These are the principal parts and most worthy of notice in Hippodamus's plan. But some persons might doubt the propriety of his division of the citizens into three parts; for the artisans, the husbandmen, and the soldiers are to compose one community, where the husbandmen are to have no arms, and the artisans neither arms nor land, which would in a manner render them slaves to the soldiery. It is also impossible that the whole community should partake of all the honourable employments in it--for the generals and the guardians of the state must necessarily be appointed out of the soldiery, and indeed the most honourable magistrates; but as the two other parts will not have their share in the government, how can they be expected to have any affection for it? But it is necessary that the soldiery should be superior to the other two parts, and this superiority will not be easily gained without they are very numerous; and if they are so, why should the community consist of any other members? why should any others have a right to elect the magistrates? Besides, of what use are the husbandmen to this community? Artisans, 'tis true, are necessary, for these every city wants, and they can live upon their business. If the husbandmen indeed furnished the soldiers with provisions, they

would be properly part of the community; but these are supposed to have their private property, and to cultivate it for their own use. Moreover, if the soldiers themselves are to cultivate that common land which is appropriated for their support, there will be no distinction between the soldier and the husbandman, which the legislator intended there should be; and if there should be any others who are to cultivate the private property of the husbandman and the common lands of the military, there will be a fourth order in the state which will have no share in it, and always entertain hostile sentiments towards it. If any one should propose that the same persons should cultivate their own lands and the public ones also, then there would be a deficiency [1268b] of provisions to supply two families, as the lands would not immediately yield enough for themselves and the soldiers also; and all these things would occasion great confusion.

Nor do I approve of his method of determining causes, when he would have the judge split the case which comes simply before him; and thus, instead of being a judge, become an arbitrator. Now when any matter is brought to arbitration, it is customary for many persons to confer together upon the business that is before them; but when a cause is brought before judges it is not so; and many legislators take care that the judges shall not have it in their power to communicate their sentiments to each other. Besides, what can prevent confusion on the bench when one judge thinks a fine should be different from what another has set it at; one proposing twenty minae, another ten, or be it more or less, another four, and another five; and it is evident, that in this manner they will differ from each other, while some will give the whole damages sued for, and others nothing; in this situation, how shall their determinations be settled? Besides, a judge cannot be obliged to perjure himself who simply acquits or condemns, if the action is fairly and justly brought; for he who acquits the party does not say that he ought not to pay any fine at all, but that he ought not to pay a fine of twenty minae. But he that condemns him is guilty of perjury if he sentences him to pay twenty minae while he believes the damages ought not to be so much.

Now with respect to these honours which he proposes to bestow on those who can give any information useful to the community, this, though very pleasing in speculation, is what the legislator should not settle, for it would encourage informers, and probably occasion commotions in the state. And this proposal of his gives rise also to further conjectures and inquiries; for some persons have doubted whether it is useful or hurtful to alter the established law of any country, if even for the better; for which reason one cannot immediately determine upon what he here says, whether it is advantageous to alter the law or not. We know, indeed, that it is possible to propose to new model both the laws and government as a common good; and since we have mentioned this subject, it may be very proper to enter into a few particulars concerning it, for it contains some difficulties, as I have already said, and it may appear better to alter them, since it has been found useful in other sciences.

Thus the science of physic is extended beyond its ancient bounds; so is the gymnastic, and indeed all other arts and powers; so that one may lay it down for certain that the same thing will necessarily hold good in the art of government. And it may also be affirmed, that experience itself gives a proof of this; for the ancient laws are too simple and barbarous; which allowed the Greeks to wear swords in the city, and to buy their wives of each [1269a]. other. And indeed all the remains of old laws which we have are very simple; for instance, a law in Cuma relative to murder. If any person who prosecutes another for murder can produce a certain number of witnesses to it of his own relations, the accused person shall be held guilty. Upon the whole, all persons ought to endeavour to follow what is right, and not what is established; and it is probable that the first men, whether they sprung out of the earth, or were saved from some general calamity, had very little understanding or knowledge, as is affirmed of these aborigines; so that it would be absurd to continue in the practice of their rules. Nor is it, moreover, right to permit written laws always to remain without alteration; for as in all other sciences, so in politics, it is impossible to express everything in writing with perfect exactness; for when we commit anything to writing we must use general terms, but in every action there is something particular to itself, which these may not comprehend; from whence it is evident, that certain laws will at certain times admit of alterations. But if we consider this matter in another point of view, it will appear to require great caution; for when the advantage proposed is trifling, as the accustoming the people easily to abolish their laws is of bad consequence, it is evidently better to pass over some faults which either the legislator or the magistrates may have committed; for the alterations will not be of so much service as a habit of disobeying the magistrates will be of disservice. Besides, the instance brought from the arts is fallacious; for it is not the same thing to alter the one as the other. For a law derives all its strength from custom, and this requires long time to establish; so that, to make it an easy matter to pass from the established laws to other new ones, is to weaken the power of laws. Besides, here is another question; if the laws are to be altered, are they all to be altered, and in every government or not, and whether at the pleasure of one person or many? all which particulars will make a great difference; for which reason we will at present drop the inquiry, to pursue it at some other time.

CHAPTER IX

There are two considerations which offer themselves with respect to the government established at Lacedaemon and Crete, and indeed in almost all other states whatsoever; one is whether their laws do or do not promote the best establishment possible? the other is whether there is anything, if we consider either the principles upon which it is founded or the executive part of it, which prevents the form of government that they had proposed to follow from being observed; now it is allowed that in every well-regulated state the members of it should be free from servile labour; but in what manner this shall be effected is not so easy to determine; for the Penestse have very often attacked the Thessalians, and the Helots the Lacedaemonians, for they in a manner continually watch an opportunity for some misfortune befalling them. But no such thing has ever happened to the Cretans; the [1269b] reason for which probably is, that although they are engaged in frequent wars with the neighbouring cities, yet none of these would enter into an alliance with the revolters, as it would be disadvantageous for them, who themselves also have their villains. But now there is perpetual enmity between the Lacedaemonians and all their neighbours, the Argives, the Messenians, and the Arcadians. Their slaves also first revolted from the Thessalians while they were engaged in wars with their neighbours the Acheans, the Perrabeans, and the Magnesians. It seems to me indeed, if nothing else, yet something very troublesome to keep upon proper terms with them; for if you are remiss in your discipline they grow insolent, and think themselves upon an equality with their masters; and if they are hardly used they are continually plotting against you and hate you. It is evident, then, that those who employ slaves have not as yet hit upon the right way of managing them.

As to the indulging of women in any particular liberties, it is hurtful to the end of government and the prosperity of the city; for as a man and his wife are the two parts of a family, if we suppose a city to be divided into two parts, we must allow that the number of men and women will be equal.

In whatever city then the women are not under good regulations, we must look upon one half of it as not under the restraint of law, as it there happened; for the legislator, desiring to make his whole city a collection of warriors with respect to the men, he most evidently accomplished his design; but in the meantime the women were quite neglected, for they live without restraint in every improper indulgence and luxury. So that in such a state riches will necessarily be in general esteem, particularly if the men are governed by their wives, which has been the case with many a brave and warlike people except the Celts, and those other nations, if there are any such, who openly practise pederasty. And the first mythologists seem not improperly to have joined Mars and Venus together; for all nations of this character are greatly addicted either to the love of women or of boys, for which reason it was thus at Lacedaemon; and many things in their state were done by the authority of the women. For what is the difference, if the power is in the hands of the women, or in the hands of those whom they themselves govern? it must turn to the same account. As this boldness of the women can be of no use in any common occurrences, if it was ever so, it must be in war; but even here we find that the Lacedaemonian women were of the greatest disservice, as was proved at the time of the Theban invasion, when they were of no use at all, as they are in other cities, but made more disturbance than even the enemy.

The origin of this indulgence which the Lacedaemonian women enjoy is easily accounted for, from the long time the men were absent from home upon foreign expeditions [1270a] against the Argives, and afterwards the Arcadians and Messenians, so that, when these wars were at an end, their military life, in which there is no little virtue, prepared them to obey the precepts of their law-giver; but we are told, that when Lycurgus endeavoured also to reduce the women to an obedience to his laws, upon their refusal he declined it. It may indeed be said that the women were the causes of these things, and of course all the fault was theirs. But we are not now considering where the fault lies, or where it does not lie, but what is right and what is wrong; and when the manners of the women are not well regulated, as I have already said, it must not only occasion faults which are disgraceful to the state, but also increase the love of money. In the next place, fault may be found with his unequal division of property, for some will have far too much, others too little; by which means the land will come into few hands, which business is badly regulated by his laws. For he made it infamous for any one either to buy or sell their possessions, in which he did right; but he permitted any one that chose it to give them away, or bequeath them, although nearly the same consequences will arise from one practice as from the other. It is supposed that near two parts in five of the whole country is the property of women, owing to their being so often sole heirs, and having such large fortunes in marriage; though it would be better to allow them none, or a little, or a certain regulated proportion. Now every one is permitted to make a woman his heir if he pleases; and if he dies intestate, he who succeeds as heir at law gives it to whom he pleases. From whence it happens that although the country is able to support fifteen hundred horse and thirty thousand foot, the number does not amount to one thousand.

And from these facts it is evident, that this particular is badly regulated; for the city could not support one shock, but was ruined for want of men. They say, that during the reigns of their ancient kings they used to present foreigners with the freedom of their city, to prevent there being a want of men while they carried on long wars; it is also affirmed that the number of Spartans was formerly ten

thousand; but be that as it will, an equality of property conduces much to increase the number of the people. The law, too, which he made to encourage population was by no means calculated to correct this inequality; for being willing that the Spartans should be as numerous as [1270b] possible, to make them desirous of having large families he ordered that he who had three children should be excused the night-watch, and that he who had four should pay no taxes: though it is very evident, that while the land was divided in this manner, that if the people increased there must many of them be very poor.

Nor was he less blamable for the manner in which he constituted the ephori; for these magistrates take cognisance of things of the last importance, and yet they are chosen out of the people in general; so that it often happens that a very poor person is elected to that office, who, from that circumstance, is easily bought. There have been many instances of this formerly, as well as in the late affair at Andros. And these men, being corrupted with money, went as far as they could to ruin the city: and, because their power was too great and nearly tyrannical, their kings were obliged to natter them, which contributed greatly to hurt the state; so that it altered from an aristocracy to a democracy. This magistracy is indeed the great support of the state; for the people are easy, knowing that they are eligible to the first office in it; so that, whether it took place by the intention of the legislator, or whether it happened by chance, this is of great service to their affairs; for it is necessary that every member of the state should endeavour that each part of the government should be preserved, and continue the same. And upon this principle their kings have always acted, out of regard to their honour; the wise and good from their attachment to the senate, a seat wherein they consider as the reward of virtue; and the common people, that they may support the ephori, of whom they consist. And it is proper that these magistrates should be chosen out of the whole community, not as the custom is at present, which is very ridiculous. The ephori are the supreme judges in causes of the last consequence; but as it is quite accidental what sort of persons they may be, it is not right that they should determine according to their own opinion, but by a written law or established custom. Their way of life also is not consistent with the manners of the city, for it is too indulgent; whereas that of others is too severe; so that they cannot support it, but are obliged privately to act contrary to law, that they may enjoy some of the pleasures of sense. There are also great defects in the institution of their senators. If indeed they were fitly trained to the practice of every human virtue, every one would readily admit that they would be useful to the government; but still it might be debated whether they should be continued judges for life, to determine points of the greatest moment, since the mind has its old age as well as the body; but as they are so brought up, [1271a] that even the legislator could not depend upon them as good men, their power must be inconsistent with the safety of the state: for it is known that the members of that body have been guilty both of bribery and partiality in many public affairs; for which reason it had been much better if they had been made answerable for their conduct, which they are not. But it may be said the ephori seem to have a check upon all the magistrates. They have indeed in this particular very great power; but I affirm that they should not be entrusted with this control in the manner they are. Moreover, the mode of choice which they make use of at the election of their senators is very childish. Nor is it right for any one to solicit for a place he is desirous of; for every person, whether he chooses it or not, ought to execute any office he is fit for. But his intention was evidently the same in this as in the other parts of his government. For making his citizens ambitious after honours, with men of that disposition he has filled his senate, since no others will solicit for that office; and yet the principal part of those crimes which men are deliberately guilty of arise from ambition and avarice.

We will inquire at another time whether the office of a king is useful to the state: thus much is certain, that they should be chosen from a consideration of their conduct and not as they are now. But that the legislator himself did not expect to make all his citizens honourable and completely virtuous is evident from this, that he distrusts them as not being good men; for he sent those upon the same embassy that were at variance with each other; and thought, that in the dispute of the kings the safety of the state consisted. Neither were their common meals at first well established: for these should rather have been provided at the public expense, as at Crete, where, as at Lacedaemon, every one was obliged to buy his portion, although he might be very poor, and could by no means bear the expense, by which means the contrary happened to what the legislator desired: for he intended that those public meals should strengthen the democratic part of his government: but this regulation had quite the contrary effect, for those who were very poor could not take part in them; and it was an observation of their forefathers, that the not allowing those who could not contribute their proportion to the common tables to partake of them, would be the ruin of the state. Other persons have censured his laws concerning naval affairs, and not without reason, as it gave rise to disputes. For the commander of the fleet is in a manner set up in opposition to the kings, who are generals of the army for life.

[1271b] There is also another defect in his laws worthy of censure, which Plato has given in his book of Laws; that the whole constitution was calculated only for the business of war: it is indeed excellent to make them conquerors; for which reason the preservation of the state depended thereon. The destruction of it commenced with their victories: for they knew not how to be idle, or engage in any other employment than war. In this particular also they were mistaken, that though they rightly thought, that those things which are the objects of contention amongst mankind are better procured by virtue than vice, yet they wrongfully preferred

the things themselves to virtue. Nor was the public revenue well managed at Sparta, for the state was worth nothing while they were obliged to carry on the most extensive wars, and the subsidies were very badly raised; for as the Spartans possessed a large extent of country, they were not exact upon each other as to what they paid in. And thus an event contrary to the legislator's intention took place; for the state was poor, the individuals avaricious. Enough of the Lacedaemonian government; for these seem the chief defects in it.

CHAPTER X

The government of Crete bears a near resemblance to this, in some few particulars it is not worse, but in general it is far inferior in its contrivance. For it appears and is allowed in many particulars the constitution of Lacedaemon was formed in imitation of that of Crete; and in general most new things are an improvement upon the old. For they say, that when Lycurgus ceased to be guardian to King Charilles he went abroad and spent a long time with his relations in Crete, for the Lycians are a colony of the Lacedaemonians; and those who first settled there adopted that body of laws which they found already established by the inhabitants; in like manner also those who now live near them have the very laws which Minos first drew up.

This island seems formed by nature to be the mistress of Greece, for it is entirely surrounded by a navigable ocean which washes almost all the maritime parts of that country, and is not far distant on the one side from Peloponnesus, on the other, which looks towards Asia, from Triopium and Rhodes. By means of this situation Minos acquired the empire of the sea and the islands; some of which he subdued, in others planted colonies: at last he died at Camicus while he was attacking Sicily. There is this analogy between the customs of the Lacedaemonians and the Cretans, the Helots cultivate the grounds [1272a] for the one, the domestic slaves for the other. Both states have their common meals, and the Lacedaemonians called these formerly not _psiditia_ but _andpia_, as the Cretans do; which proves from whence the custom arose. In this particular their governments are also alike: the ephori have the same power with those of Crete, who are called _kosmoi_; with this difference only, that the number of the one is five, of the other ten. The senators are the same as those whom the Cretans call the council. There was formerly also a kingly power in Crete; but it was afterwards dissolved, and the command of their armies was given to the _kosmoi_. Every one also has a vote in their public assembly; but this has only the power of confirming what has already passed the council and the _kosmoi_.

The Cretans conducted their public meals better than the Lacedaemonians, for at Lacedaemon each individual was obliged to furnish what was assessed upon him; which if he could not do, there was a law which deprived him of the rights of a citizen, as has been already mentioned: but in Crete they were furnished by the community; for all the corn and cattle, taxes and contributions, which the domestic slaves were obliged to furnish, were divided into parts and allotted to the gods, the exigencies of the state, and these public meals; so that all the men, women, and children were maintained from a common stock. The legislator gave great attention to encourage a habit of eating sparingly, as very useful to the citizens. He also endeavoured, that his community might not be too populous, to lessen the connection with women, by introducing the love of boys: whether in this he did well or ill we shall have some other opportunity of considering. But that the public meals were better ordered at Crete than at Lacedaemon is very evident.

The institution of the _kosmoi_, was still worse than that of the ephori: for it contained all the faults incident to that magistracy and some peculiar to itself; for in both cases it is uncertain who will be elected: but the Lacedaemonians have this advantage which the others have not, that as all are eligible, the whole community have a share in the highest honours, and therefore all desire to preserve the state: whereas among the Cretans the _kosmoi_ are not chosen out of the people in general, but out of some certain families, and the senate out of the _kosmoi_. And the same observations which may be made on the senate at Lacedaemon may be applied to these; for their being under no control, and their continuing for life, is an honour greater than they merit; and to have their proceedings not regulated by a written law, but left to their own discretion, is dangerous. (As to there being no insurrections, although the people share not in the management of public affairs, this is no proof of a well-constituted government, as the _kosmoi_ have no opportunity of being bribed like the ephori, as they live in an [1272b] island far from those who would corrupt them.) But the method they take to correct that fault is absurd, impolitic, and tyrannical: for very often either their fellow-magistrates or some private persons conspire together and turn out the _kosmoi_. They are also permitted to resign their office before their time is elapsed, and if all this was done by law it would be well, and not at the pleasure of the individuals, which is a bad rule to follow. But what is worst of all is, that general confusion which those who are in power introduce to impede the ordinary course of justice; which sufficiently shows what is the nature of the government, or rather lawless force: for it is usual with the principal persons amongst them to collect together some of the common people and their friends, and then revolt and set up for themselves, and come to blows with each other. And what is the difference, if a state is dissolved at once by such violent means, or if it gradually so

alters in process of time as to be no longer the same constitution? A state like this would ever be exposed to the invasions of those who were powerful and inclined to attack it; but, as has been already mentioned, its situation preserves it, as it is free from the inroads of foreigners; and for this reason the family slaves still remain quiet at Crete, while the Helots are perpetually revolting: for the Cretans take no part in foreign affairs, and it is but lately that any foreign troops have made an attack upon the island; and their ravages soon proved the ineffectualness of their laws. And thus much for the government of Crete.

CHAPTER XI

The government of Carthage seems well established, and in many respects superior to others; in some particulars it bears a near resemblance to the Lacedaemonians; and indeed these three states, the Cretans, the Lacedaemonians and the Carthaginians are in some things very like each other, in others they differ greatly. Amongst many excellent constitutions this may show how well their government is framed, that although the people are admitted to a share in the administration, the form of it remains unaltered, without any popular insurrections, worth notice, on the one hand, or degenerating into a tyranny on the other. Now the Carthaginians have these things in common with the Lacedaemonians: public tables for those who are connected together by the tie of mutual friendship, after the manner of their Phiditia; they have also a magistracy, consisting of an hundred and four persons, similar to the ephori, or rather selected with more judgment; for amongst the Lacedaemonians, all the citizens are eligible, but amongst the Carthaginians, they are chosen out of those of the better sort: there is also some analogy between the king and the senate in both these governments, though the Carthaginian method of appointing their kings is best, for they do not confine themselves to one family; nor do they permit the election to be at large, nor have they any regard to seniority; for if amongst the candidates there are any of greater merit than the rest, these they prefer to those who may be older; for as their power is very extensive, if they are [1273a] persons of no account, they may be very hurtful to the state, as they have always been to the Lacedaemonians; also the greater part of those things which become reprehensible by their excess are common to all those governments which we have described.

Now of those principles on which the Carthaginians have established their mixed form of government, composed of an aristocracy and democracy, some incline to produce a democracy, others an oligarchy: for instance, if the kings and the senate are unanimous upon any point in debate, they can choose whether they will bring it before the people or no; but if they disagree, it is to these they must appeal, who are not only to hear what has been approved of by the senate, but are finally to determine upon it; and whosoever chooses it, has a right to speak against any matter whatsoever that may be proposed, which is not permitted in other cases. The five, who elect each other, have very great and extensive powers; and these choose the hundred, who are magistrates of the highest rank: their power also continues longer than any other magistrates, for it commences before they come into office, and is prolonged after they are out of it; and in this particular the state inclines to an oligarchy: but as they are not elected by lot, but by suffrage, and are not permitted to take money, they are the greatest supporters imaginable of an aristocracy.

The determining all causes by the same magistrates, and not orae in one court and another in another, as at Lacedaemon, has the same influence. The constitution of Carthage is now shifting from an aristocracy to an oligarchy, in consequence of an opinion which is favourably entertained by many, who think that the magistrates in the community ought not to be persons of family only, but of fortune also; as it is impossible for those who are in bad circumstances to support the dignity of their office, or to be at leisure to apply to public business. As choosing men of fortune to be magistrates make a state incline to an oligarchy, and men of abilities to an aristocracy, so is there a third method of proceeding which took place in the polity of Carthage; for they have an eye to these two particulars when they elect their officers, particularly those of the highest rank, their kings and their generals. It must be admitted, that it was a great fault in their legislator not to guard against the constitution's degenerating from an aristocracy; for this is a most necessary thing to provide for at first, that those citizens who have the best abilities should never be obliged to do anything unworthy their character, but be always at leisure to serve the public, not only when in office, but also when private persons; for if once you are obliged to look among the wealthy, that you may have men at leisure to serve you, your greatest offices, of king and general, will soon become venal; in consequence of which, riches will be more honourable than virtue and a love of money be the ruling principle in the city-for what those who have the chief power regard as honourable will necessarily be the object which the [1273b] citizens in general will aim at; and where the first honours are not paid to virtue, there the aristocratic form of government cannot flourish: for it is reasonable to conclude, that those who bought their places should generally make an advantage of what they laid out their money for; as it is absurd to suppose, that if a man of probity who is poor should be desirous of gaining something, a bad man should not endeavour to do the same, especially to reimburse himself; for which reason the magistracy should be formed of those who are most able to support an aristocracy. It would have been better for the legislature to

have passed over the poverty of men of merit, and only to have taken care to have ensured them sufficient leisure, when in office, to attend to public affairs.

It seems also improper, that one person should execute several offices, which was approved of at Carthage; for one business is best done by one person; and it is the duty of the legislator to look to this, and not make the same person a musician and a shoemaker: so that where the state is not small it is more politic and more popular to admit many persons to have a share in the government; for, as I just now said, it is not only more usual, but everything is better and sooner done, when one thing only is allotted to one person: and this is evident both in the army and navy, where almost every one, in his turn, both commands and is under command. But as their government inclines to an oligarchy, they avoid the ill effects of it by always appointing some of the popular party to the government of cities to make their fortunes. Thus they consult this fault in their constitution and render it stable; but this is depending on chance; whereas the legislator ought to frame his government, that there the no room for insurrections. But now, if there should be any general calamity, and the people should revolt from their rulers, there is no remedy for reducing them to obedience by the laws. And these are the particulars of the Lacedaemonian, the Cretan, and the Carthaginian governments which seem worthy of commendation.

CHAPTER XII

Some of those persons who have written upon government had never any share in public affairs, but always led a private life. Everything worthy of notice in their works we have already spoke to. Others were legislators, some in their own cities, others were employed in regulating the governments of foreign states. Some of them only composed a body of laws; others formed the constitution also, as Lycurgus; and Solon, who did both. The Lacedaemonians have been already mentioned. Some persons think that Solon was an excellent legislator, who could dissolve a pure oligarchy, and save the people from that slavery which hung over them, and establish the ancient democratic form of government in his country; wherein every part of it was so framed as to be well adapted to the whole. In the senate of Areopagus an oligarchy was preserved; by the manner of electing their [1274a] magistrates, an aristocracy; and in their courts of justice, a democracy.

Solon seems not to have altered the established form of government, either with respect to the senate or the mode of electing their magistrates; but to have raised the people to great consideration in the state by allotting the supreme judicial department to them; and for this some persons blame him, as having done what would soon overturn that balance of power he intended to establish; for by trying all causes whatsoever before the people, who were chosen by lot to determine them, it was necessary to flatter a tyrannical populace who had got this power; which contributed to bring the government to that pure democracy it now is.

Both Ephialtes and Pericles abridged the power of the Areopagites, the latter of whom introduced the method of paying those who attended the courts of justice: and thus every one who aimed at being popular proceeded increasing the power of the people to what we now see it. But it is evident that this was not Solon's intention, but that it arose from accident; for the people being the cause of the naval victory over the Medes, assumed greatly upon it, and enlisted themselves under factious demagogues, although opposed by the better part of the citizens. He thought it indeed most necessary to entrust the people with the choice of their magistrates and the power of calling them to account; for without that they must have been slaves and enemies to the other citizens: but he ordered them to elect those only who were persons of good account and property, either out of those who were worth five hundred medimns, or those who were called xeugitai, or those of the third census, who were called horsemen.

As for those of the fourth, which consisted of mechanics, they were incapable of any office. Zaleucus was the legislator of the Western Locrians, as was Charondas, the Catanean, of his own cities, and those also in Italy and Sicily which belonged to the Calcidians. Some persons endeavour to prove that Onomacritus, the Locrian, was the first person of note who drew up laws; and that he employed himself in that business while he was at Crete, where he continued some time to learn the prophetic art: and they say, that Thales was his companion; and that Lycurgus and Zaleucus were the scholars of Thales, and Charondas of Zaleucus; but those who advance this, advance what is repugnant to chronology. Philolaus also, of the family of the Bacchiades, was a Theban legislator. This man was very fond of Diocles, a victor in the Olympic games, and when he left his country from a disgust at an improper passion which his mother Alithoe had entertained for him, and settled at Thebes, Philolaus followed him, where they both died, and where they still show their tombs placed in view of each other, but so disposed, that one of them looks towards Corinth, the other does not; the reason they give for this is, that Diodes, from his detestation of his mother's passion, would have his tomb so placed that no one could see Corinth from it; but Philolaus chose that it might be seen from his: and this was the cause of their living at Thebes. [1274b]

As Philolaus gave them laws concerning many other things, so did he upon adoption, which they call adoptive laws; and this he in particular did to preserve the number of families. Charondas did nothing new, except in actions for perjury, which he was the first person who took into particular consideration. He also drew up his laws with greater elegance and accuracy than even any of our present legislators. Philolaus introduced the law for the equal distribution of goods; Plato that for the community of women, children, and goods, and also for public tables for the women; and one concerning drunkenness, that they might observe sobriety in their symposiums. He also made a law concerning their warlike exercises; that they should acquire a habit of using both hands alike, as it was necessary that one hand should be as useful as the other.

As for Draco's laws, they were published when the government was already established, and they have nothing particular in them worth mentioning, except their severity on account of the enormity of their punishments. Pittacus was the author of some laws, but never drew up any form of government; one of which was this, that if a drunken man beat any person he should be punished more than if he did it when sober; for as people are more apt to be abusive when drunk than sober, he paid no consideration to the excuse which drunkenness might claim, but regarded only the common benefit. Andromadas Regmus was also a lawgiver to the Thracian talcidians. There are some laws of his concerning murders and heiresses extant, but these contain nothing that any one can say is new and his own. And thus much for different sorts of governments, as well those which really exist as those which different persons have proposed.

BOOK III

CHAPTER I

Every one who inquires into the nature of government, and what are its different forms, should make this almost his first question, What is a city? For upon this there is a dispute: for some persons say the city did this or that, while others say, not the city, but the oligarchy, or the tyranny. We see that the city is the only object which both the politician and legislator have in view in all they do: but government is a certain ordering of those who inhabit a city. As a city is a collective body, and, like other wholes, composed of many parts, it is evident our first inquiry must be, what a citizen is: for a city is a certain number of citizens. So that we must consider whom we ought to call citizen, and who is one; for this is often doubtful: for every one will not allow that this character is applicable to the same person; for that man who would be a citizen in a republic would very often not be one in an oligarchy. We do not include in this inquiry many of those who acquire this appellation out of the ordinary way, as honorary persons, for instance, but those only who have a natural right to it.

Now it is not residence which constitutes a man a citizen; for in this sojourners and slaves are upon an equality with him; nor will it be sufficient for this purpose, that you have the privilege of the laws, and may plead or be impleaded, for this all those of different nations, between whom there is a mutual agreement for that purpose, are allowed; although it very often happens, that sojourners have not a perfect right therein without the protection of a patron, to whom they are obliged to apply, which shows that their share in the community is incomplete. In like manner, with respect to boys who are not yet enrolled, or old men who are past war, we admit that they are in some respects citizens, but not completely so, but with some exceptions, for these are not yet arrived to years of maturity, and those are past service; nor is there any difference between them. But what we mean is sufficiently intelligible and clear, we want a complete citizen, one in whom there is no deficiency to be corrected to make him so. As to those who are banished, or infamous, there may be the same objections made and the same answer given. There is nothing that more characterises a complete citizen than having a share in the judicial and executive part of the government.

With respect to offices, some are fixed to a particular time, so that no person is, on any account, permitted to fill them twice; or else not till some certain period has intervened; others are not fixed, as a juryman's, and a member of the general assembly: but probably some one may say these are not offices, nor have the citizens in these capacities any share in the government; though surely it is ridiculous to say that those who have the principal power in the state bear no office in it. But this objection is of no weight, for it is only a dispute about words; as there is no general term which can be applied both to the office of a juryman and a member of the assembly. For the sake of distinction, suppose we call it an indeterminate office: but I lay it down as a maxim, that those are citizens who could exercise it. Such then is the description of a citizen who comes nearest to what all those who are called citizens are. Every one also should know, that of the component parts of those things which differ from each other in species, after the first or second remove, those which follow have either nothing at all or very little common to each.

Now we see that governments differ from each other in their form, and that some of them are defective, others [1275b] as excellent as possible: for it is evident, that those which have many deficiencies and degeneracies in them must be far inferior to those which are without such faults. What I mean by degeneracies will be hereafter explained. Hence it is clear that the office of a citizen must differ as governments do from each other: for which reason he who is called a citizen has, in a democracy, every privilege which that station supposes. In other forms of government he may enjoy them; but not necessarily: for in some states the people have no power; nor have they any general assembly, but a few select men.

The trial also of different causes is allotted to different persons; as at Lacedaemon all disputes concerning contracts are brought before some of the ephori: the senate are the judges in cases of murder, and so on; some being to be heard by one magistrate, others by another: and thus at Carthage certain magistrates determine all causes. But our former description of a citizen will admit of correction; for in some governments the office of a juryman and a member of the general assembly is not an indeterminate one; but there are particular persons appointed for these purposes, some or all of the citizens being appointed jurymen or members of the general assembly, and this either for all causes and all public business whatsoever, or else for some particular one: and this may be sufficient to show what a citizen is; for he who has a right to a share in the judicial and executive part of government in any city, him we call a citizen of that place; and a city, in one word, is a collective body of such persons sufficient in themselves to all the purposes of life.

CHAPTER II

In common use they define a citizen to be one who is sprung from citizens on both sides, not on the father's or the mother's only. Others carry the matter still further, and inquire how many of his ancestors have been citizens, as his grandfather, great-grandfather, etc., but some persons have questioned how the first of the family could prove themselves citizens, according to this popular and careless definition. Gorgias of Leontium, partly entertaining the same doubt, and partly in jest, says, that as a mortar is made by a mortar-maker, so a citizen is made by a citizen-maker, and a Larisssean by a Larisssean-maker. This is indeed a very simple account of the matter; for if citizens are so, according to this definition, it will be impossible to apply it to the first founders or first inhabitants of states, who cannot possibly claim in right either of their father or mother. It is probably a matter of still more difficulty to determine their rights as citizens who are admitted to their freedom after any revolution in the state. As, for instance, at Athens, after the expulsion of the tyrants, when Clisthenes enrolled many foreigners and city-slaves amongst the tribes; and the doubt with respect to them was, not whether they were citizens or no, but whether they were legally so or not. Though indeed some persons may have this further [1276a] doubt, whether a citizen can be a citizen when he is illegally made; as if an illegal citizen, and one who is no citizen at all, were in the same predicament: but since we see some persons govern unjustly, whom yet we admit to govern, though not justly, and the definition of a citizen is one who exercises certain offices, for such a one we have defined a citizen to be, it is evident, that a citizen illegally created yet continues to be a citizen, but whether justly or unjustly so belongs to the former inquiry.

CHAPTER III

It has also been doubted what was and what was not the act of the city; as, for instance, when a democracy arises out of an aristocracy or a tyranny; for some persons then refuse to fulfil their contracts; as if the right to receive the money was in the tyrant and not in the state, and many other things of the same nature; as if any covenant was founded for violence and not for the common good. So in like manner, if anything is done by those who have the management of public affairs where a democracy is established, their actions are to be considered as the actions of the state, as well as in the oligarchy or tyranny.

And here it seems very proper to consider this question, When shall we say that a city is the same, and when shall we say that it is different?

It is but a superficial mode of examining into this question to begin with the place and the people; for it may happen that these may be divided from that, or that some one of them may live in one place, and some in another (but this question may be regarded as no very knotty one; for, as a city may acquire that appellation on many accounts, it may be solved many ways); and in like manner, when men inhabit one common place, when shall we say that they inhabit the same city, or that the city is the same? for it does not depend upon the walls; for I can suppose Peloponnesus itself surrounded with a wall, as Babylon was, and every other place, which rather encircles many nations than one city, and that they say was taken three days when some of the inhabitants knew nothing of it: but we shall find a proper time to determine this question; for the extent of a city, how large it should be, and whether it

should consist of more than one people, these are particulars that the politician should by no means be unacquainted with. This, too, is a matter of inquiry, whether we shall say that a city is the same while it is inhabited by the same race of men, though some of them are perpetually dying, others coming into the world, as we say that a river or a fountain is the same, though the waters are continually changing; or when a revolution takes place shall we [1276b] say the men are the same, but the city is different: for if a city is a community, it is a community of citizens; but if the mode of government should alter, and become of another sort, it would seem a necessary consequence that the city is not the same; as we regard the tragic chorus as different from the comic, though it may probably consist of the same performers: thus every other community or composition is said to be different if the species of composition is different; as in music the same hands produce different harmony, as the Doric and Phrygian. If this is true, it is evident, that when we speak of a city as being the same we refer to the government there established; and this, whether it is called by the same name or any other, or inhabited by the same men or different. But whether or no it is right to dissolve the community when the constitution is altered is another question.

CHAPTER IV

What has been said, it follows that we should consider whether the same virtues which constitute a good man make a valuable citizen, or different; and if a particular inquiry is necessary for this matter we must first give a general description of the virtues of a good citizen; for as a sailor is one of those who make up a community, so is a citizen, although the province of one sailor may be different from another's (for one is a rower, another a steersman, a third a boatswain, and so on, each having their several appointments), it is evident that the most accurate description of any one good sailor must refer to his peculiar abilities, yet there are some things in which the same description may be applied to the whole crew, as the safety of the ship is the common business of all of them, for this is the general centre of all their cares: so also with respect to citizens, although they may in a few particulars be very different, yet there is one care common to them all, the safety of the community, for the community of the citizens composes the state; for which reason the virtue of a citizen has necessarily a reference to the state. But if there are different sorts of governments, it is evident that those actions which constitute the virtue of an excellent citizen in one community will not constitute it in another; wherefore the virtue of such a one cannot be perfect: but we say, a man is good when his virtues are perfect; from whence it follows, that an excellent citizen does not possess that virtue which constitutes a good man. Those who are any ways doubtful concerning this question may be convinced of the truth of it by examining into the best formed states: for, if it is impossible that a city should consist entirely of excellent citizens (while it is necessary that every one should do well in his calling, in which consists his excellence, as it is impossible that all the citizens should have the same [1277a] qualifications) it is impossible that the virtue of a citizen and a good man should be the same; for all should possess the virtue of an excellent citizen: for from hence necessarily arise the perfection of the city: but that every one should possess the virtue of a good man is impossible without all the citizens in a well-regulated state were necessarily virtuous. Besides, as a city is composed of dissimilar parts, as an animal is of life and body; the soul of reason and appetite; a family of a man and his wife--property of a master and a slave; in the same manner, as a city is composed of all these and many other very different parts, it necessarily follows that the virtue of all the citizens cannot be the same; as the business of him who leads the band is different from the other dancers. From all which proofs it is evident that the virtues of a citizen cannot be one and the same. But do we never find those virtues united which constitute a good man and excellent citizen? for we say, such a one is an excellent magistrate and a prudent and good man; but prudence is a necessary qualification for all those who engage in public affairs. Nay, some persons affirm that the education of those who are intended to command should, from the beginning, be different from other citizens, as the children of kings are generally instructed in riding and warlike exercises; and thus Euripides says:

"... No showy arts Be mine, but teach me what the state requires."

As if those who are to rule were to have an education peculiar to themselves. But if we allow, that the virtues of a good man and a good magistrate may be the same, and a citizen is one who obeys the magistrate, it follows that the virtue of the one cannot in general be the same as the virtue of the other, although it may be true of some particular citizen; for the virtue of the magistrate must be different from the virtue of the citizen. For which reason Jason declared that was he deprived of his kingdom he should pine away with regret, as not knowing how to live a private man. But it is a great recommendation to know how to command as well as to obey; and to do both these things well is the virtue of an accomplished citizen. If then the virtue of a good man consists only in being able to command, but the virtue of a good citizen renders him equally fit for the one as well as the other, the commendation of both of them is not the same. It appears, then, that both he who commands and he who obeys should each of them learn their separate business: but that the citizen should be master of and take part in both these, as any one may easily perceive; in a family

government there is no occasion for the master to know how to perform the necessary offices, but rather to enjoy the labour of others; for to do the other is a servile part. I mean by the other, the common family business of the slave.

There are many sorts of slaves; for their employments are various: of these the handicraftsmen are one, who, as their name imports, get their living by the labour of their hands, and amongst these all mechanics are included; [1277b] for which reasons such workmen, in some states, were not formerly admitted into any share in the government; till at length democracies were established: it is not therefore proper for any man of honour, or any citizen, or any one who engages in public affairs, to learn these servile employments without they have occasion for them for their own use; for without this was observed the distinction between a master and a slave would be lost. But there is a government of another sort, in which men govern those who are their equals in rank, and freemen, which we call a political government, in which men learn to command by first submitting to obey, as a good general of horse, or a commander-in-chief, must acquire a knowledge of their duty by having been long under the command of another, and the like in every appointment in the army: for well is it said, no one knows how to command who has not himself been under command of another. The virtues of those are indeed different, but a good citizen must necessarily be endowed with them; he ought also to know in what manner freemen ought to govern, as well as be governed: and this, too, is the duty of a good man. And if the temperance and justice of him who commands is different from his who, though a freeman, is under command, it is evident that the virtues of a good citizen cannot be the same as justice, for instance but must be of a different species in these two different situations, as the temperance and courage of a man and a woman are different from each other; for a man would appear a coward who had only that courage which would be graceful in a woman, and a woman would be thought a talker who should take as large a part in the conversation as would become a man of consequence.

The domestic employments of each of them are also different; it is the man's business to acquire subsistence, the woman's to take care of it. But direction and knowledge of public affairs is a virtue peculiar to those who govern, while all others seem to be equally requisite for both parties; but with this the governed have no concern, it is theirs to entertain just notions: they indeed are like flute-makers, while those who govern are the musicians who play on them. And thus much to show whether the virtue of a good man and an excellent citizen is the same, or if it is different, and also how far it is the same, and how far different.

CHAPTER V

But with respect to citizens there is a doubt remaining, whether those only are truly so who are allowed to share in the government, or whether the mechanics also are to be considered as such? for if those who are not permitted to rule are to be reckoned among them, it is impossible that the virtue of all the citizens should be the same, for these also are citizens; and if none of them are admitted to be citizens, where shall they be ranked? for they are neither [1278a] sojourners nor foreigners? or shall we say that there will no inconvenience arise from their not being citizens, as they are neither slaves nor freedmen: for this is certainly true, that all those are not citizens who are necessary to the existence of a city, as boys are not citizens in the same manner that men are, for those are perfectly so, the others under some conditions; for they are citizens, though imperfect ones: for in former times among some people the mechanics were either slaves or foreigners, for which reason many of them are so now: and indeed the best regulated states will not permit a mechanic to be a citizen; but if it be allowed them, we cannot then attribute the virtue we have described to every citizen or freeman, but to those only who are disengaged from servile offices. Now those who are employed by one person in them are slaves; those who do them for money are mechanics and hired servants: hence it is evident on the least reflection what is their situation, for what I have said is fully explained by appearances. Since the number of communities is very great, it follows necessarily that there will be many different sorts of citizens, particularly of those who are governed by others, so that in one state it may be necessary to admit mechanics and hired servants to be citizens, but in others it may be impossible; as particularly in an aristocracy, where honours are bestowed on virtue and dignity: for it is impossible for one who lives the life of a mechanic or hired servant to acquire the practice of virtue. In an oligarchy also hired servants are not admitted to be citizens; because there a man's right to bear any office is regulated by his fortune; but mechanics are, for many citizens are very rich.

There was a law at Thebes that no one could have a share in the government till he had been ten years out of trade. In many states the law invites strangers to accept the freedom of the city; and in some democracies the son of a free-woman is himself free. The same is also observed in many others with respect to natural children; but it is through want of citizens regularly born that they admit such: for these laws are always made in consequence of a scarcity of inhabitants; so, as their numbers increase, they first deprive the children of a male or female slave of this privilege, next the child of a free-woman, and last of all they will admit none but those whose fathers and mothers were both free.

That there are many sorts of citizens, and that he may be said to be as completely who shares the honours of the state, is evident from what has been already said. Thus Achilles, in Homer, complains of Agamemnon's treating him like an unhonoured stranger; for a stranger or sojourner is one who does not partake of the honours of the state: and whenever the right to the freedom of the city is kept obscure, it is for the sake of the inhabitants. [1278b] From what has been said it is plain whether the virtue of a good man and an excellent citizen is the same or different: and we find that in some states it is the same, in others not; and also that this is not true of each citizen, but of those only who take the lead, or are capable of taking the lead, in public affairs, either alone or in conjunction with others.

CHAPTER VI

Having established these points, we proceed next to consider whether one form of government only should be established, or more than one; and if more, how many, and of what sort, and what are the differences between them. The form of government is the ordering and regulating of the city, and all the offices in it, particularly those wherein the supreme power is lodged; and this power is always possessed by the administration; but the administration itself is that particular form of government which is established in any state: thus in a democracy the supreme power is lodged in the whole people; on the contrary, in an oligarchy it is in the hands of a few. We say then, that the form of government in these states is different, and we shall find the same thing hold good in others. Let us first determine for whose sake a city is established; and point out the different species of rule which man may submit to in social life.

I have already mentioned in my treatise on the management of a family, and the power of the master, that man is an animal naturally formed for society, and that therefore, when he does not want any foreign assistance, he will of his own accord desire to live with others; not but that mutual advantage induces them to it, as far as it enables each person to live more agreeably; and this is indeed the great object not only to all in general, but also to each individual: but it is not merely matter of choice, but they join in society also, even that they may be able to live, which probably is not without some share of merit, and they also support civil society, even for the sake of preserving life, without they are grievously overwhelmed with the miseries of it: for it is very evident that men will endure many calamities for the sake of living, as being something naturally sweet and desirable. It is easy to point out the different modes of government, and we have already settled them in our exoteric discourses. The power of the master, though by nature equally serviceable, both to the master and to the slave, yet nevertheless has for its object the benefit of the master, while the benefit of the slave arises accidentally; for if the slave is destroyed, the power of the master is at an end: but the authority which a man has over his wife, and children, and his family, which we call domestic government, is either for the benefit of those who are under subjection, or else for the common benefit of the whole: but its particular object is the benefit of the governed, as we see in other arts; in physic, for instance, and the gymnastic exercises, wherein, if any benefit [1279a] arise to the master, it is accidental; for nothing forbids the master of the exercises from sometimes being himself one of those who exercises, as the steersman is always one of the sailors; but both the master of the exercises and the steersman consider the good of those who are under their government. Whatever good may happen to the steersman when he is a sailor, or to the master of the exercises when he himself makes one at the games, is not intentional, or the object of their power; thus in all political governments which are established to preserve and defend the equality of the citizens it is held right to rule by turns. Formerly, as was natural, every one expected that each of his fellow-citizens should in his turn serve the public, and thus administer to his private good, as he himself when in office had done for others; but now every one is desirous of being continually in power, that he may enjoy the advantage which he makes of public business and being in office; as if places were a never-failing remedy for every complaint, and were on that account so eagerly sought after.

It is evident, then, that all those governments which have a common good in view are rightly established and strictly just, but those who have in view only the good of the rulers are all founded on wrong principles, and are widely different from what a government ought to be, for they are tyranny over slaves, whereas a city is a community of freemen.

CHAPTER VII

Having established these particulars, we come to consider next the different number of governments which there are, and what they are; and first, what are their excellencies: for when we have determined this, their defects will be evident enough.

It is evident that every form of government or administration, for the words are of the same import, must contain a supreme power over the whole state, and this supreme power must necessarily be in the hands of one person, or a few, or many; and when either

of these apply their power for the common good, such states are well governed; but when the interest of the one, the few, or the many who enjoy this power is alone consulted, then ill; for you must either affirm that those who make up the community are not citizens, or else let these share in the advantages of government. We usually call a state which is governed by one person for the common good, a kingdom; one that is governed by more than one, but by a few only, an aristocracy; either because the government is in the hands of the most worthy citizens, or because it is the best form for the city and its inhabitants. When the citizens at large govern for the public good, it is called a state; which is also a common name for all other governments, and these distinctions are consonant to reason; for it will not be difficult to find one person, or a very few, of very distinguished abilities, but almost impossible to meet with the majority [1279b] of a people eminent for every virtue; but if there is one common to a whole nation it is valour; for this is created and supported by numbers: for which reason in such a state the profession of arms will always have the greatest share in the government.

Now the corruptions attending each of these governments are these; a kingdom may degenerate into a tyranny, an aristocracy into an oligarchy, and a state into a democracy. Now a tyranny is a monarchy where the good of one man only is the object of government, an oligarchy considers only the rich, and a democracy only the poor; but neither of them have a common good in view.

CHAPTER VIII

It will be necessary to enlarge a little more upon the nature of each of these states, which is not without some difficulty, for he who would enter into a philosophical inquiry into the principles of them, and not content himself with a superficial view of their outward conduct, must pass over and omit nothing, but explain the true spirit of each of them. A tyranny then is, as has been said, a monarchy, where one person has an absolute and despotic power over the whole community and every member therein: an oligarchy, where the supreme power of the state is lodged with the rich: a democracy, on the contrary, is where those have it who are worth little or nothing. But the first difficulty that arises from the distinctions which we have laid down is this, should it happen that the majority of the inhabitants who possess the power of the state (for this is a democracy) should be rich, the question is, how does this agree with what we have said? The same difficulty occurs, should it ever happen that the poor compose a smaller part of the people than the rich, but from their superior abilities acquire the supreme power; for this is what they call an oligarchy; it should seem then that our definition of the different states was not correct: nay, moreover, could any one suppose that the majority of the people were poor, and the minority rich, and then describe the state in this manner, that an oligarchy was a government in which the rich, being few in number, possessed the supreme power, and that a democracy was a state in which the poor, being many in number, possessed it, still there will be another difficulty; for what name shall we give to those states we have been describing? I mean, that in which the greater number are rich, and that in which the lesser number are poor (where each of these possess the supreme power), if there are no other states than those we have described. It seems therefore evident to reason, that whether the supreme power is vested in the hands of many or few may be a matter of accident; but that it is clear enough, that when it is in the hands of the few, it will be a government of the rich; when in the hands of the many, it will be a government of the poor; since in all countries there are many poor and few rich: it is not therefore the cause that has been already assigned (namely, the number of people in power) that makes the difference between the two governments; but an oligarchy and democracy differ in this from each other, in the poverty of those who govern in the one, and the riches I28oa of those who govern in the other; for when the government is in the hands of the rich, be they few or be they more, it is an oligarchy; when it is in the hands of the poor, it is a democracy: but, as we have already said, the one will be always few, the other numerous, but both will enjoy liberty; and from the claims of wealth and liberty will arise continual disputes with each other for the lead in public affairs.

CHAPTER IX

Let us first determine what are the proper limits of an oligarchy and a democracy, and what is just in each of these states; for all men have some natural inclination to justice; but they proceed therein only to a certain degree; nor can they universally point out what is absolutely just; as, for instance, what is equal appears just, and is so; but not to all; only among those who are equals: and what is unequal appears just, and is so; but not to all, only amongst those who are unequals; which circumstance some people neglect, and therefore judge ill; the reason for which is, they judge for themselves, and every one almost is the worst judge in his own cause. Since then justice has reference to persons, the same distinctions must be made with respect to persons which are made with respect to things, in the manner that I have already described in my Ethics.

As to the equality of the things, these they agree in; but their dispute is concerning the equality of the persons, and chiefly for the reason above assigned; because they judge ill in their own cause; and also because each party thinks, that if they admit what is

right in some particulars, they have done justice on the whole: thus, for instance, if some persons are unequal in riches, they suppose them unequal in the whole; or, on the contrary, if they are equal in liberty, they suppose them equal in the whole: but what is absolutely just they omit; for if civil society was founded for the sake of preserving and increasing property, every one's right in the city would be equal to his fortune; and then the reasoning of those who insist upon an oligarchy would be valid; for it would not be right that he who contributed one mina should have an equal share in the hundred along with him who brought in all the rest, either of the original money or what was afterwards acquired.

Nor was civil society founded merely to preserve the lives of its members; but that they might live well: for otherwise a state might be composed of slaves, or the animal creation: but this is not so; for these have no share in the happiness of it; nor do they live after their own choice; nor is it an alliance mutually to defend each other from injuries, or for a commercial intercourse: for then the Tyrrhenians and Carthaginians, and all other nations between whom treaties of commerce subsist, would be citizens of one city; for they have articles to regulate their exports and imports, and engagements for mutual protection, and alliances for mutual defence; but [1280b] yet they have not all the same magistrates established among them, but they are different among the different people; nor does the one take any care, that the morals of the other should be as they ought, or that none of those who have entered into the common agreements should be unjust, or in any degree vicious, only that they do not injure any member of the confederacy. But whosoever endeavours to establish wholesome laws in a state, attends to the virtues and the vices of each individual who composes it; from whence it is evident, that the first care of him who would found a city, truly deserving that name, and not nominally so, must be to have his citizens virtuous; for otherwise it is merely an alliance for self-defence; differing from those of the same cast which are made between different people only in place: for law is an agreement and a pledge, as the sophist Lycophron says, between the citizens of their intending to do justice to each other, though not sufficient to make all the citizens just and good: and that this is fact is evident, for could any one bring different places together, as, for instance, enclose Megara and Corinth in a wall, yet they would not be one city, not even if the inhabitants intermarried with each other, though this inter-community contributes much to make a place one city. Besides, could we suppose a set of people to live separate from each other, but within such a distance as would admit of an intercourse, and that there were laws subsisting between each party, to prevent their injuring one another in their mutual dealings, supposing one a carpenter, another a husbandman, shoemaker, and the like, and that their numbers were ten thousand, still all that they would have together in common would be a tariff for trade, or an alliance for mutual defence, but not the same city. And why? not because their mutual intercourse is not near enough, for even if persons so situated should come to one place, and every one should live in his own house as in his native city, and there should be alliances subsisting between each party to mutually assist and prevent any injury being done to the other, still they would not be admitted to be a city by those who think correctly, if they preserved the same customs when they were together as when they were separate.

It is evident, then, that a city is not a community of place; nor established for the sake of mutual safety or traffic with each other; but that these things are the necessary consequences of a city, although they may all exist where there is no city: but a city is a society of people joining together with their families and their children to live agreeably for the sake of having their lives as happy and as independent as possible: and for this purpose it is necessary that they should live in one place and intermarry with each other: hence in all cities there are family-meetings, clubs, sacrifices, and public entertainments to promote friendship; for a love of sociability is friendship itself; so that the end then for which a city is established is, that the inhabitants of it may live happy, and these things are conducive to that end: for it is a community of families and villages for the sake of a perfect independent life; that is, as we have already said, for the sake of living well and happily. It is not therefore founded for the purpose of men's merely [1281a] living together, but for their living as men ought; for which reason those who contribute most to this end deserve to have greater power in the city than those who are their equals in family and freedom, but their inferiors in civil virtue, or those who excel them in wealth but are below them in worth. It is evident from what has been said, that in all disputes upon government each party says something that is just.

CHAPTER X

It may also be a doubt where the supreme power ought to be lodged. Shall it be with the majority, or the wealthy, with a number of proper persons, or one better than the rest, or with a tyrant? But whichever of these we prefer some difficulty will arise. For what? shall the poor have it because they are the majority? they may then divide among themselves, what belongs to the rich: nor is this unjust; because truly it has been so judged by the supreme power. But what avails it to point out what is the height of injustice if this is not? Again, if the many seize into their own hands everything which belongs to the few, it is evident that the city will be at an end. But virtue will never destroy what is virtuous; nor can what is right be the ruin of the state: therefore such a law can never be right,

nor can the acts of a tyrant ever be wrong, for of necessity they must all be just; for he, from his unlimited power, compels every one to obey his command, as the multitude oppress the rich. Is it right then that the rich, the few, should have the supreme power? and what if they be guilty of the same rapine and plunder the possessions of the majority, that will be as right as the other: but that all things of this sort are wrong and unjust is evident. Well then, these of the better sort shall have it: but must not then all the other citizens live unhonoured, without sharing the offices of the city; for the offices of a city are its honours, and if one set of men are always in power, it is evident that the rest must be without honour. Well then, let it be with one person of all others the fittest for it: but by this means the power will be still more contracted, and a greater number than before continue unhonoured. But some one may say, that it is wrong to let man have the supreme power and not the law, as his soul is subject to so many passions. But if this law appoints an aristocracy, or a democracy, how will it help us in our present doubts? for those things will happen which we have already mentioned.

CHAPTER XI

Other particulars we will consider separately; but it seems proper to prove, that the supreme power ought to be lodged with the many, rather than with those of the better sort, who are few; and also to explain what doubts (and probably just ones) may arise: now, though not one individual of the many may himself be fit for the supreme power, yet when these many are joined together, it does not follow but they may be better qualified for it than those; and this not separately, but as a collective body; as the public suppers exceed those which are given at one person's private expense: for, as they are many, each person brings in his share of virtue and wisdom; and thus, coming together, they are like one man made up of a multitude, with many feet, many hands, and many intelligences: thus is it with respect to the manners and understandings of the multitude taken together; for which reason the public are the best judges of music and poetry; for some understand one part, some another, and all collectively the whole; and in this particular men of consequence differ from each of the many; as they say those who are beautiful do from those who are not so, and as fine pictures excel any natural objects, by collecting the several beautiful parts which were dispersed among different originals into one, although the separate parts, as the eye or any other, might be handsomer than in the picture.

But if this distinction is to be made between every people and every general assembly, and some few men of consequence, it may be doubtful whether it is true; nay, it is clear enough that, with respect to a few, it is not; since the same conclusion might be applied even to brutes: and indeed wherein do some men differ from brutes? Not but that nothing prevents what I have said being true of the people in some states. The doubt then which we have lately proposed, with all its consequences, may be settled in this manner; it is necessary that the freemen who compose the bulk of the people should have absolute power in some things; but as they are neither men of property, nor act uniformly upon principles of virtue, it is not safe to trust them with the first offices in the state, both on account of their iniquity and their ignorance; from the one of which they will do what is wrong, from the other they will mistake: and yet it is dangerous to allow them no power or share in the government; for when there are many poor people who are incapable of acquiring the honours of their country, the state must necessarily have many enemies in it; let them then be permitted to vote in the public assemblies and to determine causes; for which reason Socrates, and some other legislators, gave them the power of electing the officers of the state, and also of inquiring into their conduct when they came out of office, and only prevented their being magistrates by themselves; for the multitude when they are collected together have all of them sufficient understanding for these purposes, and, mixing among those of higher rank, are serviceable to the city, as some things, which alone are improper for food, when mixed with others make the whole more wholesome than a few of them would be.

But there is a difficulty attending this form of government, for it seems, that the person who himself was capable of curing any one who was then sick, must be the best judge whom to employ as a physician; but such a one must be himself a physician; and the same holds true in every other practice and art: and as a physician ought [1282a] to give an account of his practice to a physician, so ought it to be in other arts: those whose business is physic may be divided into three sorts, the first of these is he who makes up the medicines; the second prescribes, and is to the other as the architect is to the mason; the third is he who understands the science, but never practises it: now these three distinctions may be found in those who understand all other arts; nor have we less opinion of their judgment who are only instructed in the principles of the art than of those who practise it: and with respect to elections the same method of proceeding seems right; for to elect a proper person in any science is the business of those who are skilful therein; as in geometry, of geometricians; in steering, of steersmen: but if some individuals should know something of particular arts and works, they do not know more than the professors of them: so that even upon this principle neither the election of magistrates, nor the censure of their conduct, should be entrusted to the many.

But probably all that has been here said may not be right; for, to resume the argument I lately used, if the people are not very brutal indeed, although we allow that each individual knows less of these affairs than those who have given particular attention to them, yet when they come together they will know them better, or at least not worse; besides, in some particular arts it is not the workman only who is the best judge; namely, in those the works of which are understood by those who do not profess them: thus he who builds a house is not the only judge of it, for the master of the family who inhabits it is a better; thus also a steersman is a better judge of a tiller than he who made it; and he who gives an entertainment than the cook. What has been said seems a sufficient solution of this difficulty; but there is another that follows: for it seems absurd that the power of the state should be lodged with those who are but of indifferent morals, instead of those who are of excellent characters. Now the power of election and censure are of the utmost consequence, and this, as has been said, in some states they entrust to the people; for the general assembly is the supreme court of all, and they have a voice in this, and deliberate in all public affairs, and try all causes, without any objection to the meanness of their circumstances, and at any age: but their treasurers, generals, and other great officers of state are taken from men of great fortune and worth. This difficulty also may be solved upon the same principle; and here too they may be right, for the power is not in the man who is member of the assembly, or council, but the assembly itself, and the council, and the people, of which each individual of the whole community are the parts, I mean as senator, adviser, or judge; for which reason it is very right, that the many should have the greatest powers in their own hands; for the people, the council, and the judges are composed of them, and the property of all these collectively is more than the property of any person or a few who fill the great offices of the state: and thus I determine these points.

The first question that we stated shows plainly, that the supreme power should be lodged in laws duly made and that the magistrate or magistrates, either one or more, should be authorised to determine those cases which the laws cannot particularly speak to, as it is impossible for them, in general language, to explain themselves upon everything that may arise: but what these laws are which are established upon the best foundations has not been yet explained, but still remains a matter of some question: but the laws of every state will necessarily be like every state, either trifling or excellent, just or unjust; for it is evident, that the laws must be framed correspondent to the constitution of the government; and, if so, it is plain, that a well-formed government will have good laws, a bad one, bad ones.

CHAPTER XII

Since in every art and science the end aimed at is always good, so particularly in this, which is the most excellent of all, the founding of civil society, the good wherein aimed at is justice; for it is this which is for the benefit of all. Now, it is the common opinion, that justice is a certain equality; and in this point all the philosophers are agreed when they treat of morals: for they say what is just, and to whom; and that equals ought to receive equal: but we should know how we are to determine what things are equal and what unequal; and in this there is some difficulty, which calls for the philosophy of the politician. Some persons will probably say, that the employments of the state ought to be given according to every particular excellence of each citizen, if there is no other difference between them and the rest of the community, but they are in every respect else alike: for justice attributes different things to persons differing from each other in their character, according to their respective merits. But if this is admitted to be true, complexion, or height, or any such advantage will be a claim for a greater share of the public rights. But that this is evidently absurd is clear from other arts and sciences; for with respect to musicians who play on the flute together, the best flute is not given to him who is of the best family, for he will play never the better for that, but the best instrument ought to be given to him who is the best artist.

If what is now said does not make this clear, we will explain it still further: if there should be any one, a very excellent player on the flute, but very deficient in family and beauty, though each of them are more valuable endowments than a skill in music, and excel this art in a higher degree than that player excels others, yet the best flutes ought to be given to him; for the superiority [1283a] in beauty and fortune should have a reference to the business in hand; but these have none. Moreover, according to this reasoning, every possible excellence might come in comparison with every other; for if bodily strength might dispute the point with riches or liberty, even any bodily strength might do it; so that if one person excelled in size more than another did in virtue, and his size was to qualify him to take place of the other's virtue, everything must then admit of a comparison with each other; for if such a size is greater than virtue by so much, it is evident another must be equal to it: but, since this is impossible, it is plain that it would be contrary to common sense to dispute a right to any office in the state from every superiority whatsoever: for if one person is slow and the other swift, neither is the one better qualified nor the other worse on that account, though in the gymnastic races a difference in these particulars would gain the prize; but a pretension to the offices of the state should be founded on a superiority in

those qualifications which are useful to it: for which reason those of family, independency, and fortune, with great propriety, contend with each other for them; for these are the fit persons to fill them: for a city can no more consist of all poor men than it can of all slaves But if such persons are requisite, it is evident that those also who are just and valiant are equally so; for without justice and valour no state can be supported, the former being necessary for its existence, the latter for its happiness.

CHAPTER XIII

It seems, then, requisite for the establishment of a state, that all, or at least many of these particulars should be well canvassed and inquired into; and that virtue and education may most justly claim the right of being considered as the necessary means of making the citizens happy, as we have already said. As those who are equal in one particular are not therefore equal in all, and those who are unequal in one particular are not therefore unequal in all, it follows that all those governments which are established upon a principle which supposes they are, are erroneous.

We have already said, that all the members of the community will dispute with each other for the offices of the state; and in some particulars justly, but not so in general; the rich, for instance, because they have the greatest landed property, and the ultimate right to the soil is vested in the community; and also because their fidelity is in general most to be depended on. The freemen and men of family will dispute the point with each other, as nearly on an equality; for these latter have a right to a higher regard as citizens than obscure persons, for honourable descent is everywhere of great esteem: nor is it an improper conclusion, that the descendants of men of worth will be men of worth themselves; for noble birth is the fountain of virtue to men of family: for the same reason also we justly say, that virtue has a right to put in her pretensions. Justice, for instance, is a virtue, and so necessary to society, that all others must yield her the precedence.

Let us now see what the many have to urge on their side against the few; and they may say, that if, when collectively taken, they are compared with them, they are stronger, richer, and better than they are. But should it ever happen that all these should inhabit the [1283b] same city, I mean the good, the rich, the noble, as well as the many, such as usually make up the community, I ask, will there then be any reason to dispute concerning who shall govern, or will there not? for in every community which we have mentioned there is no dispute where the supreme power should be placed; for as these differ from each other, so do those in whom that is placed; for in one state the rich enjoy it, in others the meritorious, and thus each according to their separate manners. Let us however consider what is to be done when all these happen at the same time to inhabit the same city. If the virtuous should be very few in number, how then shall we act? shall we prefer the virtuous on account of their abilities, if they are capable of governing the city? or should they be so many as almost entirely to compose the state?

There is also a doubt concerning the pretensions of all those who claim the honours of government: for those who found them either on fortune or family have nothing which they can justly say in their defence; since it is evident upon their principle, that if any one person can be found richer than all the rest, the right of governing all these will be justly vested in this one person. In the same manner, one man who is of the best family will claim it from those who dispute the point upon family merit: and probably in an aristocracy the same dispute might arise on the score of virtue, if there is one man better than all the other men of worth who are in the same community; it seems just, by the same reasoning, that he should enjoy the supreme power. And upon this principle also, while the many suppose they ought to have the supreme command, as being more powerful than the few, if one or more than one, though a small number should be found stronger than themselves, these ought rather to have it than they.

All these things seem to make it plain, that none of these principles are justly founded on which these persons would establish their right to the supreme power; and that all men whatsoever ought to obey them: for with respect to those who claim it as due to their virtue or their fortune, they might have justly some objection to make; for nothing hinders but that it may sometimes happen, that the many may be better or richer than the few, not as individuals, but in their collective capacity.

As to the doubt which some persons have proposed and objected, we may answer it in this manner; it is this, whether a legislator, who would establish the most perfect system of laws, should calculate them for the use of the better part of the citizens, or the many, in the circumstances we have already mentioned? The rectitude of anything consists in its equality; that therefore which is equally right will be advantageous to the whole state, and to every member of it in common.

Now, in general, a citizen is one who both shares in the government and also in his turn submits to be governed; [1284a] their condition, it is true, is different in different states: the best is that in which a man is enabled to choose and to persevere in a course of virtue during his whole life, both in his public and private state. But should there be one person, or a very few, eminent for an

uncommon degree of virtue, though not enough to make up a civil state, so that the virtue of the many, or their political abilities, should be too inferior to come in comparison with theirs, if more than one; or if but one, with his only; such are not to be considered as part of the city; for it would be doing them injustice to rate them on a level with those who are so far their inferiors in virtue and political abilities, that they appear to them like a god amongst men. From whence it is evident, that a system of laws must be calculated for those who are equal to each other in nature and power. Such men, therefore, are not the object of law; for they are themselves a law: and it would be ridiculous in any one to endeavour to include them in the penalties of a law: for probably they might say what Antisthenes tells us the lions did to the hares when they demanded to be admitted to an equal share with them in the government. And it is on this account that democratic states have established the ostracism; for an equality seems the principal object of their government. For which reason they compel all those who are very eminent for their power, their fortune, their friendships, or any other cause which may give them too great weight in the government, to submit to the ostracism, and leave the city for a stated time; as the fabulous histories relate the Argonauts served Hercules, for they refused to take him with them in the ship Argo on account of his superior valour. For which reason those who hate a tyranny and find fault with the advice which Periander gave to Thrasybulus, must not think there was nothing to be said in its defence; for the story goes, that Periander said nothing to the messenger in answer to the business he was consulted about, but striking off those ears of corn which were higher than the rest, reduced the whole crop to a level; so that the messenger, without knowing the cause of what was done, related the fact to Thrasybulus, who understood by it that he must take off all the principal men in the city. Nor is this serviceable to tyrants only; nor is it tyrants only who do it; for the same thing is practised both in oligarchies and democracies: for the ostracism has in a manner nearly the same power, by restraining and banishing those who are too great; and what is done in one city is done also by those who have the supreme power in separate states; as the Athenians with respect to the Samians, the Chians, and the Lesbians; for when they suddenly acquired the superiority over all Greece, they brought the other states into subjection, contrary to the treaties which subsisted between them. The King of Persia also very often reduces the Medes and Babylonians when they assume upon their former power: [1284b] and this is a principle which all governments whatsoever keep in their eye; even those which are best administered, as well as those which are not, do it; these for the sake of private utility, the others for the public good.

The same thing is to be perceived in the other arts and sciences; for a painter would not represent an animal with a foot disproportionally large, though he had drawn it remarkably beautiful; nor would the shipwright make the prow or any other part of the vessel larger than it ought to be; nor will the master of the band permit any who sings louder and better than the rest to sing in concert with them. There is therefore no reason that a monarch should not act in agreement with free states, to support his own power, if they do the same thing for the benefit of their respective communities; upon which account when there is any acknowledged difference in the power of the citizens, the reason upon which the ostracism is founded will be politically just; but it is better for the legislator so to establish his state at the beginning as not to want this remedy: but if in course of time such an inconvenience should arise, to endeavour to amend it by some such correction. Not that this was the use it was put to: for many did not regard the benefit of their respective communities, but made the ostracism a weapon in the hand of sedition.

It is evident, then, that in corrupt governments it is partly just and useful to the individual, though probably it is as clear that it is not entirely just: for in a well-governed state there may be great doubts about the use of it, not on account of the pre-eminence which one may have in strength, riches, or connection: but when the pre-eminence is virtue, what then is to be done? for it seems not right to turn out and banish such a one; neither does it seem right to govern him, for that would be like desiring to share the power with Jupiter and to govern him: nothing then remains but what indeed seems natural, and that is for all persons quietly to submit to the government of those who are thus eminently virtuous, and let them be perpetually kings in the separate states.

CHAPTER XIV

What has been now said, it seems proper to change our subject and to inquire into the nature of monarchies; for we have already admitted them to be one of those species of government which are properly founded. And here let us consider whether a kingly government is proper for a city or a country whose principal object is the happiness of the inhabitants, or rather some other. But let us first determine whether this is of one kind only, or more; [1285a] and it is easy to know that it consists of many different species, and that the forms of government are not the same in all: for at Sparta the kingly power seems chiefly regulated by the laws; for it is not supreme in all circumstances; but when the king quits the territories of the state he is their general in war; and all religious affairs are entrusted to him: indeed the kingly power with them is chiefly that of a general who cannot be called to an account for his conduct, and whose command is for life: for he has not the power of life and death, except as a general; as they frequently had in their expeditions by martial law, which we learn from Homer; for when Agamemnon is affronted in council, he restrains his

resentment, but when he is in the field and armed with this power, he tells the Greeks:

"Whoe'er I know shall shun th' impending fight, To dogs and vultures soon shall be a prey; For death is mine...."

This, then, is one species of monarchical government in which the kingly power is in a general for life; and is sometimes hereditary, sometimes elective: besides, there is also another, which is to be met with among some of the barbarians, in which the kings are invested with powers nearly equal to a tyranny, yet are, in some respects, bound by the laws and the customs of their country; for as the barbarians are by nature more prone to slavery than the Greeks, and those in Asia more than those in Europe, they endure without murmuring a despotic government; for this reason their governments are tyrannies; but yet not liable to be overthrown, as being customary and according to law. Their guards also are such as are used in a kingly government, not a despotic one; for the guards of their kings are his citizens, but a tyrant's are foreigners. The one commands, in the manner the law directs, those who willingly obey; the other, arbitrarily, those who consent not. The one, therefore, is guarded by the citizens, the other against them.

These, then, are the two different sorts of these monarchies, and another is that which in ancient Greece they called _aesumnetes_; which is nothing more than an elective tyranny; and its difference from that which is to be found amongst the barbarians consists not in its not being according to law, but only in its not being according to the ancient customs of the country. Some persons possessed this power for life, others only for a particular time or particular purpose, as the people of Mitylene elected Pittacus to oppose the exiles, who were headed by Antimenides and Alcaeus the poet, as we learn from a poem of his; for he upbraids the Mitylenians for having chosen Pittacus for their tyrant, and with one [1285b] voice extolling him to the skies who was the ruin of a rash and devoted people. These sorts of government then are, and ever were, despotic, on account of their being tyrannies; but inasmuch as they are elective, and over a free people, they are also kingly.

A fourth species of kingly government is that which was in use in the heroic times, when a free people submitted to a kingly government, according to the laws and customs of their country. For those who were at first of benefit to mankind, either in arts or arms, or by collecting them into civil society, or procuring them an establishment, became the kings of a willing people, and established an hereditary monarchy. They were particularly their generals in war, and presided over their sacrifices, excepting such only as belonged to the priests: they were also the supreme judges over the people; and in this case some of them took an oath, others did not; they did, the form of swearing was by their sceptre held out.

In ancient times the power of the kings extended to everything whatsoever, both civil, domestic, and foreign; but in after-times they relinquished some of their privileges, and others the people assumed, so that, in some states, they left their kings only the right of presiding over the sacrifices; and even those whom it were worth while to call by that name had only the right of being commander-in-chief in their foreign wars.

These, then, are the four sorts of kingdoms: the first is that of the heroic times; which was a government over a free people, with its rights in some particulars marked out; for the king was their general, their judge, and their high priest. The second, that of the barbarians; which is an hereditary despotic government regulated by laws: the third is that which they call aesumnetic, which is an elective tyranny. The fourth is the Lacedaemonian; and this, in few words, is nothing more than an hereditary generalship: and in these particulars they differ from each other. There is a fifth species of kingly government, which is when one person has a supreme power over all things whatsoever, in the manner that every state and every city has over those things which belong to the public: for as the master of a family is king in his own house, so such a king is master of a family in his own city or state.

CHAPTER XV

But the different sorts of kingly governments may, if I may so say, be reduced to two; which we will consider more particularly. The last spoken of, and the Lacedaemonian, for the chief of the others are placed between these, which are as it were at the extremities, they having less power than an absolute government, and yet more than the Lacedaemonians; so that the whole matter in question may be reduced to these two points; the one is, whether it is advantageous to the citizens to have the office of general continue in one person for life, and whether it should be confined to any particular families or whether every one should be eligible: the other, whether [1286a] it is advantageous for one person to have the supreme power over everything or not. But to enter into the particulars concerning the office of a Lacedaemonian general would be rather to frame laws for a state than to consider the nature and utility of its constitution, since we know that the appointing of a general is what is done in every state. Passing over this question then, we will proceed to consider the other part of their government, which is the polity of the state; and this it will be necessary to examine particularly into, and to go through such questions as may arise.

Now the first thing which presents itself to our consideration is this, whether it is best to be governed by a good man, or by good laws? Those who prefer a kingly government think that laws can only speak a general language, but cannot adapt themselves to particular circumstances; for which reason it is absurd in any science to follow written rule; and even in Egypt the physician was allowed to alter the mode of cure which the law prescribed to him, after the fourth day; but if he did it sooner it was at his own peril: from whence it is evident, on the very same account, that a government of written laws is not the best; and yet general reasoning is necessary to all those who are to govern, and it will be much more perfect in those who are entirely free from passions than in those to whom they are natural. But now this is a quality which laws possess; while the other is natural to the human soul. But some one will say in answer to this, that man will be a better judge of particulars. It will be necessary, then, for a king to be a lawgiver, and that his laws should be published, but that those should have no authority which are absurd, as those which are not, should. But whether is it better for the community that those things which cannot possibly come under the cognisance of the law either at all or properly should be under the government of every worthy citizen, as the present method is, when the public community, in their general assemblies, act as judges and counsellors, where all their determinations are upon particular cases, for one individual, be he who he will, will be found, upon comparison, inferior to a whole people taken collectively: but this is what a city is, as a public entertainment is better than one man's portion: for this reason the multitude judge of many things better than any one single person. They are also less liable to corruption from their numbers, as water is from its quantity: besides, the judgment of an individual must necessarily be perverted if he is overcome by anger or any other passion; but it would be hard indeed if the whole community should be misled by anger. Moreover, let the people be free, and they will do nothing but in conformity to the law, except only in those cases which the law cannot speak to. But though what I am going to propose may not easily be met with, yet if the majority of the state should happen to be good men, should they prefer one uncorrupt governor or many equally good, is it not evident that they should choose the many? But there may be divisions among [1286b] these which cannot happen when there is but one. In answer to this it may be replied that all their souls will be as much animated with virtue as this one man's.

If then a government of many, and all of them good men, compose an aristocracy, and the government of one a kingly power, it is evident that the people should rather choose the first than the last; and this whether the state is powerful or not, if many such persons so alike can be met with: and for this reason probable it was, that the first governments were generally monarchies; because it was difficult to find a number of persons eminently virtuous, more particularly as the world was then divided into small communities; besides, kings were appointed in return for the benefits they had conferred on mankind; but such actions are peculiar to good men: but when many persons equal in virtue appeared at the time, they brooked not a superiority, but sought after an equality and established a free state; but after this, when they degenerated, they made a property of the public; which probably gave rise to oligarchies; for they made wealth meritorious, and the honours of government were reserved for the rich: and these afterwards turned to tyrannies and these in their turn gave rise to democracies; for the power of the tyrants continually decreasing, on account of their rapacious avarice, the people grew powerful enough to frame and establish democracies: and as cities after that happened to increase, probably it was not easy for them to be under any other government than a democracy. But if any person prefers a kingly government in a state, what is to be done with the king's children? Is the family also to reign? But should they have such children as some persons usually have, it will be very detrimental. It may be said, that then the king who has it in his power will never permit such children to succeed to his kingdom. But it is not easy to trust to that; for it is very hard and requires greater virtue than is to be met with in human nature. There is also a doubt concerning the power with which a king should be entrusted: whether he should be allowed force sufficient to compel those who do not choose to be obedient to the laws, and how he is to support his government? for if he is to govern according to law and do nothing of his own will which is contrary thereunto, at the same time it will be necessary to protect that power with which he guards the law, This matter however may not be very difficult to determine; for he ought to have a proper power, and such a one is that which will be sufficient to make the king superior to any one person or even a large part of the community, but inferior to the whole, as the ancients always appointed guards for that person whom they created aesumnetes or tyrant; and some one advised the Syracusians, when Dionysius asked for guards, to allow him such.

CHAPTER XVI

[1287a] We will next consider the absolute monarch that we have just mentioned, who does everything according to his own will: for a king governing under the direction of laws which he is obliged to follow does not of himself create any particular species of government, as we have already said: for in every state whatsoever, either aristocracy or democracy, it is easy to appoint a general for life; and there are many who entrust the administration of affairs to one person only; such is the government at Dyrrachium, and nearly the same at Opus. As for an absolute monarchy as it is called, that is to say, when the whole state is wholly subject to the will of one person, namely the king, it seems to many that it is unnatural that one man should have the entire rule over his

fellow-citizens when the state consists of equals: for nature requires that the same right and the same rank should necessarily take place amongst all those who are equal by nature: for as it would be hurtful to the body for those who are of different constitutions to observe the same regimen, either of diet or clothing, so is it with respect to the honours of the state as hurtful, that those who are equal in merit should be unequal in rank; for which reason it is as much a man's duty to submit to command as to assume it, and this also by rotation; for this is law, for order is law; and it is more proper that law should govern than any one of the citizens: upon the same principle, if it is advantageous to place the supreme power in some particular persons, they should be appointed to be only guardians, and the servants of the laws, for the supreme power must be placed somewhere; but they say, that it is unjust that where all are equal one person should continually enjoy it. But it seems unlikely that man should be able to adjust that which the law cannot determine; it may be replied, that the law having laid down the best rules possible, leaves the adjustment and application of particulars to the discretion of the magistrate; besides, it allows anything to be altered which experience proves may be better established. Moreover, he who would place the supreme power in mind, would place it in God and the laws; but he who entrusts man with it, gives it to a wild beast, for such his appetites sometimes make him; for passion influences those who are in power, even the very best of men: for which reason law is reason without desire.

The instance taken from the arts seems fallacious: wherein it is said to be wrong for a sick person to apply for a remedy to books, but that it would be far more eligible to employ those who are skilful in physic; for these do nothing contrary to reason from motives of friendship but earn their money by curing the sick, whereas those who have the management of public affairs do many things through hatred or favour. And, as a proof of what we have advanced, it may be observed, that whenever a sick person suspects that his physician has been persuaded by his enemies to be guilty of any foul practice to him in his profession, he then rather chooses to apply to books for his cure: and not only this [1287b] but even physicians themselves when they are ill call in other physicians: and those who teach others the gymnastic exercises, exercise with those of the same profession, as being incapable from self-partiality to form a proper judgment of what concerns themselves. From whence it is evident, that those who seek for what is just, seek for a mean; now law is a mean. Moreover; the moral law is far superior and conversant with far superior objects than the written law; for the supreme magistrate is safer to be trusted to than the one, though he is inferior to the other. But as it is impossible that one person should have an eye to everything himself, it will be necessary that the supreme magistrate should employ several subordinate ones under him; why then should not this be done at first, instead of appointing one person in this manner? Besides, if, according to what has been already said, the man of worth is on that account fit to govern, two men of worth are certainly better than one: as, for instance, in Homer, "Let two together go:" and also Agamemnon's wish; "Were ten such faithful counsel mine!" Not but that there are even now some particular magistrates invested with supreme power to decide, as judges, those things which the law cannot, as being one of those cases which comes not properly under its jurisdiction; for of those which can there is no doubt: since then laws comprehend some things, but not all, it is necessary to enquire and consider which of the two is preferable, that the best man or the best law should govern; for to reduce every subject which can come under the deliberation of man into a law is impossible.

No one then denies, that it is necessary that there should be some person to decide those cases which cannot come under the cognisance of a written law: but we say, that it is better to have many than one; for though every one who decides according to the principles of the law decides justly; yet surely it seems absurd to suppose, that one person can see better with two eyes, and hear better with two ears, or do better with two hands and two feet, than many can do with many: for we see that absolute monarchs now furnish themselves with many eyes and ears and hands and feet; for they entrust those who are friends to them and their government with part of their power; for if they are not friends to the monarch, they will not do what he chooses; but if they are friends to him, they are friends also to his government: but a friend is an equal and like his friend: if then he thinks that such should govern, he thinks that his equal also should govern. These are nearly the objections which are usually made to a kingly power.

CHAPTER XVII

Probably what we have said may be true of some persons, but not of others; for some men are by nature formed to be under the government of a master; others, of a king; others, to be the citizens of a free state, just and useful; but a tyranny is not according to nature, nor the other perverted forms of government; for they are contrary to it. But it is evident from what has been said, that among equals it is neither advantageous nor [1288a] right that one person should be lord over all where there are no established laws, but his will is the law; or where there are; nor is it right that one who is good should have it over those who are good; or one who is not good over those who are not good; nor one who is superior to the rest in worth, except in a particular manner, which shall be described, though indeed it has been already mentioned. But let us next determine what people are best qualified for a

kingly government, what for an aristocratic, and what for a democratic. And, first, for a kingly; and it should be those who are accustomed by nature to submit the civil government of themselves to a family eminent for virtue: for an aristocracy, those who are naturally framed to bear the rule of free men, whose superior virtue makes them worthy of the management of others: for a free state, a war-like people, formed by nature both to govern and be governed by laws which admit the poorest citizen to share the honours of the commonwealth according to his worth. But whenever a whole family or any one of another shall happen so far to excel in virtue as to exceed all other persons in the community, then it is right that the kingly power should be in them, or if it is an individual who does so, that he should be king and lord of all; for this, as we have just mentioned, is not only correspondent to that principle of right which all founders of all states, whether aristocracies, oligarchies, or democracies, have a regard to (for in placing the supreme power they all think it right to fix it to excellence, though not the same); but it is also agreeable to what has been already said; as it would not be right to kill, or banish, or ostracise such a one for his superior merit. Nor would it be proper to let him have the supreme power only in turn; for it is contrary to nature that what is highest should ever be lowest: but this would be the case should such a one ever be governed by others. So that there can nothing else be done but to submit, and permit him continually to enjoy the supreme power. And thus much with respect to kingly power in different states, and whether it is or is not advantageous to them, and to what, and in what manner.

CHAPTER XVIII

Since then we have said that there are three sorts of regular governments, and of these the best must necessarily be that which is administered by the best men (and this must be that which happens to have one man, or one family, or a number of persons excelling all the rest in virtue, who are able to govern and be governed in such a manner as will make life most agreeable, and we have already shown that the virtue of a good man and of a citizen in the most perfect government will be the same), it is evident, that in the same manner, and for those very qualities which would procure a man the character of good, any one would say, that the government of a state was a well-established aristocracy or kingdom; so that it will be found to be education and [1288b] morals that are almost the whole which go to make a good man, and the same qualities will make a good citizen or good king.

These particulars being treated of, we will now proceed to consider what sort of government is best, how it naturally arises, and how it is established; for it is necessary to make a proper inquiry concerning this.

BOOK IV

CHAPTER I

In every art and science which is not conversant in parts but in some one genus in which it is complete, it is the business of that art alone to determine what is fitted to its particular genus; as what particular exercise is fitted to a certain particular body, and suits it best: for that body which is formed by nature the most perfect and superior to others necessarily requires the best exercise-and also of what one kind that must be which will suit the generality; and this is the business of the gymnastic arts: and although any one should not desire to acquire an exact knowledge and skill in these exercises, yet it is not, on that account, the less necessary that he who professes to be a master and instruct the youth in them should be perfect therein: and we see that this is what equally befalls the healing, shipbuilding, cloth-making, and indeed all other arts; so that it evidently belongs to the same art to find out what kind of government is best, and would of all others be most correspondent to our wish, while it received no molestation from without: and what particular species of it is adapted to particular persons; for there are many who probably are incapable of enjoying the best form: so that the legislator, and he who is truly a politician, ought to be acquainted not only with that which is most perfect imaginable, but also that which is the best suited to any given circumstances. There is, moreover, a third sort, an imaginary one, and he ought, if such a one should be presented to his consideration, to be able to discern what sort of one it would be at the beginning; and, when once established, what would be the proper means to preserve it a long time. I mean, for instance, if a state should happen not to have the best form of government, or be deficient in what was necessary, or not receive every advantage possible, but something less. And, besides all this, it is necessary to know what sort of government is best fitting for all cities: for most of those writers who have treated this subject, however speciously they may handle other parts of it, have failed in describing the practical parts: for it is not enough to be able to perceive what is best without it is what can be put in practice. It should also be simple, and easy for all to attain to. But some seek only the most subtile forms of government. Others again, choosing [1289a] rather to treat of what is common, censure those under which they live, and extol the excellence of a particular state, as the Lacedaemonian, or some other: but every legislator ought to establish such a form of government as from the present state and

disposition of the people who are to receive it they will most readily submit to and persuade the community to partake of: for it is not a business of less trouble to correct the mistakes of an established government than to form a new one; as it is as difficult to recover what we have forgot as to learn anything afresh. He, therefore, who aspires to the character of a legislator, ought, besides all we have already said, to be able to correct the mistakes of a government already established, as we have before mentioned. But this is impossible to be done by him who does not know how many different forms of government there are: some persons think that there is only one species both of democracy and oligarchy; but this is not true: so that every one should be acquainted with the difference of these governments, how great they are, and whence they arise; and should have equal knowledge to perceive what laws are best, and what are most suitable to each particular government: for all laws are, and ought to be, framed agreeable to the state that is to be governed by them, and not the state to the laws: for government is a certain ordering in a state which particularly respects the magistrates in what manner they shall be regulated, and where the supreme power shall be placed; and what shall be the final object which each community shall have in view; but the laws are something different from what regulates and expresses the form of the constitution-it is their office to direct the conduct of the magistrate in the execution of his office and the punishment of offenders. From whence it is evident, that the founders of laws should attend both to the number and the different sorts of government; for it is impossible that the same laws should be calculated for all sorts of oligarchies and all sorts of democracies, for of both these governments there are many species, not one only.

CHAPTER II

Since, then, according to our first method in treating of the different forms of government, we have divided those which are regular into three sorts, the kingly, the aristocratical, the free states, and shown the three excesses which these are liable to: the kingly, of becoming tyrannical; the aristocratical, oligarchical; and the free state, democratical: and as we have already treated of the aristocratical and kingly; for to enter into an inquiry what sort of government is best is the same thing as to treat of these two expressly; for each of them desires to be established upon the principles of virtue: and as, moreover, we have already determined wherein a kingly power and an aristocracy differ from each other, and when a state may be said to be governed by a king, it now remains that we examine into a free state, and also these other governments, an oligarchy, a democracy, and a [1289b] tyranny; and it is evident of these three excesses which must be the worst of all, and which next to it; for, of course, the excesses of the best and most holy must be the worst; for it must necessarily happen either that the name of king only will remain, or else that the king will assume more power than belongs to him, from whence tyranny will arise, the worst excess imaginable, a government the most contrary possible to a free state. The excess next hurtful is an oligarchy; for an aristocracy differs much from this sort of government: that which is least so is a democracy. This subject has been already treated of by one of those writers who have gone before me, though his sentiments are not the same as mine: for he thought, that of all excellent constitutions, as a good oligarchy or the like, a democracy was the worst, but of all bad ones, the best.

Now I affirm, that all these states have, without exception, fallen into excess; and also that he should not have said that one oligarchy was better than another, but that it was not quite so bad. But this question we shall not enter into at present. We shall first inquire how many different sorts of free states there are; since there are many species of democracies and oligarchies; and which of them is the most comprehensive, and most desirable after the best form of government; or if there is any other like an aristocracy, well established; and also which of these is best adapted to most cities, and which of them is preferable for particular persons: for, probably, some may suit better with an oligarchy than a democracy, and others better with a democracy than an oligarchy; and afterwards in what manner any one ought to proceed who desires to establish either of these states, I mean every species of democracy, and also of oligarchy. And to conclude, when we shall have briefly gone through everything that is necessary, we will endeavour to point out the sources of corruption, and stability, in government, as well those which are common to all as those which are peculiar to each state, and from what causes they chiefly arise.

CHAPTER III

The reason for there being many different sorts of governments is this, that each state consists of a great number of parts; for, in the first place, we see that all cities are made up of families: and again, of the multitude of these some must be rich, some poor, and others in the middle station; and that, both of the rich and poor, some will be used to arms, others not. We see also, that some of the common people are husbandmen, others attend the market, and others are artificers. There is also a difference between the nobles in their wealth, and the dignity in which they live: for instance, in the number of horses they breed; for this cannot be supported without a large fortune: for which reason, in former times, those cities whose strength consisted in horse became by that

means oligarchies; and they used horse in their expeditions against the neighbouring cities; as the Eretrians the Chalcidians, the Magnetians, who lived near the river Meander, and many others in Asia. Moreover, besides the difference of fortune, there is that which arises from family and merit; or, if there are any other distinctions [1290a] which make part of the city, they have been already mentioned in treating of an aristocracy, for there we considered how many parts each city must necessarily be composed of; and sometimes each of these have a share in the government, sometimes a few, sometimes more.

It is evident then, that there must be many forms of government, differing from each other in their particular constitution: for the parts of which they are composed each differ from the other. For government is the ordering of the magistracies of the state; and these the community share between themselves, either as they can attain them by force, or according to some common equality which there is amongst them, as poverty, wealth, or something which they both partake of. There must therefore necessarily be as many different forms of governments as there are different ranks in the society, arising from the superiority of some over others, and their different situations. And these seem chiefly to be two, as they say, of the winds: namely, the north and the south; and all the others are declinations from these. And thus in politics, there is the government of the many and the government of the few; or a democracy and an oligarchy: for an aristocracy may be considered as a species of oligarchy, as being also a government of the few; and what we call a free state may be considered as a democracy: as in the winds they consider the west as part of the north, and the east as part of the south: and thus it is in music, according to some, who say there are only two species of it, the Doric and the Phrygian, and all other species of composition they call after one of these names; and many people are accustomed to consider the nature of government in the same light; but it is both more convenient and more correspondent to truth to distinguish governments as I have done, into two species: one, of those which are established upon proper principles; of which there may be one or two sorts: the other, which includes all the different excesses of these; so that we may compare the best form of government to the most harmonious piece of music; the oligarchic and despotic to the more violent tunes; and the democratic to the soft and gentle airs.

CHAPTER IV

We ought not to define a democracy as some do, who say simply, that it is a government where the supreme power is lodged in the people; for even in oligarchies the supreme power is in the majority. Nor should they define an oligarchy a government where the supreme power is in the hands of a few: for let us suppose the number of a people to be thirteen hundred, and that of these one thousand were rich, who would not permit the three hundred poor to have any share in the government, although they were free, and their equal in everything else; no one would say, that this government was a democracy. In like manner, if the poor, when few in number, should acquire the power over the rich, though more than themselves, no one would say, that this was an oligarchy; nor this, when the rest who are rich have no share in the administration. We should rather say, that a democracy is when the supreme power is in the [1290b] hands of the freemen; an oligarchy, when it is in the hands of the rich: it happens indeed that in the one case the many will possess it, in the other the few; because there are many poor and few rich. And if the power of the state was to be distributed according to the size of the citizens, as they say it is in Ethiopia, or according to their beauty, it would be an oligarchy: for the number of those who are large and beautiful is small.

Nor are those things which we have already mentioned alone sufficient to describe these states; for since there are many species both of a democracy and an oligarchy, the matter requires further consideration; as we cannot admit, that if a few persons who are free possess the supreme power over the many who are not free, that this government is a democracy: as in Apollonia, in Ionia, and in Thera: for in each of these cities the honours of the state belong to some few particular families, who first founded the colonies. Nor would the rich, because they are superior in numbers, form a democracy, as formerly at Colophon; for there the majority had large possessions before the Lydian war: but a democracy is a state where the freemen and the poor, being the majority, are invested with the power of the state. An oligarchy is a state where the rich and those of noble families, being few, possess it.

We have now proved that there are various forms of government and have assigned a reason for it; and shall proceed to show that there are even more than these, and what they are, and why; setting out with the principle we have already laid down. We admit that every city consists not of one, but many parts: thus, if we should endeavour to comprehend the different species of animals we should first of all note those parts which every animal must have, as a certain sensorium, and also what is necessary to acquire and retain food, as a mouth and a belly; besides certain parts to enable it to move from place to place. If, then, these are the only parts of an animal and there are differences between them; namely, in their various sorts of stomachs, bellies, and sensoriums: to which we must add their motive powers; the number of the combinations of all these must necessarily make up the different species of

animals. For it is not possible that the same kind of animal should have any very great difference in its mouth or ears; so that when all these are collected, who happen to have these things similar in all, they make up a species of animals of which there are as many as there are of these general combinations of necessary parts.

The same thing is true of what are called states; for a city is not made of one but many parts, as has already been often said; one of which is those who supply it with provisions, called husbandmen, another called mechanics, [1291a] whose employment is in the manual arts, without which the city could not be inhabited; of these some are busied about what is absolutely necessary, others in what contribute to the elegancies and pleasures of life; the third sort are your exchange-men, I mean by these your buyers, sellers, merchants, and victuallers; the fourth are your hired labourers or workmen; the fifth are the men-at-arms, a rank not less useful than the other, without you would have the community slaves to every invader; but what cannot defend itself is unworthy of the name of a city; for a city is self-sufficient, a slave not. So that when Socrates, in Plato's Republic, says that a city is necessarily composed of four sorts of people, he speaks elegantly but not correctly, and these are, according to him, weavers, husbandmen, shoe-makers, and builders; he then adds, as if these were not sufficient, smiths, herdsmen for what cattle are necessary, and also merchants and victuallers, and these are by way of appendix to his first list; as if a city was established for necessity, and not happiness, or as if a shoe-maker and a husbandman were equally useful. He reckons not the military a part before the increase of territory and joining to the borders of the neighbouring powers will make war necessary: and even amongst them who compose his four divisions, or whoever have any connection with each other, it will be necessary to have some one to distribute justice, and determine between man and man. If, then, the mind is a more valuable part of man than the body, every one would wish to have those things more regarded in his city which tend to the advantage of these than common matters, such are war and justice; to which may be added council, which is the business of civil wisdom (nor is it of any consequence whether these different employments are filled by different persons or one, as the same man is oftentimes both a soldier and a husbandman): so that if both the judge and the senator are parts of the city, it necessarily follows that the soldier must be so also. The seventh sort are those who serve the public in expensive employments at their own charge: these are called the rich. The eighth are those who execute the different offices of the state, and without these it could not possibly subsist: it is therefore necessary that there should be some persons capable of governing and filling the places in the city; and this either for life or in rotation: the office of senator, and judge, of which we have already sufficiently treated, are the only ones remaining. If, then, these things are necessary for a state, that it may be happy and just, it follows that the citizens who engage in public affairs should be men of abilities therein. [1291b] Several persons think, that different employments may be allotted to the same person; as a soldier's, a husbandman's, and an artificer's; as also that others may be both senators and judges.

Besides, every one supposes himself a man of political abilities, and that he is qualified for almost every department in the state. But the same person cannot at once be poor and rich: for which reason the most obvious division of the city is into two parts, the poor and rich; moreover, since for the generality the one are few, the other many, they seem of all the parts of a city most contrary to each other; so that as the one or the other prevail they form different states; and these are the democracy and the oligarchy.

But that there are many different states, and from what causes they arise, has been already mentioned: and that there are also different species both of democracies and oligarchies we will now show. Though this indeed is evident from what we have already said: there are also many different sorts of common people, and also of those who are called gentlemen. Of the different sorts of the first are husbandmen, artificers, exchange-men, who are employed in buying and selling, seamen, of which some are engaged in war, some in traffic, some in carrying goods and passengers from place to place, others in fishing, and of each of these there are often many, as fishermen at Tarentum and Byzantium, masters of galleys at Athens, merchants at AEgina and Chios, those who let ships on freight at Tenedos; we may add to these those who live by their manual labour and have but little property; so that they cannot live without some employ: and also those who are not free-born on both sides, and whatever other sort of common people there may be. As for gentlemen, they are such as are distinguished either by their fortune, their birth, their abilities, or their education, or any such-like excellence which is attributed to them.

The most pure democracy is that which is so called principally from that equality which prevails in it: for this is what the law in that state directs; that the poor shall be in no greater subjection than the rich; nor that the supreme power shall be lodged with either of these, but that both shall share it. For if liberty and equality, as some persons suppose, are chiefly to be found in a democracy, it must be most so by every department of government being alike open to all; but as the people are the majority, and what they vote is law, it follows that such a state must be a democracy. This, then, is one species thereof. Another is, when the magistrates are elected by a certain census; but this should be but small, and every one who was included in it should be eligible, but as soon as he was below it should lose that right. [1292a] Another sort is, in which every citizen who is not infamous has a share in the

government, but where the government is in the laws. Another, where every citizen without exception has this right. Another is like these in other particulars, but there the people govern, and not the law: and this takes place when everything is determined by a majority of votes, and not by a law; which happens when the people are influenced by the demagogues: for where a democracy is governed by stated laws there is no room for them, but men of worth fill the first offices in the state: but where the power is not vested in the laws, there demagogues abound: for there the people rule with kingly power: the whole composing one body; for they are supreme, not as individuals but in their collective capacity.

Homer also discommends the government of many; but whether he means this we are speaking of, or where each person exercises his power separately, is uncertain. When the people possess this power they desire to be altogether absolute, that they may not be under the control of the law, and this is the time when flatterers are held in repute. Nor is there any difference between such a people and monarchs in a tyranny: for their manners are the same, and they both hold a despotic power over better persons than themselves. For their decrees are like the others' edicts; their demagogues like the others' flatterers: but their greatest resemblance consists in the mutual support they give to each other, the flatterer to the tyrant, the demagogue to the people: and to them it is owing that the supreme power is lodged in the votes of the people, and not in the laws; for they bring everything before them, as their influence is owing to their being supreme whose opinions they entirely direct; for these are they whom the multitude obey. Besides, those who accuse the magistrates insist upon it, that the right of determining on their conduct lies in the people, who gladly receive their complaints as the means of destroying all their offices.

Any one, therefore, may with great justice blame such a government as being a democracy, and not a free state; for where the government is not in the laws, then there is no free state, for the law ought to be supreme over all things; and particular incidents which arise should be determined by the magistrates or the state. If, therefore, a democracy is to be reckoned a free state, it is evident that any such establishment which centres all power in the votes of the people cannot, properly speaking, be a democracy: for their decrees cannot be general in their extent. Thus, then, we may describe the several species of democracies.

CHAPTER V

Of the different species of oligarchies one is, when the right to the offices is regulated by a certain census; so that the poor, although the majority, have no share in it; while all those who are included therein take part in the management of public affairs. Another sort is, when [1292b] the magistrates are men of very small fortune, who upon any vacancy do themselves fill it up: and if they do this out of the community at large, the state approaches to an aristocracy; if out of any particular class of people, it will be an oligarchy. Another sort of oligarchy is, when the power is an hereditary nobility. The fourth is, when the power is in the same hands as the other, but not under the control of law; and this sort of oligarchy exactly corresponds to a tyranny in monarchies, and to that particular species of democracies which I last mentioned in treating of that state: this has the particular name of a dynasty. These are the different sorts of oligarchies and democracies.

It should also be known, that it often happens that a free state, where the supreme power is in the laws, may not be democratic, and yet in consequence of the established manners and customs of the people, may be governed as if it was; so, on the other hand, where the laws may countenance a more democratic form of government, these may make the state inclining to an oligarchy; and this chiefly happens when there has been any alteration in the government; for the people do not easily change, but love their own ancient customs; and it is by small degrees only that one thing takes place of another; so that the ancient laws will remain, while the power will be in the hands of those who have brought about a revolution in the state.

CHAPTER VI

It is evident from what has been said, that there are as many different sorts of democracies and oligarchies as I have reckoned up: for, of necessity, either all ranks of the people which I have enumerated must have a share in the government, or some only, and others not; for when the husbandmen, and those only who possess moderate fortunes, have the supreme power, they will govern according to law; for as they must get their livings by their employs, they have but little leisure for public business: they will therefore establish proper laws, and never call public assemblies but when there is a necessity for them; and they will readily let every one partake with them in the administration of public affairs as soon as they possess that fortune which the law requires for their qualification: every one, therefore, who is qualified will have his share in the government: for to exclude any would be to make the government an oligarchy, and for all to have leisure to attend without they had a subsistence would be impossible: for these reasons, therefore, this government is a species of democracy. Another species is distinguished by the mode of electing their

magistrates, in which every one is eligible, to whose birth there are no objections, provided he is supposed to have leisure to attend: for which reason in such a democracy the supreme power will be vested in the laws, as there will be nothing paid to those who go to the public assemblies. A third species is where every freeman has a right to a share in the government, which he will not accept for the cause already assigned; for which reason here also the supreme power will be in the law. The fourth species [1293a] of democracy, the last which was established in order of time, arose when cities were greatly enlarged to what they were at first, and when the public revenue became something considerable; for then the populace, on account of their numbers, were admitted to share in the management of public affairs, for then even the poorest people were at leisure to attend to them, as they received wages for so doing; nay, they were more so than others, as they were not hindered by having anything of their own to mind, as the rich had; for which reason these last very often did not frequent the public assemblies and the courts of justice: thus the supreme power was lodged in the poor, and not in the laws. These are the different sorts of democracies, and such are the causes which necessarily gave birth to them.

The first species of oligarchy is, when the generality of the state are men of moderate and not too large property; for this gives them leisure for the management of public affairs: and, as they are a numerous body, it necessarily follows that the supreme power must be in the laws, and not in men; for as they are far removed from a monarchical government, and have not sufficient fortune to neglect their private affairs, while they are too many to be supported by the public, they will of course determine to be governed by the laws, and not by each other. But if the men of property in the state are but few, and their property is large, then an oligarchy of the second sort will take place; for those who have most power will think that they have a right to lord it over the others; and, to accomplish this, they will associate to themselves some who have an inclination for public affairs, and as they are not powerful enough to govern without law, they will make a law for that purpose. And if those few who have large fortunes should acquire still greater power, the oligarchy will then alter into one of the third sort; for they will get all the offices of the state into their own hands by a law which directs the son to succeed upon the death of his father; and, after that, when, by means of their increasing wealth and powerful connections, they extend still further their oppression, a monarchical dynasty will directly succeed wherein men will be supreme, and not the law; and this is the fourth species of an oligarchy correspondent to the last-mentioned class of democracies.

CHAPTER VII

There are besides two other states, a democracy and an oligarchy, one of which all speak of, and it is always esteemed a species of the four sorts; and thus they reckon them up; a monarchy, an oligarchy, a democracy, and this fourth which they call an aristocracy. There is also a fifth, which bears a name that is also common to the other four, namely, a state: but as this is seldom to be met with, it has escaped those who have endeavoured to enumerate the different sorts of governments, which [1293b] they fix at four only, as does Plato in his Republic.

An aristocracy, of which I have already treated in the first book, is rightly called so; for a state governed by the best men, upon the most virtuous principles, and not upon any hypothesis, which even good men may propose, has alone a right to be called an aristocracy, for it is there only that a man is at once a good man and a good citizen; while in other states men are good only relative to those states. Moreover, there are some other states which are called by the same name, that differ both from oligarchies and free states, wherein not only the rich but also the virtuous have a share in the administration; and have therefore acquired the name of aristocracies; for in those governments wherein virtue is not their common care, there are still men of worth and approved goodness. Whatever state, then, like the Carthaginians, favours the rich, the virtuous, and the citizens at large, is a sort of aristocracy: when only the two latter are held in esteem, as at Lacedaemon, and the state is jointly composed of these, it is a virtuous democracy. These are the two species of aristocracies after the first, which is the best of all governments. There is also a third, which is, whenever a free state inclines to the dominion of a few.

CHAPTER VIII

It now remains for us to treat of that government which is particularly called a free state, and also of a tyranny; and the reason for my choosing to place that free state here is, because this, as well as those aristocracies already mentioned, although they do not seem excesses, yet, to speak true, they have all departed from what a perfect government is. Nay, they are deviations both of them equally from other forms, as I said at the beginning. It is proper to mention a tyranny the last of all governments, for it is of all others the least like one: but as my intention is to treat of all governments in general, for this reason that also, as I have said, will be taken into consideration in its proper place.

I shall now inquire into a free state and show what it is; and we shall the better understand its positive nature as we have already described an oligarchy and a democracy; for a free state is indeed nothing more than a mixture of them, and it has been usual to call those which incline most to a democracy, a free state; those which incline most to an oligarchy, an aristocracy, because those who are rich are generally men of family and education; besides, they enjoy those things which others are often guilty of crimes to procure: for which reason they are regarded as men of worth and honour and note.

Since, then, it is the genius of an aristocracy to allot the larger part of the government to the best citizens, they therefore say, that an oligarchy is chiefly composed of those men who are worthy and honourable: now it [1294a] seems impossible that where the government is in the hands of the good, there the laws should not be good, but bad; or, on the contrary, that where the government is in the hands of the bad, there the laws should be good; nor is a government well constituted because the laws are, without at the same time care is taken that they are observed; for to enforce obedience to the laws which it makes is one proof of a good constitution in the state-another is, to have laws well calculated for those who are to abide by them; for if they are improper they must be obeyed: and this may be done two ways, either by their being the best relative to the particular state, or the best absolutely. An aristocracy seems most likely to confer the honours of the state on the virtuous; for virtue is the object of an aristocracy, riches of an oligarchy, and liberty of a democracy; for what is approved of by the majority will prevail in all or in each of these three different states; and that which seems good to most of those who compose the community will prevail: for what is called a state prevails in many communities, which aim at a mixture of rich and poor, riches and liberty: as for the rich, they are usually supposed to take the place of the worthy and honourable. As there are three things which claim an equal rank in the state, freedom, riches, and virtue (for as for the fourth, rank, it is an attendant on two of the others, for virtue and riches are the origin of family), it is evident, that the conjuncture of the rich and the poor make up a free state; but that all three tend to an aristocracy more than any other, except that which is truly so, which holds the first rank.

We have already seen that there are governments different from a monarchy, a democracy, and an oligarchy; and what they are, and wherein they differ from each other; and also aristocracies and states properly so called, which are derived from them; and it is evident that these are not much unlike each other.

CHAPTER IX

We shall next proceed to show how that government which is peculiarly called a state arises alongside of democracy and oligarchy, and how it ought to be established; and this will at the same time show what are the proper boundaries of both these governments, for we must mark out wherein they differ from one another, and then from both these compose a state of such parts of each of them as will show from whence they were taken.

There are three different ways in which two states may be blended and joined together; for, in the first place, all those rules may be adopted which the laws of each of them have ordered; as for instance in the judicial department, for in an oligarchy the rich are fined if they do not come to the court as jurymen, but the poor are not paid for their attendance; but in democracies they are, while the rich are not fined for their neglect. Now these things, as being common to both, are fit to be observed in a free [1294b] state which is composed of both. This, then, is one way in which they may be joined together. In the second place, a medium may be taken between the different methods which each state observes; for instance, in a democracy the right to vote in the public assembly is either confined by no census at all, or limited by a very small one; in an oligarchy none enjoy it but those whose census is high: therefore, as these two practices are contrary to each other, a census between each may be established in such a state. In the third place, different laws of each community may be adopted; as, for instance, as it seems correspondent to the nature of a democracy, that the magistrates should be chosen by lot, but an aristocracy by vote, and in the one state according to a census, but not in the other: let, then, an aristocracy and a free state copy something from each of them; let them follow an oligarchy in choosing their magistrates by vote, but a democracy in not admitting of any census, and thus blend together the different customs of the two governments. But the best proof of a happy mixture of a democracy and an oligarchy is this, when a person may properly call the same state a democracy and an oligarchy. It is evident that those who speak of it in this manner are induced to it because both these governments are there well blended together: and indeed this is common to all mediums, that the extremes of each side should be discerned therein, as at Lacedaemon; for many affirm that it is a democracy from the many particulars in which it follows that form of government; as for instance, in the first place, in the bringing up of their children, for the rich and poor are brought up in the same manner; and their education is such that the children of the poor may partake of it; and the same rules are observed when they are youths and men, there is no distinction between a rich person and a poor one; and in their public tables the same provision is served to all. The rich also wear only such clothes as the poorest man is able to purchase. Moreover, with respect to two

magistracies of the highest rank, one they have a right to elect to, the other to fill; namely, the senate and the ephori. Others consider it as an oligarchy, the principles of which it follows in many things, as in choosing all their officers by vote, and not by lot; in there being but a few who have a right to sit in judgment on capital causes and the like. Indeed, a state which is well composed of two others ought to resemble them both, and neither, Such a state ought to have its means of preservation in itself, and not without; and when I say in itself, I do not mean that it should owe this to the forbearance of their neighbours, for this may happen to a bad government, but to every member of the community's not being willing that there should be the least alteration in their constitution. Such is the method in which a free state or aristocracy ought to be established.

CHAPTER X

It now remains to treat of a tyranny; not that there is [1295a] much to be said on that subject, but as it makes part of our plan, since we enumerated it amongst our different sorts of governments. In the beginning of this work we inquired into the nature of kingly government, and entered into a particular examination of what was most properly called so, and whether it was advantageous to a state or not, and what it should be, and how established; and we divided a tyranny into two pieces when we were upon this subject, because there is something analogous between this and a kingly government, for they are both of them established by law; for among some of the barbarians they elect a monarch with absolute power, and formerly among the Greeks there were some such, whom they called sesumnetes. Now these differ from each other; for some possess only kingly power regulated by law, and rule those who voluntarily submit to their government; others rule despotically according to their own will. There is a third species of tyranny, most properly so called, which is the very opposite to kingly power; for this is the government of one who rules over his equals and superiors without being accountable for his conduct, and whose object is his own advantage, and not the advantage of those he governs; for which reason he rules by compulsion, for no freemen will ever willingly submit to such a government. These are the different species of tyrannies, their principles, and their causes.

CHAPTER XI

We proceed now to inquire what form of government and what manner of life is best for communities in general, not adapting it to that superior virtue which is above the reach of the vulgar, or that education which every advantage of nature and fortune only can furnish, nor to those imaginary plans which may be formed at pleasure; but to that mode of life which the greater part of mankind can attain to, and that government which most cities may establish: for as to those aristocracies which we have now mentioned, they are either too perfect for a state to support, or one so nearly alike to that state we now going to inquire into, that we shall treat of them both as one.

The opinions which we form upon these subjects must depend upon one common principle: for if what I have said in my treatise on Morals is true, a happy life must arise from an uninterrupted course of virtue; and if virtue consists in a certain medium, the middle life must certainly be the happiest; which medium is attainable [1295b] by every one. The boundaries of virtue and vice in the state must also necessarily be the same as in a private person; for the form of government is the life of the city. In every city the people are divided into three sorts; the very rich, the very poor, and those who are between them. If this is universally admitted, that the mean is best, it is evident that even in point of fortune mediocrity is to be preferred; for that state is most submissive to reason; for those who are very handsome, or very strong, or very noble, or very rich; or, on the contrary; those who are very poor, or very weak, or very mean, with difficulty obey it; for the one are capricious and greatly flagitious, the other rascally and mean, the crimes of each arising from their different excesses: nor will they go through the different offices of the state; which is detrimental to it: besides, those who excel in strength, in riches, or friends, or the like, neither know how nor are willing to submit to command: and this begins at home when they are boys; for there they are brought up too delicately to be accustomed to obey their preceptors: as for the very poor, their general and excessive want of what the rich enjoy reduces them to a state too mean: so that the one know not how to command, but to be commanded as slaves, the others know not how to submit to any command, nor to command themselves but with despotic power.

A city composed of such men must therefore consist of slaves and masters, not freemen; where one party must hate, and the other despise, where there could be no possibility of friendship or political community: for community supposes affection; for we do not even on the road associate with our enemies. It is also the genius of a city to be composed as much as possible of equals; which will be most so when the inhabitants are in the middle state: from whence it follows, that that city must be best framed which is composed of those whom we say are naturally its proper members. It is men of this station also who will be best assured of safety and protection; for they will neither covet what belongs to others, as the poor do; nor will others covet what is theirs, as the poor do

what belongs to the rich; and thus, without plotting against any one, or having any one plot against them, they will live free from danger: for which reason Phocylides wisely wishes for the middle state, as being most productive of happiness. It is plain, then, that the most perfect political community must be amongst those who are in the middle rank, and those states are best instituted wherein these are a larger and more respectable part, if possible, than both the other; or, if that cannot be, at least than either of them separate; so that being thrown into the balance it may prevent either scale from preponderating.

It is therefore the greatest happiness which the citizens can enjoy to possess a moderate and convenient fortune; for when some possess too much, and others nothing at [1296a] all, the government must either be in the hands of the meanest rabble or else a pure oligarchy; or, from the excesses of both, a tyranny; for this arises from a headstrong democracy or an oligarchy, but very seldom when the members of the community are nearly on an equality with each other. We will assign a reason for this when we come to treat of the alterations which different states are likely to undergo. The middle state is therefore best, as being least liable to those seditions and insurrections which disturb the community; and for the same reason extensive governments are least liable to these inconveniences; for there those in a middle state are very numerous, whereas in small ones it is easy to pass to the two extremes, so as hardly to have any in a medium remaining, but the one half rich, the other poor: and from the same principle it is that democracies are more firmly established and of longer continuance than oligarchies; but even in those when there is a want of a proper number of men of middling fortune, the poor extend their power too far, abuses arise, and the government is soon at an end.

We ought to consider as a proof of what I now advance, that the best lawgivers themselves were those in the middle rank of life, amongst whom was Solon, as is evident from his poems, and Lycurgus, for he was not a king, and Charondas, and indeed most others. What has been said will show us why of so many free states some have changed to democracies, others to oligarchies: for whenever the number of those in the middle state has been too small, those who were the more numerous, whether the rich or the poor, always overpowered them and assumed to themselves the administration of public affairs; from hence arose either a democracy or an oligarchy. Moreover, when in consequence of their disputes and quarrels with each other, either the rich get the better of the poor, or the poor of the rich, neither of them will establish a free state; but, as the record of their victory, one which inclines to their own principles, and form either a democracy or an oligarchy.

Those who made conquests in Greece, having all of them an eye to the respective forms of government in their own cities, established either democracies or oligarchies, not considering what was serviceable to the state, but what was similar to their own; for which reason a government has never been established where the supreme power has been placed amongst those of the middling rank, or very seldom; and, amongst a few, one man only of those who have yet been conquerors has been persuaded to give the preference to this order of [1296b] men: it is indeed an established custom with the inhabitants of most cities not to desire an equality, but either to aspire to govern, or when they are conquered, to submit.

Thus we have shown what the best state is, and why. It will not be difficult to perceive of the many states which there are, for we have seen that there are various forms both of democracies and oligarchies, to which we should give the first place, to which the second, and in the same manner the next also; and to observe what are the particular excellences and defects of each, after we have first described the best possible; for that must be the best which is nearest to this, that worst which is most distant from the medium, without any one has a particular plan of his own which he judges by. I mean by this, that it may happen, that although one form of government may be better than another, yet there is no reason to prevent another from being preferable thereunto in particular circumstances and for particular purposes.

CHAPTER XII

After what has been said, it follows that we should now show what particular form of government is most suitable for particular persons; first laying this down as a general maxim, that that party which desires to support the actual administration of the state ought always to be superior to that which would alter it. Every city is made up of quality and quantity: by quality I mean liberty, riches, education, and family, and by quantity its relative populousness: now it may happen that quality may exist in one of those parts of which the city is composed, and quantity in another; thus the number of the ignoble may be greater than the number of those of family, the number of the poor than that of the rich; but not so that the quantity of the one shall overbalance the quality of the other; those must be properly adjusted to each other; for where the number of the poor exceeds the proportion we have mentioned, there a democracy will rise up, and if the husbandry should have more power than others, it will be a democracy of husbandmen; and the democracy will be a particular species according to that class of men which may happen to be most

numerous: thus, should these be the husbandmen, it will be of these, and the best; if of mechanics and those who hire themselves out, the worst possible: in the same manner it may be of any other set between these two. But when the rich and the noble prevail more by their quality than they are deficient in quantity, there an oligarchy ensues; and this oligarchy may be of different species, according to the nature of the prevailing party. Every legislator in framing his constitution ought to have a particular regard to those in the middle rank of life; and if he intends an oligarchy, these should be the object of his laws; if a democracy, to these they should be entrusted; and whenever their number exceeds that of the two others, or at least one of them, they give [1297a] stability to the constitution; for there is no fear that the rich and the poor should agree to conspire together against them, for neither of these will choose to serve the other. If any one would choose to fix the administration on the widest basis, he will find none preferable to this; for to rule by turns is what the rich and the poor will not submit to, on account of their hatred to each other. It is, moreover, allowed that an arbitrator is the most proper person for both parties to trust to; now this arbitrator is the middle rank.

Those who would establish aristocratical governments are mistaken not only in giving too much power to the rich, but also in deceiving the common people; for at last, instead of an imaginary good, they must feel a real evil, for the encroachments of the rich are more destructive to the state than those of the poor.

CHAPTER XIII

There are five particulars in which, under fair pretences, the rich craftily endeavour to undermine the rights of the people, these are their public assemblies, their offices of state, their courts of justice, their military power, and their gymnastic exercises. With respect to their public assemblies, in having them open to all, but in fining the rich only, or others very little, for not attending; with respect to offices, in permitting the poor to swear off, but not granting this indulgence to those who are within the census; with respect to their courts of justice, in fining the rich for non-attendance, but the poor not at all, or those a great deal, and these very little, as was done by the laws of Charondas. In some places every citizen who was enrolled had a right to attend the public assemblies and to try causes; which if they did not do, a very heavy fine was laid upon them; that through fear of the fine they might avoid being enrolled, as they were then obliged to do neither the one nor the other. The same spirit of legislation prevailed with respect to their bearing arms and their gymnastic exercises; for the poor are excused if they have no arms, but the rich are fined; the same method takes place if they do not attend their gymnastic exercises, there is no penalty on one, but there is on the other: the consequence of which is, that the fear of this penalty induces the rich to keep the one and attend the other, while the poor do neither. These are the deceitful contrivances of oligarchical legislators.

The contrary prevails in a democracy; for there they make the poor a proper allowance for attending the assemblies and the courts, but give the rich nothing for doing it: whence it is evident, that if any one would properly blend these customs together, they must extend both the pay and the fine to every member of the community, and then every one would share in it, whereas part only now do. The citizens of a free state ought to [1297b] consist of those only who bear arms: with respect to their census it is not easy to determine exactly what it ought to be, but the rule that should direct upon this subject should be to make it as extensive as possible, so that those who are enrolled in it make up a greater part of the people than those who are not; for those who are poor, although they partake not of the offices of the state, are willing to live quiet, provided that no one disturbs them in their property: but this is not an easy matter; for it may not always happen, that those who are at the head of public affairs are of a humane behaviour. In time of war the poor are accustomed to show no alacrity without they have provisions found them; when they have, then indeed they are willing to fight.

In some governments the power is vested not only in those who bear arms, but also in those who have borne them. Among the Malienses the state was composed of these latter only, for all the officers were soldiers who had served their time. And the first states in Greece which succeeded those where kingly power was established, were governed by the military. First of all the horse, for at that time the strength and excellence of the army depended on the horse, for as to the heavy-armed foot they were useless without proper discipline; but the art of tactics was not known to the ancients, for which reason their strength lay in their horse: but when cities grew larger, and they depended more on their foot, greater numbers partook of the freedom of the city; for which reason what we call republics were formerly called democracies. The ancient governments were properly oligarchies or kingdoms; for on account of the few persons in each state, it would have been impossible to have found a sufficient number of the middle rank; so these being but few, and those used to subordination, they more easily submitted to be governed.

We have now shown why there are many sorts of governments, and others different from those we have treated of: for there are more species of democracies than one, and the like is true of other forms, and what are their differences, and whence they arise;

and also of all others which is the best, at least in general; and which is best suited for particular people.

CHAPTER XIV

We will now proceed to make some general reflections upon the governments next in order, and also to consider each of them in particular; beginning with those principles which appertain to each: now there are three things in all states which a careful legislator ought well to consider, which are of great consequence to all, and which properly attended to the state must necessarily be happy; and according to the variation of which the one will differ from the other. The first of these is the [1298a] public assembly; the second the officers of the state, that is, who they ought to be, and with what power they should be entrusted, and in what manner they should be appointed; the third, the judicial department.

Now it is the proper business of the public assembly to determine concerning war and peace, making or breaking off alliances, to enact laws, to sentence to death, banishment, or confiscation of goods, and to call the magistrates to account for their behaviour when in office. Now these powers must necessarily be entrusted to the citizens in general, or all of them to some; either to one magistrate or more; or some to one, and some to another, or some to all, but others to some: to entrust all to all is in the spirit of a democracy, for the people aim at equality. There are many methods of delegating these powers to the citizens at large, one of which is to let them execute them by turn, and not altogether, as was done by Tellecles, the Milesian, in his state. In others the supreme council is composed of the different magistrates, and they succeed to the offices of the community by proper divisions of tribes, wards, and other very small proportions, till every one in his turn goes through them: nor does the whole community ever meet together, without it is when new laws are enacted, or some national affair is debated, or to hear what the magistrates have to propose to them. Another method is for the people to meet in a collective body, but only for the purpose of holding the comitia, making laws, determining concerning war or peace, and inquiring into the conduct of their magistrates, while the remaining part of the public business is conducted by the magistrates, who have their separate departments, and are chosen out of the whole community either by vote or ballot. Another method is for the people in general to meet for the choice of the magistrates, and to examine into their conduct; and also to deliberate concerning war and alliances, and to leave other things to the magistrates, whoever happen to be chosen, whose particular employments are such as necessarily require persons well skilled therein. A fourth method is for every person to deliberate upon every subject in public assembly, where the magistrates can determine nothing of themselves, and have only the privilege of giving their opinions first; and this is the method of the most pure democracy, which is analogous to the proceedings in a dynastic oligarchy and a tyrannic monarchy.

These, then, are the methods in which public business is conducted in a democracy. When the power is in the hands of part of the community only, it is an oligarchy and this also admits of different customs; for whenever the officers of the state are chosen out of those who have a moderate fortune, and these from that circumstance are many, and when they depart not from that line which the law has laid down, but carefully follow it, and when all within the census are eligible, certainly it is then an oligarchy, but founded on true principles of government [1298b] from its moderation. When the people in general do not partake of the deliberative power, but certain persons chosen for that purpose, who govern according to law; this also, like the first, is an oligarchy. When those who have the deliberative power elect each other, and the son succeeds to the father, and when they can supersede the laws, such a government is of necessity a strict oligarchy. When some persons determine on one thing, and others on another, as war and peace, and when all inquire into the conduct of their magistrates, and other things are left to different officers, elected either by vote or lot, then the government is an aristocracy or a free state. When some are chosen by vote and others by lot, and these either from the people in general, or from a certain number elected for that purpose, or if both the votes and the lots are open to all, such a state is partly an aristocracy, partly a free government itself. These are the different methods in which the deliberative power is vested in different states, all of whom follow some regulation here laid down. It is advantageous to a democracy, in the present sense of the word, by which I mean a state wherein the people at large have a supreme power, even over the laws, to hold frequent public assemblies; and it will be best in this particular to imitate the example of oligarchies in their courts of justice; for they fine those who are appointed to try causes if they do not attend, so should they reward the poor for coming to the public assemblies: and their counsels will be best when all advise with each other, the citizens with the nobles, the nobles with the citizens. It is also advisable when the council is to be composed of part of the citizens, to elect, either by vote or lot, an equal number of both ranks. It is also proper, if the common people in the state are very numerous, either not to pay every one for his attendance, but such a number only as will make them equal to the nobles, or to reject many of them by lot.

In an oligarchy they should either call up some of the common people to the council, or else establish a court, as is done in some other states, whom they call pre-advisers or guardians of the laws, whose business should be to propose first what they should

afterwards enact. By this means the people would have a place in the administration of public affairs, without having it in their power to occasion any disorder in the government. Moreover, the people may be allowed to have a vote in whatever bill is proposed, but may not themselves propose anything contrary thereto; or they may give their advice, while the power of determining may be with the magistrates only. It is also necessary to follow a contrary practice to what is established in democracies, for the people should be allowed the power of pardoning, but not of condemning, for the cause should be referred back again to the magistrates: whereas the contrary takes place in republics; for the power of pardoning is with the few, but not of condemning, which is always referred [1299a] to the people at large. And thus we determine concerning the deliberative power in any state, and in whose hands it shall be.

CHAPTER XV

We now proceed to consider the choice of magistrates; for this branch of public business contains many different Parts, as how many there shall be, what shall be their particular office, and with respect to time how long each of them shall continue in place; for some make it six months, others shorter, others for a year, others for a much longer time; or whether they should be perpetual or for a long time, or neither; for the same person may fill the same office several times, or he may not be allowed to enjoy it even twice, but only once: and also with respect to the appointment of magistrates, who are to be eligible, who is to choose them, and in what manner; for in all these particulars we ought properly to distinguish the different ways which may be followed; and then to show which of these is best suited to such and such governments.

Now it is not easy to determine to whom we ought properly to give the name of magistrate, for a government requires many persons in office; but every one of those who is either chosen by vote or lot is not to be reckoned a magistrate. The priests, for instance, in the first place; for these are to be considered as very different from civil magistrates: to these we may add the choregi and heralds; nay, even ambassadors are elected: there are some civil employments which belong to the citizens; and these are either when they are all engaged in one thing, as when as soldiers they obey their general, or when part of them only are, as in governing the women or educating the youth; and also some economic, for they often elect corn-meters: others are servile, and in which, if they are rich, they employ slaves. But indeed they are most properly called magistrates, who are members of the deliberative council, or decide causes, or are in some command, the last more especially, for to command is peculiar to magistrates. But to speak truth, this question is of no great consequence, nor is it the province of the judges to decide between those who dispute about words; it may indeed be an object of speculative inquiry; but to inquire what officers are necessary in a state, and how many, and what, though not most necessary, may yet be advantageous in a well-established government, is a much more useful employment, and this with respect to all states in general, as well as to small cities.

In extensive governments it is proper to allot one employment to one person, as there are many to serve the public in so numerous a society, where some may be passed over for a long time, and others never be in office but once; and indeed everything is better done which has the whole attention of one person, than when that [1299b] attention is divided amongst many; but in small states it is necessary that a few of the citizens should execute many employments; for their numbers are so small it will not be convenient to have many of them in office at the same time; for where shall we find others to succeed them in turn? Small states will sometimes want the same magistrates and the same laws as large ones; but the one will not want to employ them so often as the other; so that different charges may be intrusted to the same person without any inconvenience, for they will not interfere with each other, and for want of sufficient members in the community it will be necessary. If we could tell how many magistrates are necessary in every city, and how many, though not necessary, it is yet proper to have, we could then the better know how many different offices one might assign to one magistrate. It is also necessary to know what tribunals in different places should have different things under their jurisdiction, and also what things should always come under the cognisance of the same magistrate; as, for instance, decency of manners, shall the clerk of the market take cognisance of that if the cause arises in the market, and another magistrate in another place, or the same magistrate everywhere: or shall there be a distinction made of the fact, or the parties? as, for instance, in decency of manners, shall it be one cause when it relates to a man, another when it relates to a woman?

In different states shall the magistrates be different or the same? I mean, whether in a democracy, an oligarchy, an aristocracy, and a monarchy, the same persons shall have the same power? or shall it vary according to the different formation of the government? as in an aristocracy the offices of the state are allotted to those who are well educated; in an oligarchy to those who are rich; in a democracy to the freemen? Or shall the magistrates differ as the communities differ? For it may happen that the very same may be sometimes proper, sometimes otherwise: in this state it may be necessary that the magistrate have great powers, in that but small. There are also certain magistrates peculiar to certain states--as the pre-advisers are not proper in a democracy, but a senate is; for

one such order is necessary, whose business shall be to consider beforehand and prepare those bills which shall be brought before the people that they may have leisure to attend to their own affairs; and when these are few in number the state inclines to an oligarchy. The pre-advisers indeed must always be few for they are peculiar to an oligarchy: and where there are both these offices in the same state, the pre-adviser's is superior to the senator's, the one having only a democratical power, the other an oligarchical: and indeed the [1300a] power of the senate is lost in those democracies, in which the people, meeting in one public assembly, take all the business into their own hands; and this is likely to happen either when the community in general are in easy circumstances, or when they are paid for their attendance; for they are then at leisure often to meet together and determine everything for themselves. A magistrate whose business is to control the manners of the boys, or women, or who takes any department similar to this, is to be found in an aristocracy, not in a democracy; for who can forbid the wives of the poor from appearing in public? neither is such a one to be met with in an oligarchy; for the women there are too delicate to bear control. And thus much for this subject. Let us endeavour to treat at large of the establishment of magistrates, beginning from first principles. Now, they differ from each other in three ways, from which, blended together, all the varieties which can be imagined arise. The first of these differences is in those who appoint the magistrates, the second consists in those who are appointed, the third in the mode of appointment; and each of these three differ in three manners; for either all the citizens may appoint collectively, or some out of their whole body, or some out of a particular order in it, according to fortune, family, or virtue, or some other rule (as at Megara, where the right of election was amongst those who had returned together to their country, and had reinstated themselves by force of arms) and this either by vote or lot. Again, these several modes may be differently formed together, as some magistrates may be chosen by part of the community, others by the whole; some out of part, others out of the whole; some by vote, others by lot: and each of these different modes admit of a four-fold subdivision; for either all may elect all by vote or by lot; and when all elect, they may either proceed without any distinction, or they may elect by a certain division of tribes, wards, or companies, till they have gone through the whole community: and some magistrates may be elected one way, and others another. Again, if some magistrates are elected either by vote or lot of all the citizens, or by the vote of some and the lot of some, or some one way and some another; that is to say, some by the vote of all, others by the lot of all, there will then be twelve different methods of electing the magistrates, without blending the two together. Of these there are two adapted to a democracy; namely, to have all the magistrates chosen out of all the people, either by vote or lot, or both; that is to say, some of them by lot, some by vote. In a free state the whole community should not elect at the same time, but some out of the whole, or out of some particular rank; and this either by lot, or vote, or both: and they should elect either out of the whole community, or out of some particular persons in it, and this both by lot and vote. In an oligarchy it is proper to choose some magistrates out of the whole body of the citizens, some by vote, some by lot, others by both: by lot is most correspondent to that form of government. In a free aristocracy, some magistrates [1300b] should be chosen out of the community in general, others out of a particular rank, or these by choice, those by lot. In a pure oligarchy, the magistrates should be chosen out of certain ranks, and by certain persons, and some of those by lot, others by both methods; but to choose them out of the whole community is not correspondent to the nature of this government. It is proper in an aristocracy for the whole community to elect their magistrates out of particular persons, and this by vote. These then are all the different ways of electing of magistrates; and they have been allotted according to the nature of the different communities; but what mode of proceeding is proper for different communities, or how the offices ought to be established, or with what powers shall be particularly explained. I mean by the powers of a magistrate, what should be his particular province, as the management of the finances or the laws of the state; for different magistrates have different powers, as that of the general of the army differs from the clerk of the market.

CHAPTER XVI

Of the three parts of which a government is formed, we now come to consider the judicial; and this also we shall divide in the same manner as we did the magisterial, into three parts. Of whom the judges shall consist, and for what causes, and how. When I say of whom, I mean whether they shall be the whole people, or some particulars; by for what causes I mean, how many different courts shall be appointed; by how, whether they shall be elected by vote or lot. Let us first determine how many different courts there ought to be. Now these are eight. The first of these is the court of inspection over the behaviour of the magistrates when they have quitted their office; the second is to punish those who have injured the public; the third is to take cognisance of those causes in which the state is a party; the fourth is to decide between magistrates and private persons, who appeal from a fine laid upon them; the fifth is to determine disputes which may arise concerning contracts of great value; the sixth is to judge between foreigners, and of murders, of which there are different species; and these may all be tried by the same judges or by different ones; for there are murders of malice prepense and of chance-medley; there is also justifiable homicide, where the fact is admitted, and the legality of it disputed.

There is also another court called at Athens the Court of Phreattae, which determines points relating to a murder committed by one who has run away, to decide whether he shall return; though such an affair happens but seldom, and in very large cities; the seventh, to determine causes wherein strangers are concerned, and this whether they are between stranger and stranger or between a stranger and a citizen. The eighth and last is for small actions, from one to five drachma's, or a little more; for these ought also to be legally determined, but not to be brought before the whole body of the judges. But without entering into any particulars concerning actions for murder, and those wherein strangers are the parties, let us particularly treat of those courts which have the jurisdiction of those matters which more particularly relate to the affairs of the community and which if not well conducted occasion seditions and commotions in the state. Now, of necessity, either all persons must have a right to judge of all these different causes, appointed for that purpose, either by vote or lot, or all of all, some of them by vote, and others by lot, or in some causes by vote, in others by lot. Thus there will be four sorts of judges. There [1301a] will be just the same number also if they are chosen out of part of the people only; for either all the judges must be chosen out of that part either by vote or lot, or some by lot and some by vote, or the judges in particular causes must be chosen some by vote, others by lot; by which means there will be the same number of them also as was mentioned. Besides, different judges may be joined together; I mean those who are chosen out of the whole people or part of them or both; so that all three may sit together in the same court, and this either by vote, lot, or both. And thus much for the different sorts of judges. Of these appointments that which admits all the community to be judges in all causes is most suitable to a democracy; the second, which appoints that certain persons shall judge all causes, to an oligarchy; the third, which appoints the whole community to be judges in some causes, but particular persons in others, to an aristocracy or free state.

BOOK V

CHAPTER I

We have now gone through those particulars we proposed to speak of; it remains that we next consider from what causes and how alterations in government arise, and of what nature they are, and to what the destruction of each state is owing; and also to what form any form of polity is most likely to shift into, and what are the means to be used for the general preservation of governments, as well as what are applicable to any particular state; and also of the remedies which are to be applied either to all in general, or to any one considered separately, when they are in a state of corruption: and here we ought first to lay down this principle, that there are many governments, all of which approve of what is just and what is analogically equal; and yet have failed from attaining thereunto, as we have already mentioned; thus democracies have arisen from supposing that those who are equal in one thing are so in every other circumstance; as, because they are equal in liberty, they are equal in everything else; and oligarchies, from supposing that those who are unequal in one thing are unequal in all; that when men are so in point of fortune, that inequality extends to everything else. Hence it follows, that those who in some respects are equal with others think it right to endeavour to partake of an equality with them in everything; and those who are superior to others endeavour to get still more; and it is this more which is the inequality: thus most states, though they have some notion of what is just, yet are almost totally wrong; and, upon this account, when either party has not that share in the administration which answers to his expectations, he becomes seditious: but those who of all others have the greatest right to be so are the last that are; namely, those who excel in virtue; for they alone can be called generally superior. There are, too, some persons of distinguished families who, because they are so, disdain to be on an equality with others, for those esteem themselves noble who boast of their ancestors' merit and fortune: these, to speak truth, are the origin and fountain from whence seditions arise. The alterations which men may propose to make in governments are two; for either they may change the state already established into some other, as when they propose to erect an oligarchy where there is a democracy; or a democracy, or free state, where there is an oligarchy, or an aristocracy from these, or those from that; or else, when they have no objection to the established government, which they like very well, but choose to have the sole management in it themselves; either in the hands of a few or one only. They will also raise commotions concerning the degree in which they would have the established power; as if, for instance, the government is an oligarchy, to have it more purely so, and in the same manner if it is a democracy, or else to have it less so; and, in like manner, whatever may be the nature of the government, either to extend or contract its powers; or else to make some alterations in some parts of it; as to establish or abolish a particular magistracy, as some persons say Lysander endeavoured to abolish the kingly power in Sparta; and Pausanias that of the ephori. Thus in Epidamnus there was an alteration in one part of the constitution, for instead of the philarchi they established a senate. It is also necessary for all the magistrates at Athens; to attend in the court of the Helisea when any new magistrate is created: the power of the archon also in that state partakes of the nature of an oligarchy: inequality is always the occasion of sedition, but not when those who are

unequal are treated in a different manner correspondent to that inequality. Thus kingly power is unequal when exercised over equals. Upon the whole, those who aim after an equality are the cause of seditions. Equality is twofold, either in number or value. Equality in number is when two things contain the same parts or the same quantity; equality in value is by proportion as two exceeds one, and three two by the same number-thus by proportion four exceeds two, and two one in the same degree, for two is the same part of four that one is of two; that is to say, half. Now, all agree in what is absolutely and simply just; but, as we have already said they dispute concerning proportionate value; for some persons, if they are equal in one respect, think themselves equal in all; others, if they are superior in one thing, think they may claim the superiority in all; from whence chiefly arise two sorts of governments, a democracy and an oligarchy; for nobility and virtue are to be found only [1302a] amongst a few; the contrary amongst the many; there being in no place a hundred of the first to be met with, but enough of the last everywhere. But to establish a government entirely upon either of these equalities is wrong, and this the example of those so established makes evident, for none of them have been stable; and for this reason, that it is impossible that whatever is wrong at the first and in its principles should not at last meet with a bad end: for which reason in some things an equality of numbers ought to take place, in others an equality in value. However, a democracy is safer and less liable to sedition than an oligarchy; for in this latter it may arise from two causes, for either the few in power may conspire against each other or against the people; but in a democracy only one; namely, against the few who aim at exclusive power; but there is no instance worth speaking of, of a sedition of the people against themselves. Moreover, a government composed of men of moderate fortunes comes much nearer to a democracy than an oligarchy, and is the safest of all such states.

CHAPTER II

Since we are inquiring into the causes of seditions and revolutions in governments, we must begin entirely with the first principles from whence they arise. Now these, so to speak, are nearly three in number; which we must first distinguish in general from each other, and endeavour to show in what situation people are who begin a sedition; and for what causes; and thirdly, what are the beginnings of political troubles and mutual quarrels with each other. Now that cause which of all others most universally inclines men to desire to bring about a change in government is that which I have already mentioned; for those who aim at equality will be ever ready for sedition, if they see those whom they esteem their equals possess more than they do, as well as those also who are not content with equality but aim at superiority, if they think that while they deserve more than, they have only equal with, or less than, their inferiors. Now, what they aim at may be either just or unjust; just, when those who are inferior are seditious, that they may be equal; unjust, when those who are equal are so, that they may be superior. These, then, are the situations in which men will be seditious: the causes for which they will be so are profit and honour; and their contrary: for, to avoid dishonour or loss of fortune by mulcts, either on their own account or their friends, they will raise a commotion in the state. The original causes which dispose men to the things which I have mentioned are, taken in one manner, seven in number, in another they are more; two of which are the same with those that have been already mentioned: but influencing in a different manner; for profit and honour sharpen men against each other; not to get the possession of them for themselves (which was what I just now supposed), but when they see others, some justly, others [1302b] unjustly, engrossing them. The other causes are haughtiness, fear, eminence, contempt, disproportionate increase in some part of the state. There are also other things which in a different manner will occasion revolutions in governments; as election intrigues, neglect, want of numbers, a too great dissimilarity of circumstances.

CHAPTER III

What influence ill-treatment and profit have for this purpose, and how they may be the causes of sedition, is almost self-evident; for when the magistrates are haughty and endeavour to make greater profits than their office gives them, they not only occasion seditions amongst each other, but against the state also who gave them their power; and this their avarice has two objects, either private property or the property of the state. What influence honours have, and how they may occasion sedition, is evident enough; for those who are themselves unhonoured while they see others honoured, will be ready for any disturbance: and these things are done unjustly when any one is either honoured or discarded contrary to their deserts, justly when they are according to them. Excessive honours are also a cause of sedition when one person or more are greater than the state and the power of the government can permit; for then a monarchy or a dynasty is usually established: on which account the ostracism was introduced in some places, as at Argos and Athens: though it is better to guard against such excesses in the founding of a state, than when they have been permitted to take place, to correct them afterward. Those who have been guilty of crimes will be the cause of sedition, through fear of punishment; as will those also who expect an injury, that they may prevent it; as was the case at Rhodes, when the nobles conspired against the people on account of the decrees they expected would pass against them. Contempt also is a cause

of sedition and conspiracies; as in oligarchies, where there are many who have no share in the administration. The rich also even in democracies, despising the disorder and anarchy which will arise, hope to better themselves by the same means which happened at Thebes after the battle of Oenophyta, where, in consequence of bad administration, the democracy was destroyed; as it was at Megara, where the power of the people was lost through anarchy and disorder; the same thing happened at Syracuse before the tyranny of Gelon; and at Rhodes there was the same sedition before the popular government was overthrown. Revolutions in state will also arise from a disproportionate increase; for as the body consists of many parts, it ought to increase proportion-ably to preserve its symmetry, which would otherwise be destroyed; as if the foot was to be four cubits long, and the rest of the body but two palms; it might otherwise [1303a] be changed into an animal of a different form, if it increase beyond proportion not only in quantity, but also in disposition of parts; so also a city consists of parts, some of which may often increase without notice, as the number of poor in democracies and free states. They will also sometimes happen by accident, as at Tarentum, a little after the Median war, where so many of the nobles were killed in a battle by the Iapygi, that from a free state the government was turned into a democracy; and at Argos, where so many of the citizens were killed by Cleomenes the Spartan, that they were obliged to admit several husbandmen to the freedom of the state: and at Athens, through the unfortunate event of the infantry battles, the number of the nobles was reduced by the soldiers being chosen from the list of citizens in the Lacedaemonian wars. Revolutions also sometimes take place in a democracy, though seldomer; for where the rich grow numerous or properties increase, they become oligarchies or dynasties. Governments also sometimes alter without seditions by a combination of the meaner people; as at Hersea: for which purpose they changed the mode of election from votes to lots, and thus got themselves chosen: and by negligence, as when the citizens admit those who are not friends to the constitution into the chief offices of the state, which happened at Orus, when the oligarchy of the archons was put an end to at the election of Heracleodorus, who changed that form of government into a democratic free state. By little and little, I mean by this, that very often great alterations silently take place in the form of government from people's overlooking small matters; as at Ambracia, where the census was originally small, but at last became nothing at all, as if a little and nothing at all were nearly or entirely alike. That state also is liable to seditions which is composed of different nations, till their differences are blended together and undistinguishable; for as a city cannot be composed of every multitude, so neither can it in every given time; for which reason all those republics which have hitherto been originally composed of different people or afterwards admitted their neighbours to the freedom of their city, have been most liable to revolutions; as when the Achaeans joined with the Traezenians in founding Sybaris; for soon after, growing more powerful than the Traezenians, they expelled them from the city; from whence came the proverb of Sybarite wickedness: and again, disputes from a like cause happened at Thurium between the Sybarites and those who had joined with them in building the city; for they assuming upon these, on account of the country being their own, were driven out. And at Byzantium the new citizens, being detected in plots against the state, were driven out of the city by force of arms. The Antisseans also, having taken in those who were banished from Chios, afterwards did the same thing; and also the Zancleans, after having taken in the people of Samos. The Appolloniats, in the Euxine Sea, having admitted their sojourners to the freedom of their city, were troubled with seditions: and the Syracusians, after the expulsion of their tyrants, having enrolled [1303b] strangers and mercenaries amongst their citizens, quarrelled with each other and came to an open rupture: and the people of Amphipolis, having taken in a colony of Chalcidians, were the greater part of them driven out of the city by them. Many persons occasion seditions in oligarchies because they think themselves ill-used in not sharing the honours of the state with their equals, as I have already mentioned; but in democracies the principal people do the same because they have not more than an equal share with others who are not equal to them. The situation of the place will also sometimes occasion disturbances in the state when the ground is not well adapted for one city; as at Clazomene, where the people who lived in that part of the town called Chytrum quarrelled with them who lived in the island, and the Colophonians with the Notians. At Athens too the disposition of the citizens is not the same, for those who live in the Piraeus are more attached to a popular government than those who live in the city properly so called; for as the interposition of a rivulet, however small, will occasion the line of the phalanx to fluctuate, so any trifling disagreement will be the cause of seditions; but they will not so soon flow from anything else as from the disagreement between virtue and vice, and next to that between poverty and riches, and so on in order, one cause having more influence than another; one of which that I last mentioned.

CHAPTER IV

But seditions in government do not arise for little things, but from them; for their immediate cause is something of moment. Now, trifling quarrels are attended with the greatest consequences when they arise between persons of the first distinction in the state, as was the case with the Syracusians in a remote period; for a revolution in the government was brought about by a quarrel between two young men who were in office, upon a love affair; for one of them being absent, the other seduced his mistress; he in his turn,

offended with this, persuaded his friend's wife to come and live with him; and upon this the whole city took part either with the one or the other, and the government was overturned: therefore every one at the beginning of such disputes ought to take care to avoid the consequences; and to smother up all quarrels which may happen to arise amongst those in power, for the mischief lies in the beginning; for the beginning is said to be half of the business, so that what was then but a little fault will be found afterwards to bear its full proportion to what follows. Moreover, disputes between men of note involve the whole city in their consequences; in Hestiaea, after the Median war: two brothers having a dispute about their paternal estate; he who was the poorer, from the other's having concealed part of the effects, and some money which his father had found, engaged the popular party on his side, while the other, who was rich, the men of fashion. And at Delphos, [1304a] a quarrel about a wedding was the beginning of all the seditions that afterwards arose amongst them; for the bridegroom, being terrified by some unlucky omen upon waiting upon the bride, went away without marrying her; which her relations resenting, contrived secretly to convey some sacred money into his pocket while he was sacrificing, and then killed him as an impious person. At Mitylene also, a dispute, which arose concerning a right of heritage, was the beginning of great evils, and a war with the Athenians, in which Paches took their city, for Timophanes, a man of fortune, leaving two daughters, Doxander, who was circumvented in procuring them in marriage for his two sons, began a sedition, and excited the Athenians to attack them, being the host of that state. There was also a dispute at Phocea, concerning a right of inheritance, between Mnasis, the father of Mnasis, and Euthucrates, the father of Onomarchus, which brought on the Phoceans the sacred war. The government too of Epidamnus was changed from a quarrel that arose from an intended marriage; for a certain man having contracted his daughter in marriage, the father of the young person to whom she was contracted, being archon, punishes him, upon which account he, resenting the affront, associated himself with those who were excluded from any share in the government, and brought about a revolution. A government may be changed either into an oligarchy, democracy, or a free state; when the magistrates, or any part of the city acquire great credit, or are increased in power, as the court of Areopagus at Athens, having procured great credit during the Median war, added firmness to their administration; and, on the other hand, the maritime force, composed of the commonalty, having gained the victory at Salamis, by their power at sea, got the lead in the state, and strengthened the popular party: and at Argos, the nobles, having gained great credit by the battle of Mantinea against the Lacedaemonians, endeavoured to dissolve the democracy. And at Syracuse, the victory in their war with the Athenians being owing to the common people, they changed their free state into a democracy: and at Chalcis, the people having taken off the tyrant Phocis, together with the nobles, immediately seized the government: and at Ambracia also the people, having expelled the tyrant Periander, with his party, placed the supreme power in themselves. And this in general ought to be known, that whosoever has been the occasion of a state being powerful, whether private persons, or magistrates, a certain tribe, or any particular part of the citizens, or the multitude, be they who they will, will be the cause of disputes in the state. For either some persons, who envy them the honours they have acquired, will begin to be seditious, or they, on account of the dignity they have acquired, will not be content with their former equality. A state is also liable to commotions when those parts of it which seem to be opposite to each other approach to an [1304b] equality, as the rich and the common people; so that the part which is between them both is either nothing at all, or too little to be noticed; for if one party is so much more powerful than the other, as to be evidently stronger, that other will not be willing to hazard the danger: for which reason those who are superior in excellence and virtue will never be the cause of seditions; for they will be too few for that purpose when compared to the many. In general, the beginning and the causes of seditions in all states are such as I have now described, and revolutions therein are brought about in two ways, either by violence or fraud: if by violence, either at first by compelling them to submit to the change when it is made. It may also be brought about by fraud in two different ways, either when the people, being at first deceived, willingly consent to an alteration in their government, and are afterwards obliged by force to abide by it: as, for instance, when the four hundred imposed upon the people by telling them that the king of Persia would supply them with money for the war against the Lacedaemonians; and after they had been guilty of this falsity, they endeavoured to keep possession of the supreme power; or when they are at first persuaded and afterwards consent to be governed: and by one of these methods which I have mentioned are all revolutions in governments brought about.

CHAPTER V

We ought now to inquire into those events which will arise from these causes in every species of government. Democracies will be most subject to revolutions from the dishonesty of their demagogues; for partly, by informing against men of property, they induce them to join together through self-defence, for a common fear will make the greatest enemies unite; and partly by setting the common people against them: and this is what any one may continually see practised in many states. In the island of Cos, for instance, the democracy was subverted by the wickedness of the demagogues, for the nobles entered into a combination with each other. And at Rhodes the demagogues, by distributing of bribes, prevented the people from paying the trierarchs what was owing to

them, who were obliged by the number of actions they were harassed with to conspire together and destroy the popular state. The same thing was brought about at Heraclea, soon after the settlement of the city, by the same persons; for the citizens of note, being ill treated by them, quitted the city, but afterwards joining together they returned and overthrew the popular state. Just in the same manner the democracy was destroyed in Megara; for there the demagogues, to procure money by confiscations, drove out the nobles, till the number of those who were banished was considerable, who, [1305a] returning, got the better of the people in a battle, and established an oligarchy. The like happened at Cume, during the time of the democracy, which Thrasymachus destroyed; and whoever considers what has happened in other states may perceive the same revolutions to have arisen from the same causes. The demagogues, to curry favour with the people, drive the nobles to conspire together, either by dividing their estates, or obliging them to spend them on public services, or by banishing them, that they may confiscate the fortunes of the wealthy. In former times, when the same person was both demagogue and general, the democracies were changed into tyrannies; and indeed most of the ancient tyrannies arose from those states: a reason for which then subsisted, but not now; for at that time the demagogues were of the soldiery; for they were not then powerful by their eloquence; but, now the art of oratory is cultivated, the able speakers are at present the demagogues; but, as they are unqualified to act in a military capacity, they cannot impose themselves on the people as tyrants, if we except in one or two trifling instances. Formerly, too, tyrannies were more common than now, on account of the very extensive powers with which some magistrates were entrusted: as the prytanes at Miletus; for they were supreme in many things of the last consequence; and also because at that time the cities were not of that very great extent, the people in general living in the country, and being employed in husbandry, which gave them, who took the lead in public affairs, an opportunity, if they had a turn for war, to make themselves tyrants; which they all did when they had gained the confidence of the people; and this confidence was their hatred to the rich. This was the case of Pisistratus at Athens, when he opposed the Pediaci: and of Theagenes in Megara, who slaughtered the cattle belonging to the rich, after he had seized those who kept them by the riverside. Dionysius also, for accusing Daphnseus and the rich, was thought worthy of being raised to a tyranny, from the confidence which the people had of his being a popular man in consequence of these enmities. A government shall also alter from its ancient and approved democratic form into one entirely new, if there is no census to regulate the election of magistrates; for, as the election is with the people, the demagogues who are desirous of being in office, to flatter them, will endeavour with all their power to make the people superior even to the laws. To prevent this entirely, or at least in a great measure, the magistrates should be elected by the tribes, and not by the people at large. These are nearly the revolutions to which democracies are liable, and also the causes from whence they arise.

CHAPTER VI

There are two things which of all others most evidently occasion a revolution in an oligarchy; one is, when the people are ill used, for then every individual is ripe for [1305b] sedition; more particularly if one of the oligarchy should happen to be their leader; as Lygdamis, at Naxus, who was afterwards tyrant of that island. Seditions also which arise from different causes will differ from each other; for sometimes a revolution is brought about by the rich who have no share in the administration, which is in the hands of a very few indeed: and this happened at Massilia, Ister, Heraclea, and other cities; for those who had no share in the government ceased not to raise disputes till they were admitted to it: first the elder brothers, and then the younger also: for in some places the father and son are never in office at the same time; in others the elder and younger brother: and where this is observed the oligarchy partakes something of a free state. At Ister it was changed into a democracy; in Heraclea, instead of being in the hands of a few, it consisted of six hundred. At Cnidus the oligarchy was destroyed by the nobles quarrelling with each other, because the government was in the hands of so few: for there, as we have just mentioned, if the father was in office, the son could not; or, if there were many brothers, the eldest only; for the people, taking advantage of their disputes, elected one of the nobles for their general, and got the victory: for where there are seditions government is weak. And formerly at Erithria, during the oligarchy of the Basilides, although the state flourished greatly under their excellent management, yet because the people were displeased that the power should be in the hands of so few, they changed the government. Oligarchies also are subject to revolutions, from those who are in office therein, from the quarrels of the demagogues with each other. The demagogues are of two sorts; one who flatter the few when they are in power: for even these have their demagogues; such was Charicles at Athens, who had great influence over the thirty; and, in the same manner, Phrynichus over the four hundred. The others are those demagogues who have a share in the oligarchy, and flatter the people: such were the state-guardians at Larissa, who flattered the people because they were elected by them. And this will always happen in every oligarchy where the magistrates do not elect themselves, but are chosen out of men either of great fortune or certain ranks, by the soldiers or by the people; as was the custom at Abydos. And when the judicial department is not in the hands of the supreme power, the demagogues, favouring the people in their causes, overturn the

government; which happened at Heraclea in Pontus: and also when some desire to contract the power of the oligarchy into fewer hands; for those who endeavour to support an equality are obliged to apply to the people for assistance. An oligarchy is also subject to revolutions when the nobility spend their fortunes by luxury; for such persons are desirous of innovations, and either endeavour to be tyrants themselves or to support others in being so, as [1306a] Hypparinus supported Dionysius of Syracuse. And at Amphipolis one Cleotimus collected a colony of Chalcidians, and when they came set them to quarrel with the rich: and at AEgina a certain person who brought an action against Chares attempted on that account to alter the government. Sometimes they will try to raise commotions, sometimes they will rob the public, and then quarrel with each other, or else fight with those who endeavour to detect them; which was the case at Apollonia in Pontus. But if the members of an oligarchy agree among themselves the state is not very easily destroyed without some external force. Pharsalus is a proof of this, where, though the place is small, yet the citizens have great power, from the prudent use they make of it. An oligarchy also will be destroyed when they create another oligarchy under it; that is, when the management of public affairs is in the hands of a few, and not equally, but when all of them do not partake of the supreme power, as happened once at Elis, where the supreme power in general was in the hands of a very few out of whom a senate was chosen, consisting but of ninety, who held their places for life; and their mode of election was calculated to preserve the power amongst each other's families, like the senators at Lacedaemon. An oligarchy is liable to a revolution both in time of war and peace; in war, because through a distrust in the citizens the government is obliged to employ mercenary troops, and he to whom they give the command of the army will very often assume the tyranny, as Timophanes did at Corinth; and if they appoint more than one general, they will very probably establish a dynasty: and sometimes, through fear of this, they are forced to let the people in general have some share in the government, because they are obliged to employ them. In peace, from their want of confidence in each other, they will entrust the guardianship of the state to mercenaries and their general, who will be an arbiter between them, and sometimes become master of both, which happened at Larissa, when Simos and the Aleuadae had the chief power. The same thing happened at Abydos, during the time of the political clubs, of which Iphiades' was one. Commotions also will happen in an oligarchy from one party's overbearing and insulting another, or from their quarrelling about their law-suits or marriages. How their marriages, for instance, will have that effect has been already shown: and in Eretria, Diagoras destroyed the oligarchy of the knights upon the same account. A sedition also arose at Heraclea, from a certain person being condemned by the court; and at Thebes, in consequence of a man's being guilty of adultery; [1306b] the punishment indeed which Eurytion suffered at Heraclea was just, yet it was illegally executed: as was that at Thebes upon Archias; for their enemies endeavoured to have them publicly bound in the pillory. Many revolutions also have been brought about in oligarchies by those who could not brook the despotism which those persons assumed who were in power, as at Cnidus and Chios. Changes also may happen by accident in what we call a free state and in an oligarchy; wheresoever the senators, judges, and magistrates are chosen according to a certain census; for it often happens that the highest census is fixed at first; so that a few only could have a share in the government, in an oligarchy, or in a free state those of moderate fortunes only; when the city grows rich, through peace or some other happy cause, it becomes so little that every one's fortune is equal to the census, so that the whole community may partake of all the honours of government; and this change sometimes happens by little and little, and insensible approaches, sometimes quicker. These are the revolutions and seditions that arise in oligarchies, and the causes to which they are owing: and indeed both democracies and oligarchies sometimes alter, not into governments of a contrary form, but into those of the same government; as, for instance, from having the supreme power in the law to vest it in the ruling party, or the contrariwise.

CHAPTER VII

Commotions also arise in aristocracies, from there being so few persons in power (as we have already observed they do in oligarchies, for in this particular an aristocracy is most near an oligarchy, for in both these states the administration of public affairs is in the hands of a few; not that this arises from the same cause in both, though herein they chiefly seem alike): and these will necessarily be most likely to happen when the generality of the people are high-spirited and think themselves equal to each other in merit; such were those at Lacedasmon, called the Partheniae (for these were, as well as others, descendants of citizens), who being detected in a conspiracy against the state, were sent to found Tarentum. They will happen also when some great men are disgraced by those who have received higher honours than themselves, to whom they are no ways inferior in abilities, as Lysander by the kings: or when an ambitious man cannot get into power, as Cinadon, who, in the reign of Agesilaus, was chief in a conspiracy against the Spartans: and also when some are too poor and others too rich, which will most frequently happen in time of war; as at Lacedaemon during the Messenian war, which is proved by a poem of Tyrtaeus, [1307a] called "Eunomia;" for some persons being reduced thereby, desired that the lands might be divided: and also when some person of very high rank might still be higher if he could rule alone, which seemed to be Pausanias's intention at Lacedaemon, when he was their general in the Median

war, and Anno's at Carthage. But free states and aristocracies are mostly destroyed from want of a fixed administration of public affairs; the cause of which evil arises at first from want of a due mixture of the democratic and the oligarchic parts in a free state; and in an aristocracy from the same causes, and also from virtue not being properly joined to power; but chiefly from the two first, I mean the undue mixture of the democratic and oligarchic parts; for these two are what all free states endeavour to blend together, and many of those which we call aristocracies, in this particular these states differ from each other, and on this account the one of them is less stable than the other, for that state which inclines most to an oligarchy is called an aristocracy, and that which inclines most to a democracy is called a free state; on which account this latter is more secure than the former, for the wider the foundation the securer the building, and it is ever best to live where equality prevails. But the rich, if the community gives them rank, very often endeavour to insult and tyrannise over others. On the whole, whichever way a government inclines, in that it will settle, each party supporting their own. Thus a free state will become a democracy; an aristocracy an oligarchy; or the contrary, an aristocracy may change into a democracy (for the poor, if they think themselves injured, directly take part with the contrary side) and a free state into an oligarchy. The only firm state is that where every one enjoys that equality he has a right to and fully possesses what is his own. And what I have been speaking of happened to the Thurians; for the magistrates being elected according to a very high census, it was altered to a lower, and they were subdivided into more courts, but in consequence of the nobles possessing all the land, contrary to law; the state was too much of an oligarchy, which gave them an opportunity of encroaching greatly on the rest of the people; but these, after they had been well inured to war, so far got the better of their guards as to expel every one out of the country who possessed more than he ought. Moreover, as all aristocracies are free oligarchies, the nobles therein endeavour to have rather too much power, as at Lacedaemon, where property is now in the hands of a few, and the nobles have too much liberty to do as they please and make such alliances as they please. Thus the city of the Locrians was ruined from an alliance with Dionysius; which state was neither a democracy nor well-tempered aristocracy. But an aristocracy chiefly approaches to a secret change by its being destroyed by degrees, as we [1307b] have already said of all governments in general; and this happens from the cause of the alteration being trifling; for whenever anything which in the least regards the state is treated with contempt, after that something else, and this of a little more consequence, will be more easily altered, until the whole fabric of government is entirely subverted, which happened in the government of Thurium; for the law being that they should continue soldiers for five years, some young men of a martial disposition, who were in great esteem amongst their officers, despising those who had the management of public affairs, and imagining they could easily accomplish their intention, first endeavoured to abolish this law, with a view of having it lawful to continue the same person perpetually in the military, perceiving that the people would readily appoint them. Upon this, the magistrates who are called counselors first joined together with an intention to oppose it but were afterwards induced to agree to it, from a belief that if that law was not repealed they would permit the management of all other public affairs to remain in their hands; but afterwards, when they endeavoured to restrain some fresh alterations that were making, they found that they could do nothing, for the whole form of government was altered into a dynasty of those who first introduced the innovations. In short, all governments are liable to be destroyed either from within or from without; from without when they have for their neighbour a state whose policy is contrary to theirs, and indeed if it has great power the same thing will happen if it is not their neighbour; of which both the Athenians and the Lacedaemonians are a proof; for the one, when conquerors everywhere destroyed the oligarchies; the other the democracies. These are the chief causes of revolutions and dissensions in governments.

CHAPTER VIII

We are now to consider upon what the preservation of governments in general and of each state in particular depends; and, in the first place, it is evident that if we are right in the causes we have assigned for their destruction, we know also the means of their preservation; for things contrary produce contraries: but destruction and preservation are contrary to each other. In well-tempered governments it requires as much care as anything whatsoever, that nothing be done contrary to law: and this ought chiefly to be attended to in matters of small consequence; for an illegality that approaches insensibly, approaches secretly, as in a family small expenses continually repeated consume a man's income; for the understanding is deceived thereby, as by this false argument; if every part is little, then the whole is little: now, this in one sense is true, in another is false, for the whole and all the parts together are large, though made up of small parts. The first therefore of anything is what the state ought to guard against. In the next place, no credit ought to be given to those who endeavour to deceive the people with false pretences; for they will be [1308a] confuted by facts. The different ways in which they will attempt to do this have been already mentioned. You may often perceive both aristocracies and oligarchies continuing firm, not from the stability of their forms of government, but from the wise conduct of the magistrates, both towards those who have a part in the management of public affairs, and those also who have not: towards those who have not, by never injuring them; and also introducing those who are of most consequence amongst them into office; nor

disgracing those who are desirous of honour; or encroaching on the property of individuals; towards those who have, by behaving to each other upon an equality; for that equality which the favourers of a democracy desire to have established in the state is not only just, but convenient also, amongst those who are of the same rank: for which reason, if the administration is in the hands of many, those rules which are established in democracies will be very useful; as to let no one continue in office longer than six months: that all those who are of the same rank may have their turn; for between these there is a sort of democracy: for which reason demagogues are most likely to arise up amongst them, as we have already mentioned: besides, by this means both aristocracies and democracies will be the less liable to be corrupted into dynasties, because it will not be so easy for those who are magistrates for a little to do as much mischief as they could in a long time: for it is from hence that tyrannies arise in democracies and oligarchies; for either those who are most powerful in each state establish a tyranny, as the demagogues in the one, the dynasties in the other, or the chief magistrates who have been long in power. Governments are sometimes preserved not only by having the means of their corruption at a great distance, but also by its being very near them; for those who are alarmed at some impending evil keep a stricter hand over the state; for which reason it is necessary for those who have the guardianship of the constitution to be able to awaken the fears of the people, that they may preserve it, and not like a night-guard to be remiss in protecting the state, but to make the distant danger appear at hand. Great care ought also to be used to endeavour to restrain the quarrels and disputes of the nobles by laws, as well as to prevent those who are not already engaged in them from taking a part therein; for to perceive an evil at its very first approach is not the lot of every one, but of the politician. To prevent any alteration taking place in an oligarchy or free state on account of the census, if that happens to continue the same while the quantity of money is increased, it will be useful to take a general account of the whole amount of it in former times, to compare it with the present, and to do this every year in those cities where the census is yearly, [1308b] in larger communities once in three or five years; and if the whole should be found much larger or much less than it was at the time when the census was first established in the state, let there be a law either to extend or contract it, doing both these according to its increase or decrease; if it increases making the census larger, if it decreases smaller: and if this latter is not done in oligarchies and free states, you will have a dynasty arise in the one, an oligarchy in the other: if the former is not, free states will be changed into democracies, and oligarchies into free states or democracies. It is a general maxim in democracies, oligarchies, monarchies, and indeed in all governments, not to let any one acquire a rank far superior to the rest of the community, but rather to endeavour to confer moderate honours for a continuance than great ones for a short time; for these latter spoil men, for it is not every one who can bear prosperity: but if this rule is not observed, let not those honours which were conferred all at once be all at once taken away, but rather by degrees. But, above all things, let this regulation be made by the law, that no one shall have too much power, either by means of his fortune or friends; but if he has, for his excess therein, let it be contrived that he shall quit the country. Now, as many persons promote innovations, that they may enjoy their own particular manner of living, there ought to be a particular officer to inspect the manners of every one, and see that these are not contrary to the genius of the state in which he lives, whether it may be an oligarchy, a democracy, or any other form of government; and, for the same reason, those should be guarded against who are most prosperous in the city: the means of doing which is by appointing those who are otherwise to the business and the offices of the state. I mean, to oppose men of account to the common people, the poor to the rich, and to blend both these into one body, and to increase the numbers of those who are in the middle rank; and this will prevent those seditions which arise from an inequality of condition. But above all, in every state it is necessary, both by the laws and every other method possible, to prevent those who are employed by the public from being venal, and this particularly in an oligarchy; for then the people will not be so much displeased from seeing themselves excluded from a share in the government (nay, they will rather be glad to have leisure to attend their private affairs) as at suspecting that the officers of the state steal the public money, then indeed they are afflicted with double concern, both because they are deprived of the honours of the state, and pillaged by those who enjoy them. There is one method of blending together a democracy and an aristocracy, [1309a] if office brought no profit; by which means both the rich and the poor will enjoy what they desire; for to admit all to a share in the government is democratical; that the rich should be in office is aristocratical. This must be done by letting no public employment whatsoever be attended with any emolument; for the poor will not desire to be in office when they can get nothing by it, but had rather attend to their own affairs: but the rich will choose it, as they want nothing of the community. Thus the poor will increase their fortunes by being wholly employed in their own concerns; and the principal part of the people will not be governed by the lower sort. To prevent the exchequer from being defrauded, let all public money be delivered out openly in the face of the whole city, and let copies of the accounts be deposited in the different wards tribes, and divisions. But, as the magistrates are to execute their offices without any advantages, the law ought to provide proper honours for those who execute them well. In democracies also it is necessary that the rich should be protected, by not permitting their lands to be divided, nor even the produce of them, which in some states is done unperceivably. It would be also better if the people would prevent them when they offer to exhibit a number of unnecessary and yet expensive public entertainments of plays, music, processions, and the like. In an oligarchy it is necessary to

take great care of the poor, and allot them public employments which are gainful; and, if any of the rich insult them, to let their punishment be severer than if they insulted one of their own rank; and to let estates pass by affinity, and not gift: nor to permit any person to have more than one; for by this means property will be more equally divided, and the greater part of the poor get into better circumstances. It is also serviceable in a democracy and an oligarchy to allot those who take no part in public affairs an equality or a preference in other things; the rich in a democracy, to the poor in an oligarchy: but still all the principal offices in the state to be filled only by those who are best qualified to discharge them.

CHAPTER IX

There are three qualifications necessary for those who fill the first departments in government; first of all, an affection for the established constitution; second place, abilities every way completely equal to the business of their office; in the third, virtue and justice correspondent to the nature of that particular state they are placed in; for if justice is not the same in all states, it is evident that there must be different species thereof. There may be some doubt, when all these qualifications do not in the same persons, in what manner the choice shall be made; as for instance, suppose that one person is an accomplished general, but a bad man and no friend to the [1309b] constitution; another is just and a friend to it, which shall one prefer? we should then consider of two qualities, which of them the generality possess in a greater degree, which in a less; for which reason in the choice of a general we should regard his courage more than his virtue as the more uncommon quality; as there are fewer capable of conducting an army than there are good men: but, to protect the state or manage the finances, the contrary rule should be followed; for these require greater virtue than the generality are possessed of, but only that knowledge which is common to all. It may be asked, if a man has abilities equal to his appointment in the state, and is affectionate to the constitution, what occasion is there for being virtuous, since these two things alone are sufficient to enable him to be useful to the public? it is, because those who possess those qualities are often deficient in prudence; for, as they often neglect their own affairs, though they know them and love themselves, so nothing will prevent their serving the public in the same manner. In short, whatsoever the laws contain which we allow to be useful to the state contributes to its preservation: but its first and principal support is (as has been often insisted upon) to have the number of those who desire to preserve it greater than those who wish to destroy it. Above all things that ought not to be forgotten which many governments now corrupted neglect; namely, to preserve a mean. For many things seemingly favourable to a democracy destroy a democracy, and many things seemingly favourable to an oligarchy destroy an oligarchy. Those who think this the only virtue extend it to excess, not considering that as a nose which varies a little from perfect straightness, either towards a hook nose or a flat one, may yet be beautiful and agreeable to look at; but if this particularity is extended beyond measure, first of all the properties of the part is lost, but at last it can hardly be admitted to be a nose at all, on account of the excess of the rise or sinking: thus it is with other parts of the human body; so also the same thing is true with respect to states; for both an oligarchy and a democracy may something vary from their most perfect form and yet be well constituted; but if any one endeavours to extend either of them too far, at first he will make the government the worse for it, but at last there will be no government at all remaining. The lawgiver and the politician therefore should know well what preserves and what destroys a democracy or an oligarchy, for neither the one nor the other can possibly continue without rich and poor: but that whenever an entire equality of circumstances [1310a] prevails, the state must necessarily become of another form; so that those who destroy these laws, which authorise an inequality in property, destroy the government. It is also an error in democracies for the demagogues to endeavour to make the common people superior to the laws; and thus by setting them at variance with the rich, dividing one city into two; whereas they ought rather to speak in favour of the rich. In oligarchies, on the contrary, it is wrong to support those who are in administration against the people. The oaths also which they take in an oligarchy ought to be contrary to what they now are; for, at present, in some places they swear, "I will be adverse to the common people, and contrive all I can against them;" whereas they ought rather to suppose and pretend the contrary; expressing in their oaths, that they will not injure the people. But of all things which I have mentioned, that which contributes most to preserve the state is, what is now most despised, to educate your children for the state; for the most useful laws, and most approved by every statesman, will be of no service if the citizens are not accustomed to and brought up in the principles of the constitution; of a democracy, if that is by law established; of an oligarchy, if that is; for if there are bad morals in one man, there are in the city. But to educate a child fit for the state, it must not be done in the manner which would please either those who have the power in an oligarchy or those who desire a democracy, but so as they may be able to conduct either of these forms of governments. But now the children of the magistrates in an oligarchy are brought up too delicately, and the children of the poor hardy with exercise and labour; so that they are both desirous of and able to promote innovations. In democracies of the purest form they pursue a method which is contrary to their welfare; the reason of which is, that they define liberty wrong: now, there are two things which seem to be the objects of a democracy, that the people in general should possess the supreme power,

and all enjoy freedom; for that which is just seems to be equal, and what the people think equal, that is a law: now, their freedom and equality consists in every one's doing what they please: that is in such a democracy every one may live as he likes; "as his inclination guides," in the words of Euripides: but this is wrong, for no one ought to think it slavery to live in subjection to government, but protection. Thus I have mentioned the causes of corruption in different states, and the means of their preservation.

CHAPTER X

It now remains that we speak of monarchies, their causes of corruption, and means of preservation; and indeed almost the same things which have been said of other governments happen to kingdoms and tyrannies; for a kingdom partakes of an aristocracy, a tyranny of the worst species of an oligarchy and democracy; for which reason it is the worst that man can submit to, as being composed of two, both of which are bad, and collectively retains all the corruptions and all the defects of both these states. These two species of monarchies arise from principles contrary to each other: a kingdom is formed to protect the better sort of people against the multitude, and kings are appointed out of those, who are chosen either for their superior virtue and actions flowing from virtuous principles, or else from their noble descent; but a tyrant is chosen out of the meanest populace; an enemy to the better sort, that the common people may not be oppressed by them. That this is true experience convinces us; for the generality of tyrants were indeed mere demagogues, who gained credit with the people by oppressing the nobles. Some tyrannies were established in this manner after the cities were considerably enlarged--others before that time, by kings who exceeded the power which their country allowed them, from a desire of governing despotically: others were founded by those who were elected to the superior offices in the state; for formerly the people appointed officers for life, who came to be at the head of civil and religious affairs, and these chose one out of their body in whom the supreme power over all the magistrates was placed. By all these means it was easy to establish a tyranny, if they chose it; for their power was ready at hand, either by their being kings, or else by enjoying the honours of the state; thus Phidon at Argos and other tyrants enjoyed originally the kingly power; Phalaris and others in Ionia, the honours of the state. Pansetius at Leontium, Cypselus at Corinth, Pisistratus at Athens, Dionysius at Syracuse, and others, acquired theirs by having been demagogues. A kingdom, as we have said, partakes much of the nature of an aristocracy, and is bestowed according to worth, as either virtue, family, beneficent actions, or these joined with power; for those who have been benefactors to cities and states, or have it in their powers to be so, have acquired this honour, and those who have prevented a people from falling into slavery by war, as Codrus, or those who have freed them from it, as Cyrus, or the founders of cities, or settlers of colonies, as the kings of Sparta, Macedon, and Molossus. A king desires to be the guardian of his people, that those who have property may be secure in the possession of it, and that the people in general meet with no injury; but a tyrant, as has been often said, has no regard to the common good, except for his own advantage; his only object is pleasure, but a king's is virtue: what a tyrant therefore is ambitious of engrossing is wealth, but a king rather honour. The guards too of a king are citizens, a tyrant's foreigners.

That a tyranny contains all that is bad both in a democracy and an oligarchy is evident; with an oligarchy it has for its end gain, as the only means of providing the tyrant with guards and the luxuries of life; like that it places no confidence in the people; and therefore deprives them of the use of arms: it is also common to them both to persecute the populace, to drive them out of the city and their own habitations. With a democracy it quarrels with the nobles, and destroys them both publicly and privately, or drives them into banishment, as rivals and an impediment to the government; hence naturally arise conspiracies both amongst those who desire to govern and those who desire not to be slaves; hence arose Periander's advice to Thrasybulus to take off the tallest stalks, hinting thereby, that it was necessary to make away with the eminent citizens. We ought then in reason, as has been already said, to account for the changes which arise in a monarchy from the same causes which produce them in other states: for, through injustice received, fear, and contempt, many of those who are under a monarchical government conspire against it; but of all species of injustice, injurious contempt has most influence on them for that purpose: sometimes it is owing to their being deprived of their private fortunes. The dissolution too of a kingdom and a tyranny are generally the same; for monarchs abound in wealth and honour, which all are desirous to obtain. Of plots: some aim at the life of those who govern, others at their government; the first arises from hatred to their persons; which hatred may be owing to many causes, either of which will be sufficient to excite their anger, and the generality of those who are under the influence of that passion will join in a conspiracy, not for the sake of their own advancement, but for revenge. Thus the plot against the children of Pisistratus arose from their injurious treatment of Harmodius's sister, and insulting him also; for Harmodius resenting the injury done to his sister, and Aristogiton the injury done to Harmodius. Periander the tyrant of Ambracia also lost his life by a conspiracy, for some improper liberties he took with a boy in his cups: and Philip was slain by Pausanias for neglecting to revenge him of the affront he had received from Attains; as was Amintas the Little by Darda, for insulting him on account of his age; and the eunuch by Evagoras the Cyprian in revenge for having taken his son's wife away from him....

Many also who have had their bodies scourged with stripes have, through resentment, either killed those who caused them to be inflicted or conspired against them, even when they had kingly power, as at Mitylene Megacles, joining with his friends, killed the Penthelidee, who used to go about striking those they met with clubs. Thus, in later times, Smendes killed Penthilus for whipping him and dragging him away from his wife. Decamnichus also was the chief cause of the conspiracy against Archelaus, for he urged others on: the occasion of his resentment was his having delivered him to Euripides the poet to be scourged; for Euripides was greatly offended with him for having said something of the foulness of his breath. And many others have been killed or conspired against on the same account. Fear too is a cause which produces the same effects, as well in monarchies as in other states: thus Artabanes conspired against Xerxes through fear of punishment for having hanged Darius according to his orders, whom he supposed he intended to pardon, as the order was given at supper-time. Some kings also have been [1312a] dethroned and killed in consequence of the contempt they were held in by the people; as some one conspired against Sardanapalus, having seen him spinning with his wife, if what is related of him is true, or if not of him, it may very probably be true of some one else. Dion also conspired against Dionysius the Younger, seeing his subjects desirous of a conspiracy, and that he himself was always drunk: and even a man's friends will do this if they despise him; for from the confidence he places in them, they think that they shall not be found out. Those also who think they shall gain his throne will conspire against a king through contempt; for as they are powerful themselves, and despise the danger, on account of their own strength, they will readily attempt it. Thus a general at the head of his army will endeavour to dethrone the monarch, as Cyrus did Astyages, despising both his manner of life and his forces; his forces for want of action, his life for its effeminacy: thus Suthes, the Thracian, who was general to Amadocus, conspired against him. Sometimes more than one of these causes will excite men to enter into conspiracies, as contempt and desire of gain; as in the instance of Mithridates against Ariobarzanes. Those also who are of a bold disposition, and have gained military honours amongst kings, will of all others be most like to engage in sedition; for strength and courage united inspire great bravery: whenever, therefore, these join in one person, he will be very ready for conspiracies, as he will easily conquer. Those who conspire against a tyrant through love of glory and honour have a different motive in view from what I have already mentioned; for, like all others who embrace danger, they have only glory and honour in view, and think, not as some do, of the wealth and pomp they may acquire, but engage in this as they would in any other noble action, that they may be illustrious and distinguished, and destroy a tyrant, not to succeed in his tyranny, but to acquire renown. No doubt but the number of those who act upon this principle is small, for we must suppose they regard their own safety as nothing in case they should not succeed, and must embrace the opinion of Dion (which few can do) when he made war upon Dionysius with a very few troops; for he said, that let the advantage he made be ever so little it would satisfy him to have gained it; and that, should it be his lot to die the moment he had gained footing in his country, he should think his death sufficiently glorious. A tyranny also is exposed to the same destruction as all other states are, from too powerful neighbours: for it is evident, that an opposition of principles will make them desirous of subverting it; and what they desire, all who can, do: and there is a principle of opposition in one state to another, as a democracy against a tyranny, as says Hesiod, "a potter against a potter;" for the extreme of a democracy is a tyranny; a kingly power against an aristocracy, from their different forms of government--for which reason the Lacedaemonians destroyed many tyrannies; as did the Syracusians during the prosperity of their state. Nor are they only destroyed from without, but also from within, when those who have no share in the power bring about a revolution, as happened to Gelon, and lately to Dionysius; to the first, by means of Thrasybulus, the brother of Hiero, who nattered Gelon's son, and induced him to lead a life of pleasure, that he himself might govern; but the family joined together and endeavoured to support the tyranny and expel Thrasybulus; but those whom they made of their party seized the opportunity and expelled the whole family. Dion made war against his relation Dionysius, and being assisted by the people, first expelled and then killed him. As there are two causes which chiefly induce men to conspire against tyrants, hatred and contempt, one of these, namely hatred, seems inseparable from them. Contempt also is often the cause of their destruction: for though, for instance, those who raised themselves to the supreme power generally preserved it; but those who received it from them have, to speak truth, almost immediately all of them lost it; for, falling into an effeminate way of life, they soon grew despicable, and generally fell victims to conspiracies. Part of their hatred may be very fitly ascribed to anger; for in some cases this is their motive to action: for it is often a cause which impels them to act more powerfully than hatred, and they proceed with greater obstinacy against those whom they attack, as this passion is not under the direction of reason. Many persons also indulge this passion through contempt; which occasioned the fall of the Pisistratidae and many others. But hatred is more powerful than anger; for anger is accompanied with grief, which prevents the entrance of reason; but hatred is free from it. In short, whatever causes may be assigned as the destruction of a pure oligarchy unmixed with any other government and an extreme democracy, the same may be applied to a tyranny; for these are divided tyrannies.

Kingdoms are seldom destroyed by any outward attack; for which reason they are generally very stable; but they have many causes of subversion within; of which two are the principal; one is when those who are in power [1313a] excite a sedition, the other when they endeavour to establish a tyranny by assuming greater power than the law gives them. A kingdom, indeed, is not what we ever see erected in our times, but rather monarchies and tyrannies; for a kingly government is one that is voluntarily submitted to, and its supreme power admitted upon great occasions: but where many are equal, and there are none in any respect so much better than another as to be qualified for the greatness and dignity of government over them, then these equals will not willingly submit to be commanded; but if any one assumes the government, either by force or fraud, this is a tyranny. To what we have already said we shall add, the causes of revolutions in an hereditary kingdom. One of these is, that many of those who enjoy it are naturally proper objects of contempt only: another is, that they are insolent while their power is not despotic; but they possess kingly honours only. Such a state is soon destroyed; for a king exists but while the people are willing to obey, as their submission to him is voluntary, but to a tyrant involuntary. These and such-like are the causes of the destruction of monarchies.

CHAPTER XI

Monarchies, in a word, are preserved by means contrary to what I have already mentioned as the cause of their destruction; but to speak to each separately: the stability of a kingdom will depend upon the power of the king's being kept within moderate bounds; for by how much the less extensive his power is, by so much the longer will his government continue; for he will be less despotic and more upon an equality of condition with those he governs; who, on that account, will envy him the less.

It was on this account that the kingdom of the Molossi continued so long; and the Lacedaemonians from their government's being from the beginning divided into two parts, and also by the moderation introduced into the other parts of it by Theopompus, and his establishment of the ephori; for by taking something from the power he increased the duration of the kingdom, so that in some measure he made it not less, but bigger; as they say he replied to his wife, who asked him if he was not ashamed to deliver down his kingdom to his children reduced from what he received it from his ancestors? No, says he, I give it him more lasting. Tyrannies are preserved two ways most opposite to each other, one of which is when the power is delegated from one to the other, and in this manner many tyrants govern in their states. Report says that Periander founded many of these. There are also many of them to be met with amongst the Persians. What has been already mentioned is as conducive as anything can be to preserve a tyranny; namely, to keep down those who are of an aspiring disposition, to take off those who will not submit, to allow no public meals, no clubs, no education, nothing at all, but to guard against everything that gives rise to high spirits or mutual confidence; nor to suffer the learned meetings of those who are at leisure to hold conversation with each other; and to endeavour by every means possible to keep all the people strangers to each other; for knowledge increases mutual confidence; and to oblige all strangers to appear in public, and to live near the city-gate, that all their actions may be sufficiently seen; for those who are kept like slaves seldom entertain any noble thoughts: in short, to imitate everything which the Persians and barbarians do, for they all contribute to support slavery; and to endeavour to know what every one who is under their power does and says; and for this purpose to employ spies: such were those women whom the Syracusians called potagogides Hiero also used to send out listeners wherever there was any meeting or conversation; for the people dare not speak with freedom for fear of such persons; and if any one does, there is the less chance of its being concealed; and to endeavour that the whole community should mutually accuse and come to blows with each other, friend with friend, the commons with the nobles, and the rich with each other. It is also advantageous for a tyranny that all those who are under it should be oppressed with poverty, that they may not be able to compose a guard; and that, being employed in procuring their daily bread, they may have no leisure to conspire against their tyrants. The Pyramids of Egypt are a proof of this, and the votive edifices of the Cyposelidse, and the temple of Jupiter Olympus, built by the Pisistratidae, and the works of Polycrates at Samos; for all these produced one end, the keeping the people poor. It is necessary also to multiply taxes, as at Syracuse; where Dionysius in the space of five years collected all the private property of his subjects into his own coffers. A tyrant also should endeavour to engage his subjects in a war, that they may have employment and continually depend upon their general. A king is preserved by his friends, but a tyrant is of all persons the man who can place no confidence in friends, as every one has it in his desire and these chiefly in their power to destroy him. All these things also which are done in an extreme democracy should be done in a tyranny, as permitting great licentiousness to the women in the house, that they may reveal their husbands' secrets; and showing great indulgence to slaves also for the same reason; for slaves and women conspire not against tyrants: but when they are treated with kindness, both of them are abettors of tyrants, and extreme democracies also; and the people too in such a state desire to be despotic. For which reason flatterers are in repute in both these: the demagogue in the democracy, for he is the proper flatterer of the people; among tyrants, he who will servilely adapt himself to their humours; for this is the business of [1314a] flatterers. And for this reason tyrants always love the worst of wretches, for they rejoice in being flattered, which no man of a liberal

spirit will submit to; for they love the virtuous, but flatter none. Bad men too are fit for bad purposes; "like to like," as the proverb says. A tyrant also should show no favour to a man of worth or a freeman; for he should think, that no one deserved to be thought these but himself; for he who supports his dignity, and is a friend to freedom, encroaches upon the superiority and the despotism of the tyrant: such men, therefore, they naturally hate, as destructive to their government. A tyrant also should rather admit strangers to his table and familiarity than citizens, as these are his enemies, but the others have no design against him. These and such-like are the supports of a tyranny, for it comprehends whatsoever is wicked. But all these things may be comprehended in three divisions, for there are three objects which a tyranny has in view; one of which is, that the citizens should be of poor abject dispositions; for such men never propose to conspire against any one. The second is, that they should have no confidence in each other; for while they have not this, the tyrant is safe enough from destruction. For which reason they are always at enmity with those of merit, as hurtful to their government; not only as they scorn to be governed despotically, but also because they can rely upon each other's fidelity, and others can rely upon theirs, and because they will not inform against their associates, nor any one else. The third is, that they shall be totally without the means of doing anything; for no one undertakes what is impossible for him to perform: so that without power a tyranny can never be destroyed. These, then, are the three objects which the inclinations of tyrants desire to see accomplished; for all their tyrannical plans tend to promote one of these three ends, that their people may neither have mutual confidence, power, nor spirit. This, then, is one of the two methods of preserving tyrannies: the other proceeds in a way quite contrary to what has been already described, and which may be discerned from considering to what the destruction of a kingdom is owing; for as one cause of that is, making the government approach near to a tyranny, so the safety of a tyranny consists in making the government nearly kingly; preserving only one thing, namely power, that not only the willing, but the unwilling also, must be obliged to submit; for if this is once lost, the tyranny is at an end. This, then, as the foundation, must be preserved: in other particulars carefully do and affect to seem like a king; first, appear to pay a great attention [1314b] to what belongs to the public; nor make such profuse presents as will offend the people; while they are to supply the money out of the hard labour of their own hands, and see it given in profusion to mistresses, foreigners, and fiddlers; keeping an exact account both of what you receive and pay; which is a practice some tyrants do actually follow, by which means they seem rather fathers of families than tyrants: nor need you ever fear the want of money while you have the supreme power of the state in your own hands. It is also much better for those tyrants who quit their kingdom to do this than to leave behind them money they have hoarded up; for their regents will be much less desirous of making innovations, and they are more to be dreaded by absent tyrants than the citizens; for such of them as he suspects he takes with him, but these regents must be left behind. He should also endeavour to appear to collect such taxes and require such services as the exigencies of the state demand, that whenever they are wanted they may be ready in time of war; and particularly to take care that he appear to collect and keep them not as his own property, but the public's. His appearance also should not be severe, but respectable, so that he should inspire those who approach him with veneration and not fear; but this will not be easily accomplished if he is despised. If, therefore, he will not take the pains to acquire any other, he ought to endeavour to be a man of political abilities, and to fix that opinion of himself in the judgment of his subjects. He should also take care not to appear to be guilty of the least offence against modesty, nor to suffer it in those under him: nor to permit the women of his family to treat others haughtily; for the haughtiness of women has been the ruin of many tyrants. With respect to the pleasures of sense, he ought to do directly contrary to the practice of some tyrants at present; for they do not only continually indulge themselves in them for many days together, but they seem also to desire to have other witnesses of it, that they may wonder at their happiness; whereas he ought really to be moderate in these, and, if not, to appear to others to avoid them-for it is not the sober man who is exposed either to plots or contempt, but the drunkard; not the early riser, but the sluggard. His conduct in general should also be contrary to what is reported of former tyrants; for he ought to improve and adorn his city, so as to seem a guardian and not a tyrant; and, moreover., always to [1315a] seem particularly attentive to the worship of the gods; for from persons of such a character men entertain less fears of suffering anything illegal while they suppose that he who governs them is religious and reverences the gods; and they will be less inclined to raise insinuations against such a one, as being peculiarly under their protection: but this must be so done as to give no occasion for any suspicion of hypocrisy. He should also take care to show such respect to men of merit in every particular, that they should not think they could be treated with greater distinction by their fellow-citizens in a free state. He should also let all honours flow immediately from himself, but every censure from his subordinate officers and judges. It is also a common protection of all monarchies not to make one person too great, or, certainly, not many; for they will support each other: but, if it is necessary to entrust any large powers to one person, to take care that it is not one of an ardent spirit; for this disposition is upon every opportunity most ready for a revolution: and, if it should seem necessary to deprive any one of his power, to do it by degrees, and not reduce him all at once. It is also necessary to abstain from all kinds of insolence; more particularly from corporal punishment; which you must be most cautious never to exercise over those who have a delicate sense of honour; for, as those who love money are touched to the quick when anything affects their property, so are men of honour and principle when they receive

any disgrace: therefore, either never employ personal punishment, or, if you do, let it be only in the manner in which a father would correct his son, and not with contempt; and, upon the whole, make amends for any seeming disgrace by bestowing greater honours. But of all persons who are most likely to entertain designs against the person of a tyrant, those are chiefly to be feared and guarded against who regard as nothing the loss of their own lives, so that they can but accomplish their purpose: be very careful therefore of those who either think themselves affronted, or those who are dear to them; for those who are excited by anger to revenge regard as nothing their own persons: for, as Heraclitus says, it is dangerous to fight with an angry man who will purchase with his life the thing he aims at. As all cities are composed of two sorts of persons, the rich and the poor, it is necessary that both these should find equal protection from him who governs them, and that the one party should not have it in their power to injure the other; but that the tyrant should attach to himself that party which is the most powerful; which, if he does, he will have no occasion either to make his slaves free, or to deprive citizens of their arms; for the strength of either of the parties added to his own forces will render him superior to any conspiracy. It would be superfluous to go through all particulars; for the rule of conduct which the tyrant ought to pursue is evident enough, and that is, to affect to appear not the tyrant, but the king; the guardian of those he governs, not their plunderer, [1315b] but their protector, and to affect the middle rank in life, not one superior to all others: he should, therefore, associate his nobles with him and soothe his people; for his government will not only be necessarily more honourable and worthy of imitation, as it will be over men of worth, and not abject wretches who perpetually both hate and fear him; but it will be also more durable. Let him also frame his life so that his manners may be consentaneous to virtue, or at least let half of them be so, that he may not be altogether wicked, but only so in part.

CHAPTER XII

Indeed an oligarchy and a tyranny are of all governments of the shortest duration. The tyranny of Orthagoras and his family at Sicyon, it is true, continued longer than any other: the reason for which was, that they used their power with moderation, and were in many particulars obedient to the laws; and, as Clisthenes was an able general, he never fell into contempt, and by the care he took that in many particulars his government should be popular. He is reported also to have presented a person with a crown who adjudged the victory to another; and some say that it is the statue of that judge which is placed in the forum.

They say also, that Pisistratus submitted to be summoned into the court of the Areopagites. The second that we shall mention is the tyranny of the Cypselidse, at Corinth, which continued seventy-seven years and six months; for Cypselus was tyrant there thirty years, Periander forty-four, and Psammetichus, the son of Georgias, three years; the reason for which was, that Cypselus was a popular man, and governed without guards. Periander indeed ruled like a tyrant, but then he was an able general. The third was that of the Pisistradidae at Athens; but it was not continual: for Pisistratus himself was twice expelled; so that out of thirty-three years he was only fifteen in power, and his son eighteen; so that the whole time was thirty-three years. Of the rest we shall mention that of Hiero, and Gelo at Syracuse; and this did not continue long, for both their reigns were only eighteen years; for Gelo died in the eighth year of his tyranny, and Hiero in his tenth. Thrasybulus fell in his eleventh month, and many other tyrannies have continued a very short time. We have now gone through the general cases of corruption and [1316a] means of preservation both in free states and monarchies. In Plato's Republic, Socrates is introduced treating upon the changes which different governments are liable to: but his discourse is faulty; for he does not particularly mention what changes the best and first governments are liable to; for he only assigns the general cause, of nothing being immutable, but that in time everything will alter [***tr.: text is unintelligible here***] he conceives that nature will then produce bad men, who will not submit to education, and in this, probably, he is not wrong; for it is certain that there are some persons whom it is impossible by any education to make good men; but why should this change be more peculiar to what he calls the best-formed government, than to all other forms, and indeed to all other things that exist? and in respect to his assigned time, as the cause of the alteration of all things, we find that those which did not begin to exist at the same time cease to be at the same time; so that, if anything came into beginning the day before the solstice, it must alter at the same time. Besides, why should such a form of government be changed into the Lacedaemonian? for, in general, when governments alter, they alter into the contrary species to what they before were, and not into one like their former. And this reasoning holds true of other changes; for he says, that from the Lacedaemonian form it changes into an oligarchy, and from thence into a democracy, and from a democracy into a tyranny: and sometimes a contrary change takes place, as from a democracy into an oligarchy, rather than into a monarchy. With respect to a tyranny he neither says whether there will be any change in it; or if not, to what cause it will be owing; or if there is, into what other state it will alter: but the reason of this is, that a tyranny is an indeterminate government; and, according to him, every state ought to alter into the first, and most perfect, thus the continuity and circle would be preserved. But one tyranny often changed into another; as at Syria, from Myron's to Clisthenes'; or into an oligarchy, as was Antileo's at Chalcas; or into a democracy, as was Gelo's at Syracuse; or into an aristocracy, as was

Charilaus's at Lacedaemon, and at Carthage. An oligarchy is also changed into a tyranny; such was the rise of most of the ancient tyrannies in Sicily; at Leontini, into the tyranny of Panaetius; at Gela, into that of Cleander; at Rhegium into that of Anaxilaus; and the like in many other cities. It is absurd also to suppose, that a state is changed into an oligarchy because those who are in power are avaricious and greedy of money, and not because those who are by far richer than their fellow citizens think it unfair that those who have nothing should have an equal share in the rule of the state with themselves, who possess so much-for in many oligarchies it is not allowable to be employed in money-getting, and there are many laws to prevent it. But in Carthage, which is a democracy, money-getting is creditable, and yet their form of government remains unaltered. It is also absurd to say, that in an oligarchy there are two cities, one of the poor and another of the rich; for why should this happen to them more than to the Lacedaemonians, or any other state where all possess not equal property, or where all are not equally good? for though no one member of the community should be poorer than he was before, yet a democracy might nevertheless change into an oligarchy; if the rich should be more powerful than the poor, and the one too negligent, and the other attentive: and though these changes are owing to many causes, yet he mentions but one only, that the citizens become poor by luxury, and paying interest-money; as if at first they were all rich, or the greater part of them: but this is not so, but when some of those who have the principal management of public affairs lose their fortunes, they will endeavour to bring about a revolution; but when others do, nothing of consequence will follow, nor when such states do alter is there any more reason for their altering into a democracy than any other. Besides, though some of the members of the community may not have spent their fortunes, yet if they share not in the honours of the state, or if they are ill-used and insulted, they will endeavour to raise seditions, and bring about a revolution, that they may be allowed to do as they like; which, Plato says, arises from too much liberty. Although there are many oligarchies and democracies, yet Socrates, when he is treating of the changes they may undergo, speaks of them as if there was but one of each sort.

BOOK VI

CHAPTER I

We have already shown what is the nature of the supreme council in the state, and wherein one may differ from another, and how the different magistrates should be regulated; and also the judicial department, and what is best suited to what state; and also to what causes both the destruction and preservation of governments are owing.

As there are very many species of democracies, as well as of other states, it will not be amiss to consider at the same time anything which we may have omitted to mention concerning either of them, and to allot to each that mode of conduct which is peculiar to and advantageous for them; and also to inquire into the combinations of all these different modes of government which we [1317a] have mentioned; for as these are blended together the government is altered, as from an aristocracy to be an oligarchy, and from a free state to be a democracy. Now, I mean by those combinations of government (which I ought to examine into, but have not yet done), namely, whether the deliberative department and the election of magistrates is regulated in a manner correspondent to an oligarchy, or the judicial to an aristocracy, or the deliberative part only to an oligarchy, and the election of magistrates to an aristocracy, or whether, in any other manner, everything is not regulated according to the nature of the government. But we will first consider what particular sort of democracy is fitted to a particular city, and also what particular oligarchy to a particular people; and of other states, what is advantageous to what. It is also necessary to show clearly, not only which of these governments is best for a state, but also how it ought to be established there, and other things we will treat of briefly.

And first, we will speak of a democracy; and this will at the same time show clearly the nature of its opposite which some persons call an oligarchy; and in doing this we must examine into all the parts of a democracy, and everything that is connected therewith; for from the manner in which these are compounded together different species of democracies arise: and hence it is that they are more than one, and of various natures. Now, there are two causes which occasion there being so many democracies; one of which is that which we have already mentioned; namely, there being different sorts of people; for in one country the majority are husbandmen, in another mechanics, and hired servants; if the first of these is added to the second, and the third to both of them, the democracy will not only differ in the particular of better or worse, but in this, that it will be no longer the same government; the other is that which we will now speak of. The different things which are connected with democracies and seem to make part of these states, do, from their being joined to them, render them different from others: this attending a few, that more, and another all. It is necessary that he who would found any state which he may happen to approve of, or correct one, should be acquainted with all these particulars. All founders of states endeavour to comprehend within their own plan everything of nearly the same kind with it; but in doing this they err, in the manner I have already described in treating of the preservation and destruction of governments. I

will now speak of these first principles and manners, and whatever else a democratical state requires.

CHAPTER II

Now the foundation of a democratical state is liberty, and people have been accustomed to say this as if here only liberty was to be found; for they affirm that this is the end proposed by every democracy. But one part of liberty is to govern and be governed alternately; for, according to democratical justice, equality is measured by numbers, and not by worth: and this being just, it is necessary that the supreme power should be vested in the people at large; and that what the majority determine should be final: so that in a democracy the poor ought to have more power than the rich, as being the greater number; for this is one mark of liberty which all framers of a democracy lay down as a criterion of that state; another is, to live as every one likes; for this, they say, is a right which liberty gives, since he is a slave who must live as he likes not. This, then, is another criterion of a democracy. Hence arises the claim to be under no command whatsoever to any one, upon any account, any otherwise than by rotation, and that just as far only as that person is, in his turn, under his also. This also is conducive to that equality which liberty demands. These things being premised, and such being the government, it follows that such rules as the following should be observed in it, that all the magistrates should be chosen out of all the people, and all to command each, and each in his turn all: that all the magistrates should be chosen by lot, except to those offices only which required some particular knowledge and skill: that no census, or a very small one, should be required to qualify a man for any office: that none should be in the same employment twice, or very few, and very seldom, except in the army: that all their appointments should be limited to a very short time, or at least as many as possible: that the whole community should be qualified to judge in all causes whatsoever, let the object be ever so extensive, ever so interesting, or of ever so high a nature; as at Athens, where the people at large judge the magistrates when they come out of office, and decide concerning public affairs as well as private contracts: that the supreme power should be in the public assembly; and that no magistrate should be allowed any discretionary power but in a few instances, and of no consequence to public business. Of all magistrates a senate is best suited to a democracy, where the whole community is not paid for giving their attendance; for in that case it loses its power; for then the people will bring all causes before them, by appeal, as we have already mentioned in a former book. In the next place, there should, if possible, be a fund to pay all the citizens--who have any share in the management of public affairs, either as members of the assembly, judges, and magistrates; but if this cannot be done, at least the magistrates, the judges the senators, and members of the supreme assembly, and also those officers who are obliged to eat at a common table ought to be paid. Moreover, as an oligarchy is said to be a government of men of family, fortune, and education; so, on the contrary, a democracy is a government in the hands of men of no birth, indigent circumstances, and mechanical employments. In this state also no office [1318a] should be for life; and, if any such should remain after the government has been long changed into a democracy, they should endeavour by degrees to diminish the power; and also elect by lot instead of vote. These things, then, appertain to all democracies; namely, to be established on that principle of justice which is homogeneous to those governments; that is, that all the members of the state, by number, should enjoy an equality, which seems chiefly to constitute a democracy, or government of the people: for it seems perfectly equal that the rich should have no more share in the government than the poor, nor be alone in power; but that all should be equal, according to number; for thus, they think, the equality and liberty of the state best preserved.

CHAPTER III

In the next place we must inquire how this equality is to be procured. Shall the qualifications be divided so that five hundred rich should be equal to a thousand poor, or shall the thousand have equal power with the five hundred? or shall we not establish our equality in this manner? but divide indeed thus, and afterwards taking an equal number both out of the five hundred and the thousand, invest them with the power of creating the magistrates and judges. Is this state then established according to perfect democratical justice, or rather that which is guided by numbers only? For the defenders of a democracy say, that that is just which the majority approve of: but the favourers of an oligarchy say, that that is just which those who have most approve of; and that we ought to be directed by the value of property. Both the propositions are unjust; for if we agree with what the few propose we erect a tyranny: for if it should happen that an individual should have more than the rest who are rich, according to oligarchical justice, this man alone has a right to the supreme power; but if superiority of numbers is to prevail, injustice will then be done by confiscating the property of the rich, who are few, as we have already said. What then that equality is, which both parties will admit, must be collected from the definition of right which is common to them both; for they both say that what the majority of the state approves of ought to be established. Be it so; but not entirely: but since a city happens to be made up of two different ranks of people, the rich and the poor, let that be established which is approved of by both these, or the greater part: but should there be opposite

sentiments, let that be established which shall be approved of by the greater part: but let this be according to the census; for instance, if there should be ten of the rich and twenty of the poor, and six of the first and fifteen of the last should agree upon any measure, and the remaining four of the rich should join with the remaining five of the poor in opposing it, that party whose census when added together should determine which opinion should be law, and should these happen to be equal, it should be regarded as a case similar to an assembly or court of justice dividing equally upon any question that comes before them, who either determine it by lot or some such method. But although, with [1318b] respect to what is equal and just, it may be very difficult to establish the truth, yet it is much easier to do than to persuade those who have it in their power to encroach upon others to be guided thereby; for the weak always desire what is equal and just, but the powerful pay no regard thereunto.

CHAPTER IV

There are four kinds of democracies. The best is that which is composed of those first in order, as we have already said, and this also is the most ancient of any. I call that the first which every one would place so, was he to divide the people; for the best part of these are the husbandmen. We see, then, that a democracy may be framed where the majority live by tillage or pasturage; for, as their property is but small, they will not be at leisure perpetually to hold public assemblies, but will be continually employed in following their own business, not having otherwise the means of living; nor will they be desirous of what another enjoys, but will rather like to follow their own business than meddle with state affairs and accept the offices of government, which will be attended with no great profit; for the major part of mankind are rather desirous of riches than honour (a proof of this is, that they submitted to the tyrannies in ancient times, and do now submit to the oligarchies, if no one hinders them in their usual occupations, or deprives them of their property; for some of them soon get rich, others are removed from poverty); besides, their having the right of election and calling their magistrates to account for their conduct when they come out of office, will satisfy their desire of honours, if any of them entertain that passion: for in some states, though the commonalty have not the right of electing the magistrates, yet it is vested in part of that body chosen to represent them: and it is sufficient for the people at large to possess the deliberative power: and this ought to be considered as a species of democracy; such was that formerly at Mantinsea: for which reason it is proper for the democracy we have been now treating of to have a power (and it has been usual for them to have it) of censuring their magistrates when out of office, and sitting in judgment upon all causes: but that the chief magistrates should be elected, and according to a certain census, which should vary with the rank of their office, or else not by a census, but according to their abilities for their respective appointments. A state thus constituted must be well constituted; for the magistracies will be always filled with the best men with the approbation of the people; who will not envy their superiors: and these and the nobles should be content with this part in the administration; for they will not be governed by their inferiors. They will be also careful to use their power with moderation, as there are others to whom full power is delegated to censure their conduct; for it is very serviceable to the state to have them dependent upon others, and not to be permitted to do whatsoever they choose; for with such a liberty there would be no check to that evil particle there is in every one: therefore it is [1319a] necessary and most for the benefit of the state that the offices thereof should be filled by the principal persons in it, whose characters are unblemished, and that the people are not oppressed. It is now evident that this is the best species of democracy, and on what account; because the people are such and have such powers as they ought to have. To establish a democracy of husbandmen some of those laws which were observed in many ancient states are universally useful; as, for instance, on no account to permit any one to possess more than a certain quantity of land, or within a certain distance from the city. Formerly also, in some states, no one was allowed to sell their original lot of land. They also mention a law of one Oxylus, which forbade any one to add to their patrimony by usury. We ought also to follow the law of the Aphutaeans, as useful to direct us in this particular we are now speaking of; for they having but very little ground, while they were a numerous people, and at the same time were all husbandmen, did not include all their lands within the census, but divided them in such a manner that, according to the census, the poor had more power than the rich. Next to the commonalty of husbandmen is one of shepherds and herdsmen; for they have many things in common with them, and, by their way of life, are excellently qualified to make good soldiers, stout in body, and able to continue in the open air all night. The generality of the people of whom other democracies are composed are much worse than these; for their lives are wretched nor have they any business with virtue in anything they do; these are your mechanics, your exchange-men, and hired servants; as all these sorts of men frequent the exchange and the citadel, they can readily attend the public assembly; whereas the husbandmen, being more dispersed in the country, cannot so easily meet together; nor are they equally desirous of doing it with these others! When a country happens to be so situated that a great part of the land lies at a distance from the city, there it is easy to establish a good democracy or a free state for the people in general will be obliged to live in the country; so that it will be necessary in such a democracy, though there may be an exchange-mob at hand, never to allow a legal assembly without the inhabitants of the country attend. We have shown in what

manner the first and best democracy ought to be established, and it will be equally evident as to the rest, for from these we [1319b] should proceed as a guide, and always separate the meanest of the people from the rest. But the last and worst, which gives to every citizen without distinction a share in every part of the administration, is what few citizens can bear, nor is it easy to preserve for any long time, unless well supported by laws and manners. We have already noticed almost every cause that can destroy either this or any other state. Those who have taken the lead in such a democracy have endeavoured to support it, and make the people powerful by collecting together as many persons as they could and giving them their freedom, not only legitimately but naturally born, and also if either of their parents were citizens, that is to say, if either their father or mother; and this method is better suited to this state than any other: and thus the demagogues have usually managed. They ought, however, to take care, and do this no longer than the common people are superior to the nobles and those of the middle rank, and then stop; for, if they proceed still further, they will make the state disorderly, and the nobles will ill brook the power of the common people, and be full of resentment against it; which was the cause of an insurrection at Cyrene: for a little evil is overlooked, but when it becomes a great one it strikes the eye. It is, moreover, very-useful in such a state to do as Clisthenes did at Athens, when he was desirous of increasing the power of the people, and as those did who established the democracy in Cyrene; that is, to institute many tribes and fraternities, and to make the religious rites of private persons few, and those common; and every means is to be contrived to associate and blend the people together as much as possible; and that all former customs be broken through. Moreover, whatsoever is practised in a tyranny seems adapted to a democracy of this species; as, for instance, the licentiousness of the slaves, the women, and the children; for this to a certain degree is useful in such a state; and also to overlook every one's living as they choose; for many will support such a government: for it is more agreeable to many to live without any control than as prudence would direct.

CHAPTER V

It is also the business of the legislator and all those who would support a government of this sort not to make it too great a work, or too perfect; but to aim only to render it stable: for, let a state be constituted ever so badly, there is no difficulty in its continuing a few days: they should therefore endeavour to procure its safety by all those ways which we have described in assigning the causes of the preservation and destruction of governments; avoiding what is hurtful, and by framing such laws, written and unwritten, as contain those things which chiefly tend to the preservation of the state; nor to suppose that that is useful either for a democratic or [1320a] an oligarchic form of government which contributes to make them more purely so, but what will contribute to their duration: but our demagogues at present, to flatter the people, occasion frequent confiscations in the courts; for which reason those who have the welfare of the state really at heart should act directly opposite to what they do, and enact a law to prevent forfeitures from being divided amongst the people or paid into the treasury, but to have them set apart for sacred uses: for those who are of a bad disposition would not then be the less cautious, as their punishment would be the same; and the community would not be so ready to condemn those whom they sat in judgment on when they were to get nothing by it: they should also take care that the causes which are brought before the public should be as few as possible, and punish with the utmost severity those who rashly brought an action against any one; for it is not the commons but the nobles who are generally prosecuted: for in all things the citizens of the same state ought to be affectionate to each other, at least not to treat those who have the chief power in it as their enemies. Now, as the democracies which have been lately established are very numerous, and it is difficult to get the common people to attend the public assemblies without they are paid for it, this, when there is not a sufficient public revenue, is fatal to the nobles; for the deficiencies therein must be necessarily made up by taxes, confiscations, and fines imposed by corrupt courts of justice: which things have already destroyed many democracies. Whenever, then, the revenues of the state are small, there should be but few public assemblies and but few courts of justice: these, however, should have very extensive jurisdictions, but should continue sitting a few days only, for by this means the rich would not fear the expense, although they should receive nothing for their attendance, though the poor did; and judgment also would be given much better; for the rich will not choose to be long absent from their own affairs, but will willingly be so for a short time: and, when there are sufficient revenues, a different conduct ought to be pursued from what the demagogues at present follow; for now they divide the surplus of the public money amongst the poor; these receive it and again want the same supply, while the giving it is like pouring water into a sieve: but the true patriot in a democracy ought to take care that the majority of the community are not too poor, for this is the cause of rapacity in that government; he therefore should endeavour that they may enjoy perpetual plenty; and as this also is advantageous to the rich, what can be saved out of the public money should be put by, and then divided at once amongst the poor, if possible, in such a quantity as may enable every one of them to purchase a little field, and, if that cannot be done, at least to give each of them enough to procure the implements [1320b] of trade and husbandry; and if there is not enough for all to receive so much at once, then to divide it according to tribes or any other allotment. In the meantime let the rich pay them for necessary services, but not be obliged to find them in

useless amusements. And something like this was the manner in which they managed at Carthage, and preserved the affections of the people; for by continually sending some of their community into colonies they procured plenty. It is also worthy of a sensible and generous nobility to divide the poor amongst them, and supplying them with what is necessary, induce them to work; or to imitate the conduct of the people at Tarentum: for they, permitting the poor to partake in common of everything which is needful for them, gain the affections of the commonalty. They have also two different ways of electing their magistrates; for some are chosen by vote, others by lot; by the last, that the people at large may have some share in the administration; by the former, that the state may be well governed: the same may be accomplished if of the same magistrates you choose some by vote, others by lot. And thus much for the manner in which democracies ought to be established.

CHAPTER VI

What has been already said will almost of itself sufficiently show how an oligarchy ought to be founded; for he who would frame such a state should have in his view a democracy to oppose it; for every species of oligarchy should be founded on principles diametrically opposite to some species of democracy.

The first and best-framed oligarchy is that which approaches near to what we call a free state; in which there ought to be two different census, the one high, the other low: from those who are within the latter the ordinary officers of the state ought to be chosen; from the former the supreme magistrates: nor should any one be excluded from a part of the administration who was within the census; which should be so regulated that the commonalty who are included in it should by means thereof be superior to those who have no share in the government; for those who are to have the management of public affairs ought always to be chosen out of the better sort of the people. Much in the same manner ought that oligarchy to be established which is next in order: but as to that which is most opposite to a pure democracy, and approaches nearest to a dynasty and a tyranny, as it is of all others the worst, so it requires the greatest care and caution to preserve it: for as bodies of sound and healthy constitutions and ships which are well manned and well found for sailing can bear many injuries without perishing, while a diseased body or a leaky ship with an indifferent crew cannot support the [1321a] least shock; so the worst-established governments want most looking after. A number of citizens is the preservation of a democracy; for these are opposed to those rights which are founded in rank: on the contrary, the preservation of an oligarchy depends upon the due regulation of the different orders in the society.

CHAPTER VII

As the greater part of the community are divided into four sorts of people; husbandmen, mechanics, traders, and hired servants; and as those who are employed in war may likewise be divided into four; the horsemen, the heavy-armed soldier, the light-armed, and the sailor, where the nature of the country can admit a great number of horse; there a powerful oligarchy may be easily established: for the safety of the inhabitants depends upon a force of that sort; but those who can support the expense of horsemen must be persons of some considerable fortune. Where the troops are chiefly heavy-armed, there an oligarchy, inferior in power to the other, may be established; for the heavy-armed are rather made up of men of substance than the poor: but the light-armed and the sailors always contribute to support a democracy: but where the number of these is very great and a sedition arises, the other parts of the community fight at a disadvantage; but a remedy for this evil is to be learned from skilful generals, who always mix a proper number of light-armed soldiers with their horse and heavy-armed: for it is with those that the populace get the better of the men of fortune in an insurrection; for these being lighter are easily a match for the horse and the heavy-armed: so that for an oligarchy to form a body of troops from these is to form it against itself: but as a city is composed of persons of different ages, some young and some old, the fathers should teach their sons, while they were very young, a light and easy exercise; but, when they are grown up, they should be perfect in every warlike exercise. Now, the admission of the people to any share in the government should either be (as I said before) regulated by a census, or else, as at Thebes, allowed to those who for a certain time have ceased from any mechanic employment, or as at Massalia, where they are chosen according to their worth, whether citizens or foreigners. With respect to the magistrates of the highest rank which it may be necessary to have in a state, the services they are bound to do the public should be expressly laid down, to prevent the common people from being desirous of accepting their employments, and also to induce them to regard their magistrates with favour when they know what a price they pay for their honours. It is also necessary that the magistrates, upon entering into their offices, should make magnificent sacrifices and erect some public structure, that the people partaking of the entertainment, and seeing the city ornamented with votive gifts in their temples and public structures, may see with pleasure the stability of the government: add to this also, that the nobles will have their generosity recorded: but now this is not the conduct which those who are at present at the head of an oligarchy pursue, but the

contrary; for they are not more desirous of honour than of gain; for which reason such oligarchies may more properly be called little democracies. Thus [1321b] we have explained on what principles a democracy and an oligarchy ought to be established.

CHAPTER VIII

After what has been said I proceed next to treat particularly of the magistrates; of what nature they should be, how many, and for what purpose, as I have already mentioned: for without necessary magistrates no state can exist, nor without those which contribute to its dignity and good order can exist happily: now it is necessary that in small states the magistrates should be few; in a large one, many: also to know well what offices may be joined together, and what ought to be separated. The first thing necessary is to establish proper regulators in the markets; for which purpose a certain magistrate should be appointed to inspect their contracts and preserve good order; for of necessity, in almost every city there must be both buyers and sellers to supply each other's mutual wants: and this is what is most productive of the comforts of life; for the sake of which men seem to have joined together in one community. A second care, and nearly related to the first, is to have an eye both to the public and private edifices in the city, that they may be an ornament; and also to take care of all buildings which are likely to fall: and to see that the highways are kept in proper repair; and also that the landmarks between different estates are preserved, that there may be no disputes on that account; and all other business of the same nature. Now, this business may be divided into several branches, over each of which in populous cities they appoint a separate person; one to inspect the buildings, another the fountains, another the harbours; and they are called the inspectors of the city. A third, which is very like the last, and conversant nearly about the same objects, only in the country, is to take care of what is done out of the city. The officers who have this employment we call inspectors of the lands, or inspectors of the woods; but the business of all three of them is the same. There must also be other officers appointed to receive the public revenue and to deliver it out to those who are in the different departments of the state: these are called receivers or quaestors. There must also be another, before whom all private contracts and sentences of courts should be enrolled, as well as proceedings and declarations. Sometimes this employment is divided amongst many, but there is one supreme over the rest; these are called proctors, notaries, and the like. Next to these is an officer whose business is of all others the most necessary, and yet most difficult; namely, to take care that sentence is executed upon those who are condemned; and that every one pays the fines laid on him; and also to have the charge of those who are in prison. [1322a] This office is very disagreeable on account of the odium attending it, so that no one will engage therein without it is made very profitable, or, if they do, will they be willing to execute it according to law; but it is most necessary, as it is of no service to pass judgment in any cause without that judgment is carried into execution: for without this human society could not subsist: for which reason it is best that this office should not be executed by one person, but by some of the magistrates of the other courts. In like manner, the taking care that those fines which are ordered by the judges are levied should be divided amongst different persons. And as different magistrates judge different causes, let the causes of the young be heard by the young: and as to those which are already brought to a hearing, let one person pass sentence, and another see it executed: as, for instance, let the magistrates who have the care of the public buildings execute the sentence which the inspectors of the markets have passed, and the like in other cases: for by so much the less odium attends those who carry the laws into execution, by so much the easier will they be properly put in force: therefore for the same persons to pass the sentence and to execute it will subject them to general hatred; and if they pass it upon all, they will be considered as the enemies of all. Thus one person has often the custody of the prisoner's body, while another sees the sentence against him executed, as the eleven did at Athens: for which reason it is prudent to separate these offices, and to give great attention thereunto as equally necessary with anything we have already mentioned; for it will certainly happen that men of character will decline accepting this office, and worthless persons cannot properly be entrusted with it, as having themselves rather an occasion for a guard than being qualified to guard others. This, therefore, ought by no means to be a separate office from others; nor should it be continually allotted to any individuals, but the young men; where there is a city-guard, the youths ought in turns to take these offices upon them. These, then, as the most necessary magistrates, ought to be first mentioned: next to these are others no less necessary, but of much higher rank, for they ought to be men of great skill and fidelity. These are they who have the guard of the city, and provide everything that is necessary for war; whose business it is, both in war and peace, to defend the walls and the gates, and to take care to muster and marshal the citizens. Over all these there are sometimes more officers, sometimes fewer: thus in little cities there is only one whom they call either general or polemarch; but where there are horse and light-armed troops, and bowmen, and sailors, they sometimes put distinct commanders over each of these; who again have others under them, according to their different divisions; all of which join together to make one military body: and thus much for this department. Since some of the magistrates, if not all, have business with the public money, it is necessary that there should be other officers, whose employment should be nothing else than to take an account of what they have, and correct any mismanagement therein. But besides all these magistrates there is one who is supreme

over them all, who very often has in his own power the disposal of the public revenue and taxes; who presides over the people when the supreme power is in them; for there must be some magistrate who has a power to summon them together, and to preside as head of the state. These are sometimes called preadvisers; but where there are many, more properly a council. These are nearly the civil magistrates which are requisite to a government: but there are other persons whose business is confined to religion; as the priests, and those who are to take care of the temples, that they are kept in proper repair, or, if they fall down, that they may be rebuilt; and whatever else belongs to public worship. This charge is sometimes entrusted to one person, as in very small cities: in others it is delegated to many, and these distinct from the priesthood, as the builders or keepers of holy places, and officers of the sacred revenue. Next to these are those who are appointed to have the general care of all those public sacrifices to the tutelar god of the state, which the laws do not entrust to the priests: and these in different states have different appellations. To enumerate in few words the different departments of all those magistrates who are necessary: these are either religion, war, taxes, expenditures, markets, public buildings, harbours, highways. Belonging to the courts of justice there are scribes to enroll private contracts; and there must also be guards set over the prisoners, others to see the law is executed, council on either side, and also others to watch over the conduct of those who are to decide the causes. Amongst the magistrates also may finally be reckoned those who are to give their advice in public affairs. But separate states, who are peculiarly happy and have leisure to attend to more minute particulars, and are very attentive to good order, require particular magistrates for themselves; such as those who have the government of the women; who are to see the laws are executed; who take care of the boys and preside over their education. To these may be added those who have the care of their gymnastic exercises, [1323a] their theatres, and every other public spectacle which there may happen to be. Some of these, however, are not of general use; as the governors of the women: for the poor are obliged to employ their wives and children in servile offices for want of slaves. As there are three magistrates to whom some states entrust the supreme power; namely, guardians of the laws, preadvisers, and senators; guardians of the laws suit best to an aristocracy, preadvisers to an oligarchy, and a senate to a democracy. And thus much briefly concerning all magistrates.

BOOK VII

CHAPTER I

He who proposes to make that inquiry which is necessary concerning what government is best, ought first to determine what manner of living is most eligible; for while this remains uncertain it will also be equally uncertain what government is best: for, provided no unexpected accidents interfere, it is highly probable, that those who enjoy the best government will live the most happily according to their circumstances; he ought, therefore, first to know what manner of life is most desirable for all; and afterwards whether this life is the same to the man and the citizen, or different. As I imagine that I have already sufficiently shown what sort of life is best in my popular discourses on that subject, I think I may very properly repeat the same here; as most certainly no one ever called in question the propriety of one of the divisions; namely, that as what is good, relative to man, may be divided into three sorts, what is external, what appertains to the body, and what to the soul, it is evident that all these must conspire to make a man happy: for no one would say that a man was happy who had no fortitude, no temperance, no justice, no prudence; but was afraid of the flies that flew round him: nor would abstain from the meanest theft if he was either hungry or dry, or would murder his dearest friend for a farthing; and also was in every particular as wanting in his understanding as an infant or an idiot. These truths are so evident that all must agree to them; though some may dispute about the quantity and the degree: for they may think, that a very little virtue is sufficient for happiness; but for riches, property, power, honour, and all such things, they endeavour to increase them without bounds: but to such we reply, that it is easy to prove from what experience teaches us in these cases, that these external goods produce not virtue, but virtue them. As to a happy life, whether it is to be found in pleasure or virtue or both, certain it is, that those whose morals are most pure, and whose understandings are best cultivated, will enjoy more of it, although their fortune is but moderate than those do who own an exuberance of wealth, are deficient in those; and this utility any one who reflects may easily convince himself of; for whatsoever is external has its boundary, as a machine, and whatsoever is useful in its excess is either necessarily hurtful, or at best useless to the possessor; but every good quality of the soul the higher it is in degree, so much the more useful it is, if it is permitted on this subject to use the word useful as well as noble. It is also very evident, that the accidents of each subject take place of each other, as the subjects themselves, of which we allow they are accidents, differ from each other in value; so that if the soul is more noble than any outward possession, as the body, both in itself and with respect to us, it must be admitted of course that the best accidents of each must follow the same analogy. Besides, it is for the sake of the soul that these things are desirable; and it is on this account that wise men should desire them, not the soul for them. Let us therefore be well assured, that every one enjoys as much happiness as he possesses virtue and wisdom, and acts according to their dictates;

since for this we have the example of GOD Himself, _who is completely happy, not from any external good, but in Himself, and because such is His nature_. For good fortune is something different from happiness, as every good which depends not on the mind is owing to chance or fortune; but it is not from fortune that any one is wise and just: hence it follows, that that city is happiest which is the best and acts best: for no one can do well who acts not well; nor can the deeds either of man or city be praiseworthy without virtue and wisdom; for whatsoever is just, or wise, or prudent in a man, the same things are just, wise, and prudent in a city.

Thus much by way of introduction; for I could not but just touch upon this subject, though I could not go through a complete investigation of it, as it properly belongs to another question: let us at present suppose so much, that a man's happiest life, both as an individual and as a citizen, is a life of virtue, accompanied with those enjoyments which virtue usually procures. If [1324a] there are any who are not convinced by what I have said, their doubts shall be answered hereafter, at present we shall proceed according to our intended method.

CHAPTER II

It now remains for us to say whether the happiness of any individual man and the city is the same or different: but this also is evident; for whosoever supposes that riches will make a person happy, must place the happiness of the city in riches if it possesses them; those who prefer a life which enjoys a tyrannic power over others will also think, that the city which has many others under its command is most happy: thus also if any one approves a man for his virtue, he will think the most worthy city the happiest: but here there are two particulars which require consideration, one of which is, whether it is the most eligible life to be a member of the community and enjoy the rights of a citizen, or whether to live as a stranger, without interfering in public affairs; and also what form of government is to be preferred, and what disposition of the state is best; whether the whole community should be eligible to a share in the administration, or only the greater part, and some only: as this, therefore, is a subject of political examination and speculation, and not what concerns the individual, and the first of these is what we are at present engaged in, the one of these I am not obliged to speak to, the other is the proper business of my present design. It is evident that government must be the best which is so established, that every one therein may have it in his power to act virtuously and live happily: but some, who admit that a life of virtue is most eligible, still doubt which is preferable a public life of active virtue, or one entirely disengaged from what is without and spent in contemplation; which some say is the only one worthy of a philosopher; and one of these two different modes of life both now and formerly seem to have been chosen by all those who were the most virtuous men; I mean the public or philosophic. And yet it is of no little consequence on which side the truth lies; for a man of sense must naturally incline to the better choice; both as an individual and a citizen. Some think that a tyrannic government over those near us is the greatest injustice; but that a political one is not unjust: but that still is a restraint on the pleasures and tranquillity of life. Others hold the quite contrary opinion, and think that a public and active life is the only life for man: for that private persons have no opportunity of practising any one virtue, more than they have who are engaged in public life the management of the [1324b] state. These are their sentiments; others say, that a tyrannical and despotical mode of government is the only happy one; for even amongst some free states the object of their laws seems to be to tyrannise over their neighbours: so that the generality of political institutions, wheresoever dispersed, if they have any one common object in view, have all of them this, to conquer and govern. It is evident, both from the laws of the Lacedaemonians and Cretans, as well as by the manner in which they educated their children, that all which they had in view was to make them soldiers: besides, among all nations, those who have power enough and reduce others to servitude are honoured on that account; as were the Scythians, Persians, Thracians, and Gauls: with some there are laws to heighten the virtue of courage; thus they tell us that at Carthage they allowed every person to wear as many rings for distinction as he had served campaigns. There was also a law in Macedonia, that a man who had not himself killed an enemy should be obliged to wear a halter; among the Scythians, at a festival, none were permitted to drink out of the cup was carried about who had not done the same thing. Among the Iberians, a warlike nation, they fixed as many columns upon a man's tomb as he had slain enemies: and among different nations different things of this sort prevail, some of them established by law, others by custom. Probably it may seem too absurd to those who are willing to take this subject into their consideration to inquire whether it is the business of a legislator to be able to point out by what means a state may govern and tyrannise over its neighbours, whether they will, or will not: for how can that belong either to the politician or legislator which is unlawful? for that cannot be lawful which is done not only justly, but unjustly also: for a conquest may be unjustly made. But we see nothing of this in the arts: for it is the business neither of the physician nor the pilot to use either persuasion or force, the one to his patients, the other to his passengers: and yet many seem to think a despotic government is a political one, and what they would not allow to be just or proper, if exercised over themselves, they will not blush to exercise over others; for they endeavour to be wisely governed themselves, but think it of no consequence whether others are so or not: but a despotic power is absurd, except only where nature has framed the one party for dominion, the other for subordination; and

therefore no one ought to assume it over all in general, but those only which are the proper objects thereof: thus no one should hunt men either for food or sacrifice, but what is fit for those purposes, and these are wild animals which are eatable.

Now a city which is well governed might be very [1325a] happy in itself while it enjoyed a good system of laws, although it should happen to be so situated as to have no connection with any other state, though its constitution should not be framed for war or conquest; for it would then have no occasion for these. It is evident therefore that the business of war is to be considered as commendable, not as a final end, but as the means of procuring it. It is the duty of a good legislator to examine carefully into his state; and the nature of the people, and how they may partake of every intercourse, of a good life, and of the happiness which results from it: and in this respect some laws and customs differ from others. It is also the duty of a legislator, if he has any neighbouring states to consider in what manner he shall oppose each of them, or what good offices he shall show them. But what should be the final end of the best governments will be considered hereafter.

CHAPTER III

We will now speak to those who, while they agree that a life of virtue is most eligible, yet differ in the use of it addressing ourselves to both these parties; for there are some who disapprove of all political governments, and think that the life of one who is really free is different from the life of a citizen, and of all others most eligible: others again think that the citizen is the best; and that it is impossible for him who does nothing to be well employed; but that virtuous activity and happiness are the same thing. Now both parties in some particulars say what is right, in others what is wrong, thus, that the life of a freeman is better than the life of a slave is true, for a slave, as a slave, is employed in nothing honourable; for the common servile employments which he is commanded to perform have nothing virtuous in them; but, on the other hand, it is not true that a submission to all sorts of governments is slavery; for the government of freemen differs not more from the government of slaves than slavery and freedom differ from each other in their nature; and how they do has been already mentioned. To prefer doing of nothing to virtuous activity is also wrong, for happiness consists in action, and many noble ends are produced by the actions of the just and wise. From what we have already determined on this subject, some one probably may think, that supreme power is of all things best, as that will enable a man to command very many useful services from others; so that he who can obtain this ought not to give it up to another, but rather to seize it: and, for this purpose, the father should have no attention or regard for the son, or the son for the father, or friend for friend; for what is best is most eligible: but to be a member of the community and be in felicity is best. What these persons advance might probably be true, if the supreme good was certainly theirs who plunder and use violence to others: but it is [1325b] most unlikely that it should be so; for it is a mere supposition: for it does not follow that their actions are honourable who thus assume the supreme power over others, without they were by nature as superior to them as a man to a woman, a father to a child, a master to a slave: so that he who so far forsakes the paths of virtue can never return back from whence he departed from them: for amongst equals whatever is fair and just ought to be reciprocal; for this is equal and right; but that equals should not partake of what is equal, or like to like, is contrary to nature: but whatever is contrary to nature is not right; therefore, if there is any one superior to the rest of the community in virtue and abilities for active life, him it is proper to follow, him it is right to obey, but the one alone will not do, but must be joined to the other also: and, if we are right in what we have now said, it follows that happiness consists in virtuous activity, and that both with respect to the community as well as the individual an active life is the happiest: not that an active life must necessarily refer to other persons, as some think, or that those studies alone are practical which are pursued to teach others what to do; for those are much more so whose final object is in themselves, and to improve the judgment and understanding of the man; for virtuous activity has an end, therefore is something practical; nay, those who contrive the plan which others follow are more particularly said to act, and are superior to the workmen who execute their designs. But it is not necessary that states which choose to have no intercourse with others should remain inactive; for the several members thereof may have mutual intercourse with each other; for there are many opportunities for this among the different citizens; the same thing is true of every individual: for, was it otherwise, neither could the Deity nor the universe be perfect; to neither of whom can anything external separately exist. Hence it is evident that that very same life which is happy for each individual is happy also for the state and every member of it.

CHAPTER IV

As I have now finished what was introductory to this subject, and considered at large the nature of other states, it now remains that I should first say what ought to be the establishment of a city which one should form according to one's wish; for no good state can exist without a moderate proportion of what is necessary. Many things therefore ought to be forethought of as desirable, but none of them such as are impossible: I mean relative to the number of citizens and the extent of the territory: for as other artificers, such as

the weaver and the shipwright, ought to have such materials as are fit for their work, since so much the better they are, by so much [1326a] superior will the work itself necessarily be; so also ought the legislator and politician endeavour to procure proper materials for the business they have in hand. Now the first and principal instrument of the politician is the number of the people; he should therefore know how many, and what they naturally ought to be: in like manner the country, how large, and what it is. Most persons think that it is necessary for a city to be large to be happy: but, should this be true, they cannot tell what is a large one and what a small one; for according to the multitude of the inhabitants they estimate the greatness of it; but they ought rather to consider its strength than its numbers; for a state has a certain object in view, and from the power which it has in itself of accomplishing it, its greatness ought to be estimated; as a person might say, that Hippocrates was a greater physician, though not a greater man, than one that exceeded him in the size of his body: but if it was proper to determine the strength of the city from the number of the inhabitants, it should never be collected from the multitude in general who may happen to be in it; for in a city there must necessarily be many slaves, sojourners, and foreigners; but from those who are really part of the city and properly constitute its members; a multitude of these is indeed a proof of a large city, but in a state where a large number of mechanics inhabit, and but few soldiers, such a state cannot be great; for the greatness of the city, and the number of men in it, are not the same thing. This too is evident from fact, that it is very difficult, if not impossible, to govern properly a very numerous body of men; for of all the states which appear well governed we find not one where the rights of a citizen are open to an indiscriminate multitude. And this is also evident from the nature of the thing; for as law is a certain order, so good law is of course a certain good order: but too large a multitude are incapable of this, unless under the government of that DIVINE POWER which comprehends the universe. Not but that, as quantity and variety are usually essential to beauty, the perfection of a city consists in the largeness of it as far as that largeness is consistent with that order already mentioned: but still there is a determinate size to all cities, as well as everything else, whether animals, plants, or machines, for each of these, if they are neither too little nor too big, have their proper powers; but when they have not their due growth, or are badly constructed, as a ship a span long is not properly a ship, nor one of two furlongs length, but when it is of a fit size; for either from its smallness or from its largeness it may be quite useless: so is it with a city; one that is too small has not [1326b] in itself the power of self-defence, but this is essential to a city: one that is too large is capable of self-defence in what is necessary; but then it is a nation and not a city: for it will be very difficult to accommodate a form of government to it: for who would choose to be the general of such an unwieldy multitude, or who could be their herald but a stentor? The first thing therefore necessary is, that a city should consist of such numbers as will be sufficient to enable the inhabitants to live happily in their political community: and it follows, that the more the inhabitants exceed that necessary number the greater will the city be: but this must not be, as we have already said, without bounds; but what is its proper limit experience will easily show, and this experience is to be collected from the actions both of the governors and the governed. Now, as it belongs to the first to direct the inferior magistrates and to act as judges, it follows that they can neither determine causes with justice nor issue their orders with propriety without they know the characters of their fellow-citizens: so that whenever this happens not to be done in these two particulars, the state must of necessity be badly managed; for in both of them it is not right to determine too hastily and without proper knowledge, which must evidently be the case where the number of the citizens is too many: besides, it is more easy for strangers and sojourners to assume the rights of citizens, as they will easily escape detection in so great a multitude. It is evident, then, that the best boundary for a city is that wherein the numbers are the greatest possible, that they may be the better able to be sufficient in themselves, while at the same time they are not too large to be under the eye and government of the magistrates. And thus let us determine the extent of a city.

CHAPTER V

What we have said concerning a city may nearly be applied to a country; for as to what soil it should be, every one evidently will commend it if it is such as is sufficient in itself to furnish what will make the inhabitants happy; for which purpose it must be able to supply them with all the necessaries of life; for it is the having these in plenty, without any want, which makes them content. As to its extent, it should be such as may enable the inhabitants to live at their ease with freedom and temperance. Whether we have done right or wrong in fixing this limit to the territory shall be considered more minutely hereafter, when we come particularly to inquire into property, and what fortune is requisite for a man to live on, and how and in what manner they ought to employ it; for there are many doubts upon this question, while each party insists upon their own plan of life being carried to an excess, the one of severity, the other of indulgence. What the situation of the country should be it is not difficult to determine, in some particulars respecting that we ought to be advised by those who are skilful in military affairs. It should be difficult of access to an enemy, but easy to the inhabitants: and as we said, that the number of [1327a] inhabitants ought to be such as can come under the eye of the magistrate, so should it be with the country; for then it is easily defended. As to the position of the city, if one could place it to one's

wish, it is convenient to fix it on the seaside: with respect to the country, one situation which it ought to have has been already mentioned, namely, that it should be so placed as easily to give assistance to all places, and also to receive the necessaries of life from all parts, and also wood, or any other materials which may happen to be in the country.

CHAPTER VI

But with respect to placing a city in the neighbourhood of the sea, there are some who have many doubts whether it is serviceable or hurtful to a well-regulated state; for they say, that the resort of persons brought up under a different system of government is disserviceable to the state, as well by impeding the laws as by their numbers; for a multitude of merchants must necessarily arise from their trafficking backward and forward upon the seas, which will hinder the well-governing of the city: but if this inconvenience should not arise, it is evident that it is better, both on account of safety and also for the easier acquisition of the necessaries of life, that both the city and the country should be near the sea; for it is necessary that those who are to sustain the attack of the enemy should be ready with their assistance both by land and by sea, and to oppose any inroad, both ways if possible but if not, at least where they are most powerful, which they may do while they possess both. A maritime situation is also useful for receiving from others what your own country will not produce, and exporting those necessaries of your own growth which are more than you have occasion for; but a city ought to traffic to supply its own wants, and not the wants of others; for those who themselves furnish an open market for every one, do it for the sake of gain; which it is not proper for a well-established state to do, neither should they encourage such a commerce. Now, as we see that many places and cities have docks and harbours lying very convenient for the city, while those who frequent them have no communication with the citadel, and yet they are not too far off, but are surrounded by walls and such-like fortifications, it is evident, that if any good arises from such an intercourse the city will receive it, but if anything hurtful, it will be easy to restrain it by a law declaring and deputing whom the state will allow to have an intercourse with each other, and whom not. As to a naval power, it is by no means doubtful that it is necessary to have one to a certain degree; and this not only for the sake of the [1327b] city itself, but also because it may be necessary to appear formidable to some of the neighbouring states, or to be able to assist them as well by sea as by land; but to know how great that force should be, the health of the state should be inquired into, and if that appears vigorous and enables her to take the lead of other communities, it is necessary that her force should correspond with her actions. As for that multitude of people which a maritime power creates, they are by no means necessary to a state, nor ought they to make a part of the citizens; for the mariners and infantry, who have the command, are freemen, and upon these depends a naval engagement: but when there are many servants and husbandmen, there they will always have a number of sailors, as we now see happens to some states, as in Heraclea, where they man many triremes, though the extent of their city is much inferior to some others. And thus we determine concerning the country, the port, the city, the sea, and a maritime power: as to the number of the citizens, what that ought to be we have already said.

CHAPTER VII

We now proceed to point out what natural disposition the members of the community ought to be of: but this any one will easily perceive who will cast his eye over the states of Greece, of all others the most celebrated, and also the other different nations of this habitable world. Those who live in cold countries, as the north of Europe, are full of courage, but wanting in understanding and the arts: therefore they are very tenacious of their liberty; but, not being politicians, they cannot reduce their neighbours under their power: but the Asiatics, whose understandings are quick, and who are conversant in the arts, are deficient in courage; and therefore are always conquered and the slaves of others: but the Grecians, placed as it were between these two boundaries, so partake of them both as to be at the same time both courageous and sensible; for which reason Greece continues free, and governed in the best manner possible, and capable of commanding the whole world, could they agree upon one system of policy. Now this is the difference between the Grecians and other nations, that the latter have but one of these qualities, whereas in the former they are both happily blended together. Hence it is evident, that those persons ought to be both sensible and courageous who will readily obey a legislator, the object of whose laws is virtue. As to what some persons say, that the military must be mild and tender to those they know, but severe and cruel to those they know not, it is courage which [1328a] makes any one lovely; for that is the faculty of the soul which we most admire: as a proof of this, our resentment rises higher against our friends and acquaintance than against those we know not: for which reason Archilaus accusing his friends says very properly to himself, Shall my friends insult me? The spirit of freedom and command also is what all inherit who are of this disposition for courage is commanding and invincible. It also is not right for any one to say, that you should be severe to those you know not; for this behaviour is proper for no one: nor are those who are of a noble disposition harsh in their manners, excepting only to the wicked; and when they are particularly so, it is, as has been already said, against their friends, when they think they have injured them;

which is agreeable to reason: for when those who think they ought to receive a favour from any one do not receive it, beside the injury done them, they consider what they are deprived of: hence the saying, "Cruel are the wars of brothers;" and this, "Those who have greatly loved do greatly hate." And thus we have nearly determined how many the inhabitants of a city ought to be, and what their natural disposition, and also the country how large, and of what sort is necessary; I say nearly, because it is needless to endeavour at as great accuracy in those things which are the objects of the senses as in those which are inquired into by the understanding only.

CHAPTER VIII

As in natural bodies those things are not admitted to be parts of them without which the whole would not exist, so also it is evident that in a political state everything that is necessary thereunto is not to be considered as a part of it, nor any other community from whence one whole is made; for one thing ought to be common and the same to the community, whether they partake of it equally or unequally, as, for instance, food, land, or the like; but when one thing is for the benefit of one person, and another for the benefit of another, in this there is nothing like a community, excepting that one makes it and the other uses it; as, for instance, between any instrument employed in making any work, and the workmen, as there is nothing common between the house and the builder, but the art of the builder is employed on the house. Thus property is necessary for states, but property is no part of the state, though many species of it have life; but a city is a community of equals, for the purpose of enjoying the best life possible: but the happiest life is the best which consists in the perfect practice of virtuous energies: as therefore some persons have great, others little or no opportunity of being employed in these, it is evident that this is the cause of the difference there is between the different cities and communities there are to be found; for while each of these endeavour to acquire what is best by various and different means, they give [1328b] rise to different modes of living and different forms of government. We are now to consider what those things are without which a city cannot possibly exist; for what we call parts of the city must of necessity inhere in it: and this we shall plainly understand, if we know the number of things necessary to a city: first, the inhabitants must have food: secondly, arts, for many instruments are necessary in life: thirdly, arms, for it is necessary that the community should have an armed force within themselves, both to support their government against those of their own body who might refuse obedience to it, and also to defend it from those who might attempt to attack it from without: fourthly, a certain revenue, as well for the internal necessities of the state as for the business of war: fifthly, which is indeed the chief concern, a religious establishment: sixthly in order, but first of all in necessity, a court to determine both criminal and civil causes. These things are absolutely necessary, so to speak, in every state; for a city is a number of people not accidentally met together, but with a purpose of ensuring to themselves sufficient independency and self-protection; and if anything necessary for these purposes is wanting, it is impossible that in such a situation these ends can be obtained. It is necessary therefore that a city should be capable of acquiring all these things: for this purpose a proper number of husbandmen are necessary to procure food, also artificers and soldiers, and rich men, and priests and judges, to determine what is right and proper.

CHAPTER IX

Having determined thus far, it remains that we consider whether all these different employments shall be open to all; for it is possible to continue the same persons always husbandmen, artificers, judges, or counsellors; or shall we appoint different persons to each of those employments which we have already mentioned; or shall some of them be appropriated to particulars, and others of course common to all? but this does not take place in every state, for, as we have already said, it is possible that all may be common to all, or not, but only common to some; and this is the difference between one government and another: for in democracies the whole community partakes of everything, but in oligarchies it is different.

Since we are inquiring what is the best government possible, and it is admitted to be that in which the citizens are happy; and that, as we have already said, it is impossible to obtain happiness without virtue; it follows, that in the best-governed states, where the citizens are really men of intrinsic and not relative goodness, none of them should be permitted to exercise any mechanic employment or follow merchandise, as being ignoble and destructive to virtue; neither should they be husband-[1329a] men, that they may be at leisure to improve in virtue and perform the duty they owe to the state. With respect to the employments of a soldier, a senator, and a judge, which are evidently necessary to the community, shall they be allotted to different persons, or shall the same person execute both? This question, too, is easily answered: for in some cases the same persons may execute them, in others they should be different, where the different employments require different abilities, as when courage is wanting for one, judgment for the other, there they should be allotted to different persons; but when it is evident, that it is impossible to oblige those

who have arms in their hands, and can insist on their own terms, to be always under command; there these different employments should be trusted to one person; for those who have arms in their hands have it in their option whether they will or will not assume the supreme power: to these two (namely, those who have courage and judgment) the government must be entrusted; but not in the same manner, but as nature directs; what requires courage to the young, what requires judgment to the old; for with the young is courage, with the old is wisdom: thus each will be allotted the part they are fit for according to their different merits. It is also necessary that the landed property should belong to these men; for it is necessary that the citizens should be rich, and these are the men proper for citizens; for no mechanic ought to be admitted to the rights of a citizen, nor any other sort of people whose employment is not entirely noble, honourable, and virtuous; this is evident from the principle we at first set out with; for to be happy it is necessary to be virtuous; and no one should say that a city is happy while he considers only one part of its citizens, but for that purpose he ought to examine into all of them. It is evident, therefore, that the landed property should belong to these, though it may be necessary for them to have husbandmen, either slaves, barbarians, or servants. There remains of the different classes of the people whom we have enumerated, the priests, for these evidently compose a rank by themselves; for neither are they to be reckoned amongst the husbandmen nor the mechanics; for reverence to the gods is highly becoming every state: and since the citizens have been divided into orders, the military and the council, and it is proper to offer due worship to the gods, and since it is necessary that those who are employed in their service should have nothing else to do, let the business of the priesthood be allotted to those who are in years. We have now shown what is necessary to the existence of a city, and of what parts it consists, and that husbandmen, mechanic, and mercenary servants are necessary to a city; but that the parts of it are soldiers and sailors, and that these are always different from those, but from each other only occasionally.

CHAPTER X

It seems neither now nor very lately to have been known [1329b] to those philosophers who have made politics their study, that a city ought to be divided by families into different orders of men; and that the husbandmen and soldiers should be kept separate from each other; which custom is even to this day preserved in Egypt and in Crete; also Sesostris having founded it in Egypt, Minos in Crete. Common meals seem also to have been an ancient regulation, and to have been established in Crete during the reign of Minos, and in a still more remote period in Italy; for those who are the best judges in that country say that one Italus being king of AEnotria., from whom the people, changing their names, were called Italians instead of AEnotrians, and that part of Europe was called Italy which is bounded by the Scylletic Gulf on the one side and the Lametic on the other, the distance between which is about half a day's journey. This Italus, they relate, made the AEnotrians, who were formerly shepherds, husbandmen, and gave them different laws from what they had before, and to have been the first who established common meals, for which reason some of his descendants still use them, and observe some of his laws. The Opici inhabit that part which lies towards the Tyrrhenian Sea, who both now are and formerly were called Ausonians. The Chones inhabited the part toward Iapigia and the Ionian Sea which is called Syrtis. These Chones were descended from the AEnotrians. Hence arose the custom of common meals, but the separation of the citizens into different families from Egypt: for the reign of Sesostris is of much higher antiquity than that of Minos. As we ought to think that most other things were found out in a long, nay, even in a boundless time (reason teaching us that want would make us first invent that which was necessary, and, when that was obtained, then those things which were requisite for the conveniences and ornament of life), so should we conclude the same with respect to a political state; now everything in Egypt bears the marks of the most remote antiquity, for these people seem to be the most ancient of all others, and to have acquired laws and political order; we should therefore make a proper use of what is told us of them, and endeavour to find out what they have omitted. We have already said, that the landed property ought to belong to the military and those who partake of the government of the state; and that therefore the husbandmen should be a separate order of people; and how large and of what nature the country ought to be: we will first treat of the division of the land, and of the husbandmen, how many and of what sort they ought to be; since we by no means hold that property ought to be common, as some persons have said, only thus far, in friendship, it [1330a] should be their custom to let no citizen want subsistence. As to common meals, it is in general agreed that they are proper in well-regulated cities; my reasons for approving of them shall be mentioned hereafter: they are what all the citizens ought to partake of; but it will not be easy for the poor, out of what is their own, to furnish as much as they are ordered to do, and supply their own house besides. The expense also of religious worship should be defrayed by the whole state. Of necessity therefore the land ought to be divided into two parts, one of which should belong to the community in general, the other to the individuals separately; and each of these parts should again be subdivided into two: half of that which belongs to the public should be appropriated to maintain the worship of the gods, the other half to support the common meals. Half of that which belongs to the individuals should be at the extremity of the country, the other half near the city, so that these two portions being allotted to each person, all would partake of

land in both places, which would be both equal and right; and induce them to act in concert with greater harmony in any war with their neighbours: for when the land is not divided in this manner, one party neglects the inroads of the enemy on the borders, the other makes it a matter of too much consequence and more than is necessary; for which reason in some places there is a law which forbids the inhabitants of the borders to have any vote in the council when they are debating upon a war which is made against them as their private interest might prevent their voting impartially. Thus therefore the country ought to be divided and for the reasons before mentioned. Could one have one's choice, the husbandmen should by all means be slaves, not of the same nation, or men of any spirit; for thus they would be laborious in their business, and safe from attempting any novelties: next to these barbarian servants are to be preferred, similar in natural disposition to these we have already mentioned. Of these, let those who are to cultivate the private property of the individual belong to that individual, and those who are to cultivate the public territory belong to the public. In what manner these slaves ought to be used, and for what reason it is very proper that they should have the promise of their liberty made them, as a reward for their services, shall be mentioned hereafter.

CHAPTER XI

We have already mentioned, that both the city and all the country should communicate both with the sea and the continent as much as possible. There are these four things which we should be particularly desirous of in the position of the city with respect to itself: in the first place, health is to be consulted as the first thing necessary: now a city which fronts the east and receives the winds which blow from thence is esteemed most healthful; next to this that which has a northern position is to be preferred, as best in winter. It should next be contrived that it may have a proper situation for the business of government and for defence in war: that in war the citizens may [1330b] have easy access to it; but that it may be difficult of access to, and hardly to be taken by, the enemy. In the next place particularly, that there may be plenty of water, and rivers near at hand: but if those cannot be found, very large cisterns must be prepared to save rain-water, so that there may be no want of it in case they should be driven into the town in time of war. And as great care should be taken of the health of the inhabitants, the first thing to be attended to is, that the city should have a good situation and a good position; the second is, that they may have good water to drink; and this not be negligently taken care of; for what we chiefly and most frequently use for the support of the body must principally influence the health of it; and this influence is what the air and water naturally have: for which reason in all wise governments the waters ought to be appropriated to different purposes, and if they are not equally good, and if there is not a plenty of necessary water, that which is to drink should be separated from that which is for other uses. As to fortified places, what is proper for some governments is not proper for all; as, for instance, a lofty citadel is proper for a monarchy and an oligarchy; a city built upon a plain suits a democracy; neither of these for an aristocracy, but rather many strong places. As to the form of private houses, those are thought to be best and most useful for their different purposes which are distinct and separate from each other, and built in the modern manner, after the plan of Hippodamus: but for safety in time of war, on the contrary, they should be built as they formerly were; for they were such that strangers could not easily find their way out of them, and the method of access to them such as an enemy could with difficulty find out if he proposed to besiege them. A city therefore should have both these sorts of buildings, which may easily be contrived if any one will so regulate them as the planters do their rows of vines; not that the buildings throughout the city should be detached from each other, only in some parts of it; thus elegance and safety will be equally consulted. With respect to walls, those who say that a courageous people ought not to have any, pay too much respect to obsolete notions; particularly as we may see those who pride themselves therein continually confuted by facts. It is indeed disreputable for those who are equal, or nearly so, to the enemy, to endeavour to take refuge within their walls--but since it very often happens, that those who make the attack are too powerful for the bravery and courage of those few who oppose them to resist, if you would not suffer the calamities of war and the insolence of the enemy, it must be thought the part of a good soldier to seek for safety under the shelter and protection of walls more especially since so many missile weapons and machines have been most ingeniously invented to besiege cities with. Indeed to neglect surrounding a city with a wall would be similar to choosing a country which is easy of access to an enemy, or levelling the eminences of it; or as if an individual should not have a wall to his house lest it should be thought that the owner of it was a coward: nor should this be left unconsidered, that those who have a city surrounded with walls may act both ways, either as if it had or as if it had not; but where it has not they cannot do this. If this is true, it is not only necessary to have walls, but care must be taken that they may be a proper ornament to the city, as well as a defence in time of war; not only according to the old methods, but the modern improvements also: for as those who make offensive war endeavour by every way possible to gain advantages over their adversaries, so should those who are upon the defensive employ all the means already known, and such new ones as philosophy can invent, to defend themselves: for those who are well prepared are seldom first attacked.

CHAPTER XII

As the citizens in general are to eat at public tables in certain companies, and it is necessary that the walls should have bulwarks and towers in proper places and at proper distances, it is evident that it will be very necessary to have some of these in the towers; let the buildings for this purpose be made the ornaments of the walls. As to temples for public worship, and the hall for the public tables of the chief magistrates, they ought to be built in proper places, and contiguous to each other, except those temples which the law or the oracle orders to be separate from all other buildings; and let these be in such a conspicuous eminence, that they may have every advantage of situation, and in the neighbourhood of that part of the city which is best fortified. Adjoining to this place there ought to be a large square, like that which they call in Thessaly The Square of Freedom, in which nothing is permitted to be bought or sold; into which no mechanic nor husbandman, nor any such person, should be permitted to enter, unless commanded by the magistrates. It will also be an ornament to this place if the gymnastic exercises of the elders are performed in it. It is also proper, that for performing these exercises the citizens should be divided into distinct classes, according to their ages, and that the young persons should have proper officers to be with them, and that the seniors should be with the magistrates; for having them before their eyes would greatly inspire true modesty and ingenuous fear. There ought to be another square [1331b] separate from this for buying and selling, which should be so situated as to be commodious for the reception of goods both by sea and land. As the citizens may be divided into magistrates and priests, it is proper that the public tables of the priests should be in buildings near the temples. Those of the magistrates who preside over contracts, indictments, and such-like, and also over the markets, and the public streets near the square, or some public way, I mean the square where things are bought and sold; for I intended the other for those who are at leisure, and this for necessary business. The same order which I have directed here should be observed also in the country; for there also their magistrates such as the surveyors of the woods and overseers of the grounds, must necessarily have their common tables and their towers, for the purpose of protection against an enemy. There ought also to be temples erected at proper places, both to the gods and the heroes; but it is unnecessary to dwell longer and most minutely on these particulars--for it is by no means difficult to plan these things, it is rather so to carry them into execution; for the theory is the child of our wishes, but the practical part must depend upon fortune; for which reason we shall decline saying anything farther upon these subjects.

CHAPTER XIII

We will now show of what numbers and of what sort of people a government ought to consist, that the state may be happy and well administered. As there are two particulars on which the excellence and perfection of everything depend, one of these is, that the object and end proposed should be proper; the other, that the means to accomplish it should be adapted to that purpose; for it may happen that these may either agree or disagree with each other; for the end we propose may be good, but in taking the means to obtain it we may err; at other times we may have the right and proper means in our power, but the end may be bad, and sometimes we may mistake in both; as in the art of medicine the physician does not sometimes know in what situation the body ought to be, to be healthy; nor what to do to procure the end he aims at. In every art and science, therefore, we should be master of this knowledge, namely, the proper end, and the means to obtain it. Now it is evident that all persons are desirous to live well and be happy; but that some have the means thereof in their own power, others not; and this either through nature [1332a] or fortune; for many ingredients are necessary to a happy life; but fewer to those who are of a good than to those who are of a bad disposition. There are others who continually have the means of happiness in their own power, but do not rightly apply them. Since we propose to inquire what government is best, namely, that by which a state may be best administered, and that state is best administered where the people are the happiest, it is evident that happiness is a thing we should not be unacquainted with. Now, I have already said in my treatise on Morals (if I may here make any use of what I have there shown), that happiness consists in the energy and perfect practice of virtue; and this not relatively, but simply; I mean by relatively, what is necessary in some certain circumstances; by simply, what is good and fair in itself: of the first sort are just punishments, and restraints in a just cause; for they arise from virtue and are necessary, and on that account are virtuous; though it is more desirable that neither any state nor any individual should stand in need of them; but those actions which are intended either to procure honour or wealth are simply good; the others eligible only to remove an evil; these, on the contrary, are the foundation and means of relative good. A worthy man indeed will bear poverty, disease, and other unfortunate accidents with a noble mind; but happiness consists in the contrary to these (now we have already determined in our treatise on Morals, that he is a man of worth who considers what is good because it is virtuous as what is simply good; it is evident, therefore, that all the actions of such a one must be worthy and simply good): this has led some persons to conclude, that the cause of happiness was external goods; which would be as if any one should suppose that the playing well upon the lyre was owing to the instrument, and not to the art. It necessarily follows from what has been said, that some things should be ready at hand and others procured by the legislator; for which reason in founding a city we earnestly wish that there may

be plenty of those things which are supposed to be under the dominion of fortune (for some things we admit her to be mistress over); but for a state to be worthy and great is not only the work of fortune but of knowledge and judgment also. But for a state to be worthy it is necessary that those citizens which are in the administration should be worthy also; but as in our city every citizen is to be so, we must consider how this may be accomplished; for if this is what every one could be, and not some individuals only, it would be more desirable; for then it would follow, that what might be done by one might be done by all. Men are worthy and good three ways; by nature, by custom, by reason. In the first place, a man ought to be born a man, and not any other animal; that is to say, he ought to have both a body and soul; but it avails not to be only born [1332b] with some things, for custom makes great alterations; for there are some things in nature capable of alteration either way which are fixed by custom, either for the better or the worse. Now, other animals live chiefly a life of nature; and in very few things according to custom; but man lives according to reason also, which he alone is endowed with; wherefore he ought to make all these accord with each other; for if men followed reason, and were persuaded that it was best to obey her, they would act in many respects contrary to nature and custom. What men ought naturally to be, to make good members of a community, I have already determined; the rest of this discourse therefore shall be upon education; for some things are acquired by habit, others by hearing them.

CHAPTER XIV

As every political community consists of those who govern and of those who are governed, let us consider whether during the continuance of their lives they ought to be the same persons or different; for it is evident that the mode of education should be adapted to this distinction. Now, if one man differed from another as much, as we believe, the gods and heroes differ from men: in the first place, being far their superiors in body; and, secondly, in the soul: so that the superiority of the governors over the governed might be evident beyond a doubt, it is certain that it would be better for the one always to govern, the other always to be governed: but, as this is not easy to obtain, and kings are not so superior to those they govern as Scylax informs us they are in India, it is evident that for many reasons it is necessary that all in their turns should both govern and be governed: for it is just that those who are equal should have everything alike; and it is difficult for a state to continue which is founded in injustice; for all those in the country who are desirous of innovation will apply themselves to those who are under the government of the rest, and such will be their numbers in the state, that it will be impossible for the magistrates to get the better of them. But that the governors ought to excel the governed is beyond a doubt; the legislator therefore ought to consider how this shall be, and how it may be contrived that all shall have their equal share in the administration. Now, with respect to this it will be first said, that nature herself has directed us in our choice, laying down the selfsame thing when she has made some young, others old: the first of whom it becomes to obey, the latter to command; for no one when he is young is offended at his being under government, or thinks himself too good for it; more especially when he considers that he himself shall receive the same honours which he pays when he shall arrive at a proper age. In some respects it must be acknowledged that the governors and the governed are the same, in others they are different; it is therefore necessary that their education should be in [1333a] some respect the same, in others different: as they say, that he will be a good governor who has first learnt to obey. Now of governments, as we have already said, some are instituted for the sake of him who commands; others for him who obeys: of the first sort is that of the master over the servant; of the latter, that of freemen over each other. Now some things which are commanded differ from others; not in the business, but in the end proposed thereby: for which reason many works, even of a servile nature, are not disgraceful for young freemen to perform; for many things which are ordered to be done are not honourable or dishonourable so much in their own nature as in the end which is proposed, and the reason for which they are undertaken. Since then we have determined, that the virtue of a good citizen and good governor is the same as of a good man; and that every one before he commands should have first obeyed, it is the business of the legislator to consider how his citizens may be good men, what education is necessary to that purpose, and what is the final object of a good life. The soul of man may be divided into two parts; that which has reason in itself, and that which hath not, but is capable of obeying its dictates: and according to the virtues of these two parts a man is said to be good: but of those virtues which are the ends, it will not be difficult for those to determine who adopt the division I have already given; for the inferior is always for the sake of the superior; and this is equally evident both in the works of art as well as in those of nature; but that is superior which has reason. Reason itself also is divided into two parts, in the manner we usually divide it; the theoretic and the practical; which division therefore seems necessary for this part also: the same analogy holds good with respect to actions; of which those which are of a superior nature ought always to be chosen by those who have it in their power; for that is always most eligible to every one which will procure the best ends. Now life is divided into labour and rest, war and peace; and of what we do the objects are partly necessary and useful, partly noble: and we should give the same preference to these that we do to the different parts of the soul and its actions, as war to procure peace; labour, rest; and the useful, the noble. The politician, therefore, who composes a body of

laws ought to extend his views to everything; the different parts of the soul and their actions; more particularly to those things which are of a superior nature and ends; and, in the same manner, to the lives of men and their different actions.

They ought to be fitted both for labour and war, but rather [1333b] for rest and peace; and also to do what is necessary and useful, but rather what is fair and noble. It is to those objects that the education of the children ought to tend, and of all the youths who want instruction. All the Grecian states which now seem best governed, and the legislators who founded those states, appear not to have framed their polity with a view to the best end, or to every virtue, in their laws and education; but eagerly to have attended to what is useful and productive of gain: and nearly of the same opinion with these are some persons who have written lately, who, by praising the Lacedaemonian state, show they approve of the intention of the legislator in making war and victory the end of his government. But how contrary to reason this is, is easily proved by argument, and has already been proved by facts (but as the generality of men desire to have an extensive command, that they may have everything desirable in the greater abundance; so Thibron and others who have written on that state seem to approve of their legislator for having procured them an extensive command by continually enuring them to all sorts of dangers and hardships): for it is evident, since the Lacedemonians have now no hope that the supreme power will be in their own hand, that neither are they happy nor was their legislator wise. This also is ridiculous, that while they preserved an obedience to their laws, and no one opposed their being governed by them, they lost the means of being honourable: but these people understand not rightly what sort of government it is which ought to reflect honour on the legislator; for a government of freemen is nobler than despotic power, and more consonant to virtue. Moreover, neither should a city be thought happy, nor should a legislator be commended, because he has so trained the people as to conquer their neighbours; for in this there is a great inconvenience: since it is evident that upon this principle every citizen who can will endeavour to procure the supreme power in his own city; which crime the Lacedaemonians accuse Pausanias of, though he enjoyed such great honours.

Such reasoning and such laws are neither political, useful nor true: but a legislator ought to instil those laws on the minds of men which are most useful for them, both in their public and private capacities. The rendering a people fit for war, that they may enslave their inferiors ought not to be the care of the legislator; but that they may not themselves be reduced to slavery by others. In [1334a] the next place, he should take care that the object of his government is the safety of those who are under it, and not a despotism over all: in the third place, that those only are slaves who are fit to be only so. Reason indeed concurs with experience in showing that all the attention which the legislator pays to the business of war, and all other rules which he lays down, should have for their object rest and peace; since most of those states (which we usually see) are preserved by war; but, after they have acquired a supreme power over those around them, are ruined; for during peace, like a sword, they lose their brightness: the fault of which lies in the legislator, who never taught them how to be at rest.

CHAPTER XV

As there is one end common to a man both as an individual and a citizen, it is evident that a good man and a good citizen must have the same object in view; it is evident that all the virtues which lead to rest are necessary; for, as we have often said, the end of war is peace, of labour, rest; but those virtues whose object is rest, and those also whose object is labour, are necessary for a liberal life and rest; for we want a supply of many necessary things that we may be at rest. A city therefore ought to be temperate, brave, and patient; for, according to the proverb, "Rest is not for slaves;" but those who cannot bravely face danger are the slaves of those who attack them. Bravery, therefore, and patience are necessary for labour, philosophy for rest, and temperance and justice in both; but these chiefly in time of peace and rest; for war obliges men to be just and temperate; but the enjoyment of pleasure, with the rest of peace, is more apt to produce insolence; those indeed who are easy in their circumstances, and enjoy everything that can make them happy, have great occasion for the virtues of temperance and justice. Thus if there are, as the poets tell us, any inhabitants in the happy isles, to these a higher degree of philosophy, temperance, and justice will be necessary, as they live at their ease in the full plenty of every sensual pleasure. It is evident, therefore, that these virtues are necessary in every state that would be happy or worthy; for he who is worthless can never enjoy real good, much less is he qualified to be at rest; but can appear good only by labour and being at war, but in peace and at rest the meanest of creatures. For which reason virtue should not be cultivated as the Lacedaemonians did; for they did not differ from others in their opinion concerning the supreme good, but in [1334b] imagining this good was to be procured by a particular virtue; but since there are greater goods than those of war, it is evident that the enjoyment of those which are valuable in themselves should be desired, rather than those virtues which are useful in war; but how and by what means this is to be acquired is now to be considered. We have already assigned three causes on which it will depend; nature, custom, and reason, arid shown what sort of men nature must produce for this purpose; it remains then

that we determine which we shall first begin by in education, reason or custom, for these ought always to preserve the most entire harmony with each other; for it may happen that reason may err from the end proposed, and be corrected by custom. In the first place, it is evident that in this as in other things, its beginning or production arises from some principle, and its end also arises from another principle, which is itself an end. Now, with us, reason and intelligence are the end of nature; our production, therefore, and our manners ought to be accommodated to both these. In the next place, as the soul and the body are two distinct things, so also we see that the soul is divided into two parts, the reasoning and not-reasoning, with their habits which are two in number, one belonging to each, namely appetite and intelligence; and as the body is in production before the soul, so is the not-reasoning part of the soul before the reasoning; and this is evident; for anger, will and desire are to be seen in children nearly as soon as they are born; but reason and intelligence spring up as they grow to maturity. The body, therefore, necessarily demands our care before the soul; next the appetites for the sake of the mind; the body for the sake of the soul.

CHAPTER XVI

If then the legislator ought to take care that the bodies of the children are as perfect as possible, his first attention ought to be given to matrimony; at what time and in what situation it is proper that the citizens should engage in the nuptial contract. Now, with respect to this alliance, the legislator ought both to consider the parties and their time of life, that they may grow old at the same part of time, and that their bodily powers may not be different; that is to say, the man being able to have children, but the woman too old to bear them; or, on the contrary, the woman be young enough to produce children, but the man too old to be a father; for from such a situation discords and disputes continually arise. In the next place, with respect to the succession of children, there ought not to be too great an interval of time between them and their parents; for when there is, the parent can receive no benefit from his child's affection, or the child any advantage from his father's protection; [1335a] neither should the difference in years be too little, as great inconveniences may arise from it; as it prevents that proper reverence being shown to a father by a boy who considers him as nearly his equal in age, and also from the disputes it occasions in the economy of the family. But, to return from this digression, care ought to be taken that the bodies of the children may be such as will answer the expectations of the legislator; this also will be affected by the same means. Since season for the production of children is determined (not exactly, but to speak in general), namely, for the man till seventy years, and the woman till fifty, the entering into the marriage state, as far as time is concerned, should be regulated by these periods. It is extremely bad for the children when the father is too young; for in all animals whatsoever the parts of the young are imperfect, and are more likely to be productive of females than males, and diminutive also in size; the same thing of course necessarily holds true in men; as a proof of this you may see in those cities where the men and women usually marry very young, the people in general are very small and ill framed; in child-birth also the women suffer more, and many of them die. And thus some persons tell us the oracle of Traezenium should be explained, as if it referred to the many women who were destroyed by too early marriages, and not their gathering their fruits too soon. It is also conducive to temperance not to marry too soon; for women who do so are apt to be intemperate. It also prevents the bodies of men from acquiring their full size if they marry before their growth is completed; for this is the determinate period, which prevents any further increase; for which reason the proper time for a woman to marry is eighteen, for a man thirty-seven, a little more or less; for when they marry at that time their bodies are in perfection, and they will also cease to have children at a proper time; and moreover with respect to the succession of the children, if they have them at the time which may reasonably be expected, they will be just arriving into perfection when their parents are sinking down under the load of seventy years. And thus much for the time which is proper for marriage; but moreover a proper season of the year should be observed, as many persons do now, and appropriate the winter for this business. The married couple ought also to regard the precepts of physicians and naturalists, each of whom have treated on these [1335b] subjects. What is the fit disposition of the body will be better mentioned when we come to speak of the education of the child; we will just slightly mention a few particulars. Now, there is no occasion that any one should have the habit of body of a wrestler to be either a good citizen, or to enjoy a good constitution, or to be the father of healthy children; neither should he be infirm or too much dispirited by misfortunes, but between both these. He ought to have a habit of labour, but not of too violent labour; nor should that be confined to one object only, as the wrestler's is; but to such things as are proper for freemen. These things are equally necessary both for men and women. Women with child should also take care that their diet is not too sparing, and that they use sufficient exercise; which it will be easy for the legislator to effect if he commands them once every day to repair to the worship of the gods who are supposed to preside over matrimony. But, contrary to what is proper for the body, the mind ought to be kept as tranquil as possible; for as plants partake of the nature of the soil, so does the child receive much of the disposition of the mother. With respect to the exposing or bringing up of children, let it be a law, that nothing imperfect or maimed shall be brought up,..... As the proper time has been pointed out for a man and a woman to enter into the marriage state, so also let us determine how long

it is advantageous for the community that they should have children; for as the children of those who are too young are imperfect both in body and mind, so also those whose parents are too old are weak in both: while therefore the body continues in perfection, which (as some poets say, who reckon the different periods of life by sevens) is till fifty years, or four or five more, the children may be equally perfect; but when the parents are past that age it is better they should have no more. With respect to any connection between a man and a woman, or a woman and a man, when either of the parties are betrothed, let it be held in utter detestation [1336a] on any pretext whatsoever; but should any one be guilty of such a thing after the marriage is consummated, let his infamy be as great as his guilt deserves.

CHAPTER XVII

When a child is born it must be supposed that the strength of its body will depend greatly upon the quality of its food. Now whoever will examine into the nature of animals, and also observe those people who are very desirous their children should acquire a warlike habit, will find that they feed them chiefly with milk, as being best accommodated to their bodies, but without wine, to prevent any distempers: those motions also which are natural to their age are very serviceable; and to prevent any of their limbs from being crooked, on account of their extreme ductility, some people even now use particular machines that their bodies may not be distorted. It is also useful to enure them to the cold when they are very little; for this is very serviceable for their health; and also to enure them to the business of war; for which reason it is customary with many of the barbarians to dip their children in rivers when the water is cold; with others to clothe them very slightly, as among the Celts; for whatever it is possible to accustom children to, it is best to accustom them to it at first, but to do it by degrees: besides, boys have naturally a habit of loving the cold, on account of the heat. These, then, and such-like things ought to be the first object of our attention: the next age to this continues till the child is five years old; during which time it is best to teach him nothing at all, not even necessary labour, lest it should hinder his growth; but he should be accustomed to use so much motion as not to acquire a lazy habit of body; which he will get by various means and by play also: his play also ought to be neither illiberal nor too laborious nor lazy. Their governors and preceptors also should take care what sort of tales and stories it may be proper for them to hear; for all these ought to pave the way for their future instruction: for which reason the generality of their play should be imitations of what they are afterwards to do seriously. They too do wrong who forbid by laws the disputes between boys and their quarrels, for they contribute to increase their growth--as they are a sort of exercise to the body: for the struggles of the heart and the compression of the spirits give strength to those who labour, which happens to boys in their disputes. The preceptors also ought to have an eye upon their manner of life, and those with whom they converse; and to take care that they are never in the company of slaves. At this time and till they are seven [1336b] years old it is necessary that they should be educated at home. It is also very proper to banish, both from their hearing and sight, everything which is illiberal and the like. Indeed it is as much the business of the legislator as anything else, to banish every indecent expression out of the state: for from a permission to speak whatever is shameful, very quickly arises the doing it, and this particularly with young people: for which reason let them never speak nor hear any such thing: but if it appears that any freeman has done or said anything that is forbidden before he is of age to be thought fit to partake of the common meals, let him be punished by disgrace and stripes; but if a person above that age does so, let him be treated as you would a slave, on account of his being infamous. Since we forbid his speaking everything which is forbidden, it is necessary that he neither sees obscene stories nor pictures; the magistrates therefore are to take care that there are no statues or pictures of anything of this nature, except only to those gods to whom the law permits them, and to which the law allows persons of a certain age to pay their devotions, for themselves, their wives, and children. It should also be illegal for young persons to be present either at iambics or comedies before they are arrived at that age when they are allowed to partake of the pleasures of the table: indeed a good education will preserve them from all the evils which attend on these things. We have at present just touched upon this subject; it will be our business hereafter, when we properly come to it, to determine whether this care of children is unnecessary, or, if necessary, in what manner it must be done; at present we have only mentioned it as necessary. Probably the saying of Theodoras, the tragic actor, was not a bad one: That he would permit no one, not even the meanest actor, to go upon the stage before him, that he might first engage the ear of the audience. The same thing happens both in our connections with men and things: what we meet with first pleases best; for which reason children should be kept strangers to everything which is bad, more particularly whatsoever is loose and offensive to good manners. When five years are accomplished, the two next may be very properly employed in being spectators of those exercises they will afterwards have to learn. There are two periods into which education ought to be divided, according to the age of the child; the one is from his being seven years of age to the time of puberty; the other from thence till he is one-and-twenty: for those who divide ages by the number seven [1337a] are in general wrong: it is much better to follow the division of nature; for every art and every instruction is intended to complete what nature has left defective: we must first consider if any regulation whatsoever

is requisite for children; in the next place, if it is advantageous to make it a common care, or that every one should act therein as he pleases, which is the general practice in most cities; in the third place, what it ought to be.

BOOK VIII

CHAPTER I

No one can doubt that the magistrate ought greatly to interest himself in the care of youth; for where it is neglected it is hurtful to the city, for every state ought to be governed according to its particular nature; for the form and manners of each government are peculiar to itself; and these, as they originally established it, so they usually still preserve it. For instance, democratic forms and manners a democracy; oligarchic, an oligarchy: but, universally, the best manners produce the best government. Besides, as in every business and art there are some things which men are to learn first and be made accustomed to, which are necessary to perform their several works; so it is evident that the same thing is necessary in the practice of virtue. As there is one end in view in every city, it is evident that education ought to be one and the same in each; and that this should be a common care, and not the individual's, as it now is, when every one takes care of his own children separately; and their instructions are particular also, each person teaching them as they please; but what ought to be engaged in ought to be common to all. Besides, no one ought to think that any citizen belongs to him in particular, but to the state in general; for each one is a part of the state, and it is the natural duty of each part to regard the good of the whole: and for this the Lacedaemonians may be praised; for they give the greatest attention to education, and make it public. It is evident, then, that there should be laws concerning education, and that it should be public.

CHAPTER II

What education is, and how children ought to be instructed, is what should be well known; for there are doubts concerning the business of it, as all people do not agree in those things they would have a child taught, both with respect to their improvement in virtue and a happy life: nor is it clear whether the object of it should be to improve the reason or rectify the morals. From the present mode of education we cannot determine with certainty to which men incline, whether to instruct a child in what will be useful to him in life; or what tends to virtue, and what is excellent: for all these things have their separate defenders. As to virtue, there is no particular [1337b] in which they all agree: for as all do not equally esteem all virtues, it reasonably follows that they will not cultivate the same. It is evident that what is necessary ought to be taught to all: but that which is necessary for one is not necessary for all; for there ought to be a distinction between the employment of a freeman and a slave. The first of these should be taught everything useful which will not make those who know it mean. Every work is to be esteemed mean, and every art and every discipline which renders the body, the mind, or the understanding of freemen unfit for the habit and practice of virtue: for which reason all those arts which tend to deform the body are called mean, and all those employments which are exercised for gain; for they take off from the freedom of the mind and render it sordid. There are also some liberal arts which are not improper for freemen to apply to in a certain degree; but to endeavour to acquire a perfect skill in them is exposed to the faults I have just mentioned; for there is a great deal of difference in the reason for which any one does or learns anything: for it is not illiberal to engage in it for one's self, one's friend, or in the cause of virtue; while, at the same time, to do it for the sake of another may seem to be acting the part of a servant and a slave. The mode of instruction which now prevails seems to partake of both parts.

CHAPTER III

There are four things which it is usual to teach children--reading, gymnastic exercises, and music, to which (in the fourth place) some add painting. Reading and painting are both of them of singular use in life, and gymnastic exercises, as productive of courage. As to music, some persons may doubt, as most persons now use it for the sake of pleasure: but those who originally made it part of education did it because, as has been already said, nature requires that we should not only be properly employed, but to be able to enjoy leisure honourably: for this (to repeat what I have already said) is of all things the principal. But, though both labour and rest are necessary, yet the latter is preferable to the first; and by all means we ought to learn what we should do when at rest: for we ought not to employ that time at play; for then play would be the necessary business of our lives. But if this cannot be, play is more necessary for those who labour than those who are at rest: for he who labours requires relaxation; which play will supply: for as labour is attended with pain and continued exertion, it is necessary that play should be introduced, under proper regulations, as a medicine: for such an employment of the mind is a relaxation to it, and eases with pleasure. [1338a] Now rest itself seems to partake of pleasure, of happiness, and an agreeable life: but this cannot be theirs who labour, but theirs who are at rest;

for he who labours, labours for the sake of some end which he has not: but happiness is an end which all persons think is attended with pleasure and not with pain: but all persons do not agree in making this pleasure consist in the same thing; for each one has his particular standard, correspondent to his own habits; but the best man proposes the best pleasure, and that which arises from the noblest actions. But it is evident, that to live a life of rest there are some things which a man must learn and be instructed in; and that the object of this learning and this instruction centres in their acquisition: but the learning and instruction which is given for labour has for its object other things; for which reason the ancients made music a part of education; not as a thing necessary, for it is not of that nature, nor as a thing useful, as reading, in the common course of life, or for managing of a family, or for learning anything as useful in public life. Painting also seems useful to enable a man to judge more accurately of the productions of the finer arts: nor is it like the gymnastic exercises, which contribute to health and strength; for neither of these things do we see produced by music; there remains for it then to be the employment of our rest, which they had in view who introduced it; and, thinking it a proper employment for freemen, to them they allotted it; as Homer sings:

"How right to call Thalia to the feast:"

and of some others he says:

"The bard was call'd, to ravish every ear:"

and, in another place, he makes Ulysses say the happiest part of man's life is

"When at the festal board, in order plac'd, They hear the song."

It is evident, then, that there is a certain education in which a child may be instructed, not as useful nor as necessary, but as noble and liberal: but whether this is one or more than one, and of what sort they are, and how to be taught, shall be considered hereafter: we are now got so far on our way as to show that we have the testimony of the ancients in our favour, by what they have delivered down upon education--for music makes this plain. Moreover, it is necessary to instruct children in what is useful, not only on account of its being useful in itself, as, for instance, to learn to read, but also as the means of acquiring other different sorts of instruction: thus they should be instructed in painting, not only to prevent their being mistaken in purchasing pictures, or in buying or selling of vases, but rather as it makes [1338b] them judges of the beauties of the human form; for to be always hunting after the profitable ill agrees with great and freeborn souls. As it is evident whether a boy should be first taught morals or reasoning, and whether his body or his understanding should be first cultivated, it is plain that boys should be first put under the care of the different masters of the gymnastic arts, both to form their bodies and teach them their exercises.

CHAPTER IV

Now those states which seem to take the greatest care of their children's education, bestow their chief attention on wrestling, though it both prevents the increase of the body and hurts the form of it. This fault the Lacedaemonians did not fall into, for they made their children fierce by painful labour, as chiefly useful to inspire them with courage: though, as we have already often said, this is neither the only thing nor the principal thing necessary to attend to; and even with respect to this they may not thus attain their end; for we do not find either in other animals, or other nations, that courage necessarily attends the most cruel, but rather the milder, and those who have the dispositions of lions: for there are many people who are eager both to kill men and to devour human flesh, as the Achaeans and Heniochi in Pontus, and many others in Asia, some of whom are as bad, others worse than these, who indeed live by tyranny, but are men of no courage. Nay, we know that the Lacedaemonians themselves, while they continued those painful labours, and were superior to all others (though now they are inferior to many, both in war and gymnastic exercises), did not acquire their superiority by training their youth to these exercises, but because those who were disciplined opposed those who were not disciplined at all. What is fair and honourable ought then to take place in education of what is fierce and cruel: for it is not a wolf, nor any other wild beast, which will brave any noble danger, but rather a good man. So that those who permit boys to engage too earnestly in these exercises, while they do not take care to instruct them in what is necessary to do, to speak the real truth, render them mean and vile, accomplished only in one duty of a citizen, and in every other respect, as reason evinces, good for nothing. Nor should we form our judgments from past events, but from what we see at present: for now they have rivals in their mode of education, whereas formerly they had not. That gymnastic exercises are useful, and in what manner, is admitted; for during youth it is very proper to go through a course of those which are most gentle, omitting that violent diet and those painful exercises which are prescribed as necessary; that they may not prevent the growth of the body: and it is no small proof that they have this effect, that amongst the Olympic candidates we can scarce find two or three who have gained a victory

both when boys and men: because the necessary exercises they went through when young deprived them of their strength. When they have allotted three years from the time of puberty to other parts of education, they are then of a proper age to submit to labour and a regulated diet; for it is impossible for the mind and body both to labour at the same time, as they are productive of contrary evils to each other; the labour of the body preventing the progress of the mind, and the mind of the body.

CHAPTER V

With respect to music we have already spoken a little in a doubtful manner upon this subject. It will be proper to go over again more particularly what we then said, which may serve as an introduction to what any other person may choose to offer thereon; for it is no easy matter to distinctly point out what power it has, nor on what accounts one should apply it, whether as an amusement and refreshment, as sleep or wine; as these are nothing serious, but pleasing, and the killers of care, as Euripides says; for which reason they class in the same order and use for the same purpose all these, namely, sleep, wine, and music, to which some add dancing; or shall we rather suppose that music tends to be productive of virtue, having a power, as the gymnastic exercises have to form the body in a certain way, to influence the manners so as to accustom its professors to rejoice rightly? or shall we say, that it is of any service in the conduct of life, and an assistant to prudence? for this also is a third property which has been attributed to it. Now that boys are not to be instructed in it as play is evident; for those who learn don't play, for to learn is rather troublesome; neither is it proper to permit boys at their age to enjoy perfect leisure; for to cease to improve is by no means fit for what is as yet imperfect; but it may be thought that the earnest attention of boys in this art is for the sake of that amusement they will enjoy when they come to be men and completely formed; but, if this is the case, why are they themselves to learn it, and not follow the practice of the kings of the Medes and Persians, who enjoy the pleasure of music by hearing others play, and being shown its beauties by them; for of necessity those must be better skilled therein who make this science their particular study and business, than those who have only spent so much time at it as was sufficient just to learn the principles of it. But if this is a reason for a child's being taught anything, they ought also to learn the art of cookery, but this is absurd. The same doubt occurs if music has a power of improving the manners; for why should they on this account themselves learn it, and not reap every advantage of regulating the passions or forming a judgment [1339b] on the merits of the performance by hearing others, as the Lacedaemonians; for they, without having ever learnt music, are yet able to judge accurately what is good and what is bad; the same reasoning may be applied if music is supposed to be the amusement of those who live an elegant and easy life, why should they learn themselves, and not rather enjoy the benefit of others' skill. Let us here consider what is our belief of the immortal gods in this particular. Now we find the poets never represent Jupiter himself as singing and playing; nay, we ourselves treat the professors of these arts as mean people, and say that no one would practise them but a drunkard or a buffoon. But probably we may consider this subject more at large hereafter. The first question is, whether music is or is not to make a part of education? and of those three things which have been assigned as its proper employment, which is the right? Is it to instruct, to amuse, or to employ the vacant hours of those who live at rest? or may not all three be properly allotted to it? for it appears to partake of them all; for play is necessary for relaxation, and relaxation pleasant, as it is a medicine for that uneasiness which arises from labour. It is admitted also that a happy life must be an honourable one, and a pleasant one too, since happiness consists in both these; and we all agree that music is one of the most pleasing things, whether alone or accompanied with a voice; as Musseus says, "Music's the sweetest joy of man;" for which reason it is justly admitted into every company and every happy life, as having the power of inspiring joy. So that from this any one may suppose that it is necessary to instruct young persons in it; for all those pleasures which are harmless are not only conducive to the final end of life, but serve also as relaxations; and, as men are but rarely in the attainment of that final end, they often cease from their labour and apply to amusement, with no further view than to acquire the pleasure attending it. It is therefore useful to enjoy such pleasures as these. There are some persons who make play and amusement their end, and probably that end has some pleasure annexed to it, but not what should be; but while men seek the one they accept the other for it; because there is some likeness in human actions to the end; for the end is pursued for the sake of nothing else that attends it; but for itself only; and pleasures like these are sought for, not on account of what follows them, but on account of what has gone before them, as labour and grief; for which reason they seek for happiness in these sort of pleasures; and that this is the reason any one may easily perceive. That music should be pursued, not on this account only, but also as it is very serviceable during the hours of relaxation from labour, probably no [1340a] one doubts; we should also inquire whether besides this use it may not also have another of nobler nature--and we ought not only to partake of the common pleasure arising from it (which all have the sensation of, for music naturally gives pleasure, therefore the use of it is agreeable to all ages and all dispositions); but also to examine if it tends anything to improve our manners and our souls. And this will be easily known if we feel our dispositions any way influenced thereby; and that they are so is evident from many other instances, as well as the music at the Olympic games; and this confessedly fills the soul with

enthusiasm; but enthusiasm is an affection of the soul which strongly agitates the disposition. Besides, all those who hear any imitations sympathise therewith; and this when they are conveyed even without rhythm or verse. Moreover, as music is one of those things which are pleasant, and as virtue itself consists in rightly enjoying, loving, and hating, it is evident that we ought not to learn or accustom ourselves to anything so much as to judge right and rejoice in honourable manners and noble actions. But anger and mildness, courage and modesty, and their contraries, as well as all other dispositions of the mind, are most naturally imitated by music and poetry; which is plain by experience, for when we hear these our very soul is altered; and he who is affected either with joy or grief by the imitation of any objects, is in very nearly the same situation as if he was affected by the objects themselves; thus, if any person is pleased with seeing a statue of any one on no other account but its beauty, it is evident that the sight of the original from whence it was taken would also be pleasing; now it happens in the other senses there is no imitation of manners; that is to say, in the touch and the taste; in the objects of sight, a very little; for these are merely representations of things, and the perceptions which they excite are in a manner common to all. Besides, statues and paintings are not properly imitations of manners, but rather signs and marks which show the body is affected by some passion. However, the difference is not great, yet young men ought not to view the paintings of Pauso, but of Polygnotus, or any other painter or statuary who expresses manners. But in poetry and music there are imitations of manners; and this is evident, for different harmonies differ from each other so much by nature, that those who hear them are differently affected, and are not in the same disposition of mind when one is performed as when another is; the one, for instance, occasions grief 13406 and contracts the soul, as the mixed Lydian: others soften the mind, and as it were dissolve the heart: others fix it in a firm and settled state, such is the power of the Doric music only; while the Phrygian fills the soul with enthusiasm, as has been well described by those who have written philosophically upon this part of education; for they bring examples of what they advance from the things themselves. The same holds true with respect to rhythm; some fix the disposition, others occasion a change in it; some act more violently, others more liberally. From what has been said it is evident what an influence music has over the disposition of the mind, and how variously it can fascinate it: and if it can do this, most certainly it is what youth ought to be instructed in. And indeed the learning of music is particularly adapted to their disposition; for at their time of life they do not willingly attend to anything which is not agreeable; but music is naturally one of the most agreeable things; and there seems to be a certain connection between harmony and rhythm; for which reason some wise men held the soul itself to be harmony; others, that it contains it.

CHAPTER VI

We will now determine whether it is proper that children should be taught to sing, and play upon any instrument, which we have before made a matter of doubt. Now, it is well known that it makes a great deal of difference when you would qualify any one in any art, for the person himself to learn the practical part of it; for it is a thing very difficult, if not impossible, for a man to be a good judge of what he himself cannot do. It is also very necessary that children should have some employment which will amuse them; for which reason the rattle of Archytas seems well contrived, which they give children to play with, to prevent their breaking those things which are about the house; for at their age they cannot sit still: this therefore is well adapted to infants, as instruction ought to be their rattle as they grow up; hence it is evident that they should be so taught music as to be able to practise it. Nor is it difficult to say what is becoming or unbecoming of their age, or to answer the objections which some make to this employment as mean and low. In the first place, it is necessary for them to practise, that they may be judges of the art: for which reason this should be done when they are young; but when they are grown older the practical part may be dropped; while they will still continue judges of what is excellent in the art, and take a proper pleasure therein, from the knowledge they acquired of it in their youth. As to the censure which some persons throw upon music, as something mean and low, it is not difficult to answer that, if we will but consider how far we propose those who are to be educated so as to become good citizens should be instructed in this art, [1341a] and what music and what rhythms they should be acquainted with; and also what instruments they should play upon; for in these there is probably a difference. Such then is the proper answer to that censure: for it must be admitted, that in some cases nothing can prevent music being attended, to a certain degree, with the bad effects which are ascribed to it; it is therefore clear that the learning of it should never prevent the business of riper years; nor render the body effeminate, and unfit for the business of war or the state; but it should be practised by the young, judged of by the old. That children may learn music properly, it is necessary that they should not be employed in those parts of it which are the objects of dispute between the masters in that science; nor should they perform such pieces as are wondered at from the difficulty of their execution; and which, from being first exhibited in the public games, are now become a part of education; but let them learn so much of it as to be able to receive proper pleasure from excellent music and rhythms; and not that only which music must make all animals feel, and also slaves and boys, but more. It is therefore plain what instruments they should use; thus, they should never be taught to play upon the flute, or any other instrument which requires great

skill, as the harp or the like, but on such as will make them good judges of music, or any other instruction: besides, the flute is not a moral instrument, but rather one that will inflame the passions, and is therefore rather to be used when the soul is to be animated than when instruction is intended. Let me add also, that there is something therein which is quite contrary to what education requires; as the player on the flute is prevented from speaking: for which reason our forefathers very properly forbade the use of it to youth and freemen, though they themselves at first used it; for when their riches procured them greater leisure, they grew more animated in the cause of virtue; and both before and after the Median war their noble actions so exalted their minds that they attended to every part of education; selecting no one in particular, but endeavouring to collect the whole: for which reason they introduced the flute also, as one of the instruments they were to learn to play on. At Lacedaemon the choregus himself played on the flute; and it was so common at Athens that almost every freeman understood it, as is evident from the tablet which Thrasippus dedicated when he was choregus; but afterwards they rejected it as dangerous; having become better judges of what tended to promote virtue and what did not. For the same reason many of the ancient instruments were thrown aside, as the dulcimer and the lyre; as also those which were to inspire those who played on them with pleasure, and which required a nice finger and great skill to play well on. What the ancients tell us, by way of fable, of the flute is indeed very rational; namely, that after Minerva had found it, she threw it away: nor are they wrong who say that the goddess disliked it for deforming the face of him who played thereon: not but that it is more probable that she rejected it as the knowledge thereof contributed nothing to the improvement of the mind. Now, we regard Minerva as the inventress of arts and sciences. As we disapprove of a child's being taught to understand instruments, and to play like a master (which we would have confined to those who are candidates for the prize in that science; for they play not to improve themselves in virtue, but to please those who hear them, and gratify their importunity); therefore we think the practice of it unfit for freemen; but then it should be confined to those who are paid for doing it; for it usually gives people sordid notions, for the end they have in view is bad: for the impertinent spectator is accustomed to make them change their music; so that the artists who attend to him regulate their bodies according to his motions.

CHAPTER VII

We are now to enter into an inquiry concerning harmony and rhythm; whether all sorts of these are to be employed in education, or whether some peculiar ones are to be selected; and also whether we should give the same directions to those who are engaged in music as part of education, or whether there is something different from these two. Now, as all music consists in melody and rhythm, we ought not to be unacquainted with the power which each of these has in education; and whether we should rather choose music in which melody prevails, or rhythm: but when I consider how many things have been well written upon these subjects, not only by some musicians of the present age, but also by some philosophers who are perfectly skilled in that part of music which belongs to education; we will refer those who desire a very particular knowledge therein to those writers, and shall only treat of it in general terms, without descending to particulars. Melody is divided by some philosophers, whose notions we approve of, into moral, practical, and that which fills the mind with enthusiasm: they also allot to each of these a particular kind of harmony which naturally corresponds therewith: and we say that music should not be applied to one purpose only, but many; both for instruction and purifying the soul (now I use the word purifying at present without any explanation, but shall speak more at large of it in my Poetics); and, in the third place, as an agreeable manner of spending the time and a relaxation from the uneasiness of the mind. [1342a] It is evident that all harmonies are to be used; but not for all purposes; but the most moral in education: but to please the ear, when others play, the most active and enthusiastic; for that passion which is to be found very strong in some souls is to be met with also in all; but the difference in different persons consists in its being in a less or greater degree, as pity, fear, and enthusiasm also; which latter is so powerful in some as to overpower the soul: and yet we see those persons, by the application of sacred music to soothe their mind, rendered as sedate and composed as if they had employed the art of the physician: and this must necessarily happen to the compassionate, the fearful, and all those who are subdued by their passions: nay, all persons, as far as they are affected with those passions, admit of the same cure, and are restored to tranquillity with pleasure. In the same manner, all music which has the power of purifying the soul affords a harmless pleasure to man. Such, therefore, should be the harmony and such the music which those who contend with each other in the theatre should exhibit: but as the audience is composed of two sorts of people, the free and the well-instructed, the rude the mean mechanics, and hired servants, and a long collection of the like, there must be some music and some spectacles to please and soothe them; for as their minds are as it were perverted from their natural habits, so also is there an unnatural harmony, and overcharged music which is accommodated to their taste: but what is according to nature gives pleasure to every one, therefore those who are to contend upon the theatre should be allowed to use this species of music. But in education ethic melody and ethic harmony should be used, which is the Doric, as we have already said, or any other which those philosophers who are skilful in that music which is to be employed in education shall

approve of. But Socrates, in Plato's Republic, is very wrong when he [1342b] permits only the Phrygian music to be used as well as the Doric, particularly as amongst other instruments he banishes the flute; for the Phrygian music has the same power in harmony as the flute has amongst the instruments; for they are both pathetic and raise the mind: and this the practice of the poets proves; for in their bacchanal songs, or whenever they describe any violent emotions of the mind, the flute is the instrument they chiefly use: and the Phrygian harmony is most suitable to these subjects. Now, that the dithyrambic measure is Phrygian is allowed by general consent; and those who are conversant in studies of this sort bring many proofs of it; as, for instance, when Philoxenus endeavoured to compose dithyrambic music for Doric harmony, he naturally fell back again into Phrygian, as being fittest for that purpose; as every one indeed agrees, that the Doric music is most serious, and fittest to inspire courage: and, as we always commend the middle as being between the two extremes, and the Doric has this relation with respect to other harmonies, it is evident that is what the youth ought to be instructed in. There are two things to be taken into consideration, both what is possible and what is proper; every one then should chiefly endeavour to attain those things which contain both these qualities: but this is to be regulated by different times of life; for instance, it is not easy for those who are advanced in years to sing such pieces of music as require very high notes, for nature points out to them those which are gentle and require little strength of voice (for which reason some who are skilful in music justly find fault with Socrates for forbidding the youth to be instructed in gentle harmony; as if, like wine, it would make them drunk, whereas the effect of that is to render men bacchanals, and not make them languid): these therefore are what should employ those who are grown old. Moreover, if there is any harmony which is proper for a child's age, as being at the same time elegant and instructive, as the Lydian of all others seems chiefly to be-These then are as it were the three boundaries of education, moderation, possibility, and decorum.

INDEX

ACHILLES, 76

Act of the city, what, 69

Actions, their original spring, i

Administration, 76; whether to be shared by the whole community, 203

AEsumnetes, 96

AEthiopia, in what manner the power of the state is there regulated, 112

Alterations in government, whence they arise, 142; what they are, 143

Ambractia, the government of, changed, 151

Andromadas Reginus, a lawgiver to the Thracian Calcidians, 65

Animals, their different provisions by nature, 14; intended by nature for the benefit of man, 14; what constitutes their different species, 113

Animals, tame, why better than wild, 8

Arbitrator and judge, their difference, 49

Architas his rattle, 248

Areopagus, senate of, 63

Argonauts refuse to take Hercules with them, 93

Aristocracies, causes of commotions in them, 157; chief cause of their alteration, 158; may degenerate into an oligarchy, 79

Aristocracy, what, 78; treated of, 120; its object, 121

Art, works of, which most excellent, 20

Artificers and slaves, their difference, 24

Assemblies, public, advantageous to a democracy, 134

Assembly, public, its proper business, 133

Athens, different dispositions of the citizens of, 149

Barter, its original, 15

Being, what the nature of every one is, 3

Beings, why some command, others obey, 2

Body by nature to be governed, 8; requires our care before the soul, 232

Calchis, the government of, changed, 151

Calcidians, 65

Carthaginian government described, 60

Census in a free state should be as extensive as possible, 131; how to be altered, 162

Charondas supposed to be the scholar of Zaleucus, 64

Child, how to be managed when first born, 235; should be taught nothing till he is five years old, 235; how then to be educated, 236

Children, the proper government of, 22; what their proper virtues, 23; what they are usually taught, 240

Cities, how governed at first, 3; what, 3; the work of nature, 3; prior in contemplation to a family, or an individual, 4

Citizen, who is one? 66, 68; should know both how to command and obey, 73

Citizens must have some things in common, 26; should be exempted from servile labour, 51; privileges different in different governments, 68; if illegally made, whether illegal, 69; who admitted to be, 75; in the best states ought not to follow merchandise, 216

City, may be too much one, 27, 35; what, 66, 82; when it continues the same, 70; for whose sake established, 76; its end, 83; of what parts made up, 113; best composed of equals, 126

City of the best form, what its establishment ought to be, 149; wherein its greatness consists, 149; may be either too large or too small, 209; what should be its situation, 211; whether proper near the sea, 211; ought to be divided by families into different sorts of men, 218

City and confederacy, their difference, 37; wherein it should be one, 27

Command amongst equals should be in rotation, 101

Common meals not well established at Lacedaemon-well at Crete, 56; the model from whence the Lacedaemonian was taken, 56; inferior to it in some respects, 56

Community, its recommendations deceitful, 34; into what people it may be divided, 194

Community of children, 29, 30; inconveniences attending it, 31

Community of goods, its inconveniences, 28; destructive of modesty and liberality, 34

Community of wives, its inconveniences, 27

Contempt a cause of sedition, 146

Courage of a man different from a woman's, 74

Courts, how many there ought to be, 140

Courts of justice should be few in a small state, 192

Cretan customs similar to the Lacedasmonian, 57; assembly open to every citizen, 58

Cretans, their power, 58; their public meals, how conducted 58

Crete, the government of, 57; description of the island of 57

Customs at Carthage, Lacedaemon, and amongst the Scythians and Iberians, concerning those who had killed an enemy, 204, 205

Dadalus's statues, 6.

Delphos, an account of a sedition there, 150

Demagogues, their influence in a democracy, 116.

Democracies, arose out of tyrannies, 100; whence they arose, 142; when changed into tyrannies, 153; their different sorts, 184, 188; general rules for their establishment, 185; should not be made too perfect, 191

Democracy, what, 79, 80; its definition, 112, 113; different sorts of, 115, 118; its object, 122; how subverted in the Isle of Cos, 152

Democracy and aristocracy, how they may be blended together, 163

Democratical state, its foundation, 184

Despotic power absurd, 205

Dion, his noble resolution, 171

Dionysius, his taxes, 175

Dissolution of kingdoms and tyrannies, 169

Domestic employments of men and women different, 74

Domestic government, its object, 77

Domestic society the first, 3

Draco, 65

Dyrrachium, government of, 101

Economy and money-getting, difference, 17

Education necessary for the happiness of the city, 90; of all things most necessary to preserve the state, 166; what it ought to be, 166; the objects of it, 228, 229; should be taken care of by the magistrate, and correspond to the nature of government, 238; should be a common care, and regulated by laws, 238

Employment, one to be allotted to one person in an extensive government, 136

Employments in the state, how to be disposed of, 88-90; whether all should be open to all, 216

Ephialtes abridges the power of the senate of Areopagus, 63

Ephori, at Sparta, their power too great, 54; improperly chosen, 54; flattered by their kings, 54; the supreme judges, 55; manner of life too indulgent, 55

Epidamnus, an account of a revolution there, 150

Equality, how twofold, 143; in a democracy, how to be procured, 186

Euripides quoted, 72

Family government, of what it consists, 5

Father should not be too young, 232

Females and slaves, wherein they differ, 2; why upon a level amongst barbarians, 3

Forfeitures, how to be applied, 192

Fortune improper pretension for power, 91

Freemen in general, what power they ought to have, 86

Free state treated of, 121; how it arises out of a democracy and oligarchy, 122, 123

Friendship weakened by a community of children, 31

General, the office of, how to be disposed of, 98

Gods, why supposed subject to kingly government, 3

Good and evil, the perception of, necessary to form a family and a city, 4

Good fortune something different from happiness, 202

Government should continue as much as possible in the same hands, 28; in what manner it should be in rotation, 28; what, 66; which best, of a good man or good laws, 98; good, to what it should owe its preservation, 124; what the best, 225

Government of the master over the slave sometimes reciprocally useful, ii

Governments, how different from each other, 67; whether more than one form should be established, 76; should endeavour to prevent others from being too powerful-- instances of it, 93; how compared to music, in; in general, to what they owe their preservation, 160

Governments, political, regal, family, and servile, their difference from each other, i

Governors and governed, whether their virtues are the same or different, 23; whether they should be the same persons or different, 227

Grecians, their superiority over other people, 213

Guards of a king natives, 96,168; of a tyrant foreigners, 96, 168

Gymnastic exercises, when to be performed, 223; how far they should be made a part of education, 242, 243

Happiness, wherein it consists, 207

Happy life, where most likely to be found, 202

Harmony, whether all kinds of it are to be used in education, 251

Helots troublesome to the Lacedaemonians, 87

Herdsmen compose the second-best democracy, 189

Hippodamus, an account of, 46; his plan of government, 46, 47: objected to, 47, 48

Homer quoted, 95, 116

Honours, an inequality of, occasions seditions, 44

Horse most suitable to an oligarchy, 195

Houses, private, their best form, 221

Human flesh devoured by some nations, 242

Husbandmen compose the best democracy, 189; will choose to govern according to law, 118

Husbandry, art of, whether part of money-getting, 13

Instruments, their difference from each other, 6; wherein they differ from possessions, 6

Italy, its ancient boundary, 218

Jason's declaration, 72

Judge should not act as an arbitrator, 48, 49; which is best for an individual, or the people in general, 98, 99

Judges, many better than one, 102; of whom to consist, 102; how many different sorts are necessary, 141

Judicial part of government, how to be divided, 140

Jurymen, particular powers sometimes appointed to that office, 68

Justice, what, 88; the course of, impeded in Crete, 59; different in different situations, 74

King, from whom to be chosen 60; the guardian of his people 168

King's children, what to be done with, 100

King's power, what it should be 100; when unequal, 143

Kingdom, what, 78

Kingdoms, their object, 167; how bestowed, 168; causes of their dissolution, 173; how preserved, 173

Kingly government in the heroic times, what, 96

Kingly power regulated by the laws at Sparta in peace, 95; absolute in war, 95

Kings formerly in Crete, 58; their power afterwards devolved to the kosmoi, 58; method of electing them at Carthage, 60

Knowledge of the master and slave different from each other, ii

Kosmoi, the power of, 58; their number, 58; wherein inferior to the ephori, 58; allowed to resign their office before their time is elapsed, 59

Lacedamonian customs similar to the Cretan, 57

Lacedaemonian government much esteemed, 41; the faults of it, 53-56; calculated only for war, 56; how composed of a democracy and oligarchy, 124

Lacedaemonian revenue badly raised, 56, 57

Lacedaemonians, wherein they admit things to be common, 33

Land should be divided into two parts, 219

Law makes one man a slave, another free, 6; whether just or not, 9; at Thebes respecting tradesmen, 75; nothing should be done contrary to it, 160

Law and government, their difference, 107, 108

Laws, when advantageous to alter them, 49,50, 52; of every state will be like the state, 88; whom they should be calculated for, 92; decide better than men, 101; moral preferable to written, 102; must sometimes bend to ancient customs, 117; should be framed to the state, 107; the same suit not all governments, 108

Legislator ought to know not only what is best, but what is practical, n

Legislators should fix a proper medium in property, 46

Liberty, wherein it partly consists, 184, 185

Life, happy, owing to a course of virtue, 125; how divided, 228

Locrians forbid men to sell their property, 43

Lycophron's account of law, 82

Lycurgus gave over reducing the women to obedience, 53; made it infamous for any one to sell his possessions, 53; some of his laws censured, 54; spent much time at Crete, 57; supposed to be the scholar of Thales, 64

Lysander wanted to abolish the kingly power in Sparta, 143

Magistrate, to whom that name is properly given, 136

Magistrates, when they make the state incline to an oligarchy, 61; when to an aristocracy, 61; at Athens, from whom to be chosen, 64; to determine those causes which the law cannot be applied to, 88; whether their power is to be the same, or different in different communities, 137; how they differ from each other, 138; in those who appoint them, 138; should be continued but a short time in democracies, 161; how to be chosen in a democracy, 185; different sorts and employments, 196

Making and using, their difference, 6

Malienses, their form of government, 131

Man proved to be a political animal, 4; has alone a perception of good and evil, 4; without law and justice the worst of beings, 5

Master, power of, whence it arises, as some think, 5

Matrimony, when to be engaged in, 232

Meals, common, established in Crete and Italy, 218; expense of, should be defrayed by the whole state, 219

Mechanic employments useful for citizens, 73

Mechanics, whether they should be allowed to be citizens, 74, 75; cannot acquire the practice of virtue, 75; admitted to be citizens in an oligarchy, 75

Medium of circumstances best, 126

Members of the community, their different pretences to the employments of the state, 90; what natural dispositions they ought to be of, 213

Men, some distinguished by nature for governors, others to be governed, 7; their different modes of living, 13; worthy three ways, 226

Merchandise, three different ways of carrying it on, 20

Middle rank of men make the best citizens, 127; most conducive to the preservation of the state, 128; should be particularly attended to by the legislators, 130

Military, how divided, 194

Mitylene, an account of a dispute there, 150

Monarch, absolute, 100

Monarchies, their nature, 95, 96; sometimes elective, 95; sometimes hereditary, 95; whence they sometimes arise, 146; causes of corruption in them, 167; how preserved, 173

Money, how it made its way into commerce, 16; first weighed, 16; afterwards stamped, 16; its value dependent on agreement, 16; how gained by exchange, 19

Money--getting considered at large, 17, 18

Monopolising gainful, 21; sometimes practised by cities, 21

Monopoly of iron in Sicily, a remarkable instance of the profit of it, 21

Music, how many species of it, in; why a part of education, 240; how far it should be taught, 242, 243; professors of it considered as mean people, 244; imitates the disposition of the mind, 246; improves our manners, 246; Lydian, softens the mind, 247; pieces of, difficult in their execution, not to be taught to children, 249

Nature requires equality amongst equals, 101

Naval power should be regulated by the strength of the city, 212

Necessary parts of a city, what, 215

Nobles, the difference between them, no; should take care of the poor, 193

Oath, an improper one in an oligarchy, 166

Officers of state, who they ought to be, 135; how long to continue, 135; who to choose them, 136

Offices, distinction between them, 67; when subversive of the rights of the people, 130

Offspring, an instance of the likeness of, to the sire, 30

Oligarchies arise where the strength of the state consists in horse, no; whence they arose, 142

Oligarchy admits not hired servants to be citizens, 75; its object, 79; what, 79, 81; its definition, 112; different sorts of, 117, 119; its object, 122; how it ought to be founded, 195

Onomacritus supposed to have drawn up laws, 64

Ostracism, why established, 93, 146; its power, 93; a weapon in the hand of sedition, 94

Painting, why it should be made a part of education, 241

Particulars, five, in which the rights of the people will be undermined, 130

Pausanias wanted to abolish the ephori, 143

People, how they should be made one, 35; of Athens assume upon their victory over the Medes, 64; what best to submit to a kingly government, 104; to an aristocratic, 104; to a free state, 104; should be allowed the power of pardoning, not of condemning, 135

Periander's advice to Thrasy-bulus, 93, 169

Pericles introduces the paying of those who attended the court of justice, 64

Philolaus, a Theban legislator, quits his native country, 64

Phocea, an account of a dispute there, 150

Physician, his business, 86

Physicians, their mode of practice in Egypt, 98; when ill consult others, 102

Pittacus, 65

Plato censured, 180

Poor excused from bearing arms and from gymnastic exercises in an oligarchy, 131; paid for attending the public assemblies in a democracy, 131

Power of the master, its object, 77

Power, supreme, where it ought to be lodged, 84; why with the many, 85, 87

Powers of a state, different methods of delegating them to the citizens, 132-134

Preadvisers, court of, 135

Priesthood, to whom to be allotted, 217

Prisoners of war, whether they may be justly made slaves, 9

Private property not regulated the source of sedition, 42; Phaleas would have it equal, 42; how Phaleas would correct the irregularities of it, 43; Plato would allow a certain difference in it, 43

Property, its nature, 12; how it should be regulated, 32, 33; the advantages of having it private, 34; what quantity the public ought to have, 44; ought not to be common, 219

Public assemblies, when subversive of the liberties of the people, 130

Public money, how to be divided, 193

Qualifications necessary for those who are to fill the first departments in government, 164

Quality of a city, what meant by it, 129

Quantity, 129

Rest and peace the proper objects of the legislator, 230

Revolutions in a democracy, whence they arise, 152; in an oligarchy, 156

Rich fined in an oligarchy for not bearing arms and attending the gymnastic exercises, 131; receive nothing for attending the public assemblies in a democracy, 131

Rights of a citizen, whether advantageous or not, 203

Seditions sometimes prevented by equality, 45; their causes, 144-146; how to be prevented, 163

Senate suits a democracy, 185

Shepherds compose the second-best democracy, 189

Slave, his nature and use, 6; a chattel, 7; by law, how, 9

Slavery not founded in nature but law, as some think, 6

Slaves, an inquiry into the virtues they are capable of, 23; difficult to manage properly, 51; their different sorts, 73

Society necessary to man, 77

Society, civil, the greatest blessing to man, 4; different from a commercial intercourse, 82

Socrates, his mistakes on government, Book II. passim; his division of the inhabitants, 38; would have the women go to war, 38; Aristotle's opinion of his discourses, 38; his city would require a country of immeasurable extent, 39; his comparison of the human species to different kinds of metals, 40; his account of the different orders of men in a city imperfect, 3

Sojourners, their situation, 66

Solon's opinion of riches, 14; law for restraining property, 43; alters the Athenian government, 63

Soul by nature the governor over the body, and in what manner, 8; of man how divided, 228, 231

Speech a proof that man was formed for society, 4

State, each, consists of a great number of parts, 109; its disproportionate increase the cause of revolutions, 147; firm, what, 159

Stealing, how to be prevented, 44

Submission to government, when it is slavery, 206

Supreme power should be ultimately vested in the laws, 101

Syracuse, the government of, languid, 151

Temperance in a man different from a woman, 74

Temples, how to be built, 223

Thales, his contrivance to get money, 21; supposed to be the companion of Onomacritus, 64

Things necessary to be known for the management of domestic affairs, 19, 20; necessary in the position of a city, 220

Tribunals, what different things they should have under their jurisdictions, 137

Tyrannies, how established, 168; how preserved, 174, 176; of short duration, 180; instances thereof, 180

Tyranny, what, 79; not natural, 103; whence it arises, 108; treated of, 124; contains all that is bad in all governments, 125

Tyrant, from whom usually chosen, 167; his object, 168; his guards, 168

Tyrants, many of them originally enjoyed only kingly power, 168; the causes of their being conspired against, 169, 170; always love the worst of men, 175

Uses of possessions, two, 15

Usury detested, 19

Venality to be guarded against, IDS

Village, what, 3

Virtue of a citizen has reference to the state, 71; different in different governments, 71

Virtues different in different persons, 23, 24; whether the same constitute a good man and a valuable citizen, 71

Walls necessary for a city, 222

War, what is gained by it in some degree a natural acquisition, 14; not a final end, 205, 229

Wife, the proper government of, 22

Women, what their proper virtue, 23; not to be indulged in improper liberties, 52; had great influence at Lacedaemon, 52; of great disservice to the Lacedemonians, 52; why indulged by them, 53; their proper time of marrying, 233; how to be managed when with child, 234

Zaleucus, legislator of the Western Locrians, 64; supposed to be the scholar of Thales, 64

The Little Immigrant

Eva Stern

Project Gutenberg Release: December 01, 2004 · eBook #7090

Thanks to Robert Stern, great-grandson of the author, for donating this eBook.

INTRODUCTION

In 1921, my great-grandmother, wrote this book about how her parents met, married and began a family. Eva's mother, Ernestine, was presumably "the little immigrant." The book was privately printed, and only a few copies survive.

The names of most of the characters have been disguised, although thinly. In the table below, the fictitious names appear on the left, the real names, where known, on the right:

Renestine Jewel Ernestine Jacobowsky Aldine Bilter (her married sister) Jaffray Starr Jacob Sterne Lola, the Starrs' first-born Laura Sterne Ena, their second-born Eva Sterne Lester Leopold Sterne Andrew Alfred Sterne Frank, the youngest child Fred Sterne Josiah, longtime family slave Caroline, Josiah's wife Sarah, successor to Carolina

One name that is authentic is that of Gen. Buell, whom the Starrs put up during the Reconstruction period after the Civil War and who in fact was sent to Jefferson following a breakout of violence during this period.

Eva Sterne, who became the wife of Leopold Stern (with only one e), was 59 when this book was printed.

THE LITTLE IMMIGRANT

Eva Stern

CHAPTER I

"NAH! Renestine, cannot you come with the skirt and let me lay it in your trunk? You are dreaming, dreaming all the time. My child, these things must be ready by midnight tonight."

The girl was thirteen years old and her mother was getting her possessions together to send her to America to join a sister who had already gone there and was married and now sent to have her little sister journey to the States, too.

"Oh, Mutterchen, I do not want to go," burst out Renestine. "I want to stay with you. I do not want to go."

"Nah! Kindlein, stay then," said the mother, keeping her own grief away from her child.

Just then the door to the little room flew open and three excited girls of about Renestine's own age or perhaps one or two years older, bustled themselves inside.

"Why, Renestine, you are not finished packing yet! We are ready and our trunks are roped and standing at the door for Laaskar to put on the post-wagon when he drives by on his way to the post-house tonight."

The speaker stopped confused seeing that Renestine was silent with no joy in her eyes and the mother sat quietly with flushed checks and said nothing.

"What has happened?" said the three girls in chorus. "You are not going to back out, are you?"

Still Renestine did not look up or make any sign that she was interested in the preparations for her arranged trip. Presently the mother spoke and her voice trembled.

"Renestine has changed her mind and will remain at home."

Then the girls broke into a laugh and chided Renestine, saying she was a baby and would never see the ocean or go to America and ride in carriages. The mental picture was doing its work. Not ride in carriages and have pretty clothes and .learn to speak

English? That was too much to refuse. Renestine raised her head, wiped the tears out of her eyes, brought the skirt neatly folded to her mother and said: "Mutterchen, finish my trunk. I am going with Yetta, Selma and Polly to America."

The journey began and Renestine made the voyage over in a sailing vessel which took six weeks to make her port at Galveston, Texas, in the early fifties. The girls experienced days of seasickness when they thought it was better to die than to ride in carriages and were weary and homesick. But when, at last, they walked again upon land and were welcomed in Galveston by their relatives, all the melancholy hours were forgotten. The girls had separated into their different families on arriving at Houston, but frequently met just as they had before leaving their home town, and were observing everything with eagerness and getting their first impressions of America.

One balmy Sunday morning they took a walk and marveled much that Houston had so many houses and such large ones. While they walked they chatted and were merry. Finally, they noticed that a great many looked at them curiously, and some smiled. They were at last spoken to by an old lady, who reminded them that it was not customary for girls to walk in the middle of the street. This was a conceit that pleased them, to walk in the middle of the street just to see people walking on either side of them.

The ringing of the Sunday morning church bells was a startling sound and Paula exclaimed, as the three stood still listening: "Oh, listen to the music box!" Solemnly they walked on and wondered that the world was so large and full of beautiful things. Itwas a long time before Renestine realized that they had gone a great distance. "We will return now," she said. But when they turned to retrace their steps they found themselves in a wood of large, dark trees with heavy gray moss dropping from their branches and a solemn stillness over all. It was growing dusk, too, and the trees looked ghostly in the falling gloom.

"Do you know which way to go?" asked Yetta.

"Oh, come with me and I will show you," said Paula.

Trustingly they followed Paula. But the brave girl, after a half hour's vain effort, had to admit that she was puzzled herself and did not know how to get out of the wood. Yetta showed the nearness of tears, but Renestine set to work to extricate themselves. Before she had decided what to do they all three heard horses' hoofs trampling down bush-wood and dry twigs not far away. The riders, or whatever it was, came nearer until the girls saw a young man on horseback, a boy accompanying him. The horsemen reined in their horses and stopped when they saw the girls standing before them. The older man, who was about twenty-eight, asked how they came to be so far in the depth of the trackless woods. When they had told him, he dismounted, throwing the reins over his arm and leading his horse, he walked along by the side of the girls guiding them out of their difficulty; the boy followed on his horse which carried the saddle-bags containing the personal belongings of both of them. As they walked many questions were asked and answered and in a little time the woods were left behind and the. girls were opening the gate of Renestine's sister's home. The young rescuer, after seeing them safely disappear in the doorway, got on his horse again and trotted off to his hotel, the boy following.

CHAPTER II

SEATED at her work table in her sitting room, Mrs. Bilter was putting the last stitches in a white Swiss dress that Renestine was to wear that night to a ball. The puff sleeve close to the shoulder was the last of the dainty dress to be put on. Mrs. Bilter took eager pleasure in dressing her pretty sister in the daintiest of gowns. When she looked up she saw her husband coming through the gate for his noon dinner. She put down her sewing and moved to meet him on the porch.

"Well, dear, how are you getting on with the ball dress?" For Mr. Bilter was as interested in his little sister-in-law as his wife was. "Renestine will have to look her prettiest to-night. There are some visiting young men in the town and they will be at the ball."

They went in together and were received by old Aunt Mary, a colored family servant who was much respected and held in affection by the members.

"Dinnah jest put on de table, Missus."

"Has Miss Renestine come home?"

"No'm. I's hasn't seen her; prehaps she's kept in fer not knowin' her lessons."

Just then Renestine came in, her cheeks rosy and her large black eyes luminous with the exercise of walking home from school. She entered the dining-room laughing and sat down next to her brother-in-law.

"How were the lessons today, Renestine?" he asked, patting her hand that lay in his. "Arithmetic right?"

"No trouble at all. Oh, I am so glad that you both had the idea to send me to school, I love it. I love to be puzzled over a question and find it out for myself. I love to feel myself gaining knowledge and understanding many things that used to be dark and incomprehensible to me and that seem plain now. I rejoice that I am able to think and speak English," and Renestine turned her head toward her sister and her eyes were moist. "You are very good to me, Aldine, and besides you are spoiling me with all the pretty dresses you make for me."

"Oh, do come in right after dinner and look at your dress for to-night. It is just lovely with the little rosebuds around the shoulders," said Mrs. Bilter.

It did not take long before the three were admiring the fluffy white dress and predicting its success at the ball.

Renestine hurried home after school and sat down by the side of her sister to help sew rosebuds on the flounces of the wide skirt. When the dress was finished Renestine took it to her room and pinned it up on the curtains of her bed to look at it and get the effect of it. Then she got out her little white satin slippers and began the ceremony of the toilette for the ball.

Carriages were coming and going before the brilliantly lighted Colonial house owned by the Good Fellowship Club. The colored drivers sat proud and erect on their boxes and held in their restive horses while their masters and mistresses alighted. Young dandies in ruffled shirts and flowered velvet waistcoats came on foot and sprang eagerly up the steps and vanished through the double doors swung back by colored attendants. Strains of music reached the street and ceased when the doors opened and shut and the sound of many voices in conversation and happy laughter burst upon the ear of the passer-by. Inside, all was gaiety and animation. Festoons of greens hung from the chandelier of kerosene lights and garlands and wreaths decorated the walls of the wide hall and rooms where there was dancing. In the ballroom five colored musicians were the orchestra and the leader "called out" the figures of the lancers and quadrilles. "Face your pardners," he called out as the square dance was begun. Several sets of four couples were formed ready for the first strains of the lancers music and the prompter. "Forward all," and all the couples advanced to the center. "Swing your pardners," "balance corners," the lady and gentleman faced to the right and took steps to the music. "Swing," and they swung around.

The next figure was the "Grand right and left," called out by the prompter and the couples circled around and after a large ring was formed by taking hands and going first to the right and then to the left, amid laughter the dance broke up.

Standing near the window on the porch were two young men. They were smoking cigars and commenting on the guests and the surroundings generally.

"There's a little Queen Esther with her black hair braided and folded over her shell pink ears. Look at her graceful walk. Do you see the one I mean?".asked the taller of the two men.

"Do you mean the one with the rosebuds on her gown?"

"Yes, the very one. She has the most beautiful black eyes I have ever seen."

"Yes, she is a beautiful girl," assented his companion.

"Where have I seen her before? I recognize those eyes."

"You are not captured, are you, Jaffray?"

"Well, I don't know." And they both laughed. "Let us go inside."

They threw away their cigars and went in.

"Miss Jewel, Mr. Starr would like to be presented to you, may I bring him to you?" Renestine looked up and found a friend speaking to her, but before she could answer the tall stranger was at her friend's elbow.

"This is a great pleasure for me," said the newly introduced guest. "But, Miss Jewel, it has been an impression of mine since I first saw you this evening that we have met before. Can you help me settle upon the place, time and occasion?"

"Why, no," laughed Renestine, showing two rows of small, white teeth that enhanced her charm.

"I am sure if we try hard enough we shall soon discover," Jaffray said. "May I sit down?" Renestine drew sideways to allow him to draw up a chair, her hoop skirt spreading her tarlatan flounces some space around her.

"Why, yes, indeed, now that I look at you, the woods, gray moss, three frightened young ladies; it was in the dusk of evening as I was riding from McKinney, all of that picture returns," he put his forefinger to his lips, and looked down at the floor in deep reflection.

For a moment Renestine was silent, then turned rosy red. "Oh, Mr. Starr, was it you who brought us out of the Wilderness and restored us to our families? You appeared at the most fortunate moment, we were really lost," and she laughed heartily. "You are a stranger here, Mr. Starr?"

"Not altogether. I have visited here before on business. Where I live it is lonesome for me and I take my vacations with much the spirit of a school boy. Shall we dance?"

The "Kiss Waltz" was a great favorite and the opening bars were beginning, "Hun" Williams, leader of the orchestra, putting a good swing into it. Renestine and Jaffrey glided with the rhythm of the music and danced until the last strains closed the tuneful composition. Throwing a lace scarf about her shoulders, Jaffray led Renestine to the balcony. The moon was bright as day and the early May dew brought out the fragrance of the jessamine and clematis climbing over the balustrade.

They stood for a time without speaking, feeling the spell of the Southern spring time.

"Is not this solemn beauty? Somehow it hurts, it is so beautiful," said Renestine quietly, her large eyes dreamy and full of softness.

"Ah, you have a poet's soul, Miss Jewel. Will you tell me something of your life? You were not born here?"

They were walking up and down the broad verandah and Renestine was telling him of the little mother so far away, parted from, perhaps never to be seen again. She was saying, "At last when the time came to say good-bye, I clung to my mother's form and in that moment could see my soul, bared, bruised, wounded and somehow the little girl passed with that parting and although I was but a few months younger than I am to-night, I am here just one year, I feel much changed and older." Her lids closed and Jaffray did not interrupt. "Mr. Starr, do you know of any experience more cruel than this parting of parents in Europe with their children to come to America? I think of it now so often. I think there cannot be in all life . . . ."

Jaffray saw the tears in those wonderful eyes. "No, Miss Jewel, no. I know of nothing more humanly cruel! I, too, parted from my beloved mother and twin sister when a mere lad to cross the ocean to seek my fortune in America. A lad barely fifteen years of age, I had no idea of what I was going out to meet in the world when I took my small belongings and journeyed toward these shores. There were no friends, no relatives where I was going; all those were being left behind; but the spirit of adventure possessed me and I wanted more freedom to work out my destiny in and the parting had to be for me and I cannot tell you how I have suffered from homesickness for the beloved Mother and good sister, for the little home in the Rhine village where the terraces of grapes lay just back of our house; that never is forgotten, no matter how long one lives. We have a common bond of sympathy, may I hope it means a tie of friendship?"

She gave him her hand and shortly afterwards he led her back into the ballroom; but the music could not tempt them to dance again and, after seeing Renestine with friends, he said good-night and left.

It was near daylight when Jaffray smoked his last cigar and finally put out the light in his little room in the hotel and went to bed.

Jaffray paid frequent visits to Houston from McKinney, after he met Miss Jewel. Although Renestine was busy with her school work, her sister permitted her, like all the young girls, to accept the attentions of young men who wished to call or who invited her to social affairs.

Jaffray was some years older than Renestine and was aware that she was but a school girl, untutored in the ways of the world, even less than most girls of her age. But Renestine's modesty, her innocence, her beauty, appealed to him as no other woman's charms had done and thoughts of her took possession him. His stuffy little office in McKinney, in the long, narrow store where general merchandise was rather irregularly piled around in high wooden boxes, in barrels, and on shallow shelves, became a

prison house and the weeks endless terms of sentence. It happened that be could not absent himself from duty oftener than once every month and then only from Friday to Sunday night. These days of freedom were now prized tenfold more dearly than if he had had his time free to do as he wished.

Heretofore it had been his dearest wish to employ his spare time with books, reading and studying to improve his mind and for the pleasure that books gave him. Now his thoughts refused to concentrate upon anything but Miss Jewel.

After some weeks of acquaintance there was an exchange of letters which grew into a long correspondence. Those were happy days for Jaffray! Eagerly he would look forward to the mail and from the receipt of each of Renestine's letters to the next he would be in a heaven all his own. He sent her songs and books of verse; he wrote long and throbbing letters, and Winter and Spring, Summer and Autumn were just one long summer day for him with the music of the birds overhead and the earth a garden of blossoms.

CHAPTER III

TWO years went by and Renestine had been the bride of Jaffray Starr three months. Grown into womanhood, she was radiant; happy in her love and secure in the faith of her choice, she went forth from her sister's home full of hope and cheer. Renestine had had many suitors, had had much admiration. She could have become the wife of a young adoring banker; she had refused to listen to the suit of men of more substance than her husband; but because of the quiet manliness of Jaffray Starr, because of his keen intellect, because of his nobility of heart and generous nature, she gave her heart into his keeping, sure that she had made no mistake, and set out with him to share his fortune, whatever it would bring. They had been married and left at once for Jaffray's home at Jefferson, where he had a position in the County Clerk's office. Now they were settled and housekeeping. But it was a long, rough journey they had made from Houston to Jefferson. The railroads had not been built in that section of the country and travel was done by horse teams and in covered wagons. Two good colored servants accompanied them; old Josiah, who drove and took care of the rough work, and his wife; Caroline, to look after the "Missus" and do the cooking. Bringing out kettles and pans tucked away in the wagon, Josiah would build a brushwood fire and Caroline would cook the meals, rations for two weeks having been provided. When it was time to stop for a meal or to rest the horses, Josiah would be on the watch for a clear spring of water along the roadside, would draw up by the side of it and begin preparations for camping. It was not as much of a hardship as Pullman travelers would conclude. The wagons were fitted with springs which gave easily over rough roads and even had a fascination and romance, and in the cool of the evening when a stretch of smooth road lay before them it was delicious to feel the soft air blowing into their faces and to experience the exhilaration of the rapid motion of the wagon. There were also arrangements for comfortable beds.

Word had gone ahead that Jaffray was bringing home a bride and the people were alert to give her welcome. Jaffray never realized how much he was thought of until he came back a Benedict. Homes were thrown open to him and his young wife with offers to remain as long as they would, and all .kinds of propositions made for their comfort and welfare.

"No, thank you, John or Tom or Buck," he would reply, kindly but firmly. "We shall go to the hotel until we can arrange a home. I have already rented a house and it won't take us long to get settled."

Nor did it. In a few weeks Jaffray and Renestine were occupying a small house, not far from the river that skirted the town, with Josiah and Caroline in charge.

"I do not see how anything can be prettier," said Renestine one day after they had been in their home about a week. She had just finished looping the pretty Swiss curtains at the windows of their living room. "I really do not," she continued, stepping back, her finger tips together, her head quizzically on one side. "Nothing can be sweeter or prettier than our home. Jaffray, have you noticed how dainty the chintz furniture is and how well it goes with the walls? I think I deserve commendation for that wall paper, Jaffray."

"Indeed, you do, my darling," returned Jaffray, pulling solemnly at his pipe and looking half amused, half serious, at his young wife. "Are you quite sure the pattern is large enough?" he said, laughing.

"Oh, you ungrateful man, you are making fun of me, I do believe. Come into the dining-room and have dinner. Caroline is just bringing it in."

Arm in arm, they stepped into a long, narrow room which went the width of the house, only excepting a little room off the main bedroom which was used for a dressing room.

The house consisted of a living room, a small hall and across from the living room, the bedroom. Back of the little room was a small porch and detached from the house, but connected by a covered walk, was the kitchen. The dining-room was a foot below the two front rooms, the kitchen joining it by the covered passage way. They could never explain why the dining-room was so arranged, but concluded that the owner had added it on at a later time. It was cosy and comfortable and became attractive under the deft fingers of Renestine. The little covered porch in front of the house was screened by running vines from the gaze of the street.

"Now for my book shelf!" exclaimed Jaffray, after he had smoked his afternoon pipe. "You must help me arrange them, Renestine. No real home without books, little girl."

Josiah brought in the large drygoods box, which he opened, and together Jaffray and Renestine took out the books, dusted them and placed them on the shelves built in one side of the wall. Among them were Byron,

Moore, Pope, History of the United States, Josephus, Irving's Life of Washington. It was late when the last one had been put away, and they were glad enough to rest in their rockers on the porch in the gloaming.

CHAPTER IV

THE day was hot and sultry. The chinaberry trees gave out their sweet flower fragrance, almost too sweet to breathe freely in, while their lacy leaves scarcely stirred. A great shady one grew in the corner of the paling-fence around the yard and close to the two-room living quarters for the negro servants. Aunt Caroline sat in the door combing her wiry hair with a curry comb, a jagged piece of broken mirror in her lap to guide her in her hairdressing; close by were a couple of rush-bottom chairs set face to face and holding across their seats a pillow with a mosquito netting pulled tight across the top of the backs. Every once in a while Aunt Caroline would twist her neck in the direction of the improvised bed and, finding nothing stirring, would resume her hair-brushing.

"Oh, Aunt Caroline," rushed out of the air and a two-year-old little girl threw herself heavily against the old servant's knees, nearly dashing her toilet articles to the ground. Aunt Caroline started, raised her curry brush over her head and shook it hard at the child.

"My lands," she said, in a low voice. "Whar you come from and making all dat noise and your sister lying dar asleep. Ain't you never swine to renembar what I's al'ays tellin' yer, not ter brash up against one like out de Sperrit world and nearly scare yer old mammy ter deth? Ennyhow yer look tired; come heah in my lap and le' me rock yer."

"May I have your looking glass, then, Aunt Caroline?"

"Look out, chile, you'll cut yerself! No. I's got to lay dis up on de shelf for mahself. Dis no lookin' glass fer a white chile. Now you come heah and get in my lap dis minute."

The child, tired from play and romping around, lifted her arms to be taken up into her dear old mammy's lap. With her curlv head pressed against Aunt Caroline's breast, she fell asleep in a little while and was resting there long after Aunt Caroline had stopped tilting her chair forward and backward--a way quite familiar to Southern nurses in lulling children to sleep. In a little while she had succumbed to the silent noon hour herself.

"Looka heah, nigger. What you mean holden dat chile in yer lap and you fast ter sleep? Wake up. Yer heah? Miss Tiny is comin!" Josiah shoved his brogan over Aunt Caroline's thinly shod foot and she jerked her head up with a start.

"Bless mah soul!" She looked around with a frightened appearance at the chairs with the mosquito netting over them and two blue gray eyes were looking up into hers and a little fist was being devoured.

"Here you are with the children," said a low, sweet voice. "I've wondered if Lola was with you. Has the baby been asleep a long time, Aunt Caroline?"

"Yes'm. She jest now waken up. Ain't she purty, Miss Tiny? Just look at her little face looken like a cherub's. She shore is a buiful chile. Looks a hole lot like you wid her big eyes, on'y dey gray 'stead of black."

"Let me take Lola from you and you lift the baby and bring her to the house."

"Yes'm." Aunt Caroline didn't lose an opportunity, however, to turn around to remark to Josiah, who was hoeing not far away, "Yer, Josiah, you jes come heah, suh, and tote dis chile up to de house. She too hebby fer de Missus. You lubbering black nigger, you jes good fer nothin' nohow and doan you eber stamp on my foot agin! Go long, Miss Tiny, we will bring up de chillens!"

Jaffray was home for midday dinner. "I've bought a nurse girl for you, Renestine. Here is the bill of sale," he said, handing a light blue paper to her. Renestine read: "A copper colored girl," etc. When they were seated at the table Jaffray said: "I felt like a mean creature when I paid the money for that girl, but I knew we needed a nurse girl. Aunt Caroline can't cook and care any longer for the children too, so what was to be done? This slavery system is frightful, and mark my words, Renestine, the day will come when the darkies will be free. Where I was born on the Rhine, no one would believe for a moment that I would buy a human being. They would hate me as I hate myself for bartering in human flesh."

"I know, I know, Jaffray. I remember when my sister used to send Josiah out in the morning to work, he would come back in the evening with his pay that he had earned in the blacksmith shop and give it to her, and Aunt Caroline would bring her money, too, that she had made by a hard day's, washing and ironing. Oh, yes, it is all wrong and dreadful, but we will treat them well and wait for the day to set them free!"

"It will not be long now. There are all sorts of rumors about Lincoln doing this 'and that."

"You mean about setting the negroes free?"

"Yes."

"But how? People will not just let them walk away!

"Walk away! Oh, little woman, if it could be brought around that way the threatening clouds would not be so dark ahead! 'Just walk away.' The President is offering to find a way out. One is to 'compensate' owners out of Government funds for the release of their slaves; another is sending them to some warm country for colonization. Of course, he would ask Congress for an appropriation for this."

For long hours they sat reading the latest news in the day's paper and discussing the war reports with a very solemn foreboding of coming events.

CHAPTER V

WHEN the Civil War broke out the women of the South blanched with the terrible ordeal before them, but never for one moment doubted but that their beloved ones would come out of it all victorious. To them it was not conceivable that a cause so plainly one of individual rights could be lost. Sacrifice upon sacrifice was cheerfully made, even gloried in by these wonderful women of the South in 1861 and to the bitter end. Delicately nurtured women denied themselves comforts, sleep, food and drink; they were reduced to personal hardships which were met and borne with a sublime fortitude.

When it was all over those families which had possessed wealth and culture were in the grip of poverty, and it was then that the spirit of Southern womanhood showed its divine strength. Facing family troubles with the courage of noble resignation, those women who had been educated--some abroad--and accomplished, became school teachers at five dollars a month for a pupil, and many a woman to-day bears gratitude in her heart for the sweet influence of these school teachers, which has gone with her into every clime, into every condition, and proved an unfailing guide to the uplands and the heights. Many became seamstresses, some governesses and others traveling companions. But wherever these gentlewoman went they carried refinement and ideals.

The heroism of the Southern women in the Civil War is an Epic in American History!

Renestine was the mother now of three little daughters. Jaffray had gone to Mexico to buy up horses, saddles and commissaries for the army. Caroline and Josiah were her bodyguards and, faithful servants, they saved her little anxieties and looked after the welfare of the children.

Renestine made their little shoes by shaping cloth after their worn ones and sewing them together with pieces of soft cardboard for soles. She made coffee by drying beets, and flour by drying potatoes. Her practical little head was resourceful for any emergency. She felt sad at the separation from her husband, and her large black eyes were mournful but not tearful. To be and doing was her spirit. In spare moments she sat down to her tambourine to do crewel work on a tapestry picture. It was a large subject--The bard Ossian playing his harp to Malvino. Ossian seated on the front of some brown rocks, Malvino seated before him, her hands folded across his knees, full of tender regard for the gentle musician. This work was her pastime and recreation. She selected the worsteds and worked her needle out and in, shading and coloring and outlining with the skill of an artist in paints. Three years she

worked on this picture, almost to the end of the war, almost as long as Penelope worked on her task awaiting Ulysses' return.

In the meantime Jaftray paid short visits to his family and made them as comfortable for periods of his absence as he had it in his power to do. Texas was too far away to be the theatre of battles during the conflict, so that no real harassing of the families by the invading Northern soldiers took place, but her people suffered privations and danger just as much as her sister states and perhaps more after the war was over and the reconstruction period set in.

In 1870 the town of Jefferson was thrown into a panic by the murder one night of a "carpet-bagger." Carpet-bagger was a name given to those men who came into Southern towns after the war to stir up the people, and particularly the darkies, against the authorities. It was necessary for Washington to send troops to Jefferson to restore order.

A stockade was built up on the hill near the new home of Jaffray, for he had found his first little house too small for his growing family, and into this stockade some of Jefferson's prominent citizens were thrown and kept until they could prove their innocence of the charges brought against them, namely, that they had knowledge of the murder of the carpet-bagger. Those were trying days. Jaffray had returned from Mexico in impaired health, which had been caused by the impure drinking water in the country and also the intense heat there. The doctors told him he had to take a long rest.

Things were going badly in the town, military law was established and all men found implicated in the disturbance were drastically punished. The war bad reduced the prosperous store holder to penury, there was little money left to circulate among the people and Jefferson was demoralized in its business, civic and social life.

General Buell, commanding the military occupation, asked as a favor to be put up at Jaffray's house, as it was one of the largest in the town and near the camp. Jaffray consented. So General Buell and his wife came to live with Renestine and Jaffray, and afterwards one or two other officers and their wives joined General Buell. This was a courageous thing for Jaffray to have done, for, with the spirit existing in the town at that critical time, not many residents would harbor the Yankees. It was so dangerous that one night, when the General wished to retire to his rooms across the broad hall, he turned to Jaffray and said:

"Jaffray, put out the lamps before I cross over."

Kerosene lamps were in use and Jaffray put out the light before the officer walked from the sitting room across to his own rooms. In politics Jaffray was a Republican and he had the courage to live up to his convictions in a community that was enraged against Lincoln and his party. But the Republicans stood for free men, whatever color or creed, and Jaffray championed their doctrines. For him humanity, justice and liberty was the breath of his nostrils. This passion for men's rights he had inherited from a long line of ancestors reaching back into the mists of "In the beginning." He was an Israelite.

Renestine was glad to accept this change in their lives, as she realized that Jaffray's affairs were not prosperous and with the assistance of her servants she could help him very well, particularly as he was not in robust health. Whatever situation faced her she met it with high courage and a spirit to do. Their devotion was deep and with their little family they were happy and contented. Sorrow had not spared them, however, for their baby daughter bad contracted whooping cough and died a few months before. Jaffray grieved deeply for the little child and Renestine was almost overcome. But she straightened up herb beautiful head, like a flower after the storm has passed, and comforted her husband.

CHAPTER VI

JAFFRAY was now Postmaster of Jefferson. he city had resumed its normal life and gained in population and wealth. The streets were filled with wagons loaded with bales of cotton brought from as far away as 250 miles by ox teams, which took three weeks.

Jefferson was at the head of navigation on an arm of the Red River. Steamboats came up once or twice a week and the cotton was shipped to New Orleans and from that city to the mills in the East. When the boats arrived the scene on the levee was a very animated one. Negroes would fix large bill hooks into the bagging around the cotton bales and load them into drays. Some of them worked singing, as sailors do when they haul and pull.

Sometimes the captains of the larger steamboats would issue invitations to the families for a soiree, when the excitement would fill society for days. The ladies would dress in their silks and laces and the men spruce up in their frock coats and flowered waistcoats and cross the gang plank into the kerosene-lighted steamboats and dance until morning. Those were red letter days for Jefferson. As a matter of etiquette, when the steamboat was loaded and about to start back, everybody would be at the levee to wave

good-bye. The side paddle would turn and the hospitable captain would be up in the pilot house, waving his cap in return until the churning side-wheel carried him around the bend.

New houses were dotting the town here and there, some of them large and handsome with spacious grounds. Kerosene oil lamps were put up to light the streets and an "Opera House" was built, where many a stock company came to play in tragedy or comedy. Shakespeare's plays were the favorites of the community and Jaffray and Renestine went often to the theatre, accompanied by their two daughters, who were in their advanced school-day years and able to appreciate it. There were two little sons added to their family circle; they remained asleep in their trundle beds with old Aunt Caroline watching over them, as she had watched over the little daughters. Josiah had died right after the war was over, but he lived to see his people freed and schools opened where they could be taught to read and write--a precious privilege. He had said to Aunt Caroline just before his last illness: "Thanks be to God that He has set the colored folks free, but thanks be to Him mosen for gibbin' me a good marsa and missus who gibs me my close, my vittles and my me'cine."

The relation of the household servants to the Southern family was that of trust and affection after their liberation. In advanced years, like old Aunt Caroline, the younger servants saved them unnecessary steps and their days were happy and peaceful.

Near the home which Renestine and Jaffrav occupied almost touching the porch was a huge oak tree spreading wide shade around it. Here the children played; or, if it was a rainy day, they carried their precious dolls and drums into the latticed summer house built for ornamentation and use in very hot weather, where woodbine and honeysuckle ran along its diamond-shaped walls and hung thick and colorful in great waves. Jaffray loved his home and spared nothing that would make it comfortable and attractive.

His days were very arduous now, as he had to learn the methods of a government position. It appealed to him, though, for it was a pursuit which required reading up on rules, laws and regulations, and his bent was for books and instruction from them. While his days passed in attending to the business of the Post Office, his nights were given to study and self-improvement. He was never satisfied with what he achieved; to learn and to know more and more was his ruling passion. Many citizens now called upon him for advice. He would be asked to speak when a new building was opened or a public movement was on foot. They knew him to be generous and full of civic pride. He belonged to the Board of Aldermen and at one time was offered the office of Mayor. He had the confidence and respect of all the inhabitants of the town and his politeness and gentleness were the qualifications which made them love him.

He was a tall, spare figure, with black, well-set eyes, black hair, now showing thin at the temples and somewhat bald; he had a short black beard and moustache and his carriage was upright and dignified. He could be stern, even severe, when things aroused his anger, and nothing could touch his temper quicker than underhand dealings or a mean act. But his whole being was steeped with love of his kind and sympathy with the poor.

In the early days of Jefferson he and a friend bought a deed for a cemetery and presented it to the Jewish community. His home was opened to social and political gatherings where his friends were sure of a warm welcome. Renestine was always the center of attraction of these social affairs. She was proud of her husband and flushed with happiness when she saw him surrounded by admiring groups of men.

At this time a new influence came into their lives. It was a fine old Frenchman, who had drifted down to Jefferson from Alabama, where he had been a professor of piano teaching. His name was D'Archais, and by degrees they learned his history. But the immediate result of their meeting was to give their two little daughters, now eight and ten years old, to him to be instructed in music.

The history of this new friend was a romantic one. During the time of Louis Philippe he left Paris. His property and title had been taken by the revolutionists for he was an aristocrat, a Count, and he found that he was safer with the ocean between him and his beloved Paris.

He landed in Mobile, Alabama, and used his accomplishments of painting and music as a means of gaining a livelihood. For many years he worked in his profession and accumulated enough to lay aside. This he invested in cotton which was destroyed in a warehouse by fire. It was hard, but he began all over again and in the meantime married a widow with a daughter. This step-daughter won his complete affection, and when she married he devoted himself to her two children, a girl and a boy. It was because of these two children that he came to Jefferson, where they were then living.

The music teacher was 70 years old when he came into the lives of Jaffray and Renestine; a polished, grand old man of kingly soul and manners. The little daughters quickly learned to love their dear old teacher and all his life time he was their dear friend.

Jaffray was much impressed by this gentle nobleman and was glad to have the privilege of his friendship for himself and his family. He found that he was easily tired in these days and welcomed nightfall when he could sit on the porch in the twilight of summer and feel the peace of evening creep on apace. Often Mr. D'Archais would join him and chat about travel and the fall and rise of political parties in France.

"I left France after the fall of Louis Philippe," he said, "and came to America. My property was confiscated and I arrived here penniless. A friend of mine had gone to Mobile, Alabama, some years before, and I resolved to follow him. I began life over again and took a position in a young ladies' academy there to teach piano. I had taken lessons from renowned musicians in Paris, the same as taught Napoleon's sister, Pauline, and this was my only means now of making a living.

"I did very well, lived comfortably and saved a little besides, so that when the war broke out I had invested in cotton which was in a warehouse waiting to be sold. A large fire destroyed the warehouse with its contents, leaving me penniless once more, as there was not a dollar of insurance on it.

"In the meantime my friend had died leaving his family--wife and daughter--in my care. I decided to carry out his wish on his deathbed and married his wife soon after. His daughter became my joy and happiness. She was docile, ma foi, so perfect, that in a few years, when she married, I was irreconcilable." Here the music master would stop, let his face drop into his big, white, soft hands for a moment and then go on with his story. "She died three years after her marriage, leaving two children, a boy and a girl. These children were adopted by people here in this state and I followed. Jefferson was recommended to me as a good place to begin a class in music. I am not sorry I came as I have made friends and in my old age I can look forward to peace and a few devoted pupils to brighten the days." Many times during his recital he would exclaim: "Mon Dieu, mon dieu, I have seen many trials and tribulations."

Jaffray was always sorry to see Mr. D'Archais leave; his personality and story were romantic and picturesque. Long into the shadows of the night he would sit watching the stars come out one by one, thinking of the troublous life of the nobleman and simple music teacher.

In the Autumn Jaffray took to his bed utterly worn out and grew very ill, so ill that the family doctor felt a great deal of concern about his symptoms. He instructed that Jaffray be kept very quiet on a low diet and stimulants, to be given every few hours. This treatment benefited Jaffray so that he was able to sit up in a favorite arm chair now and then and listen to Charles Dickens' story, "Our Mutual Friend," then running as a serial in Harper's Magazine, read to him by his little gray-eyed daughter now ten years old.

At the close of the reading one morning he said: "What a great man! I'd rather die to-day and leave behind me the fame of Charles Dickens than live to be a hundred years old."

Much encouraged by Jaffray's condition, Renestine took fresh hope and went about her daily occupation with more energy. She knew Jaffray's tender affection for his children and when on his good days he had been made comfortable in his big arm chair the two young daughters, Lola and Ena, and their little brothers, Lester, Andrew and Frank, were allowed to come into his room and be near him, the infant son Frank resting in his arms, Lola standing by like a little mother watching over them all.

Other days he would look out of the window and watch the big oak tree standing near, with its leaves turning brown, shaking in the wind. Winter was turning the vines on the summer house into lifeless twists of runners and bending the rose hushes until the petals were strewn about the ground.

It was not until the first week in November that Renestine noticed that Jaffray was not as strong as usual. He kept to his bed now altogether, and his great heart seemed to speak to her of what was uppermost there--the parting; after only thirteen years of wedded life the end had come. His little Queen Esther with the rosebuds on her gown!

In his last moments he said to a friend: "What does it matter whether a man lives a little longer or not? It is only the loved ones he leaves that matter."

At his death the city closed the places of business by proclamation of the Mayor, and the long line of followers at his bier to the little cemetery he had given testified to the love his fellow men bore him.

Renestine was crushed. Her five children were to be lived for, of course, but how could she face the long years before her? She was young, inexperienced, unused to the world and its ways. She was overwhelmed by her fate. The assets of a generous man at his death are debts and some friends. Had it not been for the advice and devotion of a few friends, Renestine would have gone

down in the black waters that were now surging around her. The Post Office was looked after until she could find strength in body and mind to assume the duties of Post Mistress to which she was appointed. When she entered the door that first morning it was as a broken spirit without any idea of what she was about to undertake. The task was serious and exacting, she realized, but how to grasp its thousand details? Her master would be the U. S. Government, an uncompromising, stern and bloodless one.

Not many years before, this little woman was an immigrant child, landing with timid step on strange soil. To-day she was ushered into the important office of Government Mail and Money matters, one of the most responsible positions in the country.

With her usual courage and determination to learn, Renestine set about the long figures of quarterly returns and register reports, money order and stamp reports, making up and distributing mail, prompt deliveries and sending out of mail. Her pride in her new life responded to the demands made upon her and she went forward. Unafraid now, for she had a grasp of the difficulties, she bent her work. She pored over her monthly and quarterly returns in the quiet of night, and over and over again she wrote and figured until she understood and could make them out correctly. She was encouraged by her friends, and complimented by the bankers and merchants in the city for her successful efforts.

The first year was a long trial to Renestine. Her children were young and needed her care and guidance as well as the new occupation. But the little mother was all the busier when she returned home in the evening. With a divine strength to perform and serve, she labored.

The education of each child was followed patiently, eagerly, unceasingly, by her. Music and languages, besides the fundamentals, were to be given to each.

The bodies were clothed by her flying fingers at night. What a boon ready-to-wear would have been to this little mother. Not a boy's garment could be had unless it was the handiwork of the household.

One evening, many years afterward, Renestine returned to her home with her sixteenth commission in her hand. She had served the public of Jefferson faithfully and efficiently and the people had honored her. During these years her elder daughter had married but only lived a year after her marriage. This was another searing sorrow and for many days seemed to consume her. Now her second daughter was about to become the wife of a noble man who had long wished to wed her and take her back with him to make their home in New York City.

This evening she sat in the midst of her little family and recalled many scenes of her life. She was still a young woman, forty-eight, and she intended sending her resignation to Washington. She was about to leave Jefferson and follow her daughter to New York where there were better opportunities for the advancement of her three sons.

The following day she went with her prospective son-in-law and her daughter to pay a farewell visit to Mr. D'Archais at his little two-roomed house. The old man rose with his arms outstretched to meet them and his "little girl" was soon enclosed in them. On parting he turned to her soon-to-be husband and said:

"Make her happy. Make my little girl happy," and held his hand affectionately in his own.

So it was that Renestine, the little immigrant girl, became a superb woman of deeds, a wonderful American mother whose grandchildren have fought in this last war to win democracy for the world!

THE END

MDCCLXIII

TWO TREATISES OF GOVERNMENT. IN THE FORMER THE FALSE PRINCIPLES AND FOUNDATION OF SIR ROBERT FILMER AND HIS FOLLOWERS ARE DETECTED AND OVERTHROWN. THE LATTER IS AN ESSAY CONCERNING THE TRUE ORIGINAL EXTENT AND END OF CIVIL GOVERNMENT.

1764 EDITOR'S NOTE The present Edition of this Book has not only been collated with the first three Editions, which were published during the Author's Life, but also has the Advantage of his last Corrections and Improvements, from a Copy delivered by him to Mr. Peter Coste, communicated to the Editor, and now lodged in Christ College, Cambridge.

PREFACE

Reader, thou hast here the beginning and end of a discourse concerning government; what fate has otherwise disposed of the papers that should have filled up the middle, and were more than all the rest, it is not worth while to tell thee. These, which remain, I hope are sufficient to establish the throne of our great restorer, our present King William; to make good his title, in the consent of the people, which being the only one of all lawful governments, he has more fully and clearly, than any prince in Christendom; and to justify to the world the people of England, whose love of their just and natural rights, with their resolution to preserve them, saved the nation when it was on the very brink of slavery and ruin. If these papers have that evidence, I flatter myself is to be found in them, there will be no great miss of those which are lost, and my reader may be satisfied without them: for I imagine, I shall have neither the time, nor inclination to repeat my pains, and fill up the wanting part of my answer, by tracing Sir Robert again, through all the windings and obscurities, which are to be met with in the several branches of his wonderful system. The king, and body of the nation, have since so thoroughly confuted his Hypothesis, that I suppose no body hereafter will have either the confidence to appear against our common safety, and be again an advocate for slavery; or the weakness to be deceived with contradictions dressed up in a popular stile, and well-turned periods: for if any one will be at the pains, himself, in those parts, which are here untouched, to strip Sir Robert's discourses of the flourish of doubtful expressions, and endeavour to reduce his words to direct,

positive, intelligible propositions, and then compare them one with another, he will quickly be satisfied, there was never so much glib nonsense put together in well-sounding English. If he think it not worth while to examine his works all thro', let him make an experiment in that part, where he treats of usurpation; and let him try, whether he can, with all his skill, make Sir Robert intelligible, and consistent with himself, or common sense. I should not speak so plainly of a gentleman, long since past answering, had not the pulpit, of late years, publicly owned his doctrine, and made it the current divinity of the times. It is necessary those men, who taking on them to be teachers, have so dangerously misled others, should be openly shewed of what authority this their Patriarch is, whom they have so blindly followed, that so they may either retract what upon so ill grounds they have vented, and cannot be maintained; or else justify those principles which they preached up for gospel; though they had no better an author than an English courtier: for I should not have writ against Sir Robert, or taken the pains to shew his mistakes, inconsistencies, and want of (what he so much boasts of, and pretends wholly to build on) scripture-proofs, were there not men amongst us, who, by crying up his books, and espousing his doctrine, save me from the reproach of writing against a dead adversary. They have been so zealous in this point, that, if I have done him any wrong, I cannot hope they should spare me. I wish, where they have done the truth and the public wrong, they would be as ready to redress it, and allow its just weight to this reflection, viz. that there cannot be done a greater mischief to prince and people, than the propagating wrong notions concerning government; that so at last all times might not have reason to complain of the Drum Ecclesiastic. If any one, concerned really for truth, undertake the confutation of my Hypothesis, I promise him either to recant my mistake, upon fair conviction; or to answer his difficulties. But he must remember two things.

First, That cavilling here and there, at some expression, or little incident of my discourse, is not an answer to my book.

Secondly, That I shall not take railing for arguments, nor think either of these worth my notice, though I shall always look on myself as bound to give satisfaction to any one, who shall appear to be conscientiously scrupulous in the point, and shall shew any just grounds for his scruples.

I have nothing more, but to advertise the reader, that Observations stands for Observations on Hobbs, Milton, &c. and that a bare quotation of pages always means pages of his Patriarcha, Edition 1680.

Book II

CHAPTER. I.

AN ESSAY CONCERNING THE TRUE ORIGINAL, EXTENT AND END OF CIVIL GOVERNMENT

Sect. 1. It having been shewn in the foregoing discourse,

(1). That Adam had not, either by natural right of fatherhood, or by positive donation from God, any such authority over his children, or dominion over the world, as is pretended:

(2). That if he had, his heirs, yet, had no right to it:

(3). That if his heirs had, there being no law of nature nor positive law of God that determines which is the right heir in all cases that may arise, the right of succession, and consequently of bearing rule, could not have been certainly determined:

(4). That if even that had been determined, yet the knowledge of which is the eldest line of Adam's posterity, being so long since utterly lost, that in the races of mankind and families of the world, there remains not to one above another, the least pretence to be the eldest house, and to have the right of inheritance:

All these premises having, as I think, been clearly made out, it is impossible that the rulers now on earth should make any benefit, or derive any the least shadow of authority from that, which is held to be the fountain of all power, Adam's private dominion and paternal jurisdiction; so that he that will not give just occasion to think that all government in the world is the product only of force and violence, and that men live together by no other rules but that of beasts, where the strongest carries it, and so lay a foundation for perpetual disorder and mischief, tumult, sedition and rebellion, (things that the followers of that hypothesis so loudly cry out against) must of necessity find out another rise of government, another original of political power, and another way of designing and knowing the persons that have it, than what Sir Robert Filmer hath taught us.

Sect. 2. To this purpose, I think it may not be amiss, to set down what I take to be political power; that the power of a MAGISTRATE over a subject may be distinguished from that of a FATHER over his children, a MASTER over his servant, a HUSBAND over his wife, and a LORD over his slave. All which distinct powers happening sometimes together in the same man, if he be considered under these different relations, it may help us to distinguish these powers one from wealth, a father of a family, and a captain of a galley.
